All of that having happened, nothing could have stopped the Communists from domination before now of India, Burma, Thailand, and a vast part of Africa. The fate of Western Europe would have been less certain, but certainly we would not have the air, naval and electronic bases we now have in Portugal, Spain, Morocco, England, France, Italy, Germany, and Turkey. Such would have been the result of choosing the "Fortress America" alternative. But of course it would not have gone that far before we would have been forced into World War III, with costs in American lives and American money infinitely greater than we have actually had.

The reason we did not find ouselves in such a position is that back in 1947 the decision was make to backstop Greece and Turkey in their sturdy resistance to Communist aggression. Up to that moment, every nation had to go it alone. Only the United States could provide leadership, cohesion and strength.

It was the enunciation of the Truman doctrine, and the military assistance and economic aid we furnished to Greece and Turkey, that told the world the United States had decided to draw the line, to make common cause with those who wished to be free, and to stand with them against further Communist encroachment. Consciously and coldly, in our own self-interest, we adopted the forward strategy. In effect we said, "Come on, boys, we'll stand with you, and we'll give you guns so you can stand with us." That in a nutshell is the theory of military assistance.

It reflects a deep and profundly true instinct of the American people, that the way to meet aggression is to place the line of defense so far forward that all possible strength can be mobilized behind it, and there to mobilize all possible strength in the best balanced array that is possible.

DRAMATIC PART IN FOREIGN POLICY

It is frequently charged against the military assistance program that it is used by the State Department for political—that is to say, diplomatic—reasons instead of being left to the military. Ladies and gentlemen, a moment's reflection will show that the military assistance program has never been a private matter for military men, and never

could be; it has ever been a very dramatic expression of U.S. foreign policy.

The Truman Doctrine, when we went in to support the Greeks and the Turks, had a tremendous impact on world politics. It was, in fact, a turning point in history. The NATO alliance followed with another terrific impact on world politics, its force and effect deriving from the military assistance which gave it substance. The same has been true in Korea, in Formosa, in Vietnam; in each case our military assistance has been the expression of a dramatic decision of U.S. foreign policy. And I have not even mentioned other cases—Spain, Iran, Thailand, Laos, and others—in which our assistance would have had an earthshaking impact at any time when the world was not shaking so badly already.

These were all tremendous moves of U.S. foreign policy, and it is essential that every important decision in the military assistance business shall be considered in that light. The State Department and the Defense Department work in concert, they discuss, they consult, they agree upon a solution—but the determining factor every time must be the foreign policy objectives of the United States, and the ultimate decision must be approved at the very highest level. It has been that way from the beginning and neither I nor any other military man would for an instant wish it otherwise.

MUCH HAS BEEN ACCOMPLISHED

Now how has all this been working out? Has it been worth all the cost and effort? The answer certainly would appear to be affirmative. All around the perimeter of the Soviet bloc, allied forces, encouraged by American leadership and strengthened by the military assistance program, stand ready to repel those probes by which the Communists test the free world's ability and will to resist. These forces are far better trained and much better equipped than when we started, their self-confidence is strong and their determination to resist has become steadily firmer. Knowing that the United States stands with them, they do not falter or fall back when the going gets tough.

Consider the inflexible courage with which Norway and Denmark, both right under the gun, have invariably rebuffed Soviet threats.

Consider the stanch replies of Greece and Turkey whenever they are threatened—and it is not infrequently.

Consider the unfailing evidences of NATO unity in the face of Soviet threats, especially the threatening moves against Berlin a year ago.

Consider Mr. Khrushchev's efforts only last month to drive a wedge between France and Germany. The Soviets have endeavored most persistently to split the NATO alliance asunder. They are always full of slogans about liquidation of foreign bases. They have never been able to open up even a small crack in the bonds which our military assistance program has nourished.

Consider the effective responses of the Chinese Nationalists to the Communist Chinese aggressions against the offshore islands and in the Taiwan Strait in the summer of 1958, a response made possible only through equipment and training provided by our military assistance program.

I say to you, that in the coldest calculation of our own self-interest, the military assistance program has been a wise and profitable investment.

We embarked on this program over 10 years ago in a time of extreme danger and emergency, and like all emergency programs, in the early years it had to be executed before it could be well planned. Our allies desperately needed weapons, and we tried desperately to get the weapons to them. Neither they, nor we on the American side, could know without years of investigation and analysis exactly what each country was

best able to do as its share in a common The crisis would not wait for us to spend those years investigating and analyzing. The crisis was right then. We had to go ahead as best we could.

From those hasty and impromptu beginnings a decade ago, has evolved a carefully considered and carefully managed operation

which we have today.

Thousands of dedicated Americans—military officers and civilians-have worked their hearts out pulling the programs into shape against all handicaps. I have seen them doing this pretty much around the world, and I take off my hat to them. There has been steady improvement in the military assistance operation everywhere, and in no place has there been serious maladministration or mismanagement. Few of our allies, of course, started out with supply systems which were ready to support and keep in good operating order the modern equip-ment we gave them. Their struggles to develop such supply and repair systems have been difficult and arduous, as anyone can understand who has witnesses the many false steps taken by our own armed forces in the past 25 years in learning to deal with exactly the same problems.

HIGH COST OF MODERN DEFENSE

Why then, if we have accomplished so much, does the cost of military assistance remain so high?

To begin with, let me say that each of the countries to whom we give military assistance has a large military budget of its own, and as far as possible it feeds, pays, clothes and trains its own forces, and furnishes them with military equipment to the extent its resources permit. As the economy of each country recuperates and becomes capable of doing more we ask it to take up a larger share of the burden, and this is

being done.

In the case of NATO, for example, our military assistance has declined steadily year by year from \$3.2 billion in 1953 to about \$1 billion in the present year; but last summer the President's Committee to Study the U.S. Military Assistance Program re-ported as a matter for serious concern, that if the NATO countries raised their defense expenditures to the highest level one could reasonably expect, and if the United States continued its military assistance at about the same rate as a year ago, the collective military strength of NATO would still fall dangerously below what the NATO commanders consider necessary. This Committee, by the way, was a nonpartisan group of nationally known citizens all of whom have distinguished themselves not only in business life but in high posts of public service. Under the chairmanship of William H. Draper, Jr. (of New York and California), the members were Dillon Anderson (of Texas), Joseph M. Dodge (of Michigan), Alfred M. Gruenther (of Nebraska, NATO and Washington), Marx Leva (of Alabama), John J. McCloy (of New York), George Mc-Ghee (of Texas), Joseph T. McNarney (of California), Adm. Arthur W. Radford, and James E. Webb (of Oklahoma), with Tracy Voorhees (of New Jersey) as Counsel. This distinguished Committee felt that after every allowance for the increasing pros-perity and the increasing defense expenditures of the NATO countries, the level of our military assistance to NATO was dangerously

At the other extreme, some of our sturdlest allies, like the Turks and the Koreans, are entirely willing to maintain large forces, and are immensely valuable to the United States and to the whole free world for that reason, but simply do not have the financial resources to arm, equip, and train such forces and keep them on the payroll, without our

assistance both military and economic.
In other words, as I said earlier the conclusion must be that so long as the Soviet-

Communist threat forces the United States to keep its overall defense expenditures at their present high levels, the portion we should plan to devote to military assistance will remain not less than \$2 billion per year.

If we allow the military assistance program to fall precipitously to a far lower level than in the past, the meaning to friend and foe alike will be that the United States is drawing back from its forward strategy. You can eeasily see why. All these lines upon which we have all agreed to stand are drawn on other people's territory, not on ours. We invited them to join us in withstanding communism on their territory, we have given the leadership in forming these alliances and making them strong; and it is indeed a point for nice judgment, how far we can go in demonstrating a loss of enthusiasm for the common effort before our allies will begin to hint that perhaps we had better go home. One thing is certain: any such indication by the United States will encourage many of our allies to slack off their own defense efforts. We are the leader. They are going to follow our lead.

Of all times, this is probably the worst time to have any such ideas arise. The Communists have not made the slightest change in their ultimate goals. To promote the cause of world communism by all feasible means continues to be their objective. At the same time they are giving some, but only some, indication that they may perhaps be willing to negotiate more seriously on at least a few of the issues causing international tension. We are faced immediately with the summit meeting next month, and possibly with a long, protracted period of negotiations Nobody expects that quick rethereafter. sults will be reached at the summit meeting on May 16, or soon after it. The period of negotiations is likely to be a very long one. It is a crucial period when we must be at our strongest, our most confident, our most

I suggest that this is not just a simple question of strengthening the hand of President Eisenhower at Paris next month, but extends to his successor of whatever party. This is the time for the United States to speak strongly and in unison, giving confidence to its friends and causing hesitation among its enemies.

I have held my remarks within the field of military assistance, which is the field of my personal responsibility, and the subject upon which I was invited to speak this evening; but in closing I would like to bring the subject of military assistance into its proper focus in our affairs by quoting from the strong and authoritative speech made by Undersecretary Douglas Dillon less than 24 hours ago:

"Soviet power and determination to expand Communist influence throughout the world pose grave and continuing threats to peace. Despite constant talk of 'peaceful coexistence, there is no evidence that Communist expansionist ambitions have altered in the slightest. It is true that Soviet rulers now appear anxious to pursue their unchanging goals through nonmilitary tactics—through diplomacy, trade, economic aid, propaganda, and internal subversion. However, they re-main confident that the totalitarian system shall prevail. Their present emphasis on nonmilitary measures does not mean that the struggle will be less intense nor the stakes less important. The primary issue today is nothing less than the survival of free men in a free civilization.

"Meanwhile, the Sino-Soviet bloc maintains enormous military power, which reinforces its constant pressure upon the free world. The risk of armed conflict is always with us. We must mount a vigorous and continuing effort to contain that risk if peace is to be kept."

The Promotion of International Investment

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. MULTER. Mr. Speaker, I com-mend to the attention of our colleagues the following address delivered by the Right Honorable Lord Shawcross, Q.C., LLD, before the Societe Royale d'Economie Politique de Belgique, Brussels, on December 14, 1959. The role of international investment and the benefits of a new investment convention are discussed in the address:

THE PROMOTION OF INTERNATIONAL INVESTMENT

(Paper submitted by the Right Honorable Lord Shawcross, Q.C., LL.D., to Societe Royale d'Economie Politique de Belgique, Brussels, Dec. 14, 1959)

First of all, perhaps, I should explain to you the angle from which I approach this problem. By profession, I am a lawyer. By occupation, I am concerned in industry. inclination, I still have an interest in politics although no longer a party one. But although I am a lawyer and greatly interested in the progressive development of International Law, I am not one of those who take the oversimplified view that all the problems of the world can be resolved by merely legal solutions; there are many great political and practical difficulties to be overcome first. And although I am now engaged in industry. I do not imagine that a selfish profit motive alone, making as much profit where one can whilst one can, is in future enough to insure the progressive economic development of the world we live in: industry itself usually recognizes fully the serious economic and social responsibilities it owes to the countries in which it operates. I must confess that it is in the end rather as a politician—a dilettante politician if you like for I have deserted the pursuit of party politics—that I have become convinced that the steady promotion of foreign investment across the frontiers of the separate states must become one of the most important ways of promoting a real international society, which remains based on our ideas, I should say ideals, of democracy, personal initiative and individual

Although the formation of the European Common Market and the eventual construction, as many of us continue to hope, of a European free-trade area will do much to stimulate the continued economic growth of the western European countries, it is obvious that in the long run not only the peace but the industrial progress of Europe is closely linked to the economic advance of the underdeveloped territories of the world. The world has become much too narrow and contracted a place for the free countries to tolerate anywhere within it the poverty and misery in which so many millions continue to live. Not only is poverty an invitation to subversion and the most potent ally of the Communists, but it acts as a brake on economic progress everywhere. The forward march of both the industrialized and the underdeveloped countries is in fact linked together in mutual interdependence.

Without continuing progress in the more highly industrailized nations the low-income countries will lack an adequate outlet for their primary products on which, in spite of the advance some have made towards industrial activity, their ability to provide

rising standards for their growing populations largely depends. And whilst we must help the industrialization of other countries, world economic growth is not simply universal industrialization. For many years the complementary nature of the economies of the highly industrialized and the primary producing countries will remain a most important basis of economic progress. On the other hand, of course, the increasing capital intensity of industrial production calls for everwidening markets; unless markets are worldwide and growing, the stagnation and saturation theories which have been suggested as dangers to the advanced countries may become practical realities. Economic interdependence is not just a question of trade: it involves the increasing interchange of the other factors in efficient production. In the Common Market, for instance, increased markets following the removal of internal tariffs may in the end have less effect in increasing Europe's productivity than the increased internal flow and movement of capital, labor, and technical skills and know-how. All this in time may apply to the development territories. They need our capital, our skills, and our markets, but equally we need to promote theirs.

What then is required to achieve these things is a steady flow of capital to build up the economic activity of the present underdeveloped or undeveloped territories of the world. And it is quite certain that this means a flow of foreign capital for there are countries whose present economic position renders them quite incapable of generating sufficient internal capital even to maintain their existing standards in the face of steadily expanding populations. How then is a sufficient international movement of capital

to be secured?

Much must, of course, continue to come in the form of bilateral or multilateral State aid. Apart from loans from the Communist countries which in the past have perhaps been of more propaganda than economic importance, but which are rightly called the trouble offensive and may greatly increase in significance, the occasions for direct State loans are probably diminishing. Although we must all be glad to see that, despite the prophets, President Eisenhower has asked Congress for increased foreign aid next year. And here it is appropriate to pay tribute to the late General Marshall. His name will remain in history for a plan far more imaginative than any military strategy and which was a most important factor in saving the peace and promoting the progress of the free world in the difficult postwar years.

But nobody can doubt that in the field of multilateral finance the continued activities of the World Bank, the International Finance Corporation, the proposed International Development Association, and other such organizations in providing finance to the low income and underdeveloped countries will remain, as they have been, of incalculable advantage to the free world. form of multilateral aid is descrying of the fullest support by governments and industry: it will meet needs, particularly in regard to what is, I believe, called the infra structure nowadays, which can never be wholly satisfied by private enterprise. But these official loans and grants already a significant burden on the budgets of the contributing countries; since 1945 the various foreign aid programs of the United States have cost each adult about \$675 can never be sufficient to cover all the capital investment required, or indeed be available for some of the projects which ought to be financed. Much must come from private sources. And this also must be remembered. The need of the underdeveloped countries is not simply for monetary aid but for a combination of monetary capital, capital goods and, in particular, the technical and administrative skills which are their essential complement. The shortage of experienced administrators of itself imposes a limit to the volume of official economic aid that can be absorbed for the more essential and appropriate productive enterprises. Without these complementary factors, much of the aid which these underdeveloped territories receive can be rendered sterile or may be dissipated in correcting current foreign exchange deficiencies. The burden of loan repayment and interest could then easily mount substantially faster than the country's ability, through increased production, to pay for it. In these circumstances, to adopt any policy of priority for official loans over direct investment, on the assumption that they are substitutes for private enterprise, is quite unrealistic.

The fact is that new private capital and reinvestment has been increasing in recent years and is now on a scale forming about 40 percent of the total flow of capital to the underdeveloped countries. If you take all the capital exported by the major capital exporting countries between 1955 and 1958 on a long-term basis, the figure is over \$17,000 million. That is a significant figure. None-theless, the outflow of private capital is not as great as it needs to be nor is that outflow attracted to the countries where its assistance could be most important both economically and politically. Much, for instance, goes to Canada and Austrlia, but some of the Latin American and Afro-Asian countries are severely short of capital finance. Broadly speaking, the reasons are twofold: they lie both in the capital importing and the capital exporting countries, and they are closely interrelated.

Let the matter be considered first from the point of view of the receiving countries, the new, the emerging territories suspicious sometimes of the great powers, jealous of any suggestion of economic imperialism. One of the most intractable problems which they have to resolve is that of framing economic policies, in a climate of strong political nationalism and suspicion, which will in the long run secure the best interests of their own countries.

There are two aspects to be recognized here. One is that there are a number of countries, some under Communist influence, some not, which for doctrinal reasons prefer state enterprise, although lacking the finance to develop it with the necessary speed and efficiency. Now, having been a member once of the English Labor Party myself, I understand this attitude although I no longer agree with it. We must learn here by experience, and it is not surprising that certain governments have become more doubtful of the alleged superior efficiency of state as compared with private enterprise. The lesson of the United Kingdom, where after much experience of state monopoly enterprise, the electorate-and indeed many in the Labor Party-have decisively recorded their objection to any increase in state activity, may help to confirm these doubts. But the truth is that, however interesting the doctrines, the developing countries simply cannot afford to indulge exclusively in state enterprise. They cannot hope to raise externally, or generate internally, the volume of finance required. This is especially true in the case of the extractive industries (where also the availability of the technical skills is a highly important factor). An investment of £50 million was required before the very modest present production of oil in Nigeria was ob-A similar investment in Netherlands New Guinea produced no economic return for the investor. Developing countries simply cannot afford to risk their own domestic capital to this extent, and, at the best, a doctrinal insistence upon state enterprise can only slow down the rate of advance.

But there is a more troublesome aspect which must be recognized, and that is that it is not unnatural for such countries, in the early years of independence, to identify foreign enterprises with the vestiges of colonial dependence and to feel that complete freedom can only be achieved if foreign interests in economic activity come to have at the most a subordinate and closely circumscribed role. Of course, to frame policies in that view is to ignore the very real difference between foreign political and foreign economic influence. Nowadays, at least, industrial enterprises are usually at the greatest pains to avoid any kind of political involvement. Undue pressure by governments upon existing foreign enterprises, and legislation to limit their activities or to exclude them may well retard the rate of growth of the whole economy without promoting any independent political strength; it will restrain the flow of much needed capital and other factors when natural economic growth would itself achieve the object of limiting any feared foreign influence without the need for any pressure of legislation or discrimination against it.

That last proposition should be examined in a little more detail. It is, no doubt, increasingly recognized that adequate rates of economic growth in the underdeveloped countries can only be achieved by the effective use of all the productive factors available to them. And a more realistic view is being taken now, at least in some countries, of the part that private direct investment can play in supplying the risk capital, administrative and technical skills, and progressive entrepreneurship which they so urgently need. But even so, the full eco-nomic significance of the economic changes which have taken place since the colonial era are not in all countries adequately understood. The fact is that the gains in production that are achieved as a result of foreign investment are accruing increasingly to the benefit of the capital receiving countries. And more significantly, these gains are being spread widely throughout their economies by generally rising wage standards, growing employment of nationals in managerial, technical, and administrative posts, the increasing use of local enterprises for ancillary services and supplies and, of course, the incidence of local taxation. It is in fact this very process of disseminating the productive gains from foreign investment throughout the economic system that will inevitably lead to an eventual and steady reduction in the relative share and influence of foreign enterprise in the country's economic activity even if its absolute contribution seems to expand rapidly.

No doubt, in the early years of economic development, the growth potential of the foreign sector will be realized more rapidly than that of the domestic sector. That need cause no misgiving. It is because the foreign enterprises will at first have the most ready access to the major supply of those factors on which future growth depends-education, skills, expertise, and, above all, capital. But by achieving their own growth potential, because of their own immediate advantages. the foreign enterprises will be creating conditions in which the very much greater potential of the whole economy, of which they are only the fringe, will begin to become effective. As their production expands, as its benefits are transmitted throughout the country in the form of higher real incomes from which the savings for domestic capital investment can be generated, and as the local population acquires the education and expertise necessary for productive activity. the latent economic activity of the country begins to be realized. The marginal but intensive activity of the foreign sector is the fuse which fires the greater but more inert charge of the country's own economic power.

Once this process has begun to gather momentum, the relative importance and advantage of the foreign sector is eroded away. and even if the foreign enterprises continue to increase in number their share of the total productive effort will tend to become progressively less significant. In time, as has, after all, happened in the United States, in Canada, and Australia, indeed in the rest of the industrialized world, the distinction between home an foreign interests ceases to matter although such interests may remain very large, as they do in Canada, in absolute terms. But in spite of the large amount of foreign capital in Canada nobody suggests that Canada is not completely independent

both economically and politically.

No doubt it is not surprising that concern at the size of the foreign sector in the domestic economy should often arise most acutely-and be exploited by the Communists—at the stage when it is probably about to begin its relative decline. It is often diffito understand that those very foreign enterprises which seem to be barriers to local progress in fact, partly and often, largely created the conditions which are giving rise to new opportunities for local economic growth, and that if they are allowed to con-tinue to add to the stream of productive experience and opportunity they will, in fact, themselves assist in shifting the balance of economic activity and influence still more toward domestic interests. But so, in fact, it has been in the case of all the industrial countries in which, in the first place, great reliance has had to be placed on foreign

Some study has already been given to this question of the pattern of ownership in a developing economy: there is respectable evidence to support the general thesis which has been indicated. But it would be useful if more economic research could be given to the matter for the emerging and development; countries would then see that whilst the pattern shows that foreign capital is es sential to their progress, in the long run it does not hinder, but on the contrary helps, to promote the strength of the domestic sector which, indeed, would otherwise continue to stagnate.

But the corollary to an appreciation by the receiving countries of the advantage of securing foreign capital is, of course, the creation of conditions likely to secure it. And as has been said, private capital is not being sufficiently attracted to those areas in which economic growth might do most to help in promoting political stability and, at the same time, in increasing world economic activity.

The reasons are not far to seek. Private cepital, whether in the form of direct or portfolio investment has always been conto accept the normal—although often considerable—commercial risks involved in the establishment of new enterprises in foreign territory. Two typical cases of oil explora-tion were mentioned earlier—but bitter experience in the past has made it shy of going to those countries in which there are, added to the commercial risks, the dangers of political ones, such as discrimination once an enterprise is established or confiscation once it has become valuable. What is mainly required—and what will only happen when the capital-receiving countries realize the importance to them of private capital—is the assurance of reasonable security. Where that exists, experience in Canada and Australia tralia, as well as in the capital movements between the European countries show that private capital will flow toward any activity which presents a reasonable prospect of economic return and indeed, some would think think, to many that do not. Security would, no doubt, best be provided by the assurance that all countries would adhere to the rules of international law. It is of that aspect of the matter that some examination can now be made.

No doubt it is true enough to say that a world which has at least pretended to re-

nounce war as an instrument for resolving international disputes ought to be prepared to accept the arbitrament of international law. As Lord Attlee said only the other day:

"If the nations of the world are seriously to consider universal disarmament, then at the same time they must give their urgent thought to the consolidation of a body of international law to which all would sub-

As a general principle most people would agree with that, and in many countries influential legal organizations and individual lawyers are pointing the way to "world peace through world law." But, ideal as it is in principle, the statement is something of an oversimplification. Festina lente—we must hurry slowly. If there must be a slogan and this is an age of slogans—the more accurate slogan would be "world law through world peace." For historically order precedes law. There must be an orderly organization of society to secure a universal acceptance of And the reason for that is plain enough. Stability and the protection of acquired rights are the necessary and characteristic incidents of any legal system. But no system, national or international, can function or protect itself against revolution unless there exists adequate machinery for ordinary and evolutionary change. Many of the nations of the world today, especially the new and developing nations, are quite unwilling to submit to the general arbitrament of international law, because they regard it as a device of the Western world to perpetuate the status quo without regard to the politinational, social, and economic forces which have so much changed the face of the world we live in. The very reasons which have led to the great powers insisting and it must be remembered that the United States of America and the United Kingdom as well as the U.S.S.R. did insist on the veto provision in the Charter of the United Nations, will continue to make less powerful nations refuse to submit generally to international law unless and until there exists some international legislative machinery enabling the rules of law to be changed and adapted to the changing needs of the modern world. After all, law can never be a static and immutable thing-the reason why citizens submit to it in their own municipal systems is that they play their part in legislatures which can alter the law when the application of its existing rules becomes unjust or inex-

We may rejoice at the fact that France has and the United States of America proposes to modify the conditions in favor of domestic jurisdiction by which their acceptance of the compulsory jurisdiction of the International Court is qualified. It is to be hoped that gradually the number of countries which will accept the jurisdiction unreservedly will increase; certainly in our own countries all our efforts must be directed to that end. But it must be recognized that far less than half the countries of the world do so adhere, at present, and whilst the rules of law themselves remain uncertain and unalterable, it is not realistic to expect dramatic advance in this direction.

But where international law can advance, and sometimes even dramatically, is in the institutional field and by securing the adherence of a large number of countries to statements or restatements of international law in regard to particular matters in which the fact of interdependence and the necessity for cooperation has become manifest. It is not generally realized that since the establishment of the International Postal Union nearly 100 years ago, no less than 116 international organizations have been set up ad hoc, each dealing with some particular matter that has become generally recognized as the necessary subject of international cooperation. The World Health Organization, the International Civil Aviation Organiza-

tion, the Food and Agriculture Organization. and here, in Europe, the organization of the Six, Euratom, and the European Coal and Steel Community, are examples. The Antarctica Treaty is the latest and not undramatic case. All of these have contributed to the establishment of a body of international rules in relation to the matters with which they deal; some have set up real interna-tional communities with recourse to their own international courts. And beyond and outside these actual institutional arrangements are a large number of cases where rules dealing with this or that matter have been established by conventions, not involving the creation of actual institutions, to which a greater or lesser number of nations have adhered. A recent case in point is the Geneva Conference which led to the convention on the law of the sea.

A surprisingly large field has already been covered by ad hoc institutional or conventional arrangements of this kind. It is on these lines by a process of selection both in regard to subject matter and area of obligation that the general progress of interna-tional law can best be promoted, so that in the end there will be a wide network of accepted rules covering a large part of the field of international relations, and at least a large number of the countries of the world.

That general commentary leads on to the specific problem of providing the assurance of security in this matter of foreign private investment. Here is a subject which is now ripe for selection as a concern of conventional international law, at least for a selected area of obligation.

Some countries have, commendably enough, attempted to give assurances by passing internal statutes purporting to give varying degrees and periods of security to the foreign investor and some have made official declarations to the like effect. These measures, whilst encouraging as far as they go (and they have certainly helped) are always liable to unilateral amendment or revocation-as for instance following political changes—and usually they contain other restrictive provisions which cut down their apparent attraction. Something more than this is needed to give any real security. The United States has to some extent

succeeded in securing this "something more"

for its own investors by the conclusion of bi-

lateral treaties of trade and commerce with some 17 different countries. These treaties contain inter alia provisions against expropriation without compensation and provide for the submission of disputes to the International Court. There is no doubt these treaties have helped to improve the investment climate in a number of countries, and indeed the development of international law. The United States is manifestly in a specially advantageous position to negotiate a network of treaties of this kind, but even so it is significant that they have failed to conclude so far any treaty with the new nations of Afro-Asia or with the Arab States. Outside of the United States very few full-scale treaties of friendship and commerce have been made in recent years. The U.K. has one such with Iran; Germany has such treaties with France, Italy, the Dominican Republic and Pakistan. Others are being discussed with Ghana and Liberia, Another is still the subject of very dilatory negotiation with the U.K. Norway has such a treaty with Japan. But the generality and variety of these treaties may lead to difficulties in interpretation, and none of them provides for any direct remedy by the private investor: He must persuade the government to espouse his cause, and this government may sometimes find it politically embarrassing to do. There remains, in this context of bilateral arrangements, the fact that the U.S. Government has under its mutual security program established a system of insurance for U.S. investors against political risks: This is available in the case of some 38 States (only one in Africa and one Arab) with which the United States has concluded investment guarantee agreements. A similar form of guarantee scheme exists in Japan, and one has recently been introduced in Germany. In France, proposals are being discussed for a similar system.

But useful as these bilateral arrangements are, they afford no protection at all except to the nationals of the countries which make them, and in the territories for which they are concluded. A broader approach than this is necessary and it is here that there is some real opportunity of extending the conventional progress of international law by

multilateral agreement.

There is a long history to this approach. Efforts to secure some multilateral convention on investment problems in the Havana Charter for an international trade organization and at the 1948 and 1957 conferences of the Organization of American States met with failure mainly because they at-tempted to cover too wide a field. The provisos and exceptions proposed by a number of capital importing countries would have made the intended guarantees largely meaningless, and they were thus unacceptable to capital exporting countries. On the other hand, a draft International Code of Fair Treatment submitted to the United Nations in 1949 by the International Chamber of Commerce, and often reverted to since, demanded too much protection for the private investor and has evoked a disappointing re-Thus it calls for general equality sponse. of treatment between foreigners and nationals in such respects as the establishment, managing and staffing of enterprises, and provides for the virtual abolition of restrictions on transfer of capital dividends and profits. Even in bilateral treaties no capital receiving country has gone as far as this. A similar criticism—that it asked too much for the private investor-was leveled against the first draft International Convention for the Protection of Private Investment put out by a Cologne society under the auspices of Herr Abs, chairman of the Deutsche Bank.

But for the general principle of an International Convention dealing with these matters, there has been significant support. Early in 1958 the Malayan Government at the South East Asia Economic Conference put forward a proposal of the kind. In the same year the Interparliamentary Union Conference meeting in Brazil, and the International Bar Association in Cologne, passed resolutions supporting a multilateral arrangement, and this year a British Parliamentary Group—on the whole, curiously enough, rather a left wing group—suggested the desirability of a World Investment Convention. In September 1959, the Assembly of the Council of Europe proposed unanimously that an Investment Statute and a Guarantee Fund should be established after a conference between the European and African countries. Thus there has been a notable increase in general interest and support.

But matters have become more concrete and particular. In 1958 a group of distinguished Continental and British international lawyers and businessmen met together to study how best these matters could be dealt with. Their conclusion was that the course giving most hope of practical progress in the near future was to promote a multilateral convention which, whilst not pretending to establish any elaborate or fully protective code for the private investor, would at least establish beyond argument the more basic and elementary principles of international law and would secure submission to an international tribunal by those States which were prepared to adhere to the convention. What were the

basic principles? They were only three in number. That Governments should carry out their specific engagements-pacta sunt servanda; that there should be no dis-crimination and that any expropriation should be accomplished by prompt adequate and effective compensation. It may be that these rules are not universally accepted: Very few of the rules of customary international law are. But certainly there is a very substantial weight of juristic opinion and of case law in their favor and they do provide the minimum security which the international investor may reasonably require. And few statesmen, after all, who wished to assert the good faith of their countries could wax very eloquent in objecting to these elementary principles at least in this limited The draft convention also contains context. a provision for submission to the International Court and, as an optional annex, machinery for establishing an arbitral tri-bunal to which individuals could have access without involving their Governments. There is also, and perhaps more controversially, an optional provision for the imposition of sanctions. Before dealing with the further history of

these proposals, something should be said in broad terms about certain of the criticisms which have been made of them. Criticisms have come from three quarters. Those representing the views of some pri-vate investors say that the safeguards do not go far enough: That there should be a wider range of protection, more explicit and specific in its application. To that it may be answered that often before the better has been the enemy of the good. It has proved quite impracticable to secure any significant common agreement on more far reaching proposals. It is unrealistic to think, for instance, that sovereign States will compel themselves to admit foreigners to every activity which is open to its own nationals. No State does so in fact. Nor can States be expected in these days of shortage of foreign currency to abrogate altogether in favor of the private investor their exchange control arrangements. From the point of view of

promoting private investment it is better to

press for what appear really vital requirements and not to seek unattainable objec-

tives which themselves would provide little additional protection.

Then, it is said by some that from the point of view of the capital-importing countries the draft is one-sided since all the obligations would be cast upon them. This is in a sense inevitable from the nature of the exercise. The convention is one which seeks protection from acts of state not act of individuals. The borrowing state can protect itself in whatsoever way it likes from the acts of the private investor in the contracts it makes with him at the time of his investment-and on the other hand it needs no protection against the capital-exporting state which is not itself involved in the action. But the broader answer is that the quid pro quo for the borrowing states' undertakings is in fact, in the English vernacular the provision of the "quids," that the capital-importing countries in return for agreeing to abide by the generally recognized procedure of international law will receive move private investment and with the capital, the benefits of the technical and commercial skills which go with them than would otherwise be the case.

Yet the possibility of some more obviously reciprocal provisions need not be excluded. No doubt this aspect will be further studied. If necessary, capital-exporting states should give some assurance that the economic interests of the borrowing states will be recognized. Thus, where a recipient country makes tax concessions—and this is a common device for attracting investment—this should not result simply in a transfer from their own to the state exchequers of the

wealthy countries. Here the tax treaty recently signed between India and the United States of America is a useful example: its key feature is that income earned as a result of a special tax concession or exemption granted by India to encourage investment shall be treated in the United States as taxfree income. Otherwise, what the Indian exchequer gave, the U.S. exchequer would take, and the encouragement to the private investor would be lost. Again, capital-exporting countries should not respond to the removal of barriers against Western capital by arbitrary tariff adjustments against the developing countries or buying discrimination against their products. And some may think, although this is not a matter for treaty provision, that it may be necessary to face the cost of higher equilibrium prices for commodities if by so doing the problems associated with the dependence of the underdeveloped countries upon unstable com-modity markets can be diminished. Certainly an insistence on the obligations of countries receiving capital aid must not be understood as ignoring the reciprocal obligations of the lending countries. Indeed. interdependence is the basis of this coopera-

The third criticism is not at all as to the content of the draft convention-although many think it would be better if it contained no provision as to sanctions-but as to the method of multilateral negotiation. The governments of the United States and the United Kingdom have been inclined to say that if a matter of this kind is submitted to negotiation between a large number of countries with a view to a multilateral convention, the principles embodied in the original draft will be so whittled away by provisos and exceptions that at the end of the day nothing of value will remain. That, it is said, was the experience at Havana. But this seems rather a counsel of despair and its validity depends upon what is put into the original draft, what countries are brought into negotiation in the first instance and what, if any, alternatives there may be for securing the admittedly desirable objective. That is why those who framed the convention now before OEEC thought it better to proceed with proposals of a modest, but minimal kind, embodying principles which can justly be put forward as existing rules, which could not be whittled away, and which could in the first instance be negotiated between a comparatively small group of like-minded nations, with provision for accession by others. No doubt a project of this kind is unsuitable for present discussion in so large a forum as the United Nations, where the Communist states would be certain to attack and exploit it. But we must agree with those with whom we can agree and so create a respectable example. On the other hand, it is clear that the process of the mere bilateral treaty has, to say the least, greatly slowed up and that it has hardly penetrated the most significant

The German Government recently adopted a proposal broadly similar to the draft promulgated by the group already referred to and submitted it to the OEEC, where the Swiss Government had also made proposals differing in method but to the same end.

These proposals have received careful and by no means unfavorable consideration in a committee of the OEEC and it is understood that the position now is that that committee will shortly report to the council of the organization. The council will then have to consider its own attitude. There are various courses it might adopt. It might conceivabley reject the whole proposal. It can hardly be thought that responsible governments would adopt such a negative position; in face of the unanimous recommendation of the Council of Europe in a somewhat similar sense, the OEEC may

be likely to adopt some positive action. It might-although it is to be hoped it will do no such thing—say that instead of estab-lishing a multilateral convention, binding on the countries which adhered to it, the OEEC should adopt a declaration, a statement, a code of fair principles. This would be the course of least resistance but the road to international anarchy has already been well paved with international declarations which particular nations have disregarded when it suited them. It might, again, convention among the countries concerned, leaving it to those countries to work out drafts of their own. Not much progress would be likely to come of such a method. Or it might decide, as one may hope it will, to work out a draft convention of its own and then to submit it to governments for approval. This would be the most responsible and satisfactory course. The OEEC is how fully familiar with the subject and the various arguments. It could proceed quite rapidly from its present studies, and take an initiative which might be sadly lacking if the matter were returned to individual governments. I hope all here who may be able to make representations to their own governments will urge them to agree, in the OEEC, that the German proposal should be accepted in principal, and that the secretariat should be instructed to prepare a suitable draft.

It may, of course, be said that whilst this is all very well, a multilateral treaty between European countries would be of little practical advantage since these countries can be relied upon to adhere to proper standards of behavior, and capital investment already takes place freely between them. This is true enough, but such a treaty would nonetheless establish a firm basis for a standard state practice which would form a respectable precedent to which development countries might adhere. Clearly, it would, at least initially, be difficult to negotiate such a treaty between a larger group of states Without the risk of dangerous ideological controversies and an attempt at watering down its provisions. Moreover, should the proposal of the European Assembly for the adherence of African as well as European countries be adopted without any such weakening in the convention's provisions, this Would constitute a most significant advance.

Apart from the possibility of concluding such a multilateral convention providing the minimum substantive rules for protecting private investment, a treaty merely establishing a system of arbitration to which pri-Vate investors could have recourse in the event of dispute with the governments of capital-receiving countries would be a measure of the greatest practical importance. Arbitration between a national of one country and the government of another has, of course, always been possible provided that the government concerned agrees to it. In practice, governments generally only so agree when this is in furtherance of an arbitration clause contained in a contract with the foreign investor. It is more rare for a government to accept arbitration when there is no such contractual obligation, unless indeed in a particular case they believe they are certain to win. Thus an investor whowithout any contract with government builds a factory or establishes a business in some foreign country, which is later expropriated without compensation by the state concerned, will have no remedy, for although the measures taken against him were contrary to international law, there is no arbitral machinery to which he can have recourse. What is required ideally is a system under which, in such a case, the injured investor can apply to some international arbitral body to arbitrate between him and the foreign government. This would involve the acceptance of some organization,

which need not be at all elaborate, which would be regarded by all concerned as com-pletely impartial and detached and able to appoint appropriate persons to act as arbitrators in particular cases. It would also require the prior agreement of governments that they would accept the jurisdiction of arbitrators so appointed, at least in certain categories of claim, and would abide by the decisions given. Such a system might be estalished by a multilateral convention or by a series of special bilateral treaties. In the meantime, suitable provisions might be embodied in any new treatles of friendship and commerce. Properly qualified and impartial arbitrators would have little difficulty in arriving at just decisions by drawing on the customary rules of international law and on the general principles of justice accepted by civilized nations. Nor would the absence of sanctions for the enforcement of awards be a serious weakness. Experience has shown that, once an international court or arbitral tribunal has given a decision, it is most unusual for governments to fall to carry it out. The force of world opinion must for a long time continue to be the most effective sanction in this field.

At the moment a number of different bodies (in addition to the Secretariat of the United Nations) including the International Chamber of Commerce, the International Law Association and the International Bar Association, are independently studying how best to establish some such system as has been described. The danger of these inde-pendent studies, apart from the dissipation of effort which they involve, is that each may evolve some system in which it will tend to have something of a vested interest, and that the proposals of each may be incon-sistent with, if not inimical to, those of the others. It is the present concern of the International Association for the Study of the Promotion and Protection of Foreign Investments (which was recently established in Geneva and consists of bankers, businessmen and international lawyers, including such persons as Monsieur Smets, Ambassador Massigli, Mr. Spofford, Mr. Arthur Dean, Sir Jeremy Raisman, Professor Carli and Herr Abs), which is itself actively interested in the problem, to bring together these various independent studies as well as the proposals for an investment statute, so that they may be coordinated.

In conclusion, reference must be made to an important suggestion thrown out by Mr. Eugene Black at the meeting of the World Bank in Washington last September. The President of the World Bank wondered whether:

"There was not a place now for an entity made up exclusively of private international investors from all countries * * * which could publicize what is being done and the conditions that attract investment. * * * This entity, if it were truly international, might help in finding solutions to differences which have actually arisen between investors and foreign Governments. * * It could serve to broaden areas of agreement and increase the awareness of the very great opportunities which exist for the expansion of private investment."

This may seem a comparatively modest proposal, but if implemented it might prove most valuable. What is required is a new and small group of persons whose own standing and experience would at once command international respect. Its sole concern should be the promotion and protection of private investment. It should not be compromised by association with any other body working in a wider field. Here again is a matter which the International Association established in Geneva, to which reference has just been made, might well pursue as one of urgency. Indeed, the association might itself form the nucleus of such a group.

In this matter, those who believe that the best hope for the future lies in the steady increase of international trade and commerce will support arrangements which will stimulate the voluntary flow of capital to those areas most needing it and will at the same time insure that, once invested in such areas, private capital will be fairly treated and will thus be able to promote the development of the country concerned and assist the commerce of the world

It is in this way, first by ad hoc agreement in one field, then by a similar process in another, that we may gradually build up that confident international cooperation which will produce international order, the possibility of conventional adaptations of existing rules and procedures, and so the conditions for the general rule of law in international affairs.

Abraham Lincoln

SPEECH

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. DOYLE. Mr. Speaker, if I could be permitted to repeat everything said by my distinguished colleagues, who have spoken so inspiringly and informatively of Abraham Lincoln on this 100th anniversary of his nomination for the Presidency of the United States, I would feel I would not be saying a bit too much about Abraham Lincoln and his influence on the life and destiny of our Nation; yes, Mr. Speaker, on the life and destiny of the whole world. In several nations where I have traveled officially as a member of the House Armed Services Committee, I could observe very attractive statues, lifesize, of this illustrious Civil War President.

For many years prior to my first coming to this great legislative body 14 years ago, I had the great privilege of being president of the Abraham Lincoln Club at Long Beach, Calif. I am sure that there are many thousands of Californians who are appreciative of his place in history for understanding between people of the human race which was the policy and practice of President Lincoln—both in and out of office.

One of the paragraphs in his message to Congress in 1861 which I always remember and emphasize as very, very appropriate always, is as follows:

The prudent, penniless beginner in the world labors for wages awhile, saves a surplus with which to buy tools or land for himself, and at length hires another new beginner to help him. This is the just and generous and prosperous system which opens the way to all—gives hope to all, and consequent energy and progress and improvement of condition to all.

I love to read and reread this statement by him during the debates with Stephen Douglas in 1858:

When I was a boy, I spent considerable time along the Sangamon River. An old steamboat plied on the river, the boiler of which was so small that when they blew the whistle, there wasn't enough steam to turn the paddlewheel. When the paddlewheel went around, they couldn't blow the

whistle. My friend Douglas reminds me of that old steamboat, for it is evident when he talks he can't think, and when he thinks, he can't talk.

Senator Douglas is of worldwide renown. All the anxious politicians of his party have been looking upon him as certainly at no distant day to be President of the United States. They have seen in his round, jolly, fruitful face post offices, land offices, marshalships and Cabinet appointments, chargeships and foreign missions, bursting and sprouting out in wonderful exuberance ready to be laid hold of by their greedy hands. And as they have been gazing upon this attractive picture so long, they cannot bring themselves to give up the charming hope. On the contrary, nobody has ever expected me to be President. In my poor, lean, lank face, nobody has ever seen that any cabbages were sprouting out. These are disadvantages all taken together, that the Republicans labor under. We have to fight this battle upon principle, and principle alone.

I recall the following quotations of his:

With malice toward none; with charity for all;

With firmness in the right, as God gives us to see the right,

Let us strive on to finish the work we are in; To bind up the Nation's wounds;

To care for him who shall have borne the battle,

And for his widow and orphan—
To do all which may achieve and cherish,
A just and lasting peace among ourselves
And with all nations.

Stand with anyone that stands right. Stand with him while he is right and part with him when he goes wrong.

Mr. Speaker, lastly, we Members of this great legislative body should not be remiss in remembering that Abraham Lincoln was a duly elected Member of the House of Representatives in his day and was a member of the Illinois delegation in the House from March 4, 1847, until March 4, 1849; and while he and his wife were here in Washington during that period they lived at Mrs. Spriggs boarding house here on the Hill where the Library of Congress now stands. In checking through my reference file about him, I find that on Tuesday, April 26, 1949, I made remarks in the House of Representatives entitled "Lincoln, Martyred Friend of the South." Every year since that it has been an inspiration to me to participate in doing something to remember him.

Steuben Society's Founders' Day

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. DERWINSKI. Mr. Speaker, Saturday, May 21, we celebrate the Steuben Society's Founders' Day, when we pay tribute to Friedrich Wilhelm Von Steuben, who contributed so much to our American independence, and the organization that proudly bears his name, the

Steuben Society, a truly outstanding American group.

Baron Von Steuben, because of his influence in converting the American Army into an effective and highly disciplined military force during the Revolution, was an indispensable figure in the achievement of American independence. History teaches us that he performed an essential service that none of his contemporaries at that time was qualified to perform.

Certainly, it is fitting for a man who contributed so much to the formative years of our Nation to be remembered in many ways. The Steuben Society, which bears his name, has contributed much in the way of cultural, fraternal, social, and patriotic activities to its members and the communities they serve. I am especially proud to have within the area of the district I represent active members of the Steuben Society of America, who always evidence a keen interest in the affairs of Government and continuously exhibit the sound attitude that reflects their fundamental beliefs in the American way of life, in our traditions of free enterprise and opportunity for all.

In these troubled times, it is well for us to remember the contributions that citizens of foreign extraction have made to the greatness of America and certainly the example set by Baron Von Steuben, one of the first to set a pattern for many in the years that have followed.

A Domestic Barricade Won't Win

EXTENSION OF REMARKS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. ROBISON. Mr. Speaker, the problems raised by the historic rise America witnessed in foreign imports during 1959 when there was a relatively static situation in the flow of merchandise exports are still unanswered. According to my information, a growing domestic demand for foreign goods caused merchandise imports to soar to a record total of \$15.2 billion last year, a 19 percent jump over the previous year's total of \$12.8 billion. At the same time, nonmilitary merchandise exports, amounting to \$16.3 billion, were virtually unchanged from their 1958 total. Thus, our merchandise export surplus gap narrowed to \$1.1 billion, and the various foreign countries doing business with the United States added a record total of \$3.7 billion to their gold and dollar holdings here.

The fact that finished consumer goods, other than foodstuffs, had a major share of such increased imports seems to pretty clearly indicate that what we are experiencing is much more than a recovery by foreign industry of its prewar American markets. More likely it is further evidence of the steadily narrowing

technological gap that formerly existed between domestic and foreign producers.

I am sure that we all applaud the recently announced administration effort to encourage exports by expanding such governmental services as are now available to American business. This can help, but what really seems needed is a rebirth here at home of the old-fashioned type of American ingenuity and "hard-sell" technique. Government can help to motivate such a mood, but only business itself can generate it.

Since last year's unlamented steel strike added to the unfavorable trade-balance picture, it is hopefully encouraging, I think, to learn what the American steel industry is proving able to do by way of recapturing a goodly share of the business it lost during that period. The following editorial from the Wall Street Journal of April 25, 1960, tells that story:

OUT FROM THE BARRICADES

"We're confident of the ability of the American steel industry to meet the threat of foreign competition. We're not so unrealistic as to think we'll come up with some magic solution that will stop imports as if somebody turned off a faucet, but they're not going to overwhelm us, either."

they're not going to overwhelm us, either."

The speaker is the marketing vice president of U.S. Steel Corp., and his attitude is as instructive as it is encouraging. For only a few weeks ago many in the steel industry were among the strongest pleaders for "protectionism" against foreign steel imports.

Now we ourselves are not so unrealistic as to think that the problem of foreign steel competition has been banished merely because the high rate of imports that prevailed during the steel strike has diminished. The fundamental problem—the high cost of producing steel in the United States—remains; and since labor is the main reason for that high cost, nothing short of a new attitude by the labor unions will resolve the problem.

The point is, however, that the industry is proving that something can be done to meet this threat on economic grounds, which is the only place it can be met. The recapture of American markets for American steel has not come from emotional appeals to "Buy American" or from the application of higher tariffs or from slapping on quotas. The market is being recaptured because the American industry is showing that it can serve that market better.

For one example, U.S. mills can offer the customers steel rolled and cut to the customer's own specifications; the buyer of foreign steel is generally limited to a choice of standard sizes and specifications.

For another, U.S. mills can offer a steady source of supply; foreign supplies are undependable. In cases where there are special metallurgical requirements, U.S. mills are also better able to provide the quality needed.

All these things have proven to be strong selling points, and the industry has buckled down to the job of making them stronger. As this newspaper's survey of the steel industry showed the other day, American steelmen faced with tough price competition are making better use of their other economically competitive strengths.

This is highly encouraging for this industry's outlook. But it is also instructive, we think, to those in other industries faced with foreign competition. For despite all the troubles the steel industry has left, it is still better off fighting back than in falling back on restrictionist measures that would only disguise the problem.

Nobody can be sure in any industry that a competitive fight will be won. But you can be pretty certain that no industry will win the fight for world markets hiding behind a domestic barricade.

Memorandum Decision-Khrushchev Versus Powers

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. PELLY. Mr. Speaker, last night as I watched television and listened to the irresponsible and unstable ravings of the egomaniac. Khrushchev, during his unbelievable press conference in Paris, I was carried back 20 years into the past to the height of Adolph Hitler's bid for World domination. Only the physical appearance of the two speakers was different.

I witnessed the same hysterical and Vitriolic name calling and saber rattling and I said to myself. Here again the peace of the world and the very future of mankind is at the mercy of a phycho-

pathic dictator.

His repeated references to the U-2 flight as a spy mission and his announced intention of trying its courageous pilot, Lieutenant Powers, as a spy prompts me to include with my remarks the following legal opinion prepared by Judge Raymond Royal of the Superior Court of the State of Washington.

Judge Royal is one of the most highly regarded jurists in my State and is an authority on international law. He tells me that this memorandum decision is a joint effort of the entire class of international law which he teaches at the Naval Reserve Officers School at Sand Point Naval Air Station in Seattle, Wash .:

IN THE SUPERIOR COURT OF WORLD OPINION FOR KING COUNTY-KHRUSHCHEV v. POW-FRS-No. 1-MEMORANDUM DECISION-MAY 13, 1960

Raymond Royal, judge:

The headline writers and the columnists, together with the man on the street, seem to assume without equivocation or question that we were caught redhanded in acts
which make us guilty of the crime of spying. The small voices of the wife and the father of the pilot who fiew the plane cry out that our husband and son is not guilty of being a spy. Has no one thought to look up the law and to see what is the law with regard to spying?

"As a lawyer and judge trained and experienced in the common law approach, and also as a student and teacher of international law, I have researched this question. My ultimate conclusions follow in a form typical of a trial judge's informal memo-

randum decision."

It is contended by the Russian Communists that the free independent and sovereign people of the United States have committed the offense of spying and have also broken international law because one of its citizens flew in the stratosphere above the surface of the sovereign nation without the consent of its government. Let us take a look at what the law of nations says about espionage and about the law of territory.

There is no simple clear-cut document codifying international law such as one would find with reference to the ordinances of a city or the statutes of a State. International law arises out of custom and usage over a long period of time or by mutual agreement and consent, and has been defined in various ways by the legal scholars throughout the ages. Among the definitions which have been generally and widely accepted by the persons dealing with international law is that of Sir Henry Maine:

The law of nations is a complex system, composed of various ingredients. It consists of general principles of right and justice, equally suited to the conduct of individuals in a state of natural equity, and to the relations and conduct of nations; of a collection of usages, customs and opinions, the growth of civilization and commerce; and a code of positive law" (International Law, 1883, p. 33).

Another is Black's definition of the term,

as follows:

"International law. The law which regulates the intercourse of nations; the law of nations. The customary law which determines the rights and regulates the intercourse of independent states in peace and

"The system of rules and principles, founded on treaty, custom, precedent, and the consensus of opinion as to justice and moral obligation, which civilized nations recognize as binding upon them in their mutual dealings and relations."

As a corollary to the definition itself, Commander Brittin, in his book "Inter-national Law for Seagoing Officers," at page 43, makes this statement with regard to the

process of international law:

"As is so often the case in the development of international law, the insistence of so many nations upon a similar right and their vigorous measures to enforce the claimed right evolve into a rule of customary international law."

There are many authorities who have commented upon the rule of law among the nations with regard to spying. There has been a general agreement and concurrence among the family of nations and the scholars in this field that The Hague regulations of 1899 expresses the customary law in this regard. The essence of article 29 which deals with this subject is that spying consists in acting "clandestinely or on false pretenses", having the objective of obtaining information in the zone of operations of a belligerent, and of communicating it to the enemy. It is a further part of this customary law that soldiers not in disguise, properly known as "scouts", might penetrate the enemy lines to obtain information without being considered spies. Dispatch bearers, whether soldiers or civilians, have not been considered spies if they carried out their missions openly. The occupants of balloons who might find themselves over enemy territory for the purpose of delivering dispatches or maintaining communications came within the same class.

Where is the cloak and dagger? The clear undisputed facts are outside the definition of a spy. It is clear that the wife and father of this American pilot are correct when they contend that Pilot Powers has not engaged

in the crime of being a spy.

The evaluation of whether or not we have offended the territorial rights of a nation is more complex. We cannot dismiss this latter charge by simply citing the definition. The rule of law regarding the extraterritorial rights of nations is far more complex and currently in a state of flux. There is no clear-cut agreement among the experts as to where it is or where it is finally going to develop.

There had been a general concurrence among the nations that the air space above a nation's territory is subject to the exclusive sovereignty of that nation. This general and uniform insistence upon such a right by the various nations, of course, was in light of the facts with regard to the use of the air in existence at the tme of the general concurrence. It also took into account the hard, cold, practical fact of international life that the nation over which the airspace lies had an effective method of controlling those who might desire to use that airspace. The antiaircraft defenses generally had been able to give some substantial enforcement in that the range of aircraft did not exceed the range of antiaircraft defense. Undoubtedly this contributed to fixing of the rule just as the 3-mile rule of territorial extension into the high seas grew out of the range of a cannon ball. Prior to the 3-mile rule evolving, many nations asserted sovereign rights offshore without limit. Due to lack of agreement or uniform acquiescence by custom and usage, these claims ultimately failed.

However, in the past few years the space above a nation's territory has been invaded by manmade objects at a far greater alti-tude than can be controlled by the nations whose territory is under the particular airspace. We know today that there is a concurrence among the nations of the world that nations have the right to put satellites into space. Various nations have done so, thereby asserting their rights in that regard. There has been no voice raised against the assertion of this right. While this use of outer space cannot be said to be a custom of long standing, it nevertheless has all the earmarks of a custom except antiquity.

The law with regard to extension of territorial sovereign rights into airspace must be limited to the actual use and ability to control which existed at the time the customary rule evolved. This generally follows the practice employed in the development of the extension of territorial rights which infringe upon the freedom of the seas. nations of the world for a number of years have been whittling away at the long-established customary 3-mile rule to the point now where the rule is regarded as uncertain. But this does not mean that none of the seas are free and open. Similarly at some height above a nation's territory, the exclusive territorial sovereign right over space ends. The fact that the nations have not agreed as to where it ends does not mean that the rule of law is that the nations below have the right to airspace ad infinitum. Nor do they have it above that which they can control and is currently used by all na-

Even though there exists no concurrence as to the boundary between free airspace and territorial airspace, there in fact is a portion which is free and open to all. clear that the altitude at which this American plane was flying was above that which was current practice when custom and usage established the present rule of the sovereignty of airspace. It is also clear that the altitude at which this plane was flying was above the practical ability of every nation to effect significant control. Therefore, because of the vacuum of positive law hibiting the flying at this altitude, the freedom of the airspace applies to the altitude at which this plane was being flown before it was either forced to seek a lower level by reason of either being shot down or suffering mechanical difficulty. The United States and the pilot of this plans were no The United more violating a rule of international law than do the Russian submarines when they lie outside of the 3-mile limit of the coast of continental United States and engage in peacetime reconnaissance and scouting. had the right to use the freedom of the airspace above that which was fixed by positive custom and usage in international law just as we have the right to exercise freedom of the seas. The general concurrence about the use and projection of satellites clearly indicates that there is a limit to this doctrine of absolute sovereignty of the space above the territory. Where that limit lies we do not know, but we can safely say that it is somewhere lower than the elevation at which this plane was flying. The legal ceiling to the airspace subject to territorial control was fixed by (1) the then current usage and (2) ability to control the occupancy of airspace.

There is another area in which the rules of international law relative to airspace rapidly are being modified. Even within the recognized territorial sovereignty control upon airspace, virtually all of the major nations of the world involved in air travel have by treaty agreed to a limit. There exists by treaty among these major nations the privilege of flying across territory of the country without landing. There also is the privilege of landing for nontraffic purposes. The International Air Service Transit Agreement arising out of the 1944 Chicago conference so provides.

While this cannot be considered a rule of law it does give evidence of a substantial and growing dissatisfaction with the rule. It is such dissatisfaction and resultant treaties which give rise to new customary law and define areas of uncertainties in the old.

define areas of uncertainties in the old.

In summary, it is clear that the flight of the U-2 single-engine jet piloted by Francis Powers was not spying. The undisputed facts cry out against bringing the case within the definition of a spy as customarily fixed by international law.

There was no illegal invasion of the customary sovereign territorial rights because the territorial airspace could only be established by custom and usage under international law:

1. The scheduled operating altitude was above the air customarily used.

2. The scheduled operating altitude was beyond the ability of the sovereign territory to effect any semblance of control.

3. The rule relating to exclusive sovereign territorial rights of airspace related only to the airspace to which a continued used could establish a custom, and of necessity this customary rule of law had to fix the exclusive airspace at an altitude below that intended to be maintained by this plane.

If Khrushchev Wants It That Way

EXTENSION OF REMARKS

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BOSCH. Mr. Speaker, the spectacle in Paris this week put on by Nikita Khrushchev has appalled all self-respecting Americans. I think that anyone who had confidence in the good faith of this man has now seen his true colors—people of good faith cannot deal with him.

The United States must be ever vigilant so that another Pearl Harbor cannot happen. We must remember that at the very moment of Pearl Harbor negotiations were allegedly going on in this country supposedly to iron out the differences between Japan and the United States—negotiations are no assurance against aggression.

This is indeed a dangerous period in the history of our country and the world and every precaution should be taken to see that we are prepared for all eventualities. No appeasement, please—appeasement wherever and whenever practiced holds for the world only a catastrophic nightmare.

Under leave to extend my remarks, I include an editorial from the New York Daily News of May 19, 1960, which gives a good summation of the situation:

IF KHRUSHCHEV WANTS IT THAT WAY

For reasons best known to himself, N. S. Khrushchev this week renewed the East-West cold war by torpedoing the Paris summit conference which had been set up chiefly because Khrushchev had insisted on it.

because Khrushchev had insisted on it.

Speculation as to why he wrecked the parley is interesting but not overly useful, it seems to us.

What matters in this ugly situation is that the cold war is on again at full blast, and that Khrushchev wants it that way.

Since that is the Red czar's wish, the Western Allies can choose one of two courses.

They can knuckle under to this tyrant, beg him for another summit, hand him some more concessions, and thereby push communism a long way toward the world conquest which the Communists never have ceased to intend.

Or the West can stand up to Khrushchev, as it did at Paris this week, go on calling his bluffs, and defy him to do his worst. Such a position, of course, calls for intensified Western preparation to fight in case Khrushchev, by accident or design, triggers a war.

Judging from the disgust and indignation Khrushchev's wrecking of the summit has kicked up all over the free world, the West—except perhaps for a few weak-kneed neutral nations—will accept Khrushchev's challenge and take up the cold war with renewed vigor and determination.

Khrushchev's obvious effort to divide Americans has flopped on its face, at least for the time being. Yesterday four leading Democrats cabled to President Eisenhower in Paris a message for the Red Czar, snubbing his demand that the summit conference be postponed until after our 1960 Presidential election.

The four were Adlai Stevenson, Senators Lyndon B. Johnson, of Texas, and J. William Fulbright, of Arkansas, and House Speaker Sam Rayburn, of Texas.

PATRIOTIC CABLEGRAM

These gentlemen thus made it clear that U.S. political differences, as always, stop at our shorelines whenever we are threatened by outsiders. We think they deserve nationwide applause for a patriotic and realistic gesture.

As for various smaller-minded Democrats who hope to make political capital by a Congressional investigation of the spy-plane incident, we think Vice President RICHARD M. NIXON answered them adequately at a news conference yesterday in Syracuse, N.Y.

Go ahead and investigate, Nixon told these politicos in effect—if they think Eisenhower should have yielded to Khrushchev's insulting demand for an apology for the spyplane affair, and if they think the administration should have left a gap in our intelligence operations. We'll be interested in hearing what these would-be investigators have to answer to that Nixon challenge.

Now that the cold war is on again, let's make our next move at Geneva by pulling out of the long palaver with the Russians about stopping nuclear weapon tests.

Khrushchev is willing to keep this conference going—and for an obvious reason. He hopes to stop our nuclear weapon development while his goes right on, and

eventually to trick the West into scrapping all its nuclear arms under an agreement containing no safeguards against Red cheating.

We've been suckered at Geneva these 18 months. That's 18 months too long. Now that Khrushchev has renewed the cold war, we should call off this particular sucker operation of his as fast as we can get our Geneva representatives back home. What with jet planes cruising at just under 600 miles per hour, that can be a fast pull-out indeed.

Central American Economic Integration

EXTENSION OF REMARKS

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. MERROW. Mr. Speaker, as a member of the Subcommittee on Inter-American Affairs of the House Foreign Affairs Committee and as one who feels that Central American peace and security is a crucial link in the chain of an effective inter-American system, I have for some time followed developments in that area with great interest.

The movement toward Central American economic integration, which is taking place under the leadership of Guatemala's courageous and forward-looking President, Gen. Miguel Ydigoras Fuentes, is most encouraging and worthy of our support. The recent consolidation of anti-Communist forces in that country has strengthened free forces not only in Guatemala but in the other Central American countries as well at a critical time in Latin American history.

Another great and enlightened Latin American leader is Dr. Ramon Villeda Morales, President of Honduras. Dr. Villeda previously served as his country's Ambassador to the United States, during which assignment he gained many friends in the United States. As President of Honduras, he is working hard for his people. Much progress has been made, but much remains to be done.

The progress and problems of Honduras are described in the following article by Virginia Prewell entitled "Honduras New Regime Progresses," which appeared in the April 11, 1960, issue of the Washington Daily News:

A young democracy now getting underway in Honduras is a hemispheric bright spot.

In a little over 2 years, a hard-working constitutional regime there has cleared away a great deal of the underbrush that has hindered national growth for generations, and has taken concrete steps toward Central American economic union.

Honduras is a mountainous country that lives by exporting tropical products grown on narrow coastal plains.

The size of Pennsylvania, it has about 1.7 million inhabitants, mostly of mixed Spanish and Indian descent. In the decade 1947–57, Honduras made the stormy passage from dictatorship to constitutional government.

President Ramon Villeda Morales, the Honduran physician who took office in late 1957 with moderate liberal backing, had to start building from the constitution up.

WIFE HELPS

Aided by his accomplished wife, Dona Alejandrina, who helped him run his Tegucigalpa hospital and now is Honduras' unofficial assistant president, Dr. Villeda Morales has given his country a labor code, a social security system, and started it on the long climb toward a better fed as well as a freer life for its people.

Dr. Villeda Morales, in addition to being an inspiring orator, has the gift of simplifying, in slogans, his fairly complex attack on

Honduras backwardness.

In recent conversations with this writer on the dirt-road tour he and most of his Government made with the Government of Guatemala, he checked off the four big I's that he is fighting.

They are ignorance, indigence, insalubrity, and illegitimacy, staggering problems for a country with Honduras' limited budgetary resources.

Dr. Villeda Morales could have added an-

other—invasion.

Last July, Col. Armando Velazquez, once chief of staff for a former strongman, attacked unsuccessfully over the border from Nicaragua.

Alleged intercepted letters published in Tegucigalpa indicate this adventure was backed by Dominican Dictator Trujillo.

LABOR AGITATION

Yet another big trouble stalks Honduras.

Communism has an increasingly dangerous wedge in Honduras in the sympathy many young Honduran leftists feel for Cuba's Premier Fidel Castro. And Castro agents are agitating Honduran labor.

Thus a fifth big I now threatens Honduras' young democracy-indecision among hemisphere leaders in putting a stop to Cuba's Caribbean meddling.

Mr. Speaker, I am glad that the indecision referred to in this article is being dispelled, particularly in Central America. In the final analysis, the best answer to the menace of communism is the building and development of free institutions under which alone can there be fulfillment of man's great potentialities for a better way of life.

Rumanian Independence Day

EXTENSION OF REMARKS OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES. Tuesday, May 10, 1960

Mr. FEIGHAN. Mr. Speaker, under leave previously obtained, I insert in the RECORD an address I delivered at the Rumanian Independence Day rally in Cleveland, Sunday, May 15, under the auspices of the Carpatina Society and the American Legion, on "Rumanian Independence Day":

May 10 is a day of great importance to Rumanian people everywhere in the world because it is Rumanian Independence Day.

In these days it has special significance because the people of Rumania have been robbed of their national independence by the Russian imperialists.

It was 15 years last March 6 that the Russians destroyed the free government of that old and honored nation and imposed upon the Rumanian people a form of government which is completely alien to their rich culture, traditions, and love for human freedom.

In the darkness of those 15 years, the people of Rumania have never lost faith in the destiny of their nation.

They remain convinced that justice will triumph throughout the world-that the cause of freemen will prevail in the affairs of nations and that Rumania will rise once again in all the splendor and beauty of her ancient civilization.

It is this dedication, this unwavering conviction, which holds the people of Rumania in an unbreakable alliance with the people of the United States and all other free countries.

The people of Rumania will be prohibited from celebrating this memorable day by the alien government which has been imposed upon them by the masters of the new imperialism in Moscow.

No public observance of this day will be allowed because the Russians are dedicated to destroying all hope for a return of national independence and because such public manifestations carry the possibility of getting out of hand so far as the occupiers are concerned.

However, the Rumanian people will find ways to observe this historic day, despite the efforts to prevent them from doing so.

What rests firmly in the hearts of men cannot be wiped out by the order of a dictator. Rumanians in the free world will properly

celebrate this day. I am happy and proud that in my district one of the most significant of these celebra-

tions is taking place today.

Free Rumanians will carry high the hopes of the captive people of Rumania.

They will, as in the past, remind all those who love freedom that these past 15 years of darkness have strengthened the determination of the Rumanian people to regain their national independence.

In this they will be performing a service for their adopted country, the United States, because the cause of peace with justice requires the dedication of all our citizens.

Tomorrow the second summit conference will open in Paris.

There a contest will take place between men who represent the cause of human freedom and those who lead the cause of slavery for all mankind.

This will be a test of justice as the foundation for a lasting peace, that is, justice for all nations and all people.

The one paramount issue, the issue which rises above all others at the Paris Conference, is that of political status quo.

The spotlight of public attention has been focused upon such issues as disarmament, a ban on nuclear weapons, the future status of Berlin and a free and united Germany,

Important as these issues are, they avoid the critical question of human rights, the rights of nations and the unnatural division

of humanity by the Russian Communists. It is clear beyond any reasonable doubt that the Russians are going to Paris with but one objective in mind.

That objective is to force the free world leaders to accept a political status quo, that is, to put a stamp of finality upon their empire of captive nations.

Nor can there be any doubt that the Russion leaders desperately need this recogni-

A serious internal crisis grips the vast empire of the Russian Communists.

It is not an economic crisis, even though there is a critical shortage of food and consumer goods throughout the empire.

It is not a crisis at the top, resulting from the constant struggle for total power which is the common characteristic of the regime.

It is a political crisis brought on by the failure of the Communist regime to win the confidence and support of the people and the corresponding demand by the non-Russian peoples of the empire for a complete change in the order of things.

The old order of Russian imperial communism is bankrupt.

It is centuries behind the needs and aspirations of the common man.

Its failures are well known to those who are its captives.

The need for drastic change to avoid total collapse is evident to all who are confined behind the Iron Curtain, including Khrushchev and his crowd.

It is beyond the ability of Russian imperial communism to grant the changes necsary to avoid the great human explosion which is in the making.

If the Communist leaders

grant the changes demanded by the realities of life they will open the floodgates to their own destruction.

They cannot possibly accommodate their system to the changes needed to preserve the empire.

The leaders in Moscow recognize these hard facts of life and are accordingly going to use the Paris conference as a temporary remedy for their internal crisis.

They seek to cause the nations of the free world to associate with them in efforts to

preserve the empire.

The Russians insist that the captive peoples must be made to realize that there is a finality to their unhappy state of life, that there is no hope for their future, that they must make their peace with commu-nism and adjust to the imposed peace of Moscow.

The Russian leaders also need a legal license to employ whatever methods become necessary to hold the empire together.

They feel they must neutralize the conscience of the West so that there can be no public protest or legal proceedings in the United Nations against such future actions as they may find necessary, including genocide and the other crimes against humanity.

This is the insurance policy they want the leaders of the free world to underwrite at

So, to secure these objectives, the Russians propose a status quo and Khrushchev has announced that this will be his goal at the Paris meeting.

Now the question is: How will the leaders of the free world meet this challenge?

Up to this moment there is no evidence available to the public which would indicate what we might do or not do to prevent a Russian victory on this critical issue.

However, it is clear to all that if President Eisenhower fails to raise in principle the right of all nations to self-determination, to self-government, in the context of the Captive Nations Week resolution as defined in Public Law 86-90, the Russians will win their point by default.

Khrushchev has made it clear in public statements that he considers the basic question of the Paris meeting to be status quo.

By so doing he has established the as pertinent to all the discussions which will take place.

If our leaders fall to raise the issue and state our position on it, silence will be taken as assent to the demands made by Khrushchev.

This is a fundamental law of international diplomacy.

It is entirely possible that the Russians can leave the Paris meeting with sound precedent to believe that the United States

has accepted a status quo.

Nor is it necessary for the three Western Powers to have unanimity on this issue in order for our President to speak out. Rumors are rampant in Europe that the British are actively pushing for a status quo, even to the point of a permanently divided Ger-

It is unlikely that France could make herself party to such a deal.

In any case, it is imperative that the United States make its position clear on this issue regardless what great Britain and France elect do do about it.

The future of Rumania and all the other captive non-Russian nations hangs in the

balance at the Paris summit.

While Rumania as a nation will not be an agenda item, the future of Rumania is involved in the issue of status quo which has been created by Khrushchev.

Nor is status quo likely to become an agenda item, but it will hang over all the proceedings and discussions at Paris. It

is the unavoidable issue.

It is, in fact, the reason why Khrushchev forced the leaders of the free world into a

second summit meeting.

These are fitting thoughts for this Rumanian Independence Day commemoration. Those of us who have fought for the rights of the Rumanian nation, for justice for all the nations of the world, do not give lipservice to this cause. More than words are needed.

Political action must be given to this

cause.

I, therefore, have urged President Eisenhower to seize the initiative at Paris, to flush out into the open the issue of status quo, to disclaim any degree of acceptance of status quo for the American people, and to rekindle the hopes of suffering millions behind the Iron Curtain by a firm advocacy of the rights of all nations to self-government, to freedom, and to national independ-

Let us pray that President Eisenhower will lead all free nations of the world in a successful fight for the right of self-determination for all nations and people. Such positive, affirmative, political action will enable the great nation of Rumania to determine its own destiny and to take its proper place among the free nations of the world.

The Dangerous Trend in Foreign Imports in the Carpet Industry

EXTENSION OF REMARKS OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. STRATTON. Mr. Speaker, at a time when efforts are being made by some to adopt legislation which would encourage more American businesses to invest abroad rather than investing in expanded facilities here at home, I think it is especially important that Members of this House should be aware of just how substantial is the threat of foreign imports to many of our basic industries.

One such industry is the carpet industry, located in the great industrial city of Amsterdam, N.Y., long famous as a center of the carpet industry. Largely because of the devastating impact of foreign imports, however, the domestic carpet business has declined and Amsterdam has now been listed for many months as one of the two chronic unemployment areas in the Empire State.

Recently I received a letter from the secretary of the Mohasco Industries, Inc., the major carpet manufacturer in Amsterdam, detailing for me some of the latest figures as to the full extent of the threat which there imports represent to continued domestic business operations. I think it is especially noteworthy, particularly at a time when there is talk of encouraging American investment only in the so-called underdeveloped countries of the world, that the biggest threat of foreign imports in the carpet industry comes from Japan, certainly a country, which at least in terms of the comparison with living standards with the United States, could be considered as one of the most underdeveloped nations of the world.

I hope the day will not be far off. Mr. Speaker, when the Members of this body will recognize the serious situation which industries like the carpet industry face, and, in line with the suggestion of Mr. Kennedy, secretary of Mohasco Industries. Inc., do take steps, as I have often urged in this body, to provide appropriate remedial tariff or quota restrictions to save our domestic industries.

Under leave to extend my remarks, I include the letter referred to:

MOHASCO INDUSTRIES, INC. Amsterdam, N.Y., April 29, 1960.
Subject: Current status of carpet imports. Hon. Samuel S. Stratton, New House Office Building,

Washington, D.C.

DEAR CONGRESSMAN STRATTON: We feel you should be apprised of the fact that carpet imports during the first 2 months of 1960 continued to show an alarming rate of increase. Comparative figures are shown be-

Total imports as a percentage of total domestic industry sales: January and February 1960; 18.1; January and February 1959, 9.9; January and February 1958, 9.5.

Imports of wilton and velvet carpets as a percent of domestic sales of wilton and velvet carpets: January and February 1960, 26.2; January and February 1959, 13.7; January and February 1958, 14.3.

Imports of wilton carpets as a percent of domestic sales of wilton carpets, January and February 1960, 47.0; January and February 1959, 18.5; January and February 1958, 26 6

This astonishing rate of increase stems primarily from the great upsurge in production of the Japanese carpet which began large-scale manufacturing op-erations only within the last few years. There appears to be no limit to the potential increase in volume of the Japanese carpet industry and thus it continues to pose continually increasing threat to our American industry. This fact certainly poses the need for remedial tariff or quota restrictions to safeguard our domestic industry.

We continue to solicit your assistance in this very serious matter.

Very truly yours,
WILLIAM J. KENNEDY, Secretary.

Lemming Fever

EXTENSION OF REMARKS OF

HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the May 9 issue of the Chicago Daily Calumet, an independent daily newspaper published in my district, is, I believe, a most thoughtprovoking commentary on a subject of grave concern to all of us, and I am including it in the RECORD for the consideration of the Members of Congress:

LEMMING FEVER

History proves that the Communists will use any conference or negotiation to serve Soviet interests and not to promote peace. The main purpose of Communist diplomacy, as well as any other arm of the Soviet Government, is to destroy the West.

Their principal purpose since 1917 has been world revolution and the destruction

of world freedom.

The United States of America and its allies have lost at every conference and summit meeting held with them regardless of whether it was held under the auspices of a Republican or a Democratic administration.

It seems that our political leaders and State Department bureaucrats have become imbued with "lemming fever." The lemmings are the small rodents of Scandinavia which periodically have the urge to rush to the sea in a mass suicidal urge of selfdestruction.

There seems to be a strange fascination about summit meetings, conferences, and Camp David retreats that infects American diplomats. The more we lose at each meeting the more the urge for newer and bigger meetings and for higher summits.

Like the lemmings they seem unable to learn or to resist the desire to destroy themselves and the free world with them.

International Cooperation-A Forward Look

EXTENSION OF REMARKS OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. MAGNUSON. Mr. Speaker, I recently had the privilege of listening to a thoughtfully provocative address by our colleague, Representative CHESTER Bowles, discussing the future challenge and direction of our foreign assistance programs, both bilateral and multilateral.

The address was delivered on April 27 to the evening session of the seventh National Conference on International Economic and Social Development at the Statler-Hilton Hotel in Washington,

It is axiomatic that if we forget where we are headed, we may never arrive. Representative Bowles, our former highly successful Ambassador to India and Nepal, here reminds us that "the purpose of economic assistance is to enable free peoples to remain free."

The speech follows:

INTERNATIONAL COOPERATION-A FORWARD LOOK

As we gather here in the interests of international economic and social development, another new nation is born. Yesterday, on the West Coast of Africa, the people of French Togo achieved their independence.

Never has the pace of history seemed quicker or more vivid.

Since the end of World War II, more than score of new nations with a total population of 900 million, have come into being-By the end of this year we shall be dealing

with 9 or 10 new fully independent states in sub-Saharan Africa alone. Ten years from now there may be twice that number. This Revolution of Rising Expectations, so

This Revolution of Rising Expectations, so dramatic and potentially so promising, is what brings us together in this conference.

Amid all the stress and confusion of our current political campaign at least one reassuring fact shines through: Our next President—whether he be a Democrat or a Republican—will almost certainly recognize the vital importance of this revolution and propose a more affirmative course of action to cope with it.

Messrs. Kennedy, Humphrey, Symington, Johnson, Stevenson, Nixon, and Rockefeller have each made it clear that our relations with the underdeveloped nations of Asia, Africa, and Latin America will be at the top

of his agenda next January.

Each has shown a keen awareness of the requirements and the possibilities. Some indeed have been in the forefront of new and constructive thinking about the policies and techniques which are most likely to enable us to play an effective role.

Yet despite this shared consensus among our leading presidential possibilities in both parties, the disturbing truth is that our oversea aid programs are receiving less and less support each year on Capitol Hill.

This year mutual security legislation has been under particularly vigorous attack.

What is the explanation? Why is such a vitally significant program increasingly treated as a legislative outcast, even by some of its erstwhile supporters?

The fault, I believe, does not lie with Congress. Instead, it lies with administration leaders who have failed to explain adequately the real purposes of economic assistance, who have failed to instill in Congress and the people any sense of the real motivation for foreign aid.

Our official explanations for foreign aid have been negative and narrow. They have failed to do justice to our real goals in world affairs

We have said that the purpose of foreign aid is solely to block communism. This argument has helped to make local Communist minorities abroad worth their weight in American dollars.

We have discreetly claimed that foreign aid will win military allies or support for us in the United Nations. This is a futile argument because it is no more possible to buy the long-term loyalty of a nation than it is to buy the endiving loyalty of a friend.

to buy the enduring loyalty of a friend.

We have cynically asserted that foreign aid will turn Asians, Africans, and Latin Americans into loyal supporters of the status quo simply by filling their empty stomachs. This is an equally mistaken argument because a landless laborer or a tenant farmer who lacks a sense of belonging and of justice will not be satisfied with marginal economic gains.

Until we shake loose from such sterile negativism in our official explanations, our economic assistance programs will continue to be in trouble with the Congress and the people.

The time is past due to give the American people the real reason and to repeat that reason again and again until it is rooted deep in the American consciousness:

The purpose of economic assistance is to enable free peoples to remain free, to create within the framework of their own cultures and beliefs independent societies which provide an increasing measure of literacy, good health, economic progress, individual dignity and justice. Our purpose, therefore, is to help assure the non-Communist peoples of Asia, Africa, and Latin America freedom of choice, in the knowledge that free peoples—whatever their disagreements with us—will never choose communism.

Before we examine some of the practical problems with which our new President must cope in getting this crucially impor-

tant effort back on the track, let us look quickly at what has gone before.

For well over a decade now our Nation has been involved in the problems of international economic development. In 1945 we vigorously supported the first steps to bind up the wartime wounds of Europe and Asia through UNRRA. In 1947 we made the momentous decision to prop up the embattled societies of Greece and Turkey.

In 1948 through the Marshall plan we plunged into the creative and massive programs to reconstruct the war-ravaged economies of Western Europe.

And in 1949 with point 4 came our imaginative decision to come to grips with the challenge of economic and technical assistance in the whole underdeveloped world.

Unhappliy we were diverted in 1950 from the high-minded but realistic objectives of the Marshal plan and point 4 by the ruthless invasion of South Korea by Communist forces and by the sudden utter necessity for counter military action by us and our United Nations associaties.

The Korean war which followed was a tragedy in more ways than one. Outside of the huge loss of life its most destructive effect was to narrow our view of world affairs.

Precisely at the time when new nations in Asia and Africa were dramatically emerging on the international stage, we began to regard the world largely as the arena for a vast and unending military struggle between the Soviet and American power blocs.

This diverted us from our budding concern with international economic and social development to an overriding obsession with military aid anywhere, and under any conditions.

Many American leaders began to test the bona fides of each new nation by its willingness to support our policies willy nilly. The doubtful or reluctant ones were written off as neutralists, as cowards, fellow travelers, or worse.

Today, 10 years after the outbreak of the Korean war we have come a long way from such narrow thinking. Our old polarized view of world affairs is increasingly accepted as out of date.

We now face the clear fact that a billion and a quarter people are alined with neither Moscow nor Washington, and we have a new understanding of why this is so.

Experience has given us a deeper understanding not only of the vital need for economic assistance but also of its limitations. We also have a clearer view of the shifting nature of the Soviet challenge under new Soviet leadership.

It is fair to say that we have arrived at a watershed in the history of the postwar era. In a very special sense it is also a watershed in the brief history of what we call foreign aid.

Behind us lie years of experimentation, of successes and disappointments. Before us lie years of unparalleled opportunity and danger.

It is a time generally for sober review and fresh thinking. And nowhere are these qualities more urgently needed than in the field of international economic and social development.

From the 1950's we have inherited policies and programs which often overlap, which often compete with one another, which sometimes hinder orderly political growth, and which are largely inadequate to the realities of the new decade.

Let us consider, therefore, some of the criteria on which a fresh approach may be based, and let us do so with particular reference to the need and the opportunity for the greater internationalization of aid.

DECISIONS FOR THE SIXTIES

I believe that most of us here tonight will agree on the following general principles:

1. Orderly political growth in non-Communist Asia, Africa, and Latin America is essential if we are to live in a peaceful and relatively free world. Continuing economic and technical assistance to the new underdeveloped nations is essential to that growth.

2. The capital needs are great and they will grow rapidly as the new nations are able to expand their efforts. In addition to responsible private investment, major government grants and loans, in both hard and soft currencies, will be required.

 To the maximum degree possible such assistance should be placed on a long-term foundation so that the recipient nations can plan the effective and economical use of all available resources.

4. There should be greater stress on regional development which necessarily goes beyond bilateral nation-to-nation relationships.

5. The excessive budgetary priorities we have given to fragile military allies and our often grudging approach to the so-called neutrals should be revised.

6. In the words of last year's amendments to the mutual security bill, highest priorities should be given to those countries "which show a responsiveness to the vital long-term economic, political, and social concerns of their people; demonstrate a clear willingness to take effective self-help measures; and effectively demonstrate that such assistance is consistent with and makes a contribution to workable long-term economic development objectives."

Having listed our areas of general agreement, let us move from generalities to the more specific courses of action which derive from our common outlook.

It is no longer sufficient to "be for foreign aid" and economic development. It is imperative that we spell out more precisely what we need to do and how best we can do

it, for history is moving fast. THE MANY INSTRUMENTS OF AID

Our economic assistance programs have assumed a wide variety of forms over the past decade. We are confronted today with a proliferation of agencies and organizations, each of which has grown up under its own set of circumstances.

To some extent, this variety is a sign of health. It means that more and more people and governments are caring about the explosive gap between the very rich and the very poor of our world. It also means that people and governments are experimenting with different approaches to the problems of economic development.

Out of such variety—and the competition it implies—can come better techniques and institutions.

But too great multiplicity of approaches can also lead to inadequate planning, piecemeal development, and dangerously uneven distribution of resources.

Of particular importance in the 1960's will be our ability to coordinate and give proper degrees of emphasis to bilateral aid and multilateral aid—to the aid given directly from one country to another, and the aid channeled through an international body.

Let us briefly consider some of the agencies now operating within each of these two categories.

Today U.S. assistance to underdeveloped nations is given bilaterally through the International Cooperation Administration, the Development Loan Fund, the Export-Import Bank, and the Department of Agriculture.

U.S. assistance is also channeled through such multilateral agencies as the World Bank, the International Monetary Fund, the U.N. technical assistance program, and the U.N. Special Fund, the World Health Organization, Food and Agriculture Organization, UNICEF, the International Finance Corporation, and the newly formed International Development Association.

Most of these institutions and programs were established to meet specific needs. Each is performing an important function. And yet inevitably the beginnings of tension between the two forms of approach have emerged.

To a degree the administrators of nationto-nation development and those who work through international agencies have come to view each other as competitors rather than collaborators.

Now there are many substantial reasons for the continuation of our nation-to-nation bilateral assistance. The Development Loan Fund, which deals largely in soft currencies, the Export-Import Bank, which finances American exports into underdeveloped countries, have a continuing major role to play. Other bilateral programs, like those in Korea, Formosa, Turkey, and Vietnam, have special relevance for military, political, and strategic reasons.

Having taken these factors into account, let us examine the advantages of an increasingly multilateral international ap-

Multilateral aid gives all the nations, givers and receivers alike, a vitally important sense of partnership. The psychological advantages are substantial.

Such aid often results in more for our money, both from contributors, and recipients. In next year's budget it is predicted that the United Nations Special Fund will achieve a ratio of nearly 1 to 3 in terms of matching by the recipient governments.

Multilateral aid usually assures that the underdeveloped nations receive funds only for programs rather than projects—and for programs to which their own governments attach importance.

Multilateral aid also means that technical assistance experts can be recruited over a wider area by international bodies at considerably lower salaries than are required to recruit American experts.

Finally, multilateral aid means that the United States need not bear alone the psychological reaction against the donor which frequently occurs in recipient countries when difficult, adverse decisions must be made or when the results of an aid program fall to meet expectations. Here as elsewhere the World Bank has operated with extraordinary competence.

Thus, the advantages of multilateralism are clear. But let us not overlook two formidable drawbacks to the multilateral approach.

In the first place, there has been considerable administrative confusion, overlapping authority, and bureaucratic conflict in the operations of many of the U.N. agencies.

Second, it is extremely difficult to persuade other prosperous nations to contribute their proper share to multination programs of economic aid. All too often, such programs must be largely underwritten by America.

In the absence of larger contributions from others, Congress will continue to take a dim view of bolder international concepts, which offer such promise.

Although these drawbacks are in no sense insurmountable, they must be taken into account by those of us who favor increased ald through international agencies.

I believe a fresh; imaginative review of the coordination or lack of it among the U.N. specialized agencies is long-overdue. Such stocktaking would also encourage these agencies to think in bolder terms about their own functions and potentialities.

As for increased help for other nations to balance a greater effort by ourselves, this too is largely a matter of abler dramatization and persuasion, not only by high officials but by American leaders.

Another factor in a revitalized program of foreign economic assistance must be a much bolder and more imaginative approach to the problem of food distribution.

Ours is the first nation in history to solve its food problem. Yet we continue to view our extraordinary agricultural productivity, and so-called farm surplus that flow from it as a curse.

The irony of such views in a world of hungry people is abundantly clear. This year we are spending more money—\$1 billion—just to store our surplus wheat than we will spend on our entire economic aid program for all of Asia and Africa.

The effective and imaginative use of our agricultural productivity to establish a system of "food banks" in areas now subject to frequent shortage will require careful international planning. Public Law 480 is a step in the right direction. I am convinced that a new administration, however, must seek techniques for putting our surpluses to work on a much broader scale. And we should learn how to make more imaginative use of the local currencies generated by this effort in education, public health, road building, and so on.

A new approach to the problems of economic development abroad should also take into account the need for more stable trade conditions. The economies of underdeveloped nations are largely based on the sale of raw materials to industrially advanced countries and downward speculative swings in the market can completely wreck the best-laid development plan by disrupting the flow of foreign exchange.

This situation is further complicated and embittered by the fact that these trade relations between developed and backward regions were largely formed under the institutions of colonialism. As a result, precarious single-crop economies which can be badly hurt by a relatively modest drop in the price of cocoa, tea, copper, tin, or rubber are sitting ducks for nationalist outbursts against the former imperialist powers.

A thoroughgoing effort is therefore needed to achieve greater stability in the international commodity markets. One means may be the establishment of minimum prices for basic raw materials which guarantee a reasonable return and some stability to the producers.

The establishment of maximum prices may be included in such agreements to discourage the kind of massive speculation which drove prices sky-high after the outbreak of the Korean war.

Finally, let us maintain a balanced view of the role of private capital investment in Asia, Africa, and Latin America. In the early stages of a new nation's development, two major obstacles to substantial private investment, by American, Canadian, or West European interests are apparent.

First, the primary individual needs are for the building of an economic infrastructure—roads, railroads, bridges, docks and multipurpose river projects. These developments are seldom self-liquidating.

Second, in the early stages of economic growth, political instability is likely to be great. Foreign investors therefore are reluctant to move ahead unless their immediate profit expectations are extremely high, and new governments are often unable or reluctant to accept such profits for fear of giving more ammunition to local Communist attacks on the capitalist exploiters.

What we must do, therefore, is circumvent these obstacles and to create new techniques, perhaps through management contracts and other devices, to bring America's industrial know-how to bear on the critical problems of Asia, Africa, and Latin American on acceptable terms.

As political stability grows, the opportunities for private investment in these enormously promising continents will multiply.

One of the greatest virtues of this conference is its concern with specifics. The panel discussions of today and tomorrow are

geared to problems of approach, finance, techniques, and administration in various countries and regions.

To give specific illustrations of the general proposals which I have outlined, I shall refer to the development of Africa.

THE EXAMPLE OF AFRICA

The African continent presents American policymakers today with a dramatic opportunity for creative, sensitive long-term planning and decisive action.

It is a relatively underpopulated continent of enormous undetermined natural wealth. The relation between land, resources, and people is generally favorable to the use of modern technology which permits higher wages and more rapidly rising living standards. It is still largely removed from the pressures of the cold war.

And aside from the major exceptions posed by Algeria and the Union of South Africa on its northern and southern rim, it offers virtually limitless long-range possibilities for the evolution of free peoples toward selfgovernment and economic viability.

Yet we have been tragically slow to sense the importance of Africa.

In the spring of 1960, we still have no effective policy toward Africa. Indeed, it is fair to say that we have not even reacted to Africa as Africa. Rather, our response has been to Russia's new interest in Africa or to the African attitudes of our NATO allies whom most Africans view as keepers of the colonial past.

The establishment of Guinea, for instance found the United States without even a consular agent in its capital, and we required over a month even to recognize its new government. As might be expected, the Soviet Union promptly moved in to fill the political and economic vacuum. Today 80 percent of Guinea's foreign trade is with the Communist dominated nations.

A realistic political policy in regard to the emerging new nations of Africa must be grounded in a coherent policy toward economic and technical development. And that, I am convinced, calls for much more of an international approach than we have used elsewhere.

The achievement of independence is only a beginning. It is a means, not an end.

If a new nation is to make a go of independence, it must have access to able planners, administrators, and technicians.

It must also have access to grants and longterm loans and to foreign trade that respects the long-term interests of the two parties and breaks clearly with the unequal conditions imposed by the old despised colonial relationships.

We have no desire to run Africa. We want no African satellites. Our sole objective is an independent, free Africa, developing in line with the aspirations of the African people.

If we could look forward to an Africa willing and able to remain independent and even aloof from both the United States and the Soviet Union in the years ahead, it would be a handsome bargain.

THE CASE FOR INTERNATIONAL AID TO AFRICA

Our objective of an independent self-sufficient Africa can best be achieved by avoiding to the maximum possible extent the sterile habits and approaches of the cold war. Let us hope therefore that the new administration will press for the maximum channeling of our aid effort to Africa through the multi-lateral agencies of the United Nations.

Meanwhile, it is encouraging to note that the Secretary-General himself is pressing for increased U.N. attention to the specific problems of Africa.

In this regard I would like to make a special plea for the strengthening of one of our most promising international agencies, the new United Nations special fund under Mr. Paul Hoffman, who served so brilliantly as administrator of the Marshall plan.

The most critical African need lies in creating the economic foundation on which a modern society can be built. As someone has put it, you cannot draw water from a tap without first building a cistern. As I have previously noted, the first order of business is the creation of the foundations of economic development: that is, transportation, roads, bridges, power, irrigation, schools, and hospitals.

The United Nations is particularly well qualified to undertake the preinvestment surveys and plans. With an increased budget, the United Nations special fund could effectively underwrite this basic task.

With Africa as well as Asia in mind, I would also make a special plea for increased American support to the International Development Association. This new agency—the brain child of Senator Mike Monrower of Oklahoma—is geared to make long-term loans payable in local currencies under multilateral administration and in close cooperation with the skilled staff of the World Bank.

However, if the United Nations is to play the expanded role which all this implies, there must be improved coordination among the U.N. agencies themselves. Although criticism of interagency rivalries is somewhat less valid than it was a few years ago, the 33 U.N. resident representatives in the countries, in which multilateral programs are being undertaken should, I believe, be given greater authority. If he is to become the essential direct link between the U.N. and the local government, each representative should become the U.N.'s mission chief responsible for all international operations in the nation of his assignment.

As I have already suggested, the role of the specialized agencies, such as WHO, FAO, and UNESCO, should be carefully reviewed. Some experienced observers believe that their functions may increasingly lie in the realm of policymaking and standard setting within a more coordinated international effort rather than in direct program administration.

Yet the political realities of Africa assure that bilateral aid will continue in some form for many years to come.

The United Kingdom, for instance, will continue to channel a sizable amount of aid to former African colonies that remain within the Commonwealth. Continued economic tles to France will result in similar relations between Paris and former French colonies.

However, our national interests and those of the new African nations will best be served by the use of international agencies serving as a worldwide clearinghouse for bilateral programs, in conducting preinvestment surveys, in providing specialized and technically trained personnel, and in fostering a regional approach.

The coordinated regional efforts of the United Nations in developing the Mekong River project in southeast Asia, and the recent success of the World Bank in dealing with the Indus Valley development suggest the possibilities.

THE VITAL CORE: PERSONNEL

This brings us to the question which in Africa may turn out to be the most decisive of all. I refer to the extraordinary dearth of administrative and technical personnel available in the new nations of Africa.

In contrast to India and the former British colonies, such Asian countries as Indonesia suffered greatly from the failure of the colonial powers to provide adequate training of administrators, engineers, and technicians for self-rule.

But how much more difficult are the prospects for the Belgian Congo, now on its precipitous way to independence, with less than 40 college graduates in the entire country? What can we say of the many areas where there are no mathematics teachers, let alone tax experts?

Africa's simple, overriding, urgent need today is trained personnel. Unless able, dedicated men and women are made available in the next decade by the tens of thousands, economic development and orderly political growth in Africa will be impossible.

Where will the teachers, engineers, technicians, and administrators be found?

Will they come largely from the two superpowers—the United States and the Soviet Union—in a massive contest for political influence? Do the urgent demands for African development require that Africa become a new battleground in the cold-war power struggle?

Right here the United Nations and its agencies may find their most decisive role—that of recruiting a major reservoir of trained administrators and technical experts available for the use of new nations everywhere; in short, an international recruitment agency leading to an international civil service.

In the decade of the 1960's Africa will largely be ruled by black men, but to a considerable extent administered by white foreigners. That must be the case until the Africans themselves can create the new generation of leadership.

The needs vary all the way from school-teachers to nurses, from extension workers to men of Cabinet ability who can operate ministries of agriculture, industrial development, education and public health until competent national administrators and technicians become available.

Two years ago the General Assembly approved an experimental program of technical assistance in public administration. This program, called OPEX, is operating on a very small budget, and the Secretary-General has received far more requests than he can fill.

Some such approach, greatly expanded, is, I believe, essential to the success of international economic and social development everywhere, but most particularly in Africa.

Salaries would be paid partly in the currency of the country to which the new international civil servants have been assigned, with the difference between local salaries and international salaries, together with pension allowances, made up from an international

The long-term administrative requirements will ultimately, of course, be met by Africans. American and European universities can do much to hurry the day by vastly increasing their scholarship programs for Africans.

In the interval, which will last at least a generation, the one way to fill the gap-with-out turning Africa into a cold war battlefield lies in the creation on a bold and adequate basis, of an internationalized civil service, open to men and women of all nationalities recruited by and responsible to the U.N.

The problems which Africa poses to us in the crucial 1960's are many and complex. Some are unique to that vast continent, and some are common to all underdeveloped nations.

There will remain for some time, for example, extreme sensitivity to all forms of imperialism—including what may be considered, justly or unjustly, as attempts at economic domination by the former colonial powers and their American ally.

The many-sided challenge of African development as a prerequisite of orderly political growth underscores the urgent need for a new global approach to the problems of international economic and social development.

Such a new approach can only come through effective American leadership by a new administration—Republican or Democratic—in the early months of 1961. It cannot be delayed, watered down, or sidestepped any longer.

Let me conclude, then, by restating the chief lines which I hope such leadership will follow next year and in the decade to come:

1. I hope we will approach oversea economic development with a broad creative view that takes into account the need for increased international trade; for fair, stable prices for raw materials produced in Asia, Africa, and Latin America; for new techniques to encourage responsible private investments; for the more effective use abroad of our enormous capacity to grow food; and for greatly expanded facilities to train development specialists.

2. I hope that our aid efforts will be increased in size, direction, scope and duration to meet the needs of long-term national and regional development programs and to encourage large-scale planning.

 I hope that we will make increased use of United Nations multilateral aid as a supervisory and coordinating umbrella for bilateral programs.

4. I hope that we will press for the formation and use of a vast corps of able and dedicated international administrators and technical experts in the form of an international civil service.

The colonial powers did things to the peoples of Asia, Africa, and Latin America.

In recent years, however inadequately, we have been doing things for them.

In the 1960's we must learn to do things with them

An approach both direct and through the United Nations must be flexible, imaginative, and positive.

It must be attuned to the varying needs, cultures, and political backgrounds of specific nations.

It must be rooted in an understanding of the full significance and challenge of international economic development as a vast new frontier for our Nation and its people.

Only if the new administration which takes office next January senses the opportunity and acts in these terms can we restore the partnership atmosphere of the Marshall plan and of Point 4. And only through such a relationship can we work effectively toward the ultimate abolition of poverty, hunger, ignorance, and disease from the face of this earth.

Aftermath at Geneva-Mr. Khrushchev's Adieu

EXTENSION OF REMARKS

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. LINDSAY. Mr. Speaker, I call the attention of my colleagues to two editorials which appear in today's issue of the New York Times.

The first, "Aftermath at Geneva," expresses the hope that the Geneva conferences will be resumed on June 7, in spite of reports that they face a complete breakdown following the sabotage of the summit by Khrushchev, and that patient effort will be made to reach agreements with the Russians. The editorial concludes with this comment relative to the nuclear test treaty:

If the nuclear test conference is to collapse along with the summit, let the fault rest, here too, with the other side. The second editorial, "Mr. Khrushchev's Adieu," underscores the chilling knowledge that a country whose broken pledges and promises to Hungary, Poland, and Rumania—to name but a few betrayed countries—is hardly in the best position to question the value of the promises of other nations.

Under unanimous consent I include the two articles, as follows:

[From the New York Times, May 19, 1960] AFTERMATH AT GENEVA

The willful destruction of the summit conference in Paris by Premier Khrushchev may portend, as reports already indicate, a complete breakdown of the two other more limited parleys that have been going on in Geneva, the one on disarmament, and the second on a ban to nuclear testing. We hope the reports are wrong.

While logic suggests that Mr. Khruschehev's aggressive tactics at the summit have cut the ground from under any hope of agreement at Geneva, logic is not always an infallible guide to diplomacy. In any event, It is very much to the interest of the free world, as it is also to the interest of the Soviet world, that the Geneva talks resume where they left off, despite the setback at Paris. So far as the 10-nation disarmament conference goes, the gap between the two sides was still vast when a recess was called on April 29. When the conference is resumed on June 7, as we trust it will be, the respective positions will be as far apart as ever; but it is certainly worth a patient effort to see if some progress cannot be made.

The situation is somewhat more hopeful in respect to the proposed treaty on cessation of nuclear weapons testing. Here considerable areas of agreement have already been achieved after many months of painful negotiation. Substantial differences remain, notably over the number of inspections the Russians will allow annually on their territory, the composition of the inspection teams and of the international control commission, and the length of the present moratorium on underground nuclear weapons tests. These are formidable differences, but they are not insurmountable.

While the risks of any agreement on stopping atomic weapons tests are great for the United States, we believe the risks of not going ahead in a sincere effort to find an agreement are far greater. No control system can be perfect; and as a matter of fact any control system practical enough to be agreed on at Geneva would be able to detect with certainty only a small proportion of the possible explosions. In this conection it is worth stressing that the resumption of nuclear blasts announced by President Eisenhower on May 7 had nothing at all to do with military devices, and referred solely to experiments for the improvement of detection methods. The British and Russians had already agreed on such nuclear tests; the only disagreement was whether they should be conducted jointly or by each nation sepa-rately, with representatives of the other nations present. The timing of this announce-ment in conjunction with the U-2 incident, plus confused language on the part of the President's press secretary in explaining it, gave an unfortunate but quite erroneous impression that somehow the United States was resuming nuclear testing with military im-

Even without the summit flasco it would have been exceedingly difficult to reach agreement with the Soviet Union on an acceptable nuclear test treaty. It will now be harder than ever; but we must not show ourselves unwilling to reach a reasonably protected treaty with the Russians on this issue. If the nuclear test conference is to collapse along with the summit, let the fault rest, here too, with the other side.

[From the New York Times, May 19, 1960] Mr. Khrushchev's Adieu

At his final press conference in Paris yesterday Premier Khrushchev renewed his accusations against the United States. Essentially his argument fell into two parts: a complaint that President Eisenhower has promised the ending of the espionage flights only until the end of his own tenure in office next January, and a complaint that this country's promises cannot be respected since they can be changed from administration to administration.

On the first point it may be noted that neither Mr. Khrushchev nor any of his subbordinates have even promised to halt for I day—let alone the remainder of Mr. Khrushchev's stay in office—the glgantic espionage effort his country maintains constantly against the free world. And Mr. Khrushchev surely knows that if he really wants the end of aerial espionage for all time he need only accept President Eisenhower's "open skies" proposal and formalize that plan in an international treaty which would be binding upon all American administrations once it had been duly ratified.

On the second issue it may be suggested that Premier Khrushchev is the last man in the world who is entitled to raise questions about the value of the promises of others. Has he forgotten how many Soviet promises have been betrayed under his own and earlier Soviet administrations?

In Hungary in November 1956, for example, were not all kinds of promises and pledges made to the Hungarian people and their legal government and were not all betrayed? Premier Nagy and General Maleter have long since already paid with their lives for having believed Soviet promises. Has Premier Khrushchev forgotten Poland, where Stalin once promised that a representative democratic government would be installed? Has he forgotten Molotov's long-since violated pledge that the institutions of Rumania would be respected, a pledge made as Soviet troops entered that country during World War II? Has he forgotten Soviet promises about Western access to West Berlin, promises that Stalin broke in the era of the Berlin blockade and which Mr. Khrushchev himself now threatens almost daily to break again? We of the free world know that on the issue of broken promises Mr. Khrushchev lives in a very glassy house

Health Care for the Aged

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. CURTIS of Missouri. Mr. Speaker, the Ways and Means Committee has been meeting in executive session for over 2 months considering various proposals to amend the laws which determine the position the Federal Government plays in the health program our society has for the aged.

These meetings in my judgment should have been open to the public instead of being held in executive sessions closed to the public.

One basic fact has become obvious as these executive sessions continued, that the Ways and Means Committee does not have the information we need in order to act intelligently on this subject. We need to call before us in public hearing the many people in our society who are knowledgeable on this broad subject, people whom we have not heard.

I am inserting into the Record with these remarks a letter I recently received from Dr. Joseph P. Costello, one of the most knowledgeable persons on this subject in the St. Louis community; indeed I would say in the Nation. This letter poses questions on which the Ways and Means Committee largely has no information and, strangely enough, to date has sought no information.

Just what pressure groups are there in our society who would urge the Ways and Means Committee and the Congress to act in this vital area without adequate study?

The letter follows:

St. Louis, Mo., May 18, 1960.

The speech presented by Missouri's Representative Curis covers a number of very valid reasons why the Forand bill is not the answer.

From my experience in annually dealing with 2,700 institutionalized patients and a Senior Citizens Center with over 23,000 visits, the following two major questions with their minor points arise:

1. Who stands to benefit from such insurance legislation?

(a) Is there a demonstrable percentage of aged individuals not receiving institutional care today because of lack of personal finances?

(b) Will the American city be relieved of financial responsibility for the health of its citizens through Federal payment for its "city hospital tradition" of service?

(c) What are the estimated payments that will be made to the municipalities?

(d) Will private charitable "united fund" type nursing homes receive Federal payments for their charity?

(e) To what extent will Federal funds subsidize church, fraternal and other benevolent organizations for their aged care?

 (f) What are the union and corporation health commitments to their retired workers?
 (g) Will union health and hospital obliga-

tions to their older workers be eliminated?

(h) Is there any connection between the union health plans with their excessive costs for the younger workers and the Union demands for Federal Old Age Health Insurance for retired workers in relation to a desire to avoid present commitments or future criticism for poor protection?

(i) In dollars and cents what is the future financial saving this bill will mean to the unions of this country?

2. What does the older person need?

(a) Will our aim be to place all older pcople in an institution?

(b) Is not preventive medicine designed to keep them out of institutions a better solution for the individual?

(c) Do the aged have adequate social security payments to get preventive medical care?

(d) Can the aged purchase adequate housing, nutrition, clothing, recreation, and preventive medicine on current social security payments?

(e) Will social security payments of \$65-\$75 or \$85 per month permit the older person to obtain these essentials?

(f) Will not these inadequate payments promote disability, and physical and mental breakdown through lack of essentials?

(g) Once again, are we to use Federal moneys to encourage good health and preventive medicine, or deterioration and institutionalization in our older citizens?

These questions and personal observation convince me that universal Federal health

insurance is not the answer because of almost incredible reduplication.

Additional Federal funds should be raised and should be channeled to people still in the community in order to help them preserve their health and defer institutionalization through preventive medicine.

Your comments and answers to these questions would be appreciated.

Sincerely yours,

JOSEPH P. COSTELLO, Jr., M.D.

(Copy to the Honorable Thomas B. Curtis, House of Representatives, Washington, D.C.)

Alaska Protests Defense Cutback

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. FLOOD, Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following article from the New York Times:

ALASKA PROTESTS DEFENSE CUTBACK-GOVER-NOR EGAN DEPLORES DECISION TO DEACTIVATE AIR FIGHTER GROUP NEAR FAIRBANKS

SEATTLE, MAY 17.—Gov. William A. Egan, of Alaska, has protested to the Defense Department against "a policy of steady retreat" in Alaska's defense program.

Governor Egan, attending a western Governors' conference here, made public today a letter he sent several days ago to Secretary of Defense Thomas S. Gates, Jr.

The letter concerned "the recently disclosed decision of the Air Force to deactivate the 449th Interceptor Squadron at the Ladd Air Force Base," just outside Fairbanks.

Mr. Egan called the decision "foolhardy, if not irresponsible."

"It is my understanding," the Governor wrote, "that the 449th represents more than 40 percent of the existing fighter strength in Alaska. With its departure, Alaska—the first line of resistance in event of attack— Would be left with a defending force of 33 fighter planes."

NOTES RUSSIAN MISSILES

Mr. Egan said it had long been public knowledge that the Russians had more than two dozen bases along the coast that could easily be reached by intermediate-range ballistic missiles. Military officials, he declared, have implored that offensive ballistic missile sites be constructed in Alaska.

The Governor wrote that it was contrary to all reason that the role of the Air Force could be conducted as well from the West Coast as from Alaska. He said this theory had been attributed to Gen. Curtis E. LeMay, Vice Chief of Staff of the Air Force.

Governor Egan noted too the undeniably crippling effect that the interceptor-plane curtailment would have on the economy of Fairbanks.

"I know I speak for the majority of Alaskans," he wrote, "when I say we are ap-Palled at the apparent disregard reflected by this decision not only for the safety of Alaska but of the United States. light of the present condition of those defenses, as well as world tensions, such a course of action appears foolhardy, if not irresponsible."

Governor Egan asked Secretary Gates to revoke the Air Force decision, if it had not yet come to his attention, or to reconsider it if it had.

CUTBACK PLAN CONFIRMED

WASHINGTON, May 17 .- The Air Force confirmed today plans to deactivate the 449th Fighter Interceptor Squadron.

A spokesman said there was no comment on complaints against this action by Alaskan officials. Senator Ernest Gruening, Democrat, of Alaska, charged in a Senate speech that it was a shocking abandonment of a vital sector of our first line of defense in an area of maximum strategic importance.

Both Senator GRUENING and his fellow Alaskan, Senator E. L. BARTLETT, also a Democrat, called for a congressional investigation of the Air Force decision.

SENATORS ASK INQUIRY

Washington, May 17-Alaska's Senators called for congressional investigation today into the reported plan to abolish the 449th Fighter Interceptor Squadron. Senators ERNEST GRUENING and E. L. BARTLETT, both Democrats, asked inquiries by both the Senate and House Armed Services Committees.

Airlift Modernization

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interview with Representative L. MENDEL RIVERS, of South Carolina, chairman of a Special Subcommittee on the National Military Airlift, as it appeared in the Christian Science Monitor;

AIRLEST MODERNIZATION-A CAPITAL INTER-VIEW WITH REPRESENTATIVE RIVERS

(By Courtney Sheldon)

WASHINGTON .- Representative L. MENDELL RIVERS, Democrat, of South Carolina, vet-eran member of the House Armed Services Committee, with airplanes a special personal interest, and chairman of an influential Special Subcommittee on the National Military Airlift, says: "Everybody has been going hog wild on pushbutton warfare and forgetting what the Army has been say-ing. * * Everybody else has overlooked the possibility of a limited war."

He estimates "It will take a billion dollars" to modernize the Military Air Transport Service.

Question. Sir, in your report you state that "within the first 20 days of either a general war without warning or limited war under any current assumptions for planning purposes, strategic airlift capabilities are seriously inadequate." Could you elaborate on what you mean by "seriously inadequate"?

Answer. The source of this information is classified. I'll just have to say it is inadequate for the reason that we would have terrific difficulty in getting people of highest priority to the right place at the right time.

Those people would have to be carried in military aircraft because of the classified nature of their positions and of the equipment that they would have to operate. Transportation of them would tax every single thing that MATS now has. And there would be a deficiency.

Question. What has happened to MATS's

capability?

Answer. They have only 31 airplanes that are modern out of 400-odd planes. I don't want to minimize what MATS is doing with their inventories. They have done a monumental job. Their exercise Big Slam-Puerto

Pine was fantastic for the inventories they have. Most of their planes are from 7 to 10 years old; yet they carried out that operation without one serious casualty.

I just don't understand why we spend \$42 billion a year for defense and only possess second-class planes to do a first-class job.

Question. Well, how did we arrive at this

situation of such obsolescence?

Answer. I think that everybody has been going hog-wild on push-button warfare and forgetting what the Army has been saying. The Army has been like a voice crying in the wilderness. Everybody else has overlooked the possibility of a limited war, and they have all thought that airplanes would phase out and missiles would take their place. This is the situation in a nutshell.

Question. In respect to the Army needs you just mentioned, you said in your report that STRAC (Strategic Army Corps) is one of a very few major commands in all the services that has not acquired its own air-lift. Do you feel that they should have one or that some part of MATS should be predesignated for Army airlift?

Answer. Our report says it should be MATS on equal priority with the other services. Now we have recommended that MATS' name be changed to MAC—Military Air Command. People have been shooting at MATS so long MATS has become anathema to certain ones. MATS is a command. It is part of a weapons system. People have been sniping at MATS a competing airline. It is ridiculous. MATS is no airline.

Question. You are talking now about the complaints of the civilian aviation transport industry that MATS is unfair competition? Answer. Yes.

Question. Now can Congress order the Pentagon to predesignate MATS planes for Army

Answer. The Joint Chiefs of the Armed Services can do it.

Question. There is no way you can force them to?

Answer. Well, I feel confident that the Joint Chiefs will do this. Our hearings were held for the purpose of helping. This is the first time the subject of airlift has ever been heard in Congress. And the informa-tion we have obtained has been helpful to the military. The Joint Chiefs are fine men. We are all in the same business—survival.

Question. In regard to your recommendations for funds for modernizing MATS, is Congress going to support you?

Answer. The House Appropriations Committee made available \$300 million for immediate off-the-shelf procurement of planes of the type the Army has requested, the 130-B with extended range. That plane is already in production. The House has approved and the bill has gone to the Senate.

Question. What was the administration's request concerning airlift modernization?

Answer. The administration requested only \$50 million to begin development of an uncompromised cargo plane. It recommended nothing to modernize MATS at this time. This would only be the beginning of a devel-

We, too, have recommended development of the plane. It takes from 4 to 5 years to develop a plane. We need planes now. will take many more hundreds of millions to bring MATS up to what it should be. would venture the assertion that it would take a billion dollars to do the job.

Question. Has there been any significant opposition within Congress itself or without Congress to your recommendations so far?

Answer. I haven't found a single opponent

Answer. I haven't found a single opponent in the Congress, not a single one. It has been remarkable how people who have been fighting MATS have joined with us and sponsored our program. I know people who have been fighting MATS terriffically, called it an airline, now they have joined us and it demonstrates a bigness of men in Congress after the foots have been obtained. gress after the facts have been obtained.

Is Washington, D.C., Really a Hick Town?

EXTENSION OF REMARKS

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. McDOWELL. Mr. Speaker, the New York Times magazine, December 27, 1959, in a provocative article by its music critic, Howard Taubman, titled "In Culture, Is Washington a Hick Town?" said any comparison with other world capital cities such as London, Paris, and Moscow, as well as Brussels, and Rome "is to our discredit." Washington, D.C., the Capital City of the richest Nation in history, was, in the judgment of the New York Times, epen behind Tiflis, U.S.S.R., in cultural matters.

Recently a more balanced article was written for the New York Times by one of the ablest members of its Washington bureau, Alvin Shuster, who makes his home in the metropolitan area of the Nation's Capital and is free of much of the cant and provincialism which is the hallmark of the art critics of the New York Times.

The article by Mr. Shuster is a hopeful article, and reports factually on the many proposals in the Congress and elsewhere designed to make it possible for the Nation's Capital to assume its proper role in the fine arts which, in the moving words of President Elsenhower, "make our civilization endure and flourish."

Unfortunately, the New York Times, which carries on its masthead the powerful phrase, "All the News That's Fit To Print," failed to print Mr. Shuster's fine article.

Feeling, as I do, that the thousands of loyal subscribers to the New York Times who live in or near the Nation's Gapital will be deeply interested in a balanced appraisal of its cultural life—including Members of the Congress—I include part of the text of Mr. Shuster's article as part of my remarks:

In his article, "In Culture, Is Washington Hick Town?" Howard Taubman, Times music critic, felt the cultural pulse of the city and completed the best much too slowly.

city and concluded it beat much too slowly.

"I get annoyed at the too-ready attitude of everybody to take a crack at Washington. They like to compare its cultural life to that of Vienna. What's there in Austria but throughout its country. And the same goes for Brussels"—David B. Karrick, a District of Columbia Commissioner.

"I feel almost ashamed everytime I see the Italian Ambassador attending an opera in this town"—A Washington operagoer who's seen a few in Italy, too.

"Twe been a resident of Washington off and on for 32 years and I take offense at

implications this is a hick town. It is wide open with cultural opportunities and this community takes advantage of everything it has to offer. I don't think any community reaches the optimum of culture"—Secretary of Health, Education, and Welfare Arthur S. Flemming.

"The sad fact is that the Capital is laggard in its provisions for the arts, and its backwardness invites criticism, however annoying"—The Washington Post and Times

And so it went. In summary there is agreement that much has to be done to erase the international image that this town suffers from cultural poverty. But there is nevertheless some indignation—often among the same Washingtonians—that what has been done, what is being done, and what is being planned are too easily and conveniently overlooked by critics. The general concensus briefly is that while this city may be no great national showcase of culture, it is no cultural backwater either. Somewhere in between lies the real cultural Washington.

Washingtonians like to illustrate their cultural life by pointing with pride to their improving national symphony; to the art galleries like the National, the Corcoran, and the Phillips; to their opera society, considered by many as first-rate though hampered like most operas by lack of funds; to its infant Washington Ballet, which has just acquired Frederic Franklin as its codirector and should show steady improvement; to the excellent chamber music at the Library of Congress and its crowded music calendar of many other events; to the Arena Stage, the local professional theater, and to the elaborate plans for the National Cultural Center with its opera, symphony, ballet and theater halls.

At the same time, of course, they do acknowledge a very serious lack of good facilities. Constitution Hall is the convention hall of the Daughters of the American Revolution and was built just for that. serves as the home of the National Symphony and is viewed by many as an acoustical horror. To put on an opera or ballet at George Washington University's Lisner auditorium, where most are performed, half the musicians have to sit outside the orchestra pit on many occasions. The National Theater is the only place in town for Broadway shows. The Arena Stage operates in an old brewery, soon to be torn down. And the Metropolitan Opera has decided to hold off on all future appearances here because of the difficulties of operating out of the Capitol Theater where it has performeda large movie house with a too-small stage and a too-high rent.

Also acknowledged is the fact that the auditoriums in our Government buildings here are inadequate. In many ways they are some of the finest halls in the city, but there seems to be one major fault. Their stages can't sustain the weight of a plano. Nadia Boulanger, one of France's most famous musicians, found her piano in the aisle at the Interior Department's audi-

Mr. Karrick, one of the three city commissioners, thinks that any consideraion of the adequacy of the culture here cannot rule out the beauties of Washington's architecture.

These are dismissed often as consisting of building after building. Anyone who can so casually dismiss the Lincoln Memorial, the Jefferson Memorial, the Archives Building, the Library of Congress, among others, is so obviously unable to discriminate and appreciate architectural beauty that little can be said to convince him. The Folger Shakespearean Library is often overlooked. It is unique in the world, for in all probability, nowhere outside of Stratford-on-Avon, if there, is there as fine a collection of Shakespeareana and works on the Elizabethan Theater.

"Admittedly we do not have everything, but we have such an abundance of cultural opportunity and such good attendance that it is ridiculous to contend that we are not a cultural city. A part of the contention seems to be based upon the fact that the expenditure by the municipal government is small. This is irrevalent. The opportunities are here, Washingtonians enjoy them. If visitors do not, that does not justify deprecating Washington's cultural standards.

"Many of the people who sit around and moan at the lack of culture in Washington have never bothered to go to an art gallery or to a concert. They would rather sit home and gripe about the fact that there is no such opportunity in the city."

This may be true, but there are certainly many, many other Washingtonians who do not sit home and gripe. One day recently, the writer tried to get tickets to four Washington events only to find all four sold out: the Boston Symphony, the National Theater's presentation of the Lunts in "The Visit," Chekhov's "Cherry Orchard" at the Arena Stage, and Catholic University's pro-duction of "Romeo and Juliet." National Symphony attendance is at an alltime high. And Washington's music calendar for March is most impressive with an event of some kind every night except two, including concerts at the National Gallery and the Phillips Gallery, string quartets and chamber music at the Library, chamber music at American University, and much more. Even the Natural Museum of History came up with a musical program the other day-early bareque music played on early bareque keyboard instruments.

There is then little evidence of native insouclance when the public contributions to the symphony total \$250,000, to the opera, \$50,000, and to the local ballet, \$25,000, all in addition to the sums given to sustain the private galleries and other cultural efforts.

Indeed, Washingtonians retort, much of what is done here is often overlooked by others. For example, Glenn Gould, the Canadian pianist and one of the hottest properties today, gave his American debut at the National Gallery. Violinist Christian Ferras made his American debut in a small auditorium in nearby Silver Spring, Md. Yet, music critics here point out, when both these artists went to New York several days later, their performances were described as their "American debuts" and New York, in effect, took credit for the achievement.

What needs to be done? Washington's real hopes are resting on the elaborate plans for the National Cultural Center. The Government has provided some 10 acres of good waterfront property, but the more than \$70 million needed for construction must be ralsed from private sources. This may not prove to be an easy task.

"I feel ashamed about this sometimes," one Member of Congress commented. "Look at what we're building on Capitol Hill here. We're spending nearly \$200 million extending the East Front and Portico, building a new House Office Building and a new Senate Office Building. We should and can afford to do more to advance culture here by providing additional funds."

Is Congress really the answer to the enhancement of Washington's cultural life? Representative Frank Thompson, Jr., New Jarsey Democrat, who has been in the forefront of congressional efforts to encourage the arts, thinks it may well be.

"It is up to Congress as the City Council of Washington, a city lacking home rule, to end these charges that the city is a hick

town," he says.

"But I sometimes get the feeling that jockeying for political position and party giving help substitute for culture here. And in Congress there often seems to be a massive apathy toward anything cultural. If it is not a pork barrel issue or a bread and butter issue, they seem to be against it. We've got a few guys up here who call ballerinas toe dancers, and that kind of thing. There simply are no votes in promoting culture in Washington."

If this is true, and from what hasn't been done in Congress all these years indicates that it is true, then looking to Congress to help elevate substantially the cultural life here may well be in vain. To some this would not necessify be a disappointment.

For there is among that group of residents who have the civic pride and the money to actively support cultural activities here some real division ever whether Government support would be wise. Those who are for it say that without it Washington's status as a center of culture may never be achieved. But there are others fearful of possible political interference and control over programs and activities once the door is opened. illustrate their argument they like to tell the reported story of the city controller, who because the city helped finance the symphony there, signed the paychecks along with a symphony representative. Some years ago the symphony played Beethoven's Ninth which called at one point for four very able soloists. When it came time to pay them the controller balked, saying: "Those four only stepped out of the chorus and sang a

Those who favor Government financial help, however, hear few complaints stemming from agriculture, aviation, or shipping subsidies, or from the tax relief to business, or from the tax on fishing and hunting equipment that makes sure our sportsmen will have something to hunt and fish.

But there is also a fear among supporters of the National Symphony, however, that any token Government support might well be worst than no support. They argue that a contribution of only \$25,000 might dry up much more than that in private funds from contributors who might tend to feel their money was no longer needed.

Another less basic issue in the way of congressional financial support is the image many Members of Congress like to create back home of being just corn-fed, homegrown, log-cabin boys who don't know nothing about this here culture thing. "All of us have been just a bit guilty of that," says Representative James C. Wricht, Jr., of Texas. "But I think we have reached the state of maturity in this Nation when that kind of attitude no longer becomes us. Sooner or later we have to grow up and stop poking fun at things intellectual and cultural."

Nevertheless, there are those in Congress who agree with men like Representative H.R. Gross, Iowa Republican, who argued against the cultural center bill. He noted that we were being criticized by diplomats in some 80-odd embassies in Washington because of no such center.

"My answer is that if these people do not like our culture, they know what to do about it. I would say further that if we had just a few of the billions of dollars that we have given to foreign freeloaders over the years we could build a cultural center every 15 feet in the District of Columbia. I don't care how many cultural centers the people of Washington want to build on land they buy with their own money. I want them to get off the backs of my taxpayers."

Of course, Washingtonians have very little control over their own tax dollars, which go direct to the Federal Government. Each year the city's Commissioners have to go hat in hand at budget time to get congressional approval for every dollar they hope to spend. Here, too, because of other public needs, culture comes last. Only \$16,000 is being spent a year out of a local budget of around \$200 million. This compares with local cultural outlays in New York of about \$2.6 million; \$817,000 in San Francisco; \$790,000 in Chicago and \$543,000 in Detroit. Even Hagerstown, Md. spends almost as much as the Nation's Capital in municipal funds for the arts. And Evansville, Ind. spends more, setting aside almost \$37,000.

The Commissioners tried 7 years ago to get Congress to authorize a subsidy of up to \$25,000 for the National Symphony, but the

proposal bogged down.

Accordingly, one of the ideas is to give the city—if not home rule—at least some discretion over how it is to use its funds. Senator J. W. Fulbright, Democrat, of Arkansas, and chairman of the Foreign Relations Committee, feels that "control of its own affairs is definitely part of the answer." The National Gallery of Art—now maintained by the Federal Government—might never have been built, he says, if it were not given by Andrew Mellon.

In this connection, Representative Thompson; and Representative Harris B. McDowell, Jr., Delaware, Democrat and another champion of Washington culture, are sponsoring along with others a bill to set aside one-tenth of 1 cent of every tax dollar in Washington for cultural work. At the current tax yield, this would come to about \$180,000, to be matched by Federal funds for a total of \$360,000.

Other ideas from Members of Congress interested in cultural advancement here have included a "national showcase program;" to creation of the Federal Advisory Council on the Arts, which has been before Congress for years; the establishment of a national portrait gallery in the old Patent Office Building, and even the appointment of a "master of the President's music."

"master of the President's music."

The "showcase" proposal—a similar bill was passed by the House several years ago—would encourage the development and growth of the arts in colleges and universities. One of the proposals in the bill now pending would be to present in Washington a series of international fine arts festivals and competitions.

"Through such a program," Representative McDowell believes, "an international music competition could be held in Washington annually with so impressive an international aggregation of judges that the winners would be launched in their professional careers as Van Cliburn was launched by Moscow."

As for the national portrait gallery of famous Americans, Senator Hubert Humphrey and Representative George W. Rhodes, who are sponsoring this plan, believe it would "make a major contribution to our national life, foster patriotism and educate the coming generations in the high ideals which distinguish us as a Nation."

The administration had been planning to tear down the building, which was designed by Robert Mills, who also designed the Washington Monument and the Treasury Building. And some here like to cite this among other things, in complaining that Washington could use something more than a "lackadaisical" attitude on culture on the part of the administration.

"A little strong leadership from the White House wouldn't hurt," one Democrat in Congress put it. "The President said back in 1955 that the 'Federal Government should do more to give official recognition to the importance of the arts and other cultural activities." But his recognition has been to come to only three concerts since taking office."

In this connection, Representative Mc-Dowell is giving his support to the idea of a "master of the President's music," who would be consulted from time to time on the music to play at ceremonial occasions. It seems the proposal stems from the criticism of the selection of songs like Zippety-doo-dah—a wonderful ditty in its place—that was played at the White House dinner for Premier Khrushchev. The feeling was this was perhaps misleadingly illustrative of the city's cultural status.

A National Conservatory of Music or a U.S. Academy of Music have also been proposed. Paul Hume, a music critic here, has urged this and suggested that the new cultural center might well serve as the residence of the conservatory.

Just what is to go into that cultural center, when and if it is built, is also creating some discussion among those Washingtonians who are looking ahead. The emphasis has been on getting it built. But some basic questions are being raised. Should it be the home of the National Symphony, for example? Should it have resident companies like the Washington Opera and Ballet? The arena stage, which wasn't consulted by the center officials, has apparently been lost to it because it plans to go ahead with its own new building. Shouldn't there be intensified efforts now to strengthen existing performing companies and to create new ones of a truly first-rate, national character?

Secretary Flemming, chairman of the center's board of trustees, believes that once the center is up, increased incentives will be provided for improving the city's cultural groups. And he believes it can be done through private contributions.

"I'm not at all convinced Federal funds are yet needed for any of this now," he says. "The curve is definitely up in Washington culture. It has made tremendous strides. Community support is increasing, not decreasing. I'm confindent it will continue.

"Once the center has been built, we hope to attract groups of great caliber. I think what we have to keep in mind is that they will be performing before a national audience here in the Nation's Capital. People from all across the country will get the chance to see what we are doing. In this way. Washington will really begin to emanals culture."

Washington then seems to be on its way. To many here its cultural life in some respects is quite admirable. But there is no doubt about all these proposals including the cultural center generating artistic endeavor; a concert-going President, a contemporary art gallery are two, a significant series of international competitions, intensified community efforts, a ban on zippety doo-dah, some self-government, much more money, both private and Government—just these "few" things—would do absolute wonders for our pulse rate.

Resolutions of International Relations Study Group, Wausau Branch, American Association of University Women

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. WILEY. Mr. President, in a world—comprised of different nations with a wide variety of political systems, cultures, economies, and other differing aspects-there are naturally "cross-Winds" that make establishing peace and stability an extremely difficult and complex challenge.

If there is ultimately to be peace, however, we recognize that nations of the World must somehow find a way to resolve differences with due consideration for the interests of the involved nations.

As we strive to find the answers, we naturally need the benefit of the best

thinking in the world.

As a leader of the free nations, the United States has a particular responsibility for so conducting its policies as to promote peace, opportunity and a spirit of cooperation among nations. A major problem, of course, is to develop the machinery by which such solution can be obtained, accommodations not only bilateral, but also multilateral, efforts to resolve international problems.

Recently, I was privileged to receive from Ethel Ziebell, chairman, International Relations Study Group, Wausau Branch, American Association of University Women, a series of resolutions for U.S. policy in the Far East. In a public-spirited program, this splendid group of university women undertook an intensive study of India and Pakistan, delving into the geography, religion, history and structure of economy, and other aspects of the two countries. Out of the study emerged a series of recommendations on U.S. policy relating to these particular countries.

Overall, these resolutions reflect the kind of universal study and thought needed—and to which civic-minded groups can contribute much—if we are to deal effectively with complex world challenges. I ask unanimous consent to have the letter from Miss Ziebell containing the resolutions—which, in large part, merit the consideration of Congress—printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. ALEXANDER WILEY, WAUSAU, WIS., May 16, 1960. U.S. Senate, Washington, D.C. Hon. WILLIAM PROXMIRE, U.S. Senate, Washington, D.C. Hon. MELVIN LARRD. House of Representatives, Washington, D.C.

GENTLEMEN: According to Barbara Ward, the noted British economist, the next 10 Years will be a period of challenge and change

unequalled in human history, and the democratic form of government will be put to its most crucial test.

The fate of democracy in Asia will be determined by the outcome of the economic development race now underway between democratic India and Communist China. Wishing to become better informed on developments in this part of the world, 18 members of the International Relations Study Group of our Wausau branch of the American Association of University Women have spent the past year studying India and Pakistan. We delved into the geography, people, religions, history, government, education, leaders, Kashmir dispute, economics, and the relations of the United States with both countries.

Our national organization is one of study, then action, so having completed this very rewarding study, our group feels the action responsibility lies in recommending to our Congressmen various areas of legislation to improve the relations between our countries.

Following are a few of the conclusions we reached. Some require legislation, or strengthening of existing instruments; others require the education or alerting of

the American public.

1. Develop an awareness and understanding of these Asian peoples. By studying their history, religions, and various aspects of their background, one is better able to interpret the needs and desires of these people who are desperately trying to transform old world societies into modern industrial states.

2. Expand cultural, informational, and educational relations between our countries. The introduction of departments of Indian studies in some of our major universities is a healthful sign. We recommend the extension of this practice, and also the de-velopment of similar departments of American studies into their universities. Indians and Pakistanis need to know more about us than the false impressions many gain from second- and third-rate movies.

3. Extend financial assistance to India so that she may accomplish the goals of her third plan and provide an economic base for future self-sustaining growth. Pakistan has not advanced as rapidly in economic development as India, and we recommend that while aiding in the development of India's full potential, Pakistan be encouraged to develop to its own full capacity. Our economic assistance should be coupled with expanded trade, for without trade, aid can die on the

4. Develop a more ambitious and long-term approach to these problems, rather than enacting emergency measures or expending effort to strengthen our allies for primarily military reasons. One of these long-term goals might be an atempt to effect a mutual defense and disarmament agreeement between these two countries, so that funds now directed toward military preparedness against one another could be directed into more constructive channels,

5. Emphasize the multilateral approach in this program of economic and technical cooperation. Other western countries are now in a position to join in providing aid, and the United Nations offers a means of in-creasing the total effort while avoiding the difficulties inherent in the bilateral method. We realize bilateral programs will be useful in certain instances, but the emphasis in the future should be on the multilateral ap-

In order to attain these and other foreign policy objectives in this rapidly changing world, the American people may be required to make sacrifices. When they are fully apprised of the crucial problems facing our country, we believe they will cooperate as they have in other times of crisis. In your position as an elected representative of the

people of Wisconsin, we urge you to enlighten and guide public opinion in this critical field of foreign policy.

Yours very truly,

ETHEL ZIEBELL, Chairman, International Relations Study Group, Wausau Branch, American As-sociation of University Women.

A Waste of White House Time and Money

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following exchange of correspondence between Mr. Bryce N. Harlow, Deputy Assistant to the President, and me. It speaks for itself:

MAY 17, 1960.

The Honorable CHARLES O. PORTER, House of Representatives, Washington, D.C.

DEAR MR. PORTER: On Saturday last, as he completed preparations for the summit conference in Paris, President Eisenhower requested me to send to you, in his behalf, this note of gratification and appreciation for your support of the mutual security authorization bill. He stressed once again his profound conviction that this program is indispensable to our own and free world de-fense against Communist imperialism, and indispensable also in encouraging struggling millions in less fortunate nations in their effort to live their lives in freedom. It is a program requiring, he said, un eserved sup-port by all of our informed citizens and officials, and he feels it would be the height of folly to allow isolated administrative shortcomings and disappointments, or local considerations, political or otherwise, to tempt anyone to jettlson or cripple the entire undertaking.

Especially the President voiced this hope, and asked that it be communicated to you in his behalf, that your responsible act of support for the mutual security authorization be matched by a determined resistance to any effort to effect massive reductions in the mutual security appropriations soon to be considered by the House. Massive reductions, he pointed out, can be accomplished only by undermining our own security, free world security, and the cause of human freedom everywhere in the world.

The President asked me to explain that he would have advised you himself of these views had his time permitted before leaving for Paris.

With best wishes.

Sincerely,

BRYCE N. HARLOW, Deputy Assistant to the President.

HOUSE OF REPRESENTATIVES. Washington, D.C., May 19, 1960.

Mr. BRYCE N. HARLOW. Deputy Assistant to the President,

The White House.

DEAR MR. HARLOW: I have just received your letter telling me that the President told you to tell me that he approved of my approval of the mutual security authorization bill. I note you say that the President him-self would have advised me but that he was busy preparing for the summit conference.

In all frankness, however, I do believe that the White House automatic typewriters, clerical staff, and your own services could

be more usefully employed than in getting out these letters to me and my colleagues. Such transparent and artificial devices as your form letter are a waste of time and money.

Of course I am pleased to know that the President is seeking to lend his support to the mutual security program, but I do be-lieve there are better ways.

Sincerely,

CHARLES O. PORTER, Member of Congress.

Washington, D.C., International Race

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1960

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement which I have prepared on the Washington, D.C., International Race, the "Olympic of Racing," held on Veterans Day at the Laurel, Md., racetrack.

There being no objection, the statement was ordered to be printed in the

RECORD. as follows:

WASHINGTON, D.C., INTERNATIONAL RACE-THE OLYMPIC OF RACING

On November 11, Veterans Day in the United States, the unique Washington, D.C., International Horserace will be presented to the sporting people of the world for the ninth time. As each year becomes history, global interest shows a decided increase, not only among the peoples of the world who breed, own, and race thoroughbreds, but also by racing's millions who thoroughly enjoy keen competition anywhere.

By its very nature, the Washington, D.C. International is an "Olympic of Racing." adding a sound sporting idea to modern air transportation, the Laurel Racecourse has developed an international spectacle already the equal, if not surpassing, other worldwide contests featuring representatives of various countries in a struggle for global

supremacy.

The Washington, D.C., International, with its Olympic overtones, is especially significant this year, a year in which the United States engages the nations of the world in

athletic prowess.

Horse racing is not included on the official Olympic agenda at Rome, but what could be more fitting than for this great Maryland racing classic to serve as an Olympic vehicle? Understandably, it would be unofficial. But it isn't too far-fetched to see this sporting equine test, involving all the skill, speed, and stamina connected with the ancient Olympics, as a part of the games every 4 years, albeit not counted officially.

The race, begun in 1952 by Laurel president John D. Schapiro, was planned with this very idea in mind, that the best horses in each country, meeting on grass, the natural footing for a thoroughbred, and at the classic distance of a mile and a half, should have the opportunity of competing for the world championship of racing, in the same manner the various nations battle for su-premacy in other sports. This certainly parallels the Olympic pattern.

Present-day air travel, with its speed and up-to-date equipment, has been largely responsible for this new era of international racing, but it remained for Laurel to do the pioneering and earn the success. It has

meant work-hard work-and a lot of time, but the sporting people of the world now have a race of worldwide importance: a race in which the various champions of each nation can meet on equal footing in a battle for the bluest of all blue ribbons-a world championship.

It is especially fitting that this "Olympics of Racing" is held on Maryland soil. A small State in size and population, Maryland is nevertheless one of the Nation's leading producers of the thoroughbred horse. Over 55,000 acres are devoted to this industry, and farms range from the 2,500-acre Holly Beach farm near Annapolis to the half-acre lot near Timonium where the fabulous Maryland-bred horse, Yes You Will, was raised.

The area comprising Baltimore, Howard, Hartford, Prince Georges, and Montgomery counties, produces 13 percent of all the thoroughbreds foaled yearly in the United States. And yet, with all this production, all but a small minority of breeders retain their produce for racing purposes, as compared to the commercial breeding establishments of Kentucky and Virginia.

So it is with a great deal of pride that I am able to point out that Maryland is the scene of the Washington, D.C., International. Despite the name of the race, it is Maryland's own, being staged by Marylanders on It carries the name of Mary-Maryland soil. land all over the world, something no other sporting event in the State does, because racing, unlike other American sports, is known far and wide. And the Washington, D.C. International, by its very name, is of prime importance to the vast amount of people all over the globe who have a strong affinity for the sport of horse racing.

Jobs After 40

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 26, 1960

Mr. HOSMER. Mr. Speaker, some time ago Journalist Sam Crowther wrote persuasive article entitled "Are We Junking Our Mature Brains?" It appeared in the November 1956 issue of Coronet magazine. The following excerpts from the article are still very good reasons why discrimination against persons over 40 by employers is a wasteful. unreasoned practice which should stop for the benefit of the country:

WORKERS ON THE SCRAP HEAP (By Sam Crowther)

The Iron Curtain of job opportunity has dropped on all levels of employment. many industries, 45 has become the end of the road for an experienced man who is unemployed or is looking for another job.

Employers give these most common reasons for not hiring older workers:

Poorer productivity with resulting increased production costs. All studies, however, indicate the contrary.

Greater absenteeism: Yet a study by the Bureau of Labor Statistics showed that the mature workers possessed a 20-percent better attendance record.

Accident proneness: The highest accident rate is among workers under 21.

Lower dependability: However, long experience points up the value and stability of older workers.

Pension costs: In the case of pension costs, measures must be taken on a broad scale in order to remove the present hiring barriers.

The Iron Curtain against men and women past 40 is being attacked on a number of fronts.

Nationwide, Secretary of Labor Mitchell has launched a six-point "Bill of Rights" pro-gram to benefit the older worker. Its recommendations include:

1. A guarantee that workers be selected on the basis of qualifications for the job, regardless of age.

2. That workers reaching retirement age be permitted to continue working if they wish.

3. A complete analysis, incorporating local studies, on the performance, productivity, absenteelsm and faithfulness of older work-

4. Incorporation of clauses against age discrimination in collective bargaining contracts.

5. Expansion of Government placement services for older workers.

6. Tapping the vast resources of mature women to meet pressing shortages as in the nursing and teaching fields.

The Fraternal Order of Eagles has, for long, run an effective campaign to ban job discrimination based on age. It carries on through education, persuasion, and seeking of nondiscrimination legislation. Labor has supported the Eagles campaign, as witnessed by the following testimonials:

Walter P. Reuther, president, International Union, United Automobile, Aircraft, and Agricultural Implement Workers of America: "It would appear that the best way to get action (on the Fraternal Order of Eagles national campaign on 'jobs after 40') will be through collective bargaining and legisla-tion. Your organization is to be congratulated for its recognition of this important problem and the need for national action to deal with it."

August Scholle, president, Michigan CIO Council: "In many instances we now have people being laid off due to new automated production methods who are in the age category of from 40-65 years, and in many instances these people are obviously unable to find employment anywhere. We therefore wish the Eagles success and we will do everything we can against any discrimination in employment of workers."

William L. McFetridge, general president, Bullding Service Employees International Union: "We congratulate the Fraternal Order of Eagles upon its 'jobs after 40' activities and assure you that we will support them in every way we can. The denial of jobs to men and women simply because they have attained a certain age is of the gravest concern to our entire society."

Joseph A. Kinch, director, education and research, Indiana CIO Council: "The Indiana State Industrial Union Council was very happy to learn of the activities of the Fraternal Order of Eagles on behalf of workingmen and women over 40 years of age. You may be sure that we will lend every support. The Eagles are to be commended."

Lee W. Minton, international president, Glass Bottle Blowers Association: "Persons 40 years and over still have many years of productive life ahead of them and our economic society, if it is to continue expanding, requires participation by this potential labor force. Eagle efforts in this crusade on behalf of wage earners over 40 are commendable."

president, Iowa Federation of Ray Mills, Labor, AFL-CIO: "Our organization is willing and happy to work with the Engles in this drive to eliminate the discrimination against men and women past 40. Your orgenization and ours are interested in a common cause.

Jesse Clark, president, Brotherhood of Railway Signalmen of America: "You may be assured that we are in full sympathy With the Eagles in your actions regarding the practice of many employers in invoking Job discriminations against men and women Over 40 years of age."

Ray Ross, president, Ohio CIO Council: "We are very much interested and highly elated that the Fraternal Order of Eagles is turning its attention toward eliminating Job discrimination in the hiring of men and Women over 40."

T. C. Carroll, president, Brotherhood of Maintenance of Way Employees: "You are to be complimented on this endeavor—an all-out Eagle campaign to enact State and Federal legislation barring discrimination

age. We will be glad to cooperate in any Way we can to make the campaign a success. Mitchell Sviridoff, president, Connecticut State Labor Council: "It is most gratifying to learn of the Eagle concern with the problem of discrimination in hiring against men and women over 40. Our State organization Will cooperate with your local chapters with

against men and women over 40 years of

respect to this program." Ed S. Miller, president, Hotel and Restaurant Employees and Bartenders International Union: "I am familiar with the long history of support on the part of the Eagles for social security. The order is certainly to be congratulated for its present campaign on behalf of workers over 40."

Statement of the Honorable James F. Byrnes on Summit Conference

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. THURMOND. Mr. President, on May 19, one of the most outstanding South Carolinians of all times, the Hon-Orable James F. Byrnes, delivered an address before the annual South Carolina Medical Association Convention at Myrtle Beach, S.C. Governor Byrnes' record of exemplary public service is proudly remembered, not only by South Carolinians, but by Americans everywhere. His dedicated service to our Nation includes top positions in all three branches of our Federal Government and to his beloved State.

With his background in every branch of our National Government and in the Position as chief executive of his beloved State of South Carolina, the observations of Governor Byrnes command the attention of all Americans. In his role as Secretary of State, James Byrnes' contributions to the cause of peace will always be remembered by grateful Americans. He has had great opportunity to Observe the sincerity of the Russians as to their alleged desire to effectuate a genuine and lasting peace. He is, therefore, well qualified to speak on the subject which he chose as the text of his speech to the convention to which I have previously referred. His comments on the recent disastrous summit conference should be read by all and should serve as the basis for sober reflection for everyone who desires a lasting peace with honor and dignity.

I ask unanimous consent that this speech be printed in the Appendix of the

There being no objection, the speech was ordered to be printed in the RECORD. as follows:

[From the State, May 20, 1960] TEXT OF BYRNES SPEECH BEFORE MEDICAL ASSOCIATION

(Following is the text of an address which Gov. James F. Byrnes, formerly Secretary of State, Supreme Court Justice, and Assistant President during World War II delivered before the South Carolina Medical Association convention at Myrtle Beach Thursday night.)

Nikita Khrushchev sabotaged the summit meeting. In doing so he brought sorrow and fear to millions of people who are more interested in having war tensions lessened

than any other question.

For 5 years Khrushchev expressed the desire for a summit meeting. The President doubled his sincerity and showed little interest. About 2 years ago the British Prime Minister, Mr. Macmillan, became an enthusiastic advocate of a meeting at the summit to lessen tensions, and other European allies expressed the hope we would agree. Because we have bases within the territory of our European allies and they are on the firing line, we finally agreed to go along with them.

My personal opinion was that even though we had little hope that any good would be accomplished, we should confer. We could not refuse even to talk with the Soviets and it would do no harm provided we stood firm and realized that they would not keep their promises and provided we maintained and increased our military defenses.

Khrushchev after his visit to this country stopped jamming our radio broadcasts to Russia in the Russian language, and gave other evidence of a conciliatory attitude toward the Western powers. But a few months ago there was a change of attitude. Khrushchev for the first time in many months repeated his threat that if the Western Powers adhered to their position of not withdrawing from West Berlin, the Soviets would make a separate treaty with East Germany and would insist upon the withdrawal of our

He threatened that if we failed to with-draw, war would follow. We cannot be sure of what caused this change of attitude. do know in a general way, that Red China was bringing pressure upon Khrushchev fearing he had become too friendly with the West. There was evidence of unrest among his people and also evidence of some dissension in the Soviet high command. recent removal of several men holding important positions in the Government, gave

proof of this.

Then Khrushchev learned that recently there had been complete agreement among the United States, Great Britain, France, and West Germany, that there would be no modification of our position as to West Berlin. In view of his continued threats, this unanimity of the West as to Berlin posed a serious problem for him. He did not know how to retreat gracefully, and was not prepared for the consequences of carrying out his threat. He saw little evidence of accomplishing anything at the summit and feared that if the President made his promised visit to Russia and in his sincere and earnest manner assured the Russian people that we want only to live in peace, they might be convinced and that might cause trouble for Mr. Khrushchev.

Unfortunately for us, the Powers incident occurred just at this time, and it gave Khru-

shchev an excuse to sabotage the summit meeting. Having thousands of Soviet spies all over the world, it was certainly not the reason for his action. It was only his excuse.

If Mr. Khrushchev did not intend to conwith the Western leaders unless the United States apologized for the Powers mission, why did he go to Paris?

He was the first to arrive in Paris. He asked to call on President deGaulle and Prime Minister Macmillan. He deliberately refrained from asking to see President Eisenhower.

For propaganda purposes, he wished in a formal meeting to demand a formal apology from the United States. He knew full well or he should have known-he would receive no apology, but decided it would give him an excuse to blast the meeting. If, to his surprise, the President should have apologized, then Khrushchev would have made no agreement as to West Berlin or disarmament, but would return to Moscow with the prestige of having humiliated the United States

In his mind and heart there is no gratitude for the \$11 billion loaned them during the last war and they have not repaid. There is only the hatred born of the knowledge that our economic and military strength prevents them from dominating the world.

Because the work of our Intelligence Serv ice necessarily has not been made public, it is understandable that many were unaware of our spying, and it accounts for some of the criticisms of our Government. However, I have been surprised at the criticisms by some Members of Congress. If any Senator or Congressman did not know for what purpose he was appropriating vast sums of money for intelligence, he could have learned by making inquiry of the chairman of the Appropriation Committees.

A few days after Khrushchev announced the capture of Powers, when some petty partisans criticized the President for permitting a plane to fly over Soviet territory without the knowledge or authority of Congress, Congressman Cannon, of Missouri, a Democrat, and chairman of the House Appropriations Committee, told the House that Allen Dulles, director of the Central Intelligence Agency, had kept the proper appropriations subcommittee advised of the spy program. He said that program met with the approval of both Democrats and Republicans on the committee, who at times had prodded Dulles to make even greater efforts to secure information on military installations in the Soviet Republic. He said they knew of the reconnaisance missions of the U-2 planes over Soviet territory and felt the information obtained would be effective in deterring the Soviets from making a surprise attack against the United States or its allies in Europe. The House gave him a hearty ovation. His statement was candid and courageous, but Clarence Cannon always places the welfare of his country above political partisanship.

Unfortunately, all politicians are not like Congressman Cannon. Some think only of the coming election. They say we must do some spying and the reconnaisance program is justified by the secrecy of the Soviets, but the timing was bad.

The only thing wrong about the Powers mission was that Powers was caught. For 4 years we have sent similar planes over Soviet territory. If Powers had not been caught, there would now be no criticism of the timing. It was just our misfortune that he should have been caught. That was bad

We have had only limited experience in spying, but during World War II we came to realize the extent to which governments engaged in spying and we resorted to it ourselves. I recall accompanying Gen. Bill Donovan, who was in charge of the Office of Strategic Services, to a camp where recruits were being trained by a former chief of police of Shanghai. It was an amazing show. It was referred to as the "Cloak and Dagger" service. Men volunteered for the work, not for the compensation, but for love of country, and sometimes for love of adventure.

Later when President Roosevelt advised me of our efforts to develop the atomic bomb, he told me that Germany was engaged in a similar effort and through our intelligence service we were employing people to spy upon the German project and had information as to their progress. They had started first. The race was close, and our fear was that if Germany won the race, we would lose the war.

Now it is difficult to recall conditions existing at the close of the war. Most of us thought the peoples of the world would be so weary of war that no government would take steps calculated to bring about another world conflict and we could look forward to a half century of peace.

Three months after the surrender of Japan we joined Great Britain and Canada in announcing to the world that we would voluntarily surrender the military advantage of our exclusive possession of the "know-how" to produce atomic weapons. We agreed to ask that the United Nations establish an International Commission having the power to see that the atomic bombs in existence were destroyed; that all nations renounced the right to produce bombs and that atomic energy should be used solely for peaceful purposes under the supervision of the International Commission.

At the meeting of the Foreign Ministers in Moscow, in December 1945, I introduced a resolution asking for the appointment of such a Commission and providing that the use of atomic energy should be subject to inspection by the International Commission, with safeguards to guarantee there would be no violation by any government. The Soviets agreed to this resolution. The Commission was appointed but when it met a few months later, the Soviet objected to the provision for international inspection.

Between December 1945 when they had agreed to the resolution and the meeting of the Commission in early 1946, Soviet ambitions had changed. This change probably was due to information gained through their spies in the United States and Great Britain, which would enable them to produce atomic bombs. They decided international inspection would interfere with their policy of secrecy.

Early in 1946 several Soviet spies were arrested in Canada. From that time on, in this country and in Britain, there have been thousands of Soviet spies. We do not forget Judith Coplon, who was tried for spying, nor Klaus Fuchs, who was sentenced to prison for giving atomic secrets to Russia, and is now in East Germany, after being re-leased from prison. Later Harry Gold was arrested as a Soviet spy. In June 1950 David Greenglass confessed to giving certain military secrets to Russia. Pontecorco secured atomic secrets from the British and then disappeared behind the Iron Curtain. So did Burgess and Maclean. The Soviet spies, Julius and Ethel Rosenberg, were sentenced to death for spying in the United States. Several employees of the Soviet Embassy in Washington who were found to be spies, were forced to leave this country. Another Soviet spy, Col. Rudolph Abel, was sentenced to 30 years for espionage. Only a few weeks ago that sentence was upheld by the U.S. Supreme Court.

All Soviet spying was not done in the long ago. Just a few weeks ago a Soviet trawler was off the coast of Connecticut spying on the experimental tests of a new submarine. And on the very day Khrushchev was criti-

cizing the United States about the Powers case, two Russian officials were expelled from Switzerland for spying on Swiss military activities and rocket bases in West Germany.

SOVIET THREATS

Stalin first, and later Krushchev, have continuously threatened to make war upon the United States, while erecting an iron curtain around the Soviet Republic and her satellites. They have made progress in the development of new weapons of war and have succeeded in keeping secret, detailed knowledge of those weapons. With their secret weapons and bellicose threats, they menace the peace of the world.

In spying, the Soviets have an advantage. They do not have to spend much time or money spying on the United States. Their agents in Washington can learn from official maps the location of our military installations and from the daily press can read even the confidential statements made to congressional committees.

Because of Soviet secrecy, President Eisenhower at Geneva in 1955, pleaded for what was called an "open skies" agreement. He offered to grant permission for Russian planes to fly over the United States, taking pictures wherever they wished, if the Soviets would grant the same privilege to the United States. The Soviets refused and have continued to refuse. In the light of this history, what is the duty of our Government to its people? Should we sit idly by and await a surprise attack that would destroy our lives and our freedom?

We can never forget December 7, 1941, when the Japanese by a surprise attack destroyed our fleet at Pearl Harbor and caused the death of hundreds of American boys. Thereafter we succeeded in breaking the Japanese code and by intercepting naval messages, were able to destroy most of the Japanese fleet. It was retaliation for that surprise attack.

Nor can we forget the surprise attack in Korea directed by the Soviets, which caused the death of thousands of Americans. We know that if the Soviets ever carry out their threats to make war on us, they will do it by surprise.

There was a time when by ordinary espionage, a government could learn of the mobilization of an army in the territory of a government threatening war. But in this day of atomic weapons, missiles and rockets, the situation is different. A missile fired from Soviet territory, in less than 30 minutes, can hit a target in the United States and utterly destroy that target and the inhabitants of the area. The only thing that deters the Soviets is the fear of immediate and massive retailation.

To retaliate successfully, we not only must have bases in Europe, but we must know the location of Soviet military installations. We cannot wait until a missile has devastated a great area and then make a reconnaissance to locate military installations. That would be too late. Because of this, our intelligence service for 4 years has been sending unarmed planes over Soviet territory, solely for the purpose of securing information.

Regardless of the information we secure, the Soviets are in no danger of attack from us. But Khrushchev now howls with rage because he learns that in his Iron Curtain there is some glass, and 65,000 feet in the air a pilot has taken pictures which he believes has lessened the secrecy with which he has surrounded the Soviet Republic.

Khrushchev makes no apology for sending to the United States countless Soviet spies. But in Paris he demanded that the President apologize and promise to punish those responsible for the Powers mission. That would include the Republican President and the Democratic congressional leaders, who

provided the money, knowing how it was to be used.

President Eisenhower refused even to discuss the demand. I am proud of the manner in which he represented our country, with dignity and courage under trying circumstances. He was subjected to intolerable insults by the bragging bully from Moscow-A man of less stature might have lost his temper and walked out of the conference room. The President preferred to suffer the insults rather than give excuse for the charge that he had broken up the conference. Time and again he agreed to return to the conference to discuss with Khrushchev the subjects that had been agreed upon prior to meeting. He thus prevented Khrushchev from shifting to the United States the responsibility for failure of the meeting.

He left unnoticed and unanswered Khruschchev's contemptible insult that he would be willing to confer only when there was a new President. Every loyal American resents that insult. It was an inexcusable effort to interfere in our election. It was stupid of Khrushchev' to think the American people will elect as President any man approved by him. His crude insults in Paris Wednesday only serve to unite our people. He will learn as did the Kaiser and Hitler, that while we divide politically on domestic affairs, we are truly united in foreign affairs.

Heartening indeed was the news report this morning that several influential Democratic leaders wired President Eisenhower assurance of their support.

While that was comforting, I hope the President and the Democratic congressional leaders, in a practical way, can prove our unity by diverting to our defense programs some of the billions of dollars now earmarked or recommended for controversial social programs. In this crisis we can postpone even meritorious social reforms but we should not postpone even for a day, any expenditure that will contribute to the defense of our lives and liberties.

The Times of Havana—A Brave Newspaper Cries Out

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. PORTER. Mr. Speaker, freedom of the press is essential in a democracy.

as is the freedom to elect those we wish to govern us and the freedom to worship and speak as we please.

Today in Cuba the essential freedoms of a democracy are being stifled. We who

Today in Cuba the essential freedoms of a democracy are being stifled. We who are friends of the people of Cuba regret these confiscations of democracy, because they leave only fear, confusion, and oppression.

There is today in Havana a brave newspaper publisher who twice weekly prints his English-language tabloid, the Times of Havana. Publisher Clarence "Pappy" Moore is a friend of mine. His courage in printing the truth gives hope to those Cubans who see too well what can happen when democracy gets side-tracked.

An article describing Pappy Moore's work appeared in the Wednesday, May 18, 1960, issue of the Washington Daily News. Under leave to extend my remarks in the RECORD, I include it:

"Pappy" Moore's Times of Havana-A Brave PAPER CRIES OUT

(By Milton Guss)

Seizure of the independent newspapers Diario de la Marina and Prensa Libre by progovernment unions in Cuba has failed to silence absolutely all the editorial critics of Fidel Castro.

One voice still cries, and sometimes

laughs, out loud.

Twice weekly the English language tabloid, Times of Havana, ridicules and lambastes many of Dr. Castro's policies, espe-cially when he tees off on the United States.

Owner-publisher is Clarence "Pappy Moore, former FBI agent from Jackson, Mich. When he could no longer stomach the pro-Batista Havana Post, Pappy launched his own paper in February 1957.

HARD WAY

Admittedly a novice at publishing, he blunged blindly ahead, learning about newspaper economics the hard way. He turned out a highly readable paper but discovered that building circulation was slow and costly.

At first he distributed papers free, yet had touble giving them away. Today the Times ranks just behind the Embassy and the American Club as leading institutions in the American colony. And hundreds of Cubans, who have always admired a sense of humor and courage, look forward to their "Tee-mes" (Times) on Mondays and Thursdays.

There is little for Americans to laugh about in Cuba these days, but the Times

usually can find a smile.

When Dr. Castro announced another rally to denounce "the Yankees," the Times headlined: "Here We Go Again."

After Batista's announcement of partial elections, the Times said: "What this counby needs are impartial elections."

STAFFERS LOYAL

Pappy's naive but sincere approach to publishing inspires tremendous loyalty from staffers, and his popularity in the colony has Sained him a string of contributing columhists, whose writing indicates they enjoy their work.

Most widely read feature is a hard-hitting Political column by Carlos Todd, a bilingual Cuban, who regularly fires salvos at Dr. Castro. Outspoken and fearless, Mr. Todd Pulls no punches. Back in February 1959, when the rest of the press dared not speak out the rest of the Ped handwriting on out, Mr. Todd saw the Red handwriting on the wall and said so.

It was an item in Mr. Todd's column, reporting the price President Manuel Urrutia haid for his home, that was seized upon by Dr. Castro to precipitate a cabinet crisis and dump his junior partner.

When the president was ousted, the Times proclaimed in descending type: "Urrutia's house comes tumbling down."

For a while, though, things looked grim for Mr. Todd. He was sued for criminal libel by the president of the republic.

SUPPORTS HIM

As usual, Pappy backed him up. He proved he was no fair weather publisher with an editorial entitled: "Mr. Todd Does Not Stand Alone."

The publisher was sticking his neck out even before Dr. Castro took over. While other papers were paid off by Batista, Pappy took took no subsidy money from the dictator, and gets none from the present one.

Oftentimes he defied censorship. Once he slipped an especially hot edition out the back door, just one step ahead of the censor. Bitterly anti-Batista, Mr. Moore welcomed or. Castro with wide-open pages. But when pidel turned on the United States, the Times, paced by Mr. Todd, challenged him.

CONTINUOUS CRITICISM

Despite anonymous threats and vitriolic attacks on TV and the Government press, the Times continues to criticize and satirize revolutionary propaganda and actions.

Pappy insists the Times is not an opposition paper; it just prints the truth-not a very popular pastime in Cuba these days.

The U.S. Merchant Marine and World Trade

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The U.S. Merchant Marine and World Trade," delivered by the Honorable Frederick H. Mueller, Secretary of Commerce, before the Port of Washington Propeller Club, in celebration of National Maritime Day, at the Statler Hotel, in this city, on May 20, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE U.S. MERCHANT MARINE AND WORLD TRADE

(Text of address by the Honorable Frederick H. Mueller, Secretary of Commerce, pre pared for delivery before the Port of Washington Propeller Club in celebration of National Maritime Day, Statler Hotel, Washington, D.C., Friday, May 20, 1960)

It was just 27 years ago today that the Congress, by joint resolution, established May 22 as National Maritime Day and provided for its annual proclamation by the President. It provides an occasion to commemorate the first transoceanic voyage of any ship powered by steam. For on May 22, 1819, the SS Savannah started the voyage which ushered in a new era in merchant shipping.

This year another chapter in maritime history will be written. As President Eisen-hower noted in his Maritime Day proclamation, "This year will witness the harnessing of the atom for the benefit of mankind as the world's first nuclear-powered merchant ship, the NS Savannah, sails out upon the high seas."

But, as the President also noted, National Maritime Day each year also provides an occasion to honor the U.S. merchant marine and all who help to maintain an industry and service so essential to the economy and security of the free world.

In all of our proper celebrations all over the country, however, it behooves all of us to remember another anniversary-for it points a moral. A century ago last month the famous Pony Express began operating between St. Joseph, Mo., and Sacramento, Calif

You might be interested in the kinds of ads used to recruit the boys who manned this wild and woolly route to carry messages at the rate of \$5 a half ounce-later reduced to a dollar. One was reproduced in the Washington Evening Star for April 9:

"Wanted—young, skinny, wiry fellows not over 18. Must be expert riders willing to risk death daily. Orphans preferred. Wages \$25 a week."

In its short life the Pony Express sure had glamor. Buffalo Bill Cody and Wild Bill Hickok were in the select company of riders. and Mark Twain penned their praises. They astonished the world with their record of 7 days and 17 hours carrying Lincoln's first inaugural address.

But the enterprise went broke, for a variety of causes, in about 18 months. It was given the final blow when the first transcontinental telegraph line, building from both coasts, was finally joined and completed at Salt Lake City in October 1861. Technological prog-ress, which within the lifetime of men and women still living has seen the world move from the Pony Express days to jet planes that can cross the entire continent between breakfast and lunch, has been inexorable. However glamorous the good old days, competition in new and improved methods of transportation and communication have sounded their knell.

I say this not to play the specter at the feast on this occasion, but to note another purpose of Maritime Day celebrations. Past accomplishments inspire them-but we must look ahead, reflect upon our problems, and plan a better future for the maritime in-

dustry.

I say "we" advisedly. The Department of Commerce, the U.S. Government, in fact the people of the United States and the whole free world, have a vital stake in your economic health and growth. Before getting into some specifics, let me spell that out as a step in enlisting the kind of help we shall need to do what sorely needs to be done.

We have survived two world wars and were able to end the bloody stalemate in Korea, aiding our allies in all of these struggles, in great measure because we could stay in business on the world's sea lanes. Today, with an even greater threat, U.S.-flag ships must be available to deliver U.S. economic and military aid to nations whose strength and growth are vital to our own.

On the strictly commercial side, we need your help. As you know, the President re-cently intiated a national export expansion program-a partnership by the Federal Government and private industry to sell more American goods abroad. The Departments of State and Commerce are stepping up services to help business to do more business overseas.

We urge the maritime industry to take a fresh look at the trade and tourist picture. I am sure that your great industry will join with other American business enterprises in seeking new markets for American products and new traffic for American shipping.

As our foreign trade expands-and expand it must—we have a job to convince both exporters and importers that they should move a substantial portion of their cargoes on fine American ships.

Now for those specifics. What is plaguing your industry? We don't have all the answers, but we've been learning fast.

Recently, I submitted to the President the report which he requested me to make, as Secretary of Commerce, on Federal transportation policy and program. The problems of the merchant marine were identified in the light of general problems of public policy in transportation. The general recommendations we made were stated in summary form, and require further elaboration in detail

As the decade opens, the strategic position of the United States has undergone a transformation. In former years we felt as a nation that we faced but a single acute threat to our national security. The response to it was specific and decisive: specific plans for defending the security of the free world.

This specific, decisive policy had all the virtues of a simple issue which could be stated in term easily understood. It had its influ-

ence on our merchant marine policy. our objective was specific our merchant marine policy could be equally specific; we could say that our defense plans and assumptions required a civilian merchant marine of X number of tons or X numbers of ships to augment our logistical plans. Merchant marine planners could look to the military authorities for their specific logistical requirements and could attempt to build a merchant marine policy on the assumptions presented to them.

Under today's conditions in international affairs, this simple, black and white way of planning a national merchant marine is no longer possible, let alone desirable. We have a whole economy to think about. What was once a simple issue of military power between the free world and the Soviet bloc has become a problem of more uncertainty and more complexity. We face continuous threat

and tension in many areas.

This evolving situation has introduced great uncertainties into military planning, and consequently into the national defens aspects of our merchant marine policy. can no longer plan merchant marine policy on the basis of a specific set of figures on national defense requirements. While defense plans must recognize that a backlog of merchant ships is of great potential value, this value must be measured against a great variety of other military problems.

Furthermore, our economic policies in this coming decade will have important impacts on our political relationships. Like world strategic situation, the world economic situation is evolving from the severe simplicity of the past to increasing complexity. Our foreign trade and balance of payments have reflected this changing picture. We know that we must be competitive if our economy is to survive in a world of growing

productivity.

The growing competitiveness of world trade has made a profound impact on our shipping industry. Our national merchant marine now carries less than 20 percent of our foreign trade tonnage, a lesser rate than any time since before the First World War. Furthermore, wide cost differentials exist between our maritime industry and those of other countries in the construction and

operation of ships.
Historically the Government has sought to meet this particular competitive disadvantage with a variety of subsidies. Construction and operating differential sub-sidies have been granted, and such subsidy costs have increased. Under cargo preference laws, reserving to privately owned and operated American flag merchant ships at least 50 percent of Government-financed cargoes, the unsubsidized part of our foreign

trade fleet is also being aided.

One of the major policy goals recommended in our transportation report is to improve the efficiency of shipbuilding and ship operation to meet foreign competition and reduce the need for Federal subsidy. The research and development programs of the Department of Commerce have been greatly expanded over the past 5 years. The NS Savannah is one result, and otherssuch as the hydrofoil vessel and the automation of ship operations-are on the way.

These measures looking toward industry and Government cooperation toward greater efficiency, obviously require the full co-

operation of American labor.

Here I feel we all-and again I say "all" advisedly-have done very little. I refer to the fact that the connection between the worker's job and the safety and security of his home and family has not been emphasized.

On the face of it labor has been a major beneficiary of our merchant marine subsidy policy. And no one would argue with the fact that labor and management in your industry have a common interest in the continued existence of American ships and shipyards. But are the implications of these facts sufficiently known on both sides of the bargaining table?

American labor has learned, in many industries that mechanization and automation make and keep lobs, and make a higher standard of living possible. American management has learned that labor has a right to a measure of protection and a voice in decisions affecting their livelihood. And great progress has been made.

But it is later than we think. New means of labor-management cooperation must be found to improve the competitive position of our merchant marine. We need new machinery where automation does not applyhuman machinery to provide flexibility and rapid change in service to meet the changing

demands for service.

The least that the public has a right to demand is that those who are the beneficiaries of subsidies as well as the payments of customers should work together to give value received. I have high hopes that transportation report, emphasizing competition and deemphasizing subsidies, can gradually permit the Government to concentrate our tax money upon those programs which the Government alone can undertake and carry through.

Maritime management and labor surely have the know-how to do the job. Our foreign trade and domestic commerce are growing, as is our population and the world's population. Subsidies should operate as an incentive to greater initiative and efficiency on the part of the American Merchant Marine. No one knows better than you in the industry that subsidies do not guarantee a profit to the operator.

That happy solution to your difficulties depends, in the final analysis on your ability to secure cargoes at remunerative The Maritime Administrator, imrates. plementing section 212 of the Merchant Marine Act of 1936, has appointed a committee to study and develop ways and means to induce importers and exporters to give preference to vessels under U.S. registry. preference to

It is not unreasonable to shoot for a goal of at least half of our export and import traffic to move in American-flag bottoms. Yet in 1958 only a third of such traffic moving liner ships over essential foreign trade routes moved in U.S.-flag ships. If bulk cargoes are included, this proportion drops to 16 percent.

All of us can do a better job than that. We can bring home to those controlling selection of carriers that U.S.-flag carriers usually—and subsidized operators must purchase and use U.S. products except under emergency conditions. Your serviceunlike foreign shipping operators who come and go as they please—is stable and regular. Our shipyard workers and seamen benefit from use of American-flag ships and in turn increase purchase of American goods and

These are but elements of good salesmanship, and we need the hard sell in your industry as much as we need it to better

our whole export position.

Meanwhile we in Government are going ahead with further proposals for merchant marine construction and operation, based upon our evaluation of shipping needs and such strategic assumptions as seem reasonable. But our concentrated attention will increasingly be on means of increasing the competitive quality of our merchant marine to assist in the improvement of the competitive position of your industry in world

This effort will involve hard decisions and the solution of difficult problems. For many it will require a new outlook. Industry and labor must make their own constructive suggestions to the Government on means of improving the value of the merchant marine to American business in foreign trade. And much more emphasis must be given to research and development.

The program I have described, based upon the findings and recommendations in our transportation report, will be a major experiment in industry-labor-government partnership. The stakes are high. They involve our national survival as well as that of your industry. Upon its success rests not merely our own prosperity. The peoples of the world of the 1960's will grow even closer together in time-and we hope in freedomthrough progress in science and the exchange of goods made possible by peaceful trade.

The pony express beat the then world's record for carrying messages 2,000 miles at about 250 miles a day a century ago. Yet with all its gallantry it couldn't beat the competition of technological ad-

But the spirit of those young men, whose exploits have enchanted several generations It is that of Americans, is still with us. spirit which will yet carry the message of freemen and free enterprise around the world and perhaps to the unexplored reaches of the universe.

Problems of the Aging

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the May 12, 1960, edition of the Catholic Sentinel which is published in Portland, Oreg. I should like to call special attention to the following para-

This problem involves several aspects: nation's moral obligation to those who have contributed much to society and now are in need; the political pressures of groups whose interests are mutually contradictory; the need of preserving the traditional free relationship between doctor, hospital, and pa-tient. Whatever decision the Nation's leaders make should be made in a spirit of respect for the individual and with due regard for the common good.

I agree. I hope this Congress will meet and solve one of the major problems before it. As stated in the editorial it is "a nation's moral obligation to those who contributed much to society and now are in need."

The editorial follows:

PROBLEMS OF THE AGING

In 1900 there were 3.1 million Americans over 65 years of age. Today there are 15.5 It is estimated that America's senmillion ior citizens will number over 24 million in another 20 years. The medical care which makes this increased longevity possible is itself increasing in cost, as the savings of the aging shrink in value. The current debate in Congress over the Forand bill has brought this problem to the attention of the Nation

Congressman Forand's plan would provide funds to finance surgical costs and up to 120 days' combined hospital and nursing Lome care per year for people over 65. The bill would raise the money through the social security system. It would boost social security taxes one-fourth of 1 percent for employees and one-fourth of 1 percent for

employers.

The American Medical Association, the National Association of Manufacturers, the Chambers of Commerce of the United States. and the National Grange have joined private insurance companies in opposing the Forand measure. Supporting Congressman Forand are the AFL-CIO and large numbers of the Nation's citizens over 65. A large volume of mail, some of it obviously of the massproduced variety, but much bearing marks of reason and conviction is flooding the White House and Congress. (Many of the letters are written in painfully lettered longhand.)

Those who were at first simply opposed to the Forand bill, impressed by the wide support it has received, are busy drafting counter-proposals which purport to accomplish the same goals without the direct intervention of Government. Perhaps they are impressed with the fact that Americans Over 65 now makes up 20 percent of the

electorate.

This problem involves several aspects: A nation's moral obligation to those who have contributed much to society and now are in heed; the political pressures of groups whose Interests are mutually contradictory; the heed of preserving the traditional free relationship between doctor, hospital, and patient. Whatever decision the Nation's leaders make should be made in a spirit of respect for the individual and with due regard for the common good.

This is but one of the problems of the aging, although a most urgent one.

Discretionary Power for the President To Withhold Aid From Nations Engaged in Economic Warfare

EXTENSION OF REMARKS

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "For United States To Decide," Which was published on April 30 in the Lansing State Journal, of Lansing, Mich.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

FOR UNITED STATES TO DECIDE

By a vote of 45 to 25, the U.S. Senate Thursday wrote into the foreign aid bill an amendment giving President Eisenhower discretionary power to withhold aid from any nation engaged in economic warfare against any other nation which benefits from the as-Sistance program.

The amendment, sponsored by a Republican Senator and a Democratic Senator, is almillar to one previously passed by the House, and was described as being aimed at the United Arab Republic's blockade of Israeli

shipping.

Senator J. WILLIAM FULBRIGHT, Democrat, of Arkansas, chairman of the Foreign Relations Committee, was among the opponents of the move. He contended the Senate was intervening in one of the most delicate and explosive situations in the world, in a reference to the tense animosity between Israel and the Arabs in the Middle East.

The amendment expresses the sense of Congress that the purposes of the foreign aid program are defeated when a nation benefiting under it acts to wage economic warfare against other nations assisted under this act.

Many Americans are not likely to regard an amendment authorizing the President to use his discretion in applying this principle in the administration of the aid program as intervention in the Middle East or any other area.

The United States certainly should not be obligated to supply American tax dollars and other resources to countries regardless of the

policies of their governments.

To do so would in some cases support policies which conflict diametrically with principles supported by the United States, if the United States were to send millions of dollars to the United Arab Republic, Israel might understandably regard it as intervention in support of the U.A.R. policy of barring Israeli shipping from the Suez Canal.

No nation has a right to expect a continued flow of American aid regardless of the policies it chooses to pursue. It is difficult to discern a real basis for objection to the amendment authorizing the President to administer the foreign aid program in accordance with what he believes to be in the best interests of this country and the nations which receive the aid.

There Are Treasures in Our Forests

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I want to call the attention of other Members to the following editorial from the East Oregonian newspaper. It emphasizes the importance of continued wise development of our forest resources and points to the growing variety of uses being found for this valuable heritage:

[From the East Oregonian, Pendleton, Oreg., May 11, 1960]

THERE ARE TREASURES IN OUR FORESTS

With the largest stand of merchantable timber in any of the States, Oregon's economy will depend heavily upon the utilization of that wood. How, then, is an industry that has not been noted for its vision doing with this resource Much better than many probably realize.

There is growing realization that timber must be treated as a crop and that it is a tremendously valuable resource because it is a renewable resource. More important, large sums of money are being spent in this State to get new products from wood. Numerous companies and research groups are active in "silvichemicals" research, the field of discovering and producing chemical

products from wood.

An example of the wide variety of uses into which new chemical products of the tree are finding their way is furnished by Crown Zellerbach Corp., which says its silvichemicals are going into asphalt emulsions, briquets, eeramics, cleaning compounds, gypsum board, softboard, insecticides, linoleum paste, road binders, concrete admixtures, oil well drilling compounds, paint, paint solvents and strippers, agricultural chemicals, synthetic fibers, rubber, camphor, wetting agents, resins, solvents, plasticizers and a host of other products.

Weyerhaeuser Co. is shooting for a full line of silvichemicals and is presently marketing quercetin, a brilliant yellow chemical derived from Douglas-fir bark which protects certain products, such as rubber, plastics, vegetable and animal oils, feeds, and other commodities, from spoiling or deteriorating. Company scientists are continuing their extensive research on bark components and

whole wood-fiber products.

In Portland, Georgia-Pacific Corp. soon start production of 200,000 to 300,000 pounds a month of cyanide chemicals in a major new chemical pilot plant which will use bark and sawdust. The new plant will turn out glycerin, copper cyanide, ferric ferrocyanide, copper sulfate, and nickel sulfate worth an estimated \$2 million to \$3 million a year.

A new research and development center of Evans Products Co. at Corvallis is pushing research on chemical utilization of wood residues. The center is presently turning wood fiber from nearby mills into plastic-

impregnated battery separators.

Western Pine Association's laboratory in Portland has developed methods for extracting arabogalactan, a sugar from larch which is useful as a pill binder and an ingredient for such products as ink and glue. The pine industry researchers have also improved extractive techniques for resin, a source of turpentine and rosin. Resin, which makes up some 5 percent of pine trees, can be obtained from stumps or even from lumber.

At Corvallis, the Oregon Forest Research Center, an industry-supported State organization, has isolated major chemical constituents from western trees and has developed uses for extractives from Douglas-fir bark such as tannins, waxes, and dihydro-quercetin. Scientists there are also studying lignin structure and are working with wood residues.

All this should be most encouraging to the citizens of a State that depends to the extent that Oregon does upon wood-products manufacturing. But it very well may be that we "ain't seen nothin' yet."

Approximately 30 percent of every tree in the forest consists of lignin-the glue which nature uses to hold the fibers of the tree together. Researchers have not yet fathomed its exact structure, despite their progress in obtaining a growing range of chemicals from it. Most of them believe that once they achieve the breakthrough in pinning down lignin's structure completely they will then have the framework with which to create a silvichemical industry comparable to the diverse petrochemical field.

When the mysteries of lignin are no longer mysterious, the door will be opened to in-dustrial expansion in this State of a magnitude that few can measure today. And it may not be far off.

Save that tree. In a few years mills will not only want it, but any bark, limbs, knots, and pitch pockets you have.

Daily Texan Reports Some Facts and Figures About Padre Island Seashore Park and the Battle To Establish It

> EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. YARBOROUGH. Mr. President. as interest in the proposal to establish a national seashore recreation area on Padre Island continues to grow, additional articles and editorials on the subject are published almost daily.

I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the full page of articles on Padre Island National Seashore Park which was published on May 8 in the University of Texas outstanding student newspaper, the Daily Texan.

There being no objection, the articles were ordered to be printed in the RECORD,

as follows:

PADRE PARK BATTLE STARTED IN 1958

When Fred Seaton, Secretary of the Interior, recommended recently that Padre Island-the lizard-shaped island stretching lazily down the Texas coast-be made a national seashore, his okay marked real progress in a fight to save Texas' coast.

The battle began June 13, 1958, when Ronnie Dugger, former Texan editor, commented

in his paper, the Texas Observer:

"Texas has but the one national park, Big Bend; yet we are the largest of the States. Cannot our potent (alas sometimes too potent) Texans in Washington persuade the Congress to make Padre Island our second national natural shrine? Gentlemen, before it becomes too late, and honkey tonks and shacks and litter make the matter moot, let us the people have this for the long quiet future."

Soon after, on June 27, 1958, Senator RALPH YARBOROUGH introduced his bill calling for a

national park at Padre.

According to the Observer, in its April 22, 1960, issue, Senator Lyndon Johnson then contacted the National Park Service. that time, the Park Service Director, Conrad Wirth, told the Observer that Service studies were expected to lead to making a Department objective of the Padre issue.

Three Texas newspapers—the Houston Press, the Observer, and the Corpus Christi Caller-Times have supported the park move-ment. The Caller wrote in April, "* * * the Padre Island plan as viewed by most people is dedicated to the preservation of one of the last few wilderness seashore areas in the United States. It would be this generation's legacy to the children and adults of the future * * *. There are enough tourist courts, enough hamburgher and hot-dog stands, and enough penny arcades in other locations to satisfy the population. An access road, perhaps a few shelters and a central park headquarters are all the improvement needed."

The Texas Legislature has consented to the park, after a lengthy fight in the 56th session. Senator YARBOROUGH has called Representative Roger Daily's passage of the Padre Island consent bill "a great step" in the project.

Perhaps the Caller summed up the situation best in its April editorial:

"Tourist cottages, restaurants, and other services for tourists can be provided adequately in areas adjacent to the seashore But the central wilderness must be kept intact, inimproved, as nearly as possible, so that with the breaking surf, with wheeling gulls overhead and the sandpipers and other shore birds hurrying up and down the sand, men, women, and children may sit for a time and perhaps recreate an image of this great country of ours as it was when men first visited its shores."

JIMMY HYATT.

FACTS AND FIGURES

Some facts and figures about Padre Island: The island was named for Padre Nicolas Balli, Spanish priest who obtained sovereign rights to the island (in 1800). He carried on grazing operations, specializing in long-horn cattle and mustangs,

A surfaced road at the north end of the island terminates at the Nueces County Park, although passenger cars may proceed (at their own risks and the possible cost of a tow car) down the beach for about 25 miles.

At the south end, a surfaced road extends up the island for approximately 5 miles from Isla Blanca Park, which is operated by Cameron County. Travel beyond this point is along the beach; and, by passenger car, such travel is unpredictable at best.

In the event that Padre Island does become a national seashore, the Park Service visualizes retaining the island's primitive character by keeping "the central section of the island roadless, but in other portions, road system behind the barrier dunes would provide access to the beach without intruding on the natural scene. Other developments would consist principally of camping and picnic areas and centers at the north and south entrances to the area where visitors could obtain information."

ISLAND CHARM

But supposing, just supposing, you want to get away from a chamber of commerce approach. What else would you find at Padre? Rusty beer cans, boarded nails, broken glass for the unguarded toe, and the unwelcome Portuguese man-of-war.

Yet, when Padre is left behind, it's the island's charm that feeds the memory:

Putting up the tent at 1 a.m., with the help of a generous moon, swim-induced appetites, the bearable semi-isolation, the primitive light of a two-mantled lantern, the wind creating anchor dunes around the tent, the commanding surf, salt spray, which becomes as permanent as a native arm and leg, hovering sea gulls in the early morning, the trailing sunbeam, the frightened jig with a sand crab, man's desire to caress his own unity away from the neighboring eye of civilization.

Such memories make you hasten to join hands with those who would protect our beach heritage for our children, their children: the future.

BILL MCREYNOLDS.

Academic Excellence

EXTENSION OF REMARKS OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. HERLONG. Mr. Speaker, we have been hearing a good deal about quality in education these last months. Down in my district the other day, the Center for Practical Politics selected John Henriksen, Jr., captain of the tennis team, to receive the annual Wall Street Journal Award. Around the big conference table in the center, which occupies Carnegie Hall, Mr. Henriksen's fellow students took time out to hear Sally Olson, one of the most popular junior students, say a few words about academic excellence. Her remarks were so much in the everyday ways of Rollins College that I would not mention them except for the fact that she said something in such an emphatic way that I think the whole incident of student speaking to student deserves to be made a matter of record.

Here is what Miss Olson said:

Academic excellence—the word excellence is a superlative of the highest degree; it means the very best, the highest of attainments, not to be excelled. Combined with academic, it implies top-ranking scholastic merit and achievement. Academic excellence is not come by lightly or easily; it is won through earnest and thorough pursuit and conscientious endeavor. Academic excellence is that goal which all students, in theory, strive for and pursue, and which few attain. A student of academic excel-lence is one of high grade and intellectual caliber. He is marked by this token as & thinker, a learner, a striver, a scholar.

Academic excellence is not a goal per se-It connotes a readiness and ability to match wits with life's problems and oppositions; it connotes the maturity so needed to take one's place in the world today. The ties of the phrase academic excellence spread far beyond school; they reach out to the life one

must live after schooling is past.

Academic excellence is a proud possession and a milestone too. It is a challenge, and a challenge which, well met, will grant the receiver his working part in a complex growing world.

Mr. Speaker, I have no worry about American youth when spontaneous incidents like this take place. Miss Olsen expresses concisely an ideal of her generation.

It is perhaps not by accident that the director of this same Center for Practical Politics. Miss Alice McMahon, is going to be the youngest elected member of the Florida delegation to the Democratic National Convention in Los Angeles in July. That is the kind of young citizens we are developing in my Fifth District.

Crossing Congo Is Experience of Lifetime

EXTENSION OF REMARKS

HON, EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. MUSKIE. Mr. President, on March 10, 11, and 12, 1960, Mrs. May Craig published in her daily column three more articles of interest to our readers

In the column published on March 10 Mrs. Craig crossed the great Congo Leopoldville, deep in the heart of equatorial Africa.

In the second, she analyzed the kind of world one finds in equatorial Africa-

In the third, she suggested that there are substantial reasons for the fact that the people of the Congo are not yet ready for complete independence.

I ask unanimous consent that these three articles be printed in the Appen dix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORP. as follows:

[Africa on the Move, Mar. 10, 1960] CROSSING CONGO IS EXPERIENCE OF LIPETIME

(By May Craig)

LEOPOLDVILLE.—Crossing the great Congo River is an experience of a lifetime. On one side of it lies Brazzaville, French; on the other Leopoldville, British in nature. They belong to the French community and the

(British) Commonwealth, respectively. are staying in a hotel in Leopoldville, though our plane landed in Brazzaville. We crossed the great river, second only to the Amazon in volume of water discharged into the sea, and fifth longest in the world. From Brazzaville we could look across and glimpse the tall new hotel where we would stay. crossed in a little gas engined boat, with our luggage tugged behind. It was terrifically hot and humid-"stay out of the sun," our consul in Brazzaville and consul general in Leopoldville besought us. Equatorial Africa is made up of four small republics, and since they belong respectively to the community and the commonwealth, they do not have presidents, and we do not send them ambassadors. De Gaulle is the President of the French Community and is a hero-since he fled France with the Free French when the Nazis blitzkrieged into France. There is a park with a statue of De Gaulle here, and the house where the high commissioner, the ranking French official has his offices is called Casa de Gaulle.

The voyage from Accra, Ghana, to Brazzaville was a long one—8 hours by Air France. It was an old plane, with lots of leg room between seats, the staff was anxious to please and the heck with the system. When I waked early and asked for a cup of coffee I got it.

We had left the hotel in Accra at 2 a.m., after restless napping, and a hurried breakfast. Draped with typewriters, flight bags, cameras, coats, sound equipment, and one lady who brought a fur coat because it was snowy in her home and cold in Paris. It is a torment to her in this heat, carried in a plastic bag. We left the airport at 3 a.m. and tried to catch up on sleep on the plane and tried to catch up on sleep on the plane. Minor calamities have happened to me—one handle of my expensive and beloved travel handbag was torn off in a crowd in Acora, and it is tied on with a piece of string—hope to get it fixed by a cobbler here but fear the worst.

Most popular man in group is the one with an electric razor that runs from the airport, after a horrible night on a little battery. Day we went right from the airport, after a horrible night flight and we were all frowzy, to see President Toure of Guinea, the men took turns shaving in the bus, to the intense interest of the Airicans peering into the bus. One man, after shaving, took a picture of the next man shaving the left side of his face, developed it right there, and showed it to the man, just shaving the right side of his face. What a world—when you see the people along the roads, almost naked, though some draped in elaborate colored robes.

There are no camels or donkeys here, most of the carrying is done by people. A "load," a common measure of weight, for trade, is a "load," which is 60 pounds.

Strong man of Equatorial Africa, one of the four new republics, joined by a customs union, is a priest named Abbe Fulbert Youlon, who is prime minister and nobody knows whether he can still be a priest or not. He received us dressed in pure white clothes, striking against his black face. We got good advice from our consul at Brazzaville, seconded by our consul from Leopold-ville—who said he had come to greet us but not properly until 2 more days when he received us at his consulate across the river.

Eat anything at the hotel, we were told, even butter, which is imported. But don't drink anything except from a bottle, and then, only if you pour it yourself, or see it poured. The tap water comes from the Congo, and about every 10,000 gallons an amoeba creeps in—that is the devilish intestinal parasite from which you can never be cured. You can get better, but there he lives, as long as you do, sallying forth into a spell of dysentery every now and then.

The hotel here in Leopoldville is new and nice-but all sorts of odd failures to provide comforts the Americans have. The elevators are tiny and there are never enough hooks and bars in the bath—fortunately we have one bath to each pair of the group-in Guinea we had to go down the hall to what the British call the W.C., in stygian darkness--they never have the amount of electric light we do. But everybody is so glad to see us, hurries to help, wants us to come in with foreign capital. The abbe said that they "welcome it with all our hearts"—meaning the foreign capital they need to develop their country. They are so anxious to get on, to get education, to be free, to learn engineering and the other technology to lift themselves up to a better life. "But from anybody," the abbe said, and we knew he meant that if he could not get it from the West, from France, the U.N., the World Bankfrom the Communists. He said their ties, in Brazzaville and Equatorial Africa were increasingly firm-so unlike situation in Guinea. Heads of these small French countries are in Paris now with De Gaulle, talking progress.

[Africa on the Move, Mar. 11, 1960] DIVERSE PEOPLE MAKE TERRIBLE TRIBAL WARS (By May Craig)

BRAZZAVILLE, EQUATORIAL AFRICA.-This is a great area running from the Sahara, through a rain forest belt, to the ocean. Thus, you have the Mohammedan-Arab influence on the north, down to the various tribes of blacks. The European explorers of Africa put different tribes and ethnic groups together hodge-podge and now that the Africans are trying to make nations of contiguous lands, put diverse people together, they have terrible tribal wars and dissensions. The nomads of the north have no real affinity with the farmers of the south, which is onethird the size of the United States, great parts of it empty and poor, the southern part rich in uranium, iron, manganese ore, palm oil, wood.

Maine might think its future is not related to the future of this Equatorial Africa, but from here comes a good deal of the plywood that competes with Maine. We have great manganese-bearing ore in Maine, but it is low grade and so far it has not paid to unlock it from the curious ores in which the manganese is bound. Here the ore runs from 49 to 60 percent pure. The United States Steel Company and Bethlehem Steel are in here and across the Congo River in Belgian Congo, and are going to build long railroads to the Atlantic to get the ore out, refining it in the United States.

There is a peaceful relationship with France, though this area is free except for the central administration in France of defense, foreign relations, communications. The question is whether to continue in the French community or not-there are not the riots and violence that they have across the river in Leopoldville, in the Belgian Congo, where there was a small tribal fracas, with spears one day while we were there. The Republic of Gabon which is one of the four in this equatorial Africa is the richest and does not want to have to support the poorer. The country is already part of the Sahara development movement in the north, to which equatorial Africa stretches. Gabon wants to stay close to France; there is considerable socialism here; as Catholics they are anti-Communist. They know the need of trained administrators and public servants to run this country. Eventually they dream of a Union of Central Africa. They have fine city schools, a fine new hospital. There has never been segregation here, as across the river in Belgian Congo.

This river, the Congo, is inconceivably mighty. Some places it is 7 miles wide. Between Brazzaville and Leopoldville, it runs wide and flat, with floating islands of water hyacinths, that beautiful devil that chokes so many of the tributaries as well as the main bodies of African rivers. Sometimes the matted islands of hyacinth and other grasses and flowers are so large they support birds and even small animals that somehow get aboard. The water laps the shores in ripples, the little boys stand on the sparse brown beaches and fish. But the current is swift, because 10 miles away there are the great rapids of the Congo, pulling. rapids are caused by a steep drop in the bed of the river and the rapids crash against great rock and small islands and throw clouds of brown spray into the air. They say that in the rainy season, which is about to begin, the rapids are inconceivably terrible.

In the cities they have narrow concrete gutters, 2 feet deep, to carry off the water when the rains come. The cities would be flooded with shallow gutters such as we have, but these deep gutters are fine traps for unwary travelers to break their legs in, because we do not expect them to be there.

The Belgian Congo will be free June 30, and the example may stir up the presently rather calm Equatorial Africa. There is no special fear here of the French atomic bomb. The French told them in advance and said there would be no danger and they are proud that the French community belongs to the atomic club. There is none of that passionate denunciation we ran across in Guinea and Ghana and I am obliged to think that some of it is stirred up there politically. Knowledgable people think this country will stay in a loose relationship with France. They want a choice of what outside help they can get in development, they may come to the U.N. and the United States for investment capital. If they remain tranquil and stable they will get it. Lever Brothers is in here for palm oil, and other American companies. They don't bother-much about the Khrushchev visit to the United States. They do bother about what they have been told of the "degradation" of the Negro in America, regarding them as Africans, not as Americans. Illiteracy is high, but the French have an expanded education program.

There is great respect for women among Africans, in a special feminine place in the scheme of things. In the Moslem north they are secluded, not in the south. They still remember how the French built the first railroad with forced labor, and many Africans died under the whip. The United States is in a dilemma; we cannot stay entirely with French colonial policy any longer. "The fate of Africa is no longer in French hands," one official said. "The Africans have taken it into their own hands, the future is for them to decide, wisely or not."

[Africa on the Move, Mar. 12, 1960]
Congo Isn't Ready for Complete
Independence
(By May Craig)

LEOPOLDVILLE, BELGIAN CONGO.—This country is not ready for the hard, long road to complete independence, but the Belgians panicked when there were riots in late 1959 and the Belgian Congo will decide June 30 whether or not they will retain any ties with Belgium, or cut off completely. In any case they will be free. They have three front-line contenders for political leadership: Patrice Lumumba of the Mouvement National Congolese; Joseph Kasavubu of the Abako, and Jean Bolikango of the Front Unite Bangala. Ask anybody here which will emerge as the big shot and they laugh and ask us who will get the Democratic nomination for the American Presidency.

One morning we spent at the American consulate with eight Belgian officials telling

us about their side of the situation, political, economic, social. When we asked how come the Bolgians had been here so long and had not set up such friendly relations that the Congolese want them to stay, they said they were caught up in a great wave of nationalism and black determination to take back their continent from the white people.

Maine may think our Grand Coulee and the possible Quoddy tidal power project are big, but they take your breath away here when they speak of the power project at Inga, between here and the ocean, on the Congo. It can be done in small units as they get in industries to use the power, but the total power development, if ever, will be 25 million kilowatts; Grand Coulee is 2 million, the Volga River in Russia, they said, is 2.1 million; the proposed Volta River project in Ghana 600,000.

Cooler heads told us this great Congo River development, to cost a total for dams and installations more than \$3 billion, is just a dream. Where to get the money? industries to use the power? They have bauxite for aluminum, not very high grade, but there is too much aluminum made now and the Soviet Union trade policy is to undersell the free world, no matter what their own production cost, and destroy us and get the world aluminum market. Congo would have to export the aluminumand to where? They hope to sell to India, but this is years in the future, and first they have to establish a stable government favorable to private investment and foreign government assistance.

Right now, a competent Belgian told us, nobody knows what will happen after June 30. Many projects here have stopped, because nobody knows the future. The hotels and shops are almost empty; Belgian capital is fleeing, and while some big companies of foreign countries want to stay and there are foreign businessmen with briefcases here in this hotel, ready to do business if they can, there is complete lack of confidence. Cracks will begin to show in the African Government when the rival ambitions and plans collide, one said to me. There will have to be an authoritarian government at first, to bind this country into a nation. The Belgians hope to stay in a friendly, business relationship, help with administration, since the Congolese have few trained civil servants. But the Congolese are suspicious that this is just colonialism under another dress. The one big issue-independence being assuredis whether they will federate, fall apart into small units with tribal base, continue tie with Belgium. In the shadows are the Russians, with ready purse, and promises of "no strings." American Lever Bros. have a new, big tea plantation.

This country is 50 percent Christian, 50 percent pagan—but the pagans are monothe-istic, they believe in one God. We saw the first Protestant chapel near here, set up in 1891, Baptist, a mud hut with a corrugated roof, which was originally thatched.

To the shame of Washington, D.C., the capital of the United States be it told, that in Leopoldville there is not a mosquito or a screen, in an area of 40 miles diameter. They have done this by insecticides sprayed by helicopters. I can't go out into my garden in Washington in the evening because of the mosquitoes, which are not malarial of course, and formal garden parties in Washington burn the antimosquito candles and pass around spray.

So sudden has been the capitulation of the Belgians that one huge administration building stands unfinished, no workers, yawning windows. What will the Congolese do with a per capita income of \$41 a year? They have uranium and other minerals, but there are other sources. When we asked Belgian officials why in all their stay here they did not get on with the Congo river hydro project,

he asked why, in all our 150 years in the United States we only just now developed the St. Lawrence,

The population is exploding, sanitation encouraging it. They say they have pienty of open spaces to move into and do not plan any birth control—but the rural population is flocking to the cities. Belgian Government for 10 years has been building housing, some apartments, three stories high, 12 families to each building, and many one-family houses, but they cannot keep up with the influx and cannot get them to go away. They come and roost on their families or clans already here, with overcrowding and unemployment. Belgians should get credit for housing, water, schools, hospitals here, but it's colonial.

Thank You for Listening to an Old Lady— Worried by Fears of Hospital and Medical Bills

EXTENSION OF REMARKS

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. WOLF. Mr. Speaker, I have received many letters from our senior citizens, since I have been a member of this body, pointing out the difficulties which they are experiencing in meeting the high cost of living.

Many of them have worked hard all their lives, only to meet with an accident or illness of some kind when they were within a quarter or two of meeting the requirements for social security benefits. Others were forced to guit work because of physical disability before the type of work which they did was covered by social security. Many other factors, beyond the control of these people, most of whom are deeply conscientious and who cringe at the thought of accepting charity, have worked together to force those who have contributed so much to our country to become objects of charity-of the community or of their chil-

A great deal has been said and written lately on the subject of medical and hospital aid for our senior citizens. The fact that none of the proposals which have been advanced come to grips with the whole problem is pointed up by a letter which I have just received from a constituent of mine. This letter is written with such clarity—and its sincerity cannot be questioned—that I would like the Members of this body to give serious thought to its content as we continue to study the problem of hospital, medical and surgical aid for our older people.

CEDAR RAPIDS, IOWA,
May 18, 1960.
Representative Leonard G. Wolf,

Washington, D.C.

My Dear Mr. Wolf: I'm one of those aged—or nearly there—at 62. The bills in Congress for aid to aged give me a wry smile. Perhaps those on social security need aid, but what about those folks who are trying to get along on small savings—have no social security—or are being helped by children who cannot pay hospital and medical expenses? Many are unable to secure social

security. President Eisenhower's bill would aid after a certain sum is paid—how are the near needy to secure \$250 for first payment?

The specter that frightens me is hospital and medical bills (I know what these past 2½ years have cost). I have no insurance—as insurance companies would not take me due to heart attacks and after a while all my savings will be gone.

The aid for aged should include help for persons who most need such aid. The near needy who are not receiving social security, or old-age assistance.

In this day, doctors think they are contributing a great service by prolonging the life of the aged; I'm supposed to feel most grateful to the doctors who pulled me back from the grave in order that I might exist as I now do. I wonder how many aged folks feel the same as I.

Neither bill as offered to Congress, as I see it, is of aid to the ones who most need it.

Thank you for listening to an old lady. Sincerely,

Great Lakes Water Level Study

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1960

Mr. WILEY. Mr. President, the Great Lakes—the greatest inland waterway system in the world—is becoming increasingly important to the commerce, not only of the Midwest, but of all America.

Particularly, the completion of the St. Lawrence Seaway—allowing opportunity for deep-draft shipping to flow into the lakes—marked the opening of a new economic era.

In the light of this new significance of the lakes for trade and commercial as well as travel, residential, industrial, agricultural, and other interests have an ever greater stake in maximum development and utilization of this tremendous resource.

We recall that in 1952, the Corps of Engineers undertook a comprehensive study of the lakes generally to determine:

First, the feasibility of a plan of regulation of the water levels of the Great Lakes which would best serve the interests of all water users; and

Second, the advisability of undertaking local protective flood control projects for areas along the shore of the Great Lakes subject to fluctuation levels of the Great Lakes,

Unfortunately, the study was started; then progress was interrupted and postponed.

Today, I was pleased to receive from Marvin Fast, Executive Director of the Great Lakes Commission, a resolution urging that the study of water level problems of the lakes be resumed, and that adequate appropriations be provided for

carrying out the study.

Representing the thinking of this fine Organization on a major problem of interest to the Great Lakes region and the country-the resolution, I believe, deserves the consideration of Congress. I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

GREAT LAKES WATER LEVEL STUDY-RESOLU-TION OF THE GREAT LAKES COMMISSION MAY 11, 1960

Whereas the water levels of the Great Lakes fluctuate in irregular long-range cycles in a range of approximately 5 feet; and

Whereas extreme high levels result in inundation of shore lands and beach erosion, difficulties in the docking and loading of vessels and damage to dock facilities, interference with land drainage, and aggravation of floods on tributary streams to the Great Lakes; and

Whereas extreme low levels reduce the cargo-carrying capacity of vessels on the lakes, require extensive harbor and dock improvements, expose unsightly flats, de-crease the area of waterfowl nesting grounds, and cause excessive shoaling; and

Whereas following extensive damage from high water levels to Great Lakes shoreline Properties officially estimated by the U.S. Corps of Engineers at \$61 million in the single year 1951-52, the Committee on Public Works of the House of Representatives on June 26, 1952, directed the U.S. Corps of Engineers to make a comprehensive study of survey scope to determine:

1. The feasibility of a plan of regulation of the levels of the Great Lakes which would best serve the interests of all water uses, including the reduction of damages to shore properties, the use of the Great Lakes for navigation, and the use of the storage and outflow from the Great Lakes

for power development;

The advisability of adopting local protection flood control projects for areas along the shores of the Great Lakes and tributary streams that are subject to inundation as a result of fluctuations in the levels of the lakes where such projects are found to

be feasible and economically justified; and Whereas the report on this survey, originally scheduled for completion in fiscal year 1957, still has not been completed because

of lack of funds; and

Whereas the great significance and importance of the report and its findings to the further development and optimum utilization of the waters of the Great Lakes underscore the desirability of its completion at the earliest possible date: Now,

therefore, be it

Resolved by the Great Lakes Commission

Resolved by the Great Lakes Commission

the Commission of the on May 11, 1950. That it strongly urge the Congress, the President, and the Bureau of Budget to provide sufficient funds to meet the capabilities of the U.S. Corps of Engineers in fiscal year 1961, stated to be \$65,000, for furthering work on this survey; and be it further

Resolved, That the Commission urge the President, the Bureau of the Budget, and the Congress to provide the additional funds which will be required after June 30, 1961, in order that the report will be completed without further delays; and be it further

Resolved, That copies of this resolution be transmitted to the President, the Bureau of the Budget and the Great Lakes States' delegations in the Congress.

GREAT LAKES COMMISSION. ANN ARBOR, MICH.

America Could Use More Patriotism

EXTENSION OF REMARKS OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. DOWDY. Mr. Speaker, Charles Walton Evans, son of Dr. and Mrs. C. W. Evans, of Lufkin, Tex., is the owner of a large U.S. flag, a gift to him last year from his grandmother. Since becoming the flag's owner, he has flown it each national holiday during the year. This young American is living proof that patriotism is not dead in the United States by any means.

The Lufkin (Tex.) News, for May 17, 1960, had a story about this young Texan who is proud to fly his U.S. flag, and the next day an editorial, each of which I request be incorporated in the Appendix of the RECORD:

YOUTH FLIES FLAG, AND PROUDLY, TOO (By John W. Moody)

"It's the Star-Spangled Banner. Long may it wave, o'er the land of the free and the home of the brave."

These words are part of our national an-The man who penned them would be mighty proud today of a Lufkin lad on Southwood Drive.

The lad is Charles Walton Evans. He is the son of Dr. and Mrs. C. W. Evans of 1010 Southwood Drive.

He is also one living example that patriotism in the United States is not dead-yet.

For the last year, he has been the owner of an Old Glory almost as big as he is. And he hasn't missed a chance to display it.

He has seen to it personally the Nation's symbol flies proudly from a staff in his front

yard each national holiday.
"Well, I did miss San Jacinto Day," he said. "But that is a State holiday instead of a national one." Federally, he hasn't missed

In Lufkin, you may be certain of seeing the U.S. flag on Veteran's Day, Abraham Lincoln's birthday, Armed Forces Day, George Washington's birthday and other national holidays.

"The day that everyone forgets is Mother's Day," he said. "The flag is supposed to fly that day, too."

Young Evans is particularly proud of the flag he flies. It is large and looks like one owned by a school, government or large corporation rather than a private individual. However, it is easily handled.

The staff is about 10 to 12 feet long, about 2 feet of which is stuck in the ground, according to young Evans.

"The flag is a gift from my grandmother in Apple Springs," he said. "She gave it to me about a year ago."

NATION COULD USE MORE PATRIOTISM, FLAG FLYING

Heart-warming indeed was the story published on the front page of the Lufkin News

Tuesday about the youth who is proud to fly the U.S. flag.

Charles Walton Evans, son of Dr. and Mrs. C. W. Evans of Lufkin, places the U.S. flag in the front yard of his home on every na-

tional holiday.

Sometimes the very young show the way.

With each passing year it seems that Americans have become less aware for the need of proudly displaying Old Glory, the symbol of freedom in the world.

Such organizations as the DAR have conducted drives in recent years in Lufkin in an endeavor to get business firms and individuals to fly their flags on designated national holidays. Only scattered response is usually obtained.

Certain elements in this Nation have continually pooh-poohed anything that smacks of patriotism. Perhaps this attitude by many people who live off the fat of the land, yet condemn it with word and action, has had some effect on a dying patriotism. Apathy among American citizens has been another factor.

There is no doubt that what this Nation needs and needs badly is a resurgence of patriotic spirit-the kind of spirit which brought pioneers to this country in the face of dangers, the kind of patriotism that the early colony settlers exhibited in fighting for this country's freedom from England.

We face one of the most crucial periods in the long and storied history of the United States at this moment. Khrushchev has sabotaged the summit meeting and insulted our President. There is now no doubt that compromise with the Communists is virtually impossible, and Americans must be prepared to back the principles which they hold to be true and upon which this Nation was

Patrietism, which is just another word for love of country, is an element we need more of in this day and time. We need more people like the Evans youth who are proud of his Nation and proudly displays the U.S. flag at every opportunity.

Let's Trade Quemoy and Matsu for Bishop Walsh

EXTENSION OF REMARKS OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the May 13, 1960, issue of Labor Herald, a weekly labor union paper published in Baltimore, the article being entitled, "Let's Trade Quemoy and Matsu for Bishop Walsh," and written by Charles S. Bernstein.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

LET'S TRADE QUEMOY AND MATSU FOR BISHOP WALSH

(By Charles S. Bernstein)

President Eisenhower at Wednesday's press conference was asked by Holmes Alexander of the McNaughton Syndicate-"Mr. President, Sir, this is a question about Quemoy and Matsu; and two of the Democratic candidates have said that if elected they would try to get rid of that responsibility."

The President's answer is open to all who want to read it. But the issue this writer wishes to point to is that of humanity. Even a lowly scribe can understand such an elementary subject, although he may not understand the military importance of the two islands.

One should be willing to sacrifice political prestige for human values. If by giving the Communists in China an opportunity to get satisfaction in having the two islands returned to them, we can secure the release of Americans from torture and life imprisonment, it is worth our try. If the United States could accomplish this exchange of a little real estate for human beings, we will have done an act of mercy and justice.

According to the New York Times of March 19, 1960, there are in Red China prisons, besides our own Marylander, Bishop James Edward Walsh, a group of other Amer-

icans. This is the account:

The charge against Bishop Walsh, Hong Kong, reported March 18 was: Bishop James Edward Walsh, of Cumberland, Md., was convicted today in Shanghai having directed a group of Chinese Roman Catholic priests in plots, espionage, and other counterrevolutionary activities against Communist China. Of course, there is not a man, woman, or child in America, other than a Commie or fellow traveler who believes this charge. Yet Bishop Walsh and other Americans are kept in prison.

Since the Communists took control of China in 1949, they have imprisoned or held

158 Americans under arrest.

Five died in prison from maltreatment. The rest have been released, except for Bishop Walsh and the following four:

Robert Ezra McCann, of Pasadena, Calif., arrested in 1951 and sentenced to 15 years; John Thomas Downey, of New Britain, Conn., arrested in 1954 and given a 20-year sentence; Richard George Fecteau, of Lynn, Mass., arrested in 1954, and sentenced to life imprisonment; and Hugh Francis Redmond, Jr., of Yonkers, N. Y., arrested in 1951 and given a life sentence.

All were charged with espionage.

Therefore, we Americans have all to gain and nothing to lose, by trading some real estate for these lives mentioned above. Not only that, but, if we are forced to defend these islands, with our fleet and our Air Force, it will mean many thousands more lives of Americans. All that can be avoided by a graceful offer by the President to exchange a little real estate for human beings.

change a little real estate for human beings.
Right now, when there is a lull in the international situation in the Far East, let us try to test our scheme of trade. Surely we will get the best of the bargain—Labor

Herald.

Inactivation of 449th Fighter-Interceptor Squadron, at Ladd Field

EXTENSION OF REMARKS

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. RIVERS of Alaska. Mr. Speaker, I consider it my duty to call to the attention of my colleagues in the House an alarming development with regard to our national defense. I refer to the incredible decision of the Air Force, recently announced, that it will inactivate and phase out the 449th Fighter-Interceptor Squadron at Ladd Field, near Fairbanks, Alaska, in August 1960. This unit, which is the only one of its kind in

Alaska north of the Brooks Range—the only other fighter-inceptor squadron in Alaska being at Elmendorf Air Force Field near Anchorage, Alaska-has for many years been regarded by the highest military authorities as an indispensable shield against potential aggression by the Russians. Ladd Field, only 600 miles from Siberia, is a part of our northwest bastion of defense; a vital link in our perimeter of national defense, which includes Alaska as the corridor between Asia and North America, being an area once characterized by the late great Army officer, William "Billy" Mitchell, as "the most important strategic place in the world."

As recently as last March the Air Force programed replacement of its 25 F-89 aircraft at Ladd AFB for F-101Bs, in line with strengthening the defensive power of the 449th Fighter-Interceptor Squadron. This occurred at a time when international tensions appeared to be relaxing. Now in the midst of a worsened world situation stemming from our U-2 observation flights over Russia, we are confronted with the Air Force's sudden plan to withdraw from Ladd Field, soundly established on American soil in the shadow of the Iron Curtain, as contrasted with many of our foreign airbases which are built on political quick-

On July 4th last, at Auburn, N.Y., I had the privilege of speaking at a ceremony honoring our 49th State, in which I extolled the foresight and wisdom of former Secretary of State, William Henry Seward, in effectuating the purchase of Alaska from Russia, and noted the disadvantage the rest of North America would now be suffering if Alaska were yet in the hands of the Russians. Both the audience and I visualized the idea of Russian bombers and missiles being located in Alaska pointed toward the great industrial centers of the older States and Canada, and we did not like what we saw, which lent enhanced meaning to the memory of William Henry Seward.

Now we are told by Gen. Curtis LeMay, who requested the construction of Eielson AFB a decade ago as a launching ground for SAC bombers just 26 miles from Fairbanks, that Alaska is now of subordinate strategic importance and that for economy reasons the risk of phasing out the 449th Fighter Interceptor Squadron may be taken. This, in the face of the fact that said squadron has been on the alert for years to defend not only Ladd Field and environs against the possibility of a Russian paratrooper attack or destructive bombing mission, but to likewise defend the great SAC installation and runway at Eielson AFB with resultant protection of our whole

Since long-range missiles presently under development are presumably not yet operational, the Russian airpower according to Gen. Thomas D. White, Chief of Staff of the Air Force, is still Russia's most dangerous weapon. To my mind this makes the problem elementary and the answer apparent—this is no time to inactivate any part of

our manned fighter-interceptor forces. Comes the day when East and West will have each other thoroughly pinpointed with adequate arrays of ICBM's, there may be no further use for Air Force bases as we know them today, but the time is not now, any more than it is time to phase out the Air Force itself.

I realize that the Air Force is hurting because of the recent congressional appropriation cutback on Bomarc widely regarded as an extravagant fifth wheel in our overall missile program, but do not think this justifies the economy reaction displayed in the plan to chop down our manned fighter strength. This reaction is equivalent to saying to the Congress, "You want economy so we will give it to you-where it hurts." Instead. the money saved on Bomarc should be made available to strengthen our manned fighter defenses. Such approach would be consistent with the fact that the top stratum of the Air Force has turned down the request of Lt. Gen. Frank A. Armstrong, Jr., Commanding General of the Alaskan Command, for intermediate range missile installations in Alaska to offset the 27 Russian missile installations in Siberia across the Bering Strait. If Alaska is not an area usable for exchanging missile blows with the Russians, it must be regarded as an area vulnerable to attack and attempted occupancy by the Russians for use against the rest of our country as a nearby launching platform.

An excellent and more complete treatment of this whole subject is found in the remarks of Senators Bartlett and Gruening of Alaska set forth in the Congressional Record of May 17, 1960, beginning on page 9665 with the speech of Senator Gruening. I invite all of you to read the able presentations of the two Senators, for the vital interest of all the people of the United States is at stake.

World Refugee Year—Resolution of National Council of Protestant Episcopal Church

EXTENSION OF REMARKS

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1960

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a resolution on World Refugee Year, adopted at the Greenwich, Conn., meeting of the National Council of the Protestant Episcopal Church.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

WORLD REPUGEE YEAR—RESOLUTION ADOPTED BY THE NATIONAL COUNCIL OF THE PROTES-TANT EPISCOPAL CHURCH APRIL 26-28, 1960 Whereas World Refugee Year, as established by the United Nations and cospon-

sored by the United States of America, comes to an end on June 30, 1960; and

Whereas no new legislation to replace the Refugee Acts which have expired, has been enacted by the present session of the Con-

gress: Therefore be it

Resolved, That the National Council of the Protestant Episcopal Church in the United States of America urges the immediate enactment of fair and generous legislation, permitting the admission to the United States of a substantial number of refugees in 1960 and 1961; and be it further

Resolved, That the secretary of the national council send copies of this resolution to the President, the Secretary of State, and to each Member of the Senate of the United

States.

Hon. Leonard G. Wolf Discusses Role of Congress in Space Age

EXTENSION OF REMARKS

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. SISK. Mr. Speaker, my good friend and able colleague from Iowa, the Honorable Leonard G. Wolf, of Iowa, was selected as the guest speaker at the National Aeronautical Electronics Conference at Dayton, Ohio. Congressman Wolf is a distinguished member of the Committee on Science and Astronautics, upon which I also have the honor of serving. I have had an opportunity to observe his fine work on the committee, and I think every Member will want to study Congressman Wolf's description of the work of the committee and his pertinent comments on America's position in the space age, which formed the theme of his speech at the Conference on

The text of Congressman Wolf's address follows:

I am indeed flattered to have this opportunity to speak to you tonight. It is always a stimulating experience to address an audience of well-informed and highly professional people such as you. By the way, I stand here, as a one-time Navy electrician, World War II vintage and I know the difference between an ohm and a watt, or a resistor and a condenser, and especially the difference between a hot line and a ground. I find this very inadequate after today's experiences at Wright Patterson.

But I think that if I were now pursuing a career in the field of electronics I would be greatly excited and stimulated by the great events that are taking place in the programs of rocket research and space exploration currently being pursued by the Department of Defense and the National Aeronautics and Space Administration. These events have a significance to developments in electronics research that stretches out into the future far beyond our ability to envision. The implications in the single fact of being able to communicate with and receive information from a space vehicle-Pioneer V-out to 50 million miles or more are to me simply staggering. We are only now approaching the threshold of achieving manned flight through space to the moon and to the planets, which could not be possibly accomplished without the unceasing drive toward progressive development that has been demonstrated over the past years not only by you and your colleagues, but also by our great national industrial complex that

has made possible the comparatively recent growth of the electronics industry. Today I met a man who is still working, yet worked with the Wright brothers just a few short years ago.

Now, let me go into the role of Congress in the development of our space programs, and in a much larger sense, its interest in all aspects of scientific research and development.

For many years, perhaps more positively since World War II, there has been a growing awareness in Congress, particularly in the House of Representatives, of the increasing importance of scientific research and development in the everyday life of our people and, equally important, as a very important part of our defense and national resources.

If we reflect upon the historical significance of our great economic and social advances that followed World War I, of the roaring twenties, of the depression, of the thirties, and of another great industrial and economic upsurge coming out of World War II, we can then perceive more clearly the recent emergence into early maturity of a vigorous approach, nationally, to scientific research and development as the root-source of future security and economic prosperity. Congress and the executive branch, including the military departments, have been keenly aware of this fact, and nowhere has this awareness been more pointedly expressed than by the Department of Defense in its requests for steadily increasing appropriations to pursue military research and development programs submitted to Congress

every year.

For instance, the budget for research, development, and engineering submitted by the DOD for the coming fiscal year is almost \$6 billion. And the National Aeronautics and Space Administration has almost doubled its budget in its 2 years of existence from \$500 million to more than \$300 million. Congress has expressed its awareness of the importance of R. & D., by appropriating almost all the funds re-

quested.

Of course, we have had outstanding scientific organizations within the many Departments of the Government for many years. I need only point to the National Bureau of Standards and the National Science Foundation, as examples. But, in comparison to the DOD, the funds required by these organizations have been very small indeed.

My committee, the Committee on Science and Astronautics as well as the Senate Committee on Aeronautical and Space Sciences, is the latest and perhaps the most significant expression of Congress of its awareness that productive research and development, both basic and applied, has become a factor of major importance to our national community. Incidentally, my committee is the first standing committee that has been created by the House of Representatives since 1900. During the 2d session of the 85th Congress, the Select (that means temporary) Committee on Astronautics and Space Exploration, working with great energy and drive, created the National Aeronautics and Space Administration and dedicated it to the peaceful exploration of space for the benefit of mankind everywhere.

My committee is the direct descendant of that select committee and has functioned with even greater vigor and action. My committee has a record of having held more hearings in its first year than any committee in the history of Congress. To give you an idea of the extent of our interests and jurisdiction, aside from our legislative responsibilities, we have held definitive hearings on the international control of outer space, ground-cushion phenomena, satellites for world communication, missile development and space science, space propulsion, nuclear explosions in space, to name only a few. Yes, and in earth sciences, oceanography, social sciences, too.

But, you may ask why does a congressional committee take the time and expend the energy to make such detailed investigations? doesn't it just concern itself with enacting legislation and acting as a watchdog over the executive branch? The answers to such seemingly innocuous questions are really quite complex.

Ladies and gentlemen, it has been my continuing mission since being elected to Congress, to point out as emphatically and as often as I can, that within our country there is no longer existing a clear division between civilian and military. We no longer live during times of peace and of war.

We are, and have been for many years, continually and unceasingly at war-with only the shooting suspended and not always is this true. Now, no one doubts that Western civilization is faced, in the form of the Communist philosophy, with its most deadly threat since Genghis Khan stormed out of Mongolia with his "golden horde" brought Europe almost to the brink of complete political and social disintegration in the 12th century. To quote Gen. John B. Medaris, who appeared before our committee on February 18 of this year, "Fundamentally [the United States-Soviet competition] is a clash between different philosophies as to the position of the individual in society. The field of conflict is so broad, so profound, that it encompasses every element of international power—military, economic, diplo-matic, political, psychological, and spiritual."

Coupling my first premise that scientific research and development is assuming a paramount importance to the lives of all our people, with the realization and acceptance of the fact that we are engaged in a universal conflict, which can result only in unconditional surrender either by the West or the East, Khrushchev's "We will bury you" was no figure of speech, then it should become clear that each and every one of you, and your colleagues in the other scientific disciplines, hold presently, to a major degree, the responsibility for our continued existence as free people. It therefore becomes the objective of Congress and my committee to support and foster, as a principal national resource, the scientific mission in every field of endeavor.

In this connection, let us consider the education of our young people. We have held considerable hearings on this subject and received testimony from many outstanding educators and educational administrators. And I am sure that many of you have a deep interest in this field. In this very basic, fundamental area, we are, right now, seeing the Soviet Union turning out scientists and engineers at a rate far surpassing our own. The Red bosses recognized years ago that the success of their mission to communize the world would depend upon excelling all other nations, particularly the United States, in science and technology. Such success would depend totally on the quality and quantity of trained scientists that would be available to their research and engineering programs, and ultimately making world dominion possible. We must come to grips with the great needs in the field of education and quit arguing over who has the responsibility to do it and get the education program going.

You can see why we in Congress and in my committee are concerned with the education of scientists in our country, and also for the material well-being of much of the

Let me speak now about the interest of our committee in the space program.

During the International Geophysical Year recently terminated, the United States as-sumed the responsibility for placing a satellite in orbit around the earth to explore the

regions beyond our atmosphere. The Navy, and the Naval Research Laboratory assigned the Vanguard mission and proceeded with the necessary design, engineering and tests, despite the fact that the Army's Ballistic Missile Agency at Huntsville, Ala., by slightly modifying the exist-ing Redstone missile, was ready to place a satellite in orbit almost a year before the scheduled Vanguard. Then, as we all know, came the great awakening; inaugurated by Sputnik I. Our complacency had been joited. False illusions regarding the Soviet Union's technological capabilities were thoroughly dissipated. And we stood before the world, figuratively, with our scientific halo down around our ears. We learned there was no longer room for complacency. Russia just a few days before Sputnik I, when, in my first speeches, I suggested Russia had some scientific surprises for us my audiences laughed with pompous selfesteem. And then sputnik—then my audiences would say, "Now how come? What happened to American leadership?"

Between Sputnik I and now has evolved gradually, grimly, and often painfully, the comprehensive space research program now underway in NASA. And there is no question that in the last few years, our satellite and deep probe projects have paid off handsomely. It is an established fact that our space vehicles have contributed data to the scientific communities of the world that quantitatively and qualitatively exceeds that of the Soviet Union by several orders of

magnitude.

I'd like to read two significant comments from Mr. Baldwin of the New York Times. Baldwin says the reason for this is that we Americans have not recognized sufficiently the psychological and political aspects of the space race. "The nation's space program," he writes, "has been too much under the authority of the mathematical scientists—the 'pure' researchers to whom scientific facts and findings are ends in themselves—and the budget planners, economists and cost accountants."

However, in awareness of the political and psychological importance of space achievements Moscow has been far more perceptive than Washington. Our greater proficiency in the accumulation of scientific data has been more than offset in world opinion by the Russian "firsts"; first sputnik; first deep-space probe; first picture of the "dark side" of the moon; first rocket to hit the moon. Moreover, the Soviet space program excels our own in the greatly superior thrust of the Soviet booster rockets.

And a comment of Dr. Eberhardt Rechtin, the Chief of the Telecommunications Division, states this in the following manner: "At the present time, one of the most remarkable features of the U.S. position is the almost complete lack of urgency in the space program. Our space program costs less than \$10 per year per U.S. adult or roughly, one evening's entertainment per year."

evening's entertainment per year."
Yes, insofar as booster thrust and weight
lifting capabilities are concerned our rocket
development is still several years behind that
of the U.S.S.R., whose Sputnik III exceeded
in weight, the total sum of the payload
of every satellite and space probe we have

sent up, to date.

However, in many long hours of hearings our committee has heard from Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Administration, and his associates, regarding the progress of current NASA satellite launching programs, the development of large and superlarge boosters, and the plans for a continuously productive program leading to an ever-growing space capability. And I can assure you tonight that our future in space looks very promising indeed, particularly with regard to the development of large boosters such as the Saturn and the Nova. However, I cannot equate our relationship with Russian

progress. They are not standing still. But despite our successes so far the history of the management process that have characterized our missile and space programs has left much to be desired. To put it bluntly, they were delayed by an almost pathological inability to choose our objectives and to make management decisions on the top level, to organize Government resources for the job needed to be done.

And I say this despite the brilliant success of our Armed Forces in bringing their ballistic missiles to operational status in record time. To quote Dr. Simon Ramo, outstanding scientist and industrial organizer of our day, who appeared before our committee: "We have become bogged down again with the real bottleneck—not the limited technical and physical resources available in this Nation, but instead, the slow process of decisionmaking, organization, and arrangementmaking.

"Today, years after complete demonstrations of our technical capability and years after the unprecedented simultaneous implementation of all of the production tools and facilities and operational military planning for the full utilization of these technical accomplishments, we still seem to be involved in major debates as to how many should be the numbers of missiles that we provide to insure inevitable retaliationthis, even though a substantial part of America's capacity for competitive hardware production stands unused." I might say at this point, that most of the rivalry and friction between the services has been caused by this decisionmaking problem at the top. The individual chiefs have had to fight to maintain their programs. And they hoped that the rival chiefs would do the same. But all of this should have been unnecessary, had proper decisions been made and on time at the summit.

This is where Congress and my committee has made the largest contribution—the continuous insistence and polite prodding that all the responsible Government agencies develop, by every means available, the most efficient organizations possible, obtain the best scientific talent available, and provide leadership to American industry which, in the final analysis, is the only instrumentality by which our national scientific objectives can be achieved.

I have tried in these few brief moments to give you an idea of the depth and breadth of my committee's responsibilities and areas of action. We Americans are living in a period of fateful decisions made by men who are motivated either by a belief in moral law and the inherent dignity of man, or in the supremacy of the state. These decisions will inevitably and permanently effect our lives as free people, surrounded by an incredible plentitude that has been the product of our science, our technology, our industires and hard work, a plentitude that is experienced nowhere else in the world. We are richer far beyond what our fathers ever envisioned we could be. And our material wealth is the envy of all peoples. Our danger lies in the complacency bred by plenty.

I have had an opportunity to travel extensively in the world, only recently returning from southeast Asia and the Orient. There I saw human degradation of a fantastic order that beggars description. I have seen people who are struggling to survive without even the basic human needs of food, clothing and shelter, living in the midst of squalor that makes our worst city slums look like the hanging gardens of Babylon. I have been in places where a cupful of rancid, spoiled food is worth more than a human life. And yet, these people live in hope, striving as best they may for a better future for their children. And they have before them two avenues that they could travel toward that future—one posted with the hypocrisy and blandishments of com-

munism, the other with the promise and truth of democracy. I say to you that we are competing with the Soviet Union, not for space, not for the marketplace, but for the minds and trust of uncommitted peoples all over the world.

How is American science, research, technology a part of this competition? We have made it irrefutably evident that the products of hard work, the exploitation of our natural gifts and the unceasing development of our scientific and technical aptitudes have been combined to give America what it has today. And this, the most important point of all, has been done within a society of free men and women in less than 200 years. And, the same is possible for all peoples. This is the message we must bring to those struggling people. This is the bright hope we must give them. Material and spiritual progress is possible without destroying the basic freedoms.

I think, ladies and gentlemen, that perhaps our greatest virtue is not solely in our abilities to produce, but rather too, in our willingness to give. I think that most of us believe that we are our brother's keeper, and have acted that way over the years. I do not mean to imply that in helping to feed the hungry, cloth the naked, and shelter the homeless of the world that each one of us were self-conscious in doing so. Nor do I believe we have sent our bounty overseas like the ostentatious philanthropist.

No. Because I have seen in these countries American shovels, tractors, combines, looms, all types of machinery along with American scientists, technicians, engineers, doctors—there to teach and instruct those people how to help themselves, and to have pride in their own accomplishments. We must increase this area even more. We must lead in this area, not as a military power, but as a free nation whose only desire is to help raise up mankind.

I need only point to our enormous contributions to the rebuilding of war—devastated nations, particularly Japan, now a thriving, vigorous commercial country 15 years after almost complete economic disaster.

These are the things that American science has made possible. And thus through our technology have we affirmed our principles of morality and humanity. We must be sure that those countries which have not as yet finally chosen the road down which they will march toward the future, have an opportunity to respond to those same eternal principles and hopefully create a better life for their people through the democratic process.

Therefore, you and I, as participants in this great outpouring of scientific discovery, energy, and accomplishment, in our own humble way, strive for the common goal so earnestly desired by everyone. You, more directly than I, can be part of translating concept into reality.

The goal of my committee, as the instru-ment of the greatest form of human government the world has ever known, guides and attempts to give to our national research and development programs a positive and constructive emphasis. It is the firm belief of my colleagues that the results achieved through our national and scientific efforts should benefit all mankind. As an instrument of the Government that stands as a symbol of intellectual fredeom for everyone, the Committee on Science and Astronautics has the incomparable opportunity to play a major role in assuring to ourselves and the free world the security and tranquility that is sought and dreamed of by so many. And with God's help, that opportunity will lead man ever closer to realizing the promise that was given to him 2,000 years ago in Bethelhem, "Peace on earth, to men of good will."

Social Justice To End Arms Race

EXTENSION OF REMARKS

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter directed, under date of May 13, 1960, to President Eisenhower by Mrs. A. Powell Davies, president of the Unitarian Fellowship for Social Justice. The letter relates to the submission to the President of 5,000 signatures on a petition to end the arms

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

> UNITARIAN FELLOWSHIP FOR SOCIAL JUSTICE,

Washington, D.C., May 14, 1960. Hon, DWIGHT D. EISENHOWER,

The White House, Washington, D.C.

DEAR MR. PRESIDENT: We present to you today, on the eve of your departure for the Summit Conference in Paris, 5,000 signatures on a petition to end the arms race.

These petitions have come to us from 25 States, from Alaska to Florida. They contain the signatures of members of Unitarian Churches, Friends Meetings, Congregationalist, Methodists, Episcopalians, members of the American Humanist Society, and many others. The petition originated in the Unitarian Fellowship for Social Justice Chapter In Los Angeles. It is co-sponsored by the Southern California Council of the American Humanist Society, the Peace and Social Action Committee of the Santa Monica Friends Meeting, and the Board of Directors for the Pageant for Peace.

Had there been time, Mr. President, millions of signatures could have been secured, assuring you of the confidence of the American people of all parties and all walks of life that you will present to the Summit Conference the hopes we have for peace. As the petition says, "The Summit Conference in petition says, "The Summit Conference in Paris is the focus of these hopes. We ask you, Mr. President, to act for us there. Use the time that is still ours. End the arms race. Limit armaments now as a step toward total disarmament." These petitions have come from Pennsylvania, California, New Jersey, Massachusetts, Florida, Ohio, Connecticut, Kansas, Vermont, New Mexico, North Carolina, New York, Maryland, Alaska, Illinois, Wisconsin, Arizona, Kentucky, Pennsylvania, Oregon, Texas, Washington, Ten-nessee, Alabama, and Louisiana.

In presenting these petitions to you, we believe that you will be strengthened in your desire to bring a conclusion to the Summit talks with definite plans for world disarmament. This is our only hope to escape as our petition says, from "a world paralyzed by fear, a world in which half of mankind suffers hunger, disease, poverty, and ignorance while the wealth and talent of the other half is wasted on weapons which cannot defend those who make them, and which can destroy life on our planet."

Sincerely, Mrs. A. Powell Davies, Presid President.

Petition by Unitarian Fellowship for Paul Nagle Explains His Views on Postal Salary Increases

EXTENSION OF REMARKS

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. MORRISON. Mr. Speaker, Federal employee leaders have completed their pay increase presentation to the House Committee on Post Office and Civil Service. Much of the material which has been presented to the committee has been extremely well done and most convincing.

On March 24 testimony was presented by a person whom I consider to be the most promising of the younger postal leaders in Washington.

I am referring to Paul A. Nagle, president of the National Postal Transport Association. The statement by Mr. Nagle is of such high quality and such general interest that under leave to extend my remarks, I ask that Mr. Nagle's statement be inserted at this point in the RECORD:

Mr. Chairman, my name is Paul A. Nagle. I am president of the National Postal Transport Association representing 25,000 employees of the Post Office Department engaged in the distribution and transportation of the U.S. mail in railway post offices, highway post offices, air mail facilities, and post

I appear before you this morning in support of H.R. 9883 sponsored by Hon. James H. Morrison, H.R. 9950 sponsored by Hon. JOHN R. FOLEY, H.R. 9954 sponsored by Hon. JAMES C. OLIVER, H.R. 9974 sponsored by Hon. JOEL T. BROYHILL, H.R. 9980 sponsored by Hon. Kathryn E. Granahan, H.R. 10132 sponsored by Hon. RANDALL S. HARMON, H.R. 10206 sponsored by Hon. John Lesinski, H.R. 10865 sponsored by Hon. STANLEY A. PROKOP, H.R. 11085 sponsored by Hon. JACOB H. GIL-BERT and in support of the 60 other salary bills which have been introduced by Members of the House of Representatives.

Allow me to thank you, Mr. Chairman, and also the Honorable EDWARD H. REES, the Honorable James C. Davis, the Honorable Ros-ERT J. CORBETT and the Honorable H. R. GROSS for having sponsored bills which are designed to insure that there will be no lapse in postal pay increases enacted in 1958. Also we extend grateful thanks to the Honorable GLENN CUNNINGHAM for having sponsored legislation providing a 10-percent postal pay increase.

PROVISIONS OF H.R. 9883

The basic salary increase provided by H.R. 9883 will be the main topic of this testimony. Let me declare immediately however the support of NPTA for two subsidiary features of H.R. 9883 and companion legislation.

It is gratifying that H.R. 9883 affords protection against legislative delays by including an effective date of January 1, 1960. This feature is particularly important be-cause postal employees are losing ground on

cause postal employees are losing ground on the economic highway and retroactivity ac-cordingly becomes an essential safeguard. Another extremely important feature of H.R. 9883 is section 104 which provides longevity adjustments. Fifteen years have elapsed since the longevity concept was first included in postal pay statutes. In all the

intervening period there has been no change in the initial placement of the longevity steps at \$100 each.

When the longevity idea was first adopted it took the form of meritorious grades in recognition of "good and faithful service." When Public Law 500 was enacted in 1950, the additional or "meritorious" grades were converted to straight longevity grades to be awarded after 13, 18, and 25 years of service. Conversion brought with it some irregularities and inequities which continue to this day. The changed economic national structure plus the continuing inconsistencies in the longevity law combine to justify approval of this feature of H.R. 9883.

ECONOMIC CHANGES

It is more than 2 years since the effective date of the last salary increase for postal workers. What is even more significant these employees have received only two wage adjustments since 1952. During the 1950-59 period the average hourly pay for factory workers increased 76.5 cents per hour. During the same period the average hourly wage of postal workers rose only 58.8 cents per hour. In further contrast the hourly raise negotiated for members of the International Association of Machinists was 97.1 cents.

Mr. Chairman, more than 60 percent of the postal employees in the United States are in the \$4,000 to \$4,999 bracket. people cannot raise a family and educate their children on an income grossly inadequate in this age of economic enlightenment.

Consider, for example, the changes in tax impact in recent years. Before World War II, the average postal clerk had a top automatic pay grade of \$44.27 weekly and paid no income tax. Today the equivalent em-ployee with two children receives a maximum of \$93.75 but pays \$11.22 in national income This is a \$11.22 deficit in spendable dollars which are themselves worth only 47.3 percent of their 1939 value. The costof-living market basket does not include National, State, and local taxes which because of basic salary deficiency take a heavier bite from postal employees' salaries than from the average U.S. citizen.

One of the yardsticks frequently used to measure the material well-being of families in the United States is the annual report of the Heller Committee for Research in Social Economics of the University of California.

It is generally recognized that the budgets reported by the Heller Committee reflect only a modest standard of living. The latest report of the Committee issued on March 3, 1960, reveals that the budget for the family of a salaried person consisting of a man, a woman, a boy of 13, and a girl of 8 requires an income of \$9,476.43. Even in this budget, which is slightly under \$10,000, there is an amount of only \$1,378.62 allowed for housing and just \$65.03 for education.

The budget for a wage earner with a family of four requires an annual income of \$6,-633.28 The wage earner budget is \$1,000 greater than the maximum contemplated for clerks and carriers by H.R. 9883. The wage earner budget allows only \$1,110.95 for housing and the incredible figure of \$8.34 for education.

What kind of housing and what level of education can be provided for his children by a postal worker having an annual wage between \$4,600 and \$4,700?

EDUCATION COSTS

The Nation is properly becoming increasingly conscious of the need to provide adequate educational facilities for our youth. We have pointed out that on an income \$1,000 higher than the maximum contemplated for clerks and carriers by H.R. 9883 there is available only \$8.34 for education.

In an interview appearing in the magazine U.S. News & World Report (Feb. 1, 1980) Mr. John F. Morse, head of the Federal school loan program, reported that the current cost of a college education in a State supported institution is \$1,200 annually if there are no tuition fees. Three thousand dollars is the annual cost at expensive private institutions. College education is out of the question for the child of today's average postal worker.

Mr. Morse is vice president of Rensselaer Polytechnic Institute, an educational institution offering the highest type of learning in today's much needed technical skills. Mr. Morse reports that at Rensselaer even though a student were to receive an \$800 loan annually, "the father would have to put up at least \$1,400 a year." How would such an astronomical figure be available to a parent who has spent a 20-year career on the tail of the economic kite in the U.S. postal

service?

Student loans fortunately are interest free during the period that the student is in fulltime attendance at a college, and the interest rate during repayment is only 3 percent per year. In other areas, however, the high cost of money is taking its toll from postal

employee pockets.

Other witnesses have testified that most postal employees do not even earn the required \$5,384 to qualify for a Federal Housing Authority loan. To make matters even less tolerable for this hard pressed group the cost of FHA loans has risen 1½ percent since 1952. The 1952 rate was 4½ percent and in that year the total cost of today's modest \$12,800 FHA loan was \$20,556. For 1960 the rate has risen to 5¾ percent and the total cost becomes \$23,760. The increased cost amounts to \$3,204 or nearly 8 months total pay from the income of a person who does not earn enough to begin with to qualify for the loan.

EXECUTIVE COSTS RISE

Mr. Chairman you have introduced into the record of these hearings a letter from Budget Director Maurice H. Stans in which it was reported that the executive branch of the U.S. Government finds "no basis for a general increase in Federal statutory salary rates."

On March 17, 1960, writing in the Washington Daily News, Mr. Ed Korterba commented that the budget of the Bureau of the Budget had risen from \$220,000 in 1938 to \$5,100,000 this year. If a member of the National Postal Transport Association in the railway post office service was receiving a top salary of \$2,450 in 1938 and if his budget had increased by an amount similar to that needed to sustain the Bureau of the Budget, he would now require more than \$55,000 annually.

It is interesting also to apply the budget approach to the Post Office Department. In the postal appropriation for fiscal 1938 there was included an amount of \$2.859,039 to cover administrative salaries. By fiscal 1960 the comparable costs had risen to \$58,159,000. If individual road service employee-incomes had risen by a like amount, these employees would now be budgeting at the rate of \$48,000 per year.

OTHER SALARIES HAVE INCREASED

During 1959, upward wage adjustments were received by 7 million workers in the United States. During 1960 half of all major collective bargaining agreements expire. Certainly the agreements reached during 1960 will reflect the liberal settlement contained in the Steelworkers' contract.

Postal employees have received no increase since January 1, 1958. In the intervening period tens of millions of workers have received or will receive favorable wage adjustments. Unless Congress adjusts postal salaries this year, postal workers will slip deeper into the economic morass which drives them into accepting supplemental employment, and their wives will be pressured into jobs that take them away from the home and children.

Allow me, Mr. Chairman, to advance one very graphic place of evidence of the way in which pay to laborers far exceeds the salaries received by the vast bulk of postal employees.

The San Jose (Calif.) Mercury on March 15, 1960, carried an advertisement for bids on the construction of Santa Clara Hospital. The advertisement declared that "Workmen employed on said work must be paid in accordance with the prevailing scale of wages adopted by the Board of Supervisors of Santa Clara County."

The advertisement lists all types of construction jobs. Remembering that clerks and carriers receive a top automatic salary of \$2.34 per hour, it is highly interesting that the salary scale announced for laborers is a current rate of \$3.115 per hour, advancing to \$3.295 on May 1, 1960, and to \$3.475 on May 1, 1961.

The increases contemplated for postal clerks and carriers by H.R. 9883 would need almost to be doubled if such postal employees were to be afforded salaries equivalent to those currently received by laborers on the Santa Clara propect. The increases of H.R. 9883 would need to be higher still if the future increases scheduled at Santa Clara were to be met.

POSTAL INCREASES IN BRITAIN

The Postal Telegraph and Telephone International which is the international organization representing postal and telecommunications workers throughout the free world, has recently published information regarding the economic gains achieved by post-office workers in Great Britain since the end of World War II. A London postman's pay has increased 153 percent since 1946 while the pay of members of the National Postal Transport Association has advanced only 80 percent in the same period.

Postal wage increases in England have exceeded, by a considerable extent, the rise in the cost of living, which is estimated to be 77 percent. Compare with the United States the startling fact that postal wage adjustments in Great Britain have exceeded the 89 percent rise in the average wages in pri-

vate employment.

The tragic truth is that the comparative standard of living among postal employees has deteriorated since the thirties. The United States now stands on the threshold of an economic era which will increase its gross national product by \$300 billion in the next 15 years. In such a dynamic economy, traditional standards of Government employee wage adjustment must be reevaluated. The new atmosphere of national growth demands an improved standard of living for families of postal employees.

PRODUCTIVITY

Postal workers are contributing to the essential economic growth of the Nation. This is evidenced by Post Office Department testimony before the subcommittee holding hearings on postal appropriations for fiscal 1961. A chart submitted by the Post Office Department indicates that in the 5-year period from 1954 to 1959, piece handlings per man hour had increased from 524.3 to 662.3 pieces. This is an average increase of nearly 30 percent.

In term of 1954 postage rates on letter mail, the quantity of mall handled in 1 hour had a revenue value of \$15.73. Output in 1959 had a relative revenue value of \$26.49. In contrast with a difference of \$10.76 per hour in revenue, the postal employee who accomplished the improvement received only 23 cents per hour in increased pay.

GUIDE LINES

A controversial aspect of productivity has been the Guide Lines system recently instituted by the Post Office Department. We have criticized the program as a thinly veiled speedup and we are unhappy over Post Office claims that we were consulted in the planning of the program. A more appropriate way to put it would have been for the Department to say that it announced its plans to employee leaders rather than that the leaders were consulted in the formulation of those plans.

It has also variously been claimed that employees themselves requested the Guides system and that morale of the affected employees has never been better. I dissent totally from any such viewpoint and declare that partially as a direct result of the Guides system, the morale lag is second only to the pay lag in the service lag of the Post Office

Department.

EMPLOYEE TURNOVER

Mr. Chairman, it is in the pay level of the clerk and carrier that maximum turnover occurs. Again recently Budget Director Stans testified that recruitment is difficult at the higher pay levels of Government service. Retention of high level personnel is a negligible problem in postal employment but recruitment of the people who make up the productive postal work force continues to be a very real problem.

The Chicago Sun Times reported on October 15, 1959, that at the heart of the problem of postal service lies "the difficulty of attracting and keeping competent postal

workers."

Postmaster Orr, at Wilmette, Ill., is quoted as saying "Our help problem is so acute it's painful." Mr. Orr adds that "The changeover is so fast it makes your head swim."

Assistant Postmaster Williamson, at Skokie, Ill., is quoted as saying, "The trouble is our salary rate. All the industry around us pays higher. The retirement program and vacations are good, but that still doesn't interest men too much. They have to make a living."

In the sharp differences of opinion between the National Postal Transport Association and the Post Office Department in regard to the discontinuance of terminals and airport mail facilities, one of the things upon which we have insisted is statewide recruitment for postal positions. This is essential if we are to avoid having access to postal positions concentrated in population centers. The Post Office Department has stubbornly resisted virtually every attempt by the National Postal Transport Association to soften the shock the changes are having on persons formerly assigned to terminals and airport mail facilities. However, postal administrators admit that they will be forced by recruitment difficulties to yield on the matter of statewide apportionment to postal jobs.

METROPOLITAN AREA PLAN

Mr. Chairman, the National Postal Transport Association has had occasion to point out the flaws in the metropolitan area program for mail processing. In addition to the defects which are built into the metro plan, the system places added burdens on the shoulders of postal employees. In States where the metro system has been inaugurated, new scheme examinations have been imposed at rapid-fire intervals. Postal employees richly deserve to have their salaries increased to reflect the additional knowledge and skills which are required.

Another and even more serious aspect of the metropolitan area plan is the nation-wide integrated postal service plan which threatens to impose an actual pay cut upon those members of the National Postal Transport Association who are assigned to duty in railway and highway post offices. If the Post Office Department persists in inaugurating the first phase of this plan next month in Washington State, most of the mobile unit employees in that State will

actually suffer pay cuts of \$20 per month. Under the new nationwide plan this condition will be repeated throughout the coun-Any pay adjustment to be enacted should take into consideration the pay cuts confronting this most unfortunate group of postal people.

It is interesting that both the metro plan and the nationwide integrated postal service plan are variations of an antiquated system which was discarded 100 years ago in favor of distribution in rallway post office cars

Mr. Chairman, I am an elected officer of the National Postal Transport Association on leave of absence from a position as dis-tributor, level 5 on the New York and Pittsburgh Railway Post Office. During more than 20 years of active service I performed in the Post Office Department I have worked frequently with employees of the Railway Express Agency. The duties of the Railway Express messengers are far less complex than those of postal transportation clerks. No scheme study is required and the general obligations of the position are less demanding. Nevertheless, it has been my experi-ence that such employees consistenly re-ceive more than a level 5 postal salary. The ceive more than a level 5 postal salary. typical current wage for Railway Express messengers on railroad duty is \$460 monthly. This amounts to \$800 per year more than the amount of salary paid to a railway post office distributor. In addition, the Broth-erhood of Railway Clerks is currently negotiating a wage increase designed to produce an additional \$500 annually. Approval of H.R. 9883 is warranted by the currently existing wage spreads in comparable jobs in railroad service.

TERMINAL PROBLEMS

Prior to January 9, 1960 there existed a network of postal terminals and airport mail facilities. We have already referred to the way in which, by administrative decree, the installations were merged with local post offices. As one result, the transfer rights of personnel were sharply circumscribed. Many people assigned to such fa-cilities have been living away from home in the expectation of transfer to more conveniently situated mobile or stationary installations. With the discontinuance of terminals and curtailment of mobile units. these employees face limited transfer prospects and are deprived of the opportunity either to return to their homes or to advance to mobile unit positions. With-drawal of the prospect for anticipated promotion is itself a severe economic hardship to this substantial group of postal em-

Another complication of the merging of terminals has been changed in the administrative workweek for Postal Transportation Service employees. The sick and annual leave law specifically excludes Saturdays and Sundays for purposes of granting leave. In some terminal installations the flow of mail is heaviest on weekends. Under the Postal Transportation Service administrative workweek, Saturdays and Sundays were treated as any other days for leave purposes. City post offices however operate under the fiction that they are closed on weekends and that even persons scheduled to perform service on those days are ineligible to receive paid leave. Accordingly the leave lag becomes another element in the overall pay lag problem of postal employees.

NO PAY STUDY NEEDED

Mr. Chairman, we associate ourselves with earlier witnesses who feel that there is no need to have a further study of Federal pay systems to determine what increases are justified. More than 90 percent of all full-time Federal employees are covered by the Classification Act, the Postal Field Service Compensation Act or by statutes covering wage board employees.

The Post Office Department has expressed great pride in the Postal Field Service Compensation Act as a triumph of modern scientific allocation of positions to salary levels. We do not agree. We believe that there are many inequities in what is commonly identified as Public Law 68. think the positions are graded too low; that promotion increases are too narrow; and that all service for acting in higher levels should be compensated at the pay grades set for those levels. Nevertheless, we recognize that the immediate need is for a pay adjustment as contemplated by H.R. 9883. Immediately after that has been accomplished, this distinguished committee may confidently rely upon our enthusiastic cotoward removal of inequities operation from Public Law 68. We offer our earnest gratitude for having been invited by you, Mr. Chairman, to submit our views on the changes which might properly be made in Public Law 68. We are grateful also for the work already done in this regard by the committee staff.

In connection with pay studies it is in-teresting that the International Cooperation Administration is asking Congress for \$350,000 to develop in Cuba what it calls a modern civil service and personnel system.

We have no idea what is planned for Cuba and we have no objections. We do know that after years of engineering studies right here in the United States, the conditions of Federal employment have declined dangerously. Postal changes have confronted members of the National Postal Transport Association with economic problems more severe than those facing any other group of Government workers. In view of the general need of the Federal employees for wage adjustments and in light of the special plight of our membership, the National Postal Transport Association asks your early favorable consideration of H.R. 9883.

Mr. Chairman, we thank you for the action your distinguished committee is taking on pay legislation. Again we thank the sponsors of the several bills and we offer our very real appreciation for the opportunity to appear before you this morn-

The Late John A. Reilly

EXTENSION OF REMARKS

HON. ANDREW F. SCHOEPPEL

OF KANSAS *

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "John A. Reilly," published in the Washington Evening Star of May 21.

The editorial relates to a distinguished Washingtonian who recently passed away. The editorial speaks of Mr. Reilly's great influence for good in the Capital City.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHN A. REILLY

Washington has lost a distinguished native son-one who had an important part in making it a better city-with the death at 58 of John A. Reilly. His efforts in behalf of the Nation's Capital went beyond what might have been expected from a leader in the financial and business community. He

had a boundless pride in his city and this led him, as a labor of love, to devote a great deal of his time and energy to civic advancement

Thus, despite the press of his duties as bank president and as officer in numerous civic, trade, religious, and other organiza-tions, Mr. Reilly readily accepted the Com-missioners' invitation to head a citizens group assigned to the difficult task of "sellto Congress the District's \$319 million public works program. The Reilly committee was given a large measure of credit for the final approval of the program in 1954, including a method to finance it. Mr. Reilly did not live to see the completion of the farreaching improvements. But the structures which eventually will mark the final realization of the program will stand as a lasting monument to his persuasiveness, zealousness and tact in pressing for congressional approval of the epochal enterprise.

International Rescue and First Aid Association

EXTENSION OF REMARKS OF

HON, JOEL T. BROYHILL

OF UTUGINTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. BROYHILL. Mr. Speaker, I would like to take this opportunity to insert into the RECORD a brief statement about an organization of which I am particularly proud, and to which all of us owe a debt of gratitude. This is the International Rescue and First Aid Association, which has its national headquarters in neighboring Alexandria.

The Commonwealth of Virginia will honor the members of the organized rescue and lifesaving squads and crews throughout the State during Rescue Squad Week, May 22-28, 1960, by proclamation of Gov. J. Lindsay Almond, Jr.

Virginia is the only State in the Union which annually pays tribute to the humanitarian round-the-clock service of the hundreds of dedicated men and women who provide trained, helping hands to their neighbors in emergency situations: respond to the ever-increasing number of highway accidents; and are constantly alert and ready to work with civil defense and other local agencies in event of major disaster.

Rescue Squad Week is our Commonwealth's way of saying "Thank you" to the rescue squads and lifesaving crews, the Virginia Association of Rescue Squads and their ladies auxiliaries-to the individuals who, as members of these organized units, give so freely of their time, their talents and of their own financial resources and undergo training and more training so that they may be prepared to aid the sick and injured.

Virginia is a pioneer in the organized rescue and first aid movement and organizers of the initial units in the Commonwealth have assisted in forming comparable units in other States.

Virginia, too, is the headquarters State of the International Rescue & First Aid Association with its executive office located in the heart of historic Alexandria,

This association was organized in 1948 at its first annual convention in Atlantic City, N.J., and is incorporated under the code of the Commonwealth of Virginia.

The dedicated service of the many thousands of men and women in the organized rescue and first aid movement in the United States and around the world is exemplified in the masthead of the association's official magazine, the International Rescuer:

And a certain Samaritan * * * going up to him bound up his wounds, pouring in oil and wine; and setting him on his own beast, brought him to an inn and took care of him—Luke 10: 33-34.

The International Rescue and First Aid Association is an association of organized volunteer, paid and industrial rescue squads, ambulance and first-aid crews, fire departments, and other comparable units equipped with all types of rescue and first-aid apparatus and devices which can be carried in mobile units, either by vehicular, water or air transport; county, State, and other associations; and individuals, both men and women, active or interested in the rescue and first-aid movement.

The IRFAA membership thus is composed of individuals, organized units and associations, and associate members in the United States, Canada, and other countries. All of the association's elected and appointed officers, with the exception of the executive director, are volunteers in this voluntary nonprofit

organization.
The objectives

The objectives of the International Rescue and First Aid Association are: First. To promote the ideas of organized rescue and first-aid work throughout the world.

Second. To promote and assist in the establishment and training of rescue and

first-aid organizations.

Third. To cooperate to the fullest possible extent with other organizations whose objectives are accident prevention, safety education, rescue and first-aid work.

Fourth. To cooperate in, foster, and conduct research designed to advance the science and art of rescue and first-aid work, and to encourage the desirable standardization of practice and equipment.

Fifth. To establish a system of mutual assistance both within the association and with other organizations to be used in the event of large-scale disaster.

Sixth. To develop and maintain a code of high ethical standards among rescue and first-aid personnel.

Seventh. To promote the general good and welfare of the members of the association.

Eight. To aid in bringing about and maintaining world harmony by developing a spirit of kinship among the people who are devoted to the cause of saving life and aiding the sick and injured.

Nine. To bring together in a common association all organizations and individuals interested in the aforementioned objectives.

The International Rescue and First Aid Association encourages plans of cooperative action and mutual assistance among its members; and on local, county, State, provincial, and other levels; but it does not itself become operational in any emergency or disaster situation on any level. It does not order, dispatch, or request any member unit or individual member to the scene of any emergency or disaster of any type and so any unit, individual, or organization does not lose any autonomy or freedom of action through membership in this association.

The IRFAA constantly advocates basic and advanced training, practice—and more training—in the techniques and skills of rescue and first-aid work; and emphasizes that first-aid training is only the basic foundation of the training and skills needed by the members of squads and crews organized to cope with all types of emergency situations.

The IRFAA firmly emphasizes that all drivers, attendants, and other personnel of ambulances or other emergency vehicles transporting sick or injured persons should have had first aid training and carry current first-aid cards—American Red Cross or Bureau of Mines in the United States. The association advocates that each and every State should have a law requiring such first aid training for ambulance personnel.

The Virginia Association of Rescue Squads is an association member of the International Rescue and First Aid Association, as are other State and county

associations of rescue squads.

We are proud that our Commonwealth annually pays tribute to the members of Virginia's rescue and first-aid squads and crews. We are proud that the International Rescue and First Aid Association has its headquarters in historic Alexandria and that it is incorporated under the Code of Virginia. We are proud that the ideas of organized rescue and first aid work and the spirit of kinship among the people who are devoted to the cause of saving life and aiding the sick and injured are being promoted by the IRFAA, around the globe, from historic Virginia.

Medical Aid for Our Senior Citizens

EXTENSION OF REMARKS

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. DULSKI. Mr. Speaker, I wish to call attention to a resolution adopted by the Erie County Board of Supervisors at Buffalo, N.Y., on May 10, 1960, in favor of medical aid for our senior citizens. I ask unanimous consent that this resolution be included at this point in the RECORD.

The resolution follows:

Whereas the agricultural productivity of America has resulted in an abundance of healthful and nutritious foods; and

Whereas medical science has made tremendous progress in the development of surgical methods and drugs which strengthen and prolong life; and Whereas as a result we can all look forward to a healthier and longer life; and

Whereas since life expectancy has increased, we have in our midst a large number of senior citizens without whose efforts our recent situation would not be possible; and

Whereas the cost and frequency of medical care increases as a person reaches the age of 65 which is the mandatory retirement

age for most persons, and

Whereas medical aid to senior citizens could be financed in a manner similar to or in conjunction with social security by spreading the cost over the productive years in which a person is gainfully employed; and

Whereas the benefits of medical aid to senior citizens would far outwelch the very small cost to each individual: Now, there-

fore, be it

Resolved. That this honorable board go on record as strongly in favor of medical aid to senior citizens.

Fabulous Mine in the Sea

EXTENSION OF REMARKS

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BOGGS. Mr. Speaker, off the coast of my State of Louisiana, in the Gulf of Mexico, the world's first offshore sulfur mine is beginning production. This pioneering \$30 million venture, which required the construction of the world's largest permanent steel island, is an outstanding example of the lengths to which our domestic mining industry must go to insure for the Nation a continued supply of vital raw materials. And "vital" is the word for sulfur—an element indispensable to fertilizer, steel, rubber, textiles, paper, petroleum refining, pharmaceuticals, and a host of chemical products.

The risks involved in this undertaking are of particular relevance today when questions are being raised about the merits of the percentage depletion allowance under our tax laws. Percentage depletion serves as a powerful incentive for companies and individuals to assume such risks and to find and develop our mineral resources. It is my firm belief that, without the incentive supplied by percentage depletion, the United States could not reasonably expect to enjoy the long-term abundance of sulfur or of other minerals which are now guaranteed to us by such projects as this one.

The time and treasure that must be dedicated to the discovery and development of mineral deposits run to very large amounts, and the chances of failure are very great. Time, treasure, and risk and multiplied many times over when—as is the case with our new Louisiana sulfur mine—the deposit lies 2,000 feet below the floor of the sea in 50 feet of water periodically whipped by hurricane winds and waves.

The story of this Louisiana mine—called Grand Isle—was told in the Satur-day Evening Post of April 23, 1960, under

the title, "Fabulous Mine in the Sea." Because the article dramatically illustrates the financial gamble inherent in resources development and the consequent need for the incentive offered by percentage depletion, I submit it herewith for the RECORD:

FABULOUS MINE IN THE SEA (By Arthur W. Baum)

The sign is a little larger than the top of a ping-pong table. It is bolted in place and may or may not remain secure through the next hurricane, which is a matter that will affect hardly anyone. Few people ever will see this sign. Yet it marks something unique in the world. It is the new and only

outpost of an American frontier.

The sign reads: "Freeport Sulphur Company—Grand Isle Mine—Jefferson Parish—Louislana." This information is ridiculous to anyone not acquainted with that peculiar element sulfur, without which our everyday life would quickly fall apart. For this mine is 7 miles out in the Gulf of Mexico. There are no miners anywhere, no mine shafts, no ore cars, tailings piles or mules. All that is visible is the largest steel island that man has ever erected. Its legs disappear into the water below. It carries large buildings, sheds, a heliport, cranes and a tall drilling rig.

Today the Grand Isle Mine is a little less than a haif mile long. This is long enough to provide a plank-paved boulevard, complete with speed limits, for the motorized carts that zip along 75 feet above the sea. In time the linear surface will more than double, but even today the long platform is larger than any other offshore rig from which we are exploring the gulf floor for

raw materials.

The Grand Isle Mine, even though it is out of sight of land on a mildly hazy day, is the World's third largest sulfur-mining installation and sits above an underground salt dome whose cap-it is hoped-contains the country's third largest sulfur deposit. may exceed this promise. "It had better be a good one," the engineer said, "or we are standing on the most expensive fishing tleup in history." The sulfur is a half mile down, and the first 50 feet is sea waterand trouble. The sea will, under full hurricane conditions, tear at the island's legs With 45-foot waves. The lowest deck level, therefore, is 60 feet above mean gulf level, allowing considerably greater margin for stormy seas than has been known among previous offshore structures, which have heretofore all been oil rigs or military installations.

Grand Isle Mine is a \$30 million island Which is expected to live its working life in a slow dance. It will sink and it will tilt. It is a peculiarity of this kind of sulfur mining that the land surface collapses as sulfur is withdrawn. Although the collapse here will be unseen, it will ultimately form a basin about 2 miles across and 43 feet deep in the center. The mine structure cannot escape some of this subsidence, although it is built as far toward the edge as is feasible. Part of the structure will sink 23 feet and slide sideways. Sometime in the future this movement will require rebuilding of the affected sections. Other parts will merely extend their legs, which are built to be lengthened where they stand.

If this seems an odd sort of mining, consider the element itself, sulfur, which is a pretty silly substance. It is a stone, brimstone, and it burns. It also helps produce burning and explosion in other materials. But a mass of sulfur alone will quench its own fire as the burning area heats the surrounding stone, melting it into a liquid which then drowns and douses the fire. Molten sulfur will revert to stone when it

is cooled below 240° F., or it will become thick and unmanageable, like cold molasses, if it is heated another 100° above its melting point.

This 100° temperature span within which sulfur is a liquid, once inspired an ingenious American named Herman Frasch to invent a new way of mining brimstone, which had always been mined in a normal pick-and-shovel manner. Frasch believed that if he could introduce heated water into an ore body containing sulfur, the sulfur would melt and could be withdrawn as a liquid. He tried it in a Louisiana backwoods in 1895, and he was right, a fact which helped break a world monopoly held by Sicily. Now almost half the world's production is produced by the Frasch method.

Grand Isle Mine is possible only because of Frasch. But even this sort of mining is not simple, 7 miles from shore. The island must carry on its steel back a plant that will heat 5 million gallons of water daily to a temperature of 330°, so hot it would flash into steam if it were not held under pressure. The structure must also shoulder huge compressors for sending air bubbles down to lift the molten sulfur, miles of pipes, a hotel for employees, a helicopter station, boat docks, and drilling platforms.

The goal of all these things is to drive three concentric pipes a half mile down so that the hot water and compressed air can reach the sulfur-bearing rock, melt the sulfur and then bring it up. It emerges as a stream of water-thin, tea-colored liquid flowing from a faucet. Ideally, once this process starts it continues without interruption for the life of the mine, perhaps 30 years, at a rate of several thousand tons a day. In Grand Isle's case it will not do so. Hurricanes will almost certainly cause expensive shutdowns from time to time.

It would be futile to heat water and send just anywhere underground where it might possibly keep going to China. Hence the geologists had to determine that the brimstone under the Grand Isle Mine lies in a limestone formation which is enveloped by harder rocks and thus constitutes a sort of natural tank, capped by the arched cap rock of the salt dome and floored by anhydrite just above the solid salt. Within this envelope lies the sulfur ore, and a few sur-There are caves in the formation, the largest discovered thus far having a height of 18 feet. Drillers hate these holes because when they are penetrated, the drill and all its following string drop into the cave with a wham that shakes platforms. Sudden violence always reminds the plat-

form crews that there is nowhere to run. Grand Isle Mine has cost about one-third more than similar facilities on land. Although it is a pioneer structure in sulfur mining, it is also a part of a wider move into the sea to find resources we need. The oil drillers were the first to pry into the formations, largely salt domes, which exist under the Gulf of Mexico as well as on land. In the few years of their search they have significantly altered the horizon in areas like that off Grand Isle. In these waters, where pirate Jean Lafitte once sailed through the pass between Grand Isle and Grand Terre, perhaps to bury treasure on some low island, a far greater treasure hunt is visible miles out in the gulf. The area off Grand Isle is speckled with platforms where drilling has occurred and in some cases where oil or gas is now flowing. Seventeen are visible from the sulfur mine. On a fine night the view from shore is that of a populated rural countryside, with lights and flares sprinkled through the dark. In this panorama the sulfur mine's long string looks like a distant Main Street.

An engineer pointed out one of the apparent effects of this seaward civilization. "You notice," he said, "there aren't any pelicans any more? Got too civilized for 'em,

I guess." The solemn, slow-flapping "box-cars" with the undershot chins were missing. They have been the only loss. Gulls still wheel over the platforms and boats. Schools of dolphin still are lazily into view as they dive for food, and it is rare that a few minutes' watching from the mine structure fails to produce a view of fish below.

fails to produce a view of fish below. If it is the new sulfur structure that has caused the pelicans to leave, they will not return for a long time. The salt dome off Grand Isle is definitely a commercial producer of sulfur, something that happens only once in 20 times among these geological salt fingers squeezed up from ancient buried seas. The dome was discovered in a search for oil by the Humble Co. of Houston, and was outlined by test drilling in 1953. Humble at first considered undertaking its own mining of the deposit, but subscquently thought better of it and turned the mining job over to specialists. Humble, however, still owns the lease on that area of open water called Block 9, and will split the profits with Freeport.

Freeport is not our largest sulfur com-It is outranked by Texas Gulf Sulphur, which owns the giant boling Dome in Texas and has in the last 30 years taken more than 50 million long tons from this largest of all deposits. Freeport was selected because it has had long experience in semimarine mining locations and because it owns and has successfully operated a small and unusual sulfur mine at Bay St. Elaine, on the watery fringe of Louisiana a few miles below the jumping-off town of Cocodrie. The Bay St. Elaine mine, recently exhausted, was a double experiment. Its mining plant sat on a floating barge, and for the first time it used sea water, instead of fresh, to melt and

lift underground sulfur.

At Bay St. Elaine, Freeport learned to live with salty, corrosive water, an experience which made Grand Isle Mine possible because at Grand Isle there is no economic possibility of obtaining anything but sea water in the great quantities necessary. Grand Isle Mine is the first offshore sea-water operation in history. There must be some fresh water available, of course, for the big boilers and for the 10 dozen men who will split residence time abroad the steel stork. But the quantity is negligible compared with the necessary volume of mining water.

Landlord Humble gets a little more out of its partnership with Freeport than appears in the mining agreement. "You see that flare out there?" the engineer asked. "We are going to put that light out." The flare was gas, burning endlessly near a Humble platform a mile and a half away. It marked a supply of gas totaling 9 million cubic feet per day, enough to operate all the cookstoves in a sizable city. This will be piped to Grand Isle mine for fuel to heat water, and it will not be enough. More than half as much again is being brought from unseen platforms 10 miles west in the gulf.

forms 10 miles west in the gulf.
Grand Isle mine began what should be a generation or more of sulfur production in mid-March 1960. But already it has hung up a list of records. It has, for example, established Edward J. McNamara as the luckiest "raccoon" the Gulf Coast has ever seen. McNamara is a large bundle of Cajun from Thibodaux, La., a town that sits on mossdraped Bayou Lafourche, which, centuries ago, was the Mississippi's channel to the sea. He is a highly educated and skilled sulfur engineer, a jovial man who still manages to cling to faint traces of liquid Cajun speech. McNamara is half Irish and half French, and his wife not only is all French but also, to Mac's good fortune, is related to those most excellent New Orleans restaurateurs, the Galatoires.

Planting the Grand Isle mine at a precise spot in the Gulf of Mexico was McNamara's project, carried out by a combination of nine marine contractors, engineering firms, weather consultants and oceanographers, plus the advice of gulf-wise Humble Oil. The gulf had never seen such a project. As far as possible and in as large pieces as possible, the half mile of island was fabricated ashore in plants which had river access to the gulf necessarily free from bridge crossings. Half of a powerplant was floated out and dropped accurately on the correct bolt holes by giant cranes. The piece weighed 645 tons, a new record lift for the gulf.

Theoretically the work of placing the basic skeleton, allowing for no interruptions, should have taken 2 months. This was theory. In practice the movements of the construction fleet would be absolutely subservient to weather. Obviously floating cranes could not dangle hundreds of tons in midair if strong winds or big waves were going to toss the barges around. All hands would have been happy to settle beforehand for 2 weeks of weather delay. But the weatherman and the marine contractors made a hero out of McNamara. The job was finished in 59 days. "Should have been 58," McNamara said. "The only day we lost was not from weather, but because of a holiday."

Once under way, sulfur mining is a qulet, largely invisible operation. The drill platforms produce some bustle, because one well will remove sulfur from less than a single underground acre; new holes must thus be drilled continually. But aside from this activity there is little stir. The drama of Grand Isle Mine was in its construction. Every move was breathtaking, beginning with the placement on the gulf floor of glant spider webs of steel for spacing and guiding the 30-inch steel legs which then were driven a couple of hundred feet into the gulf floor. All of this underpinning was then locked together, not only to bear the weight of the little city above but also to cope with the bending strains that were bound to come later.

This is a structure that will be pushed around by winds and waves above water level and nudged below the sea floor by the inevitable sinking and sliding. The buildings on top will sway only 4 inches in a gale, which is not bad at all. Each section of the boulevard traversing the island is equipped to slide 3 feet horizontally before rebuilding will be necessary. The hotel will move a few feet, but this movement will never compare with the airlift it enjoyed as it reached its position in the first place. The hotel was carried out in four pieces, each complete. As each quarter of the 60-room, 30-bath structure hung on the cranes, it was actually livable. There were blankets on the beds, lamps on tables, pool and ping-pong tables stood in position, and medicines lined the cabinets of the miniature hospital aboard.

The first pier to be completed was at a Y, where ultimately a traffic light will control two roadways. The heliport followed as soon as possible so construction crews could get onto and off the island. Then the piers were pushed out to the drill platform, 1,400 feet from the heliport, because this was the spot where production work would first begin.

The present Grand Isle drilling platform, and a second one to come, will be more versatile than oil rigs. Each platform will push down 108 separate wells, many times the number that an oil platform can drill. The triple tubes will curve underground in all directions, reaching out a half mile, with some of them bent so far that at their tips they will be nearly horizontal.

When these wells force superheated water into the envelope in the cap rock of the dome, more water goes in than sulfur comes out. Hence there must be additional wells whose function is merely to pump out excess water. They are called bleed-water wells, and in Grand Isle's case they have bred a satellite

for the big island. A separate bleed-water platform has been erected a quarter mile from the main mine. No one will live or work there. Its withdrawal of several million gallons of waste water a day will be automatic. In the event of trouble, signal lights will flash the news to the main platform, and the satellite can then be reached by boat or helicopter.

The mine itself will have a continual residential colony big enough to fill the 60 rooms of the \$1,375,000 platform hotel. Normally each man will have a room of his own, with a complete tile bath shared with the next-door occupant. The room itself will also be used by a second man who rotates jobs with the occupant. Shifts are 5 days on and 5 days off. During their 5-day stints on the Island, the men work 12-hour days, picking up overtime after 8 hours. They also enjoy a bargain. Each pays \$1 a day for his offshore room and board, which cost the company seven times that amount per man.

Living quarters are roomier and more elaborate than the average oil rig can afford, but otherwise the life is approximately the same. There are television, pool, table tennis and card playing, with gambling limited by company rule and liquor banned completely. There is also a small library, and for those who want further education a school will be maintained. Schoolmaster is Raymond Gilbert Bryant Jr., of New Orleans, who is also alternate superintendent of the operation with Bob Rawlinson, Freeport has conducted school classes at other remote mines. and the results are good. Volunteers pinpoint their school standing by tests and then continue from that point through high school. One volunteer at another mine was tested as seventh grade. He had not been in school for 35 years, but picked up and went on to achieve a highschool diploma issued by the State of Louisiana in the name of the high school he would have attended if he had remained in school as a boy. Oddly enough, that particular high school had burned down 20 years earlier.

As with most isolated industrial operations, the path to good humor is believed to lie through the dining room. Freeport operates a cafeteria with unstinted menus, and coffee and fruit are on tap around the clock. There are three cold rooms, from freezing to fresh-vegetable cool, and the kitchen is modern and highly electrified, complete with city-type waste-disposal machines. Louisiana requires that offshore platforms police their premises as if they were on land, so the gulf cannot be used as a dumping ground.

The Freeport payroll will be thick with Louisianians, which means that the burning-hot sauces of the bayou country must be on hand. The fact that one of the chief cooks is named Ulgere Louis Hebert is sold assurance that pepper sauces will be in abundant supply. Ulgere is one of the kitchen crew who will be continually and annoyingly called on to wrap and freeze the interminable fish caught from the lower catwalks of the mine. Fishing is anybody's privilege, provided that fishermen clamber down the steel stairs in pairs, for safety. Once down there, the hooking of white trout or other gulf varieties is no task at all. Fish abound in the vicinity of all gulf structures.

Most employees like the 5-and-5 work shifts. The 5 out of every 10 days at home often means the off-duty employee can build a house, beachcomb, farm or pick up some secondary job and more money. The mine is, however, not universally acceptable. Even before regular production crews were chosen, there were a few requests for transfer. To anyone with a fear of heights, the tall island is no paradise. Except for the boulevard, living quarters and some plant areas, the structure's floor is of open-mesh steel grating, and stepping onto such an area above the 75 feet of understructure can present

peculiar illusions. Although the height is not very great, a downward look through the open grating can easily create the sensation that the grating has dropped to the heaving gulf surface and one is standing on nothing. One new arrival was suddenly attacked with so severe a case of acrophobia that he had to be blindfolded and carried the entire distance from where he froze, to the heliport and thence back to solid land.

Although Grand Isle makes no really unusual demands on its men, and only minor injuries occurred during its construction, it does make demands on itself that have hitherto been unknown to offshore structures. For one thing, great care is taken to eliminate vibrations. Then there are the manifestations of heat, and after all, this seagoing plant is quite largely a waterheating plant. Thermal expansion is irresistible, and Grand Isle, in addition to the jostling it must take from wave, wind and sinking of the gulf floor, must take into account the creeping of metal when it is heated. The well pipes, for example, when steam-hot water is first introduced, will jump 31/2 feet out of the drilling floor. And the pipeline which will carry molten sulfur mites to shore will, when it gets hot, grow longer by 55 feet. At least the two interior pipes will do so-those that carry hot sulfur and hot water-but the big pipe enclosing these two will be outside of the insulation and hence will not be subject to the same creep. Thus the outside pipe has been fitted with hundreds of internal rollers which will permit the hot inside pipes to wriggle like snakes.

The pipeline to shore was a spectacular engineering feat. It is not only a complex the three aforementioned concentric pipes, but it carries two other pipes strapped to its back and it was assembled in 2,000foot lengths on shore, on the tip of Grand Isle, where each piece was almost as long as the island is wide. Also it was a \$2 million afterthought. Original plans had called for sulfur vats and boat-loading facilities on the Grand Isle Mine offshore, But the potential interference of weather and high seas, which could force a shutdown of the sulfer flow, loomed so large that the pipeline was substituted. Liquid sulfur will will now flow to shore on Grand Isle and will be transported from that point through Barataria Bay and across backwater bayous to Port Sulphur, on the lower Mississippi. It will make the trip as a liquid in vacuum bottle barges and in so doing will reveal another of the element's peculiarities. Liquid sulpur produces its own insulating quilt. When it hits the cooler walls of the container barges, it reverts to stone and forms its own cocoon of very effective insula-

Nature is not quite through with Grand Isle Mine after shoving its underpinnings, pushing it by wind and wave and twisting its hot components. There is another and insidious attack—corrosion. Salt water and salt air corrode steel, and the island is all steel. Moreover, the corrosion comes in three separate zones, below the surface, in the splash zone at the surface, and the out-of-water upper structure. Of these the most easily dealt with is the below-surface water attack. The nibble of salt water is nullified by setting up an electric field between the island and anodes surrounding it. Protection of the upper structure is also straightforward. It is coated with a mantle of zinc silicate.

Protection of the splash zone is more complicated. For one thing, the sections of legs which are today just at the surface, tomorrow will be below it, and certain areas above that will sink into the zone. The solution here is outright surrender to the sea. Legs have simply been thickened by the amount that it can be calculated that the sea will chew away. On top of that the splash zone is also

covered by the inorganic mantle which other areas receive. And this is no mere matter of swinging a paintbrush. The cost of the protective application, at 50 cents a square foot,

was nearly \$500,000.

Is all this worth while? Granted that the Grand Isle Mine is a dramatic achievement, that it is a pioneer step in the offshore production of a raw material other than petroleum, is it necessary and will it pay off? In 20 or 30 years we may have an answer. Today the sulfur that will be mined 7 miles off the gulf coast not only is not needed, but pound for pound is worth less than almost anything you can imagine. Sulfur, an element that is basic to our civilization, is worth about a penny a pound, and while everything else has been going up for more than a decade, sulfur has been going down.

On a current market basis, Grand Isle Mine is a terrible mistake. Louisiana or the Federal Government will tax its product heavily, recently booming Mexican production will compete with it, oil refineries increasingly take sulfur out of sour gas and oll, and pyrite mining continues in Sicily and many other World areas. There is nothing stylish about it. There is no possibility of increasing sales by designing annual models of sulfur or Putting on sales-promotion drives. It is irrevocably tied to the rate of our industrial Welfare, to the amount of steel and fertilizer and chintz curtains and eyeglasses that the Nation consumes.

Thus, Grand Isle Mine is an investment not In today but in a future industrial growth, a day of more products and a broader life. It is also, and this is of more immediate con-cern, an investment in tomorrow's composure for sulfur customers. More than in most things, the big users of sulfur have their own long-term programs. They want to know that next year's sulfur supply or the next decade's supply is assured and available. This the Grand Isle Mine, the crazy-legs stork of the gulf, can promise.

Farley Critical of Stevenson's "Crowbar" Talk

EXTENSION OF REMARKS OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following news story which appeared in the Washington Sunday Star on May 23, 1960:

FARLEY CRITAL OF STEVENSON'S "CROWBAR" TALK

New York, May 21.—James A. Farley today called upon the forthcoming Democratic Nation Convention to condemn and repudiate Adiai E. Stevenson's criticism of the Eisenhower administration over the U-2 spy plane incident.

Mr. Farley, former Democratic national chairman, accused Mr. Stevenson of "attempting to use the incident to 'sledgehammer and crowbar' another disastrous nomi-nation for himself as the apostle of appeasement out of the Democratic Party."

Mr. Farley supported and campaigned for Mr. Stevenson in both the 1952 and 1956 presidential campaigns.

Mr. Stevenson had said that Premier Khrushchev of Russia wrecked the summit conference but that the United States gave him the sledgehammer and crowbar to do it. UNWARRANTED ATTACK

Mr. Farley said, the unwarranted attack by Mr. Stevenson "on the President's conduct of the summit negotiations, in my opinion, in no way represents the thinking of the Democratic Party."

He called on Democrats "to keep the symbol of our party, the Democratic mule and not Mr. Stevenson's umbrella," and added:

"For Mr. Stevenson to state that the ad-ministration gave the Soviet a sledgehammer and a crowbar to wreck the summit conference indicates to me that Mr. Stevenson continues to be as misinformed on the facts as he is infatuated with his own writing style."

The Postmaster General in the late President Franklin D. Roosevelt's Cabinet said, "It has been my experience that adroit phrasemaking does not necessarily indicate sound policymaking, a view which I find fortified by the rejection of Mr. Stevenson on two occasions by the American electorate."

Mr. Farley continued:

"It is a pity that the course of history cannot be reversed by a well-turned phrase, in which case hundreds of millions of enslaved people and at least 13 captive countries, liberated by Mr. Stevenson's apt phrases, would have occasion to think profusely about this overpolished literary combination of Don Quixote, Pagliacci and Rip Van Winkle,"

My Duty as a Citizen

EXTENSION OF REMARKS

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. McINTIRE. Mr. Speaker, as American citizens we are indeed blessed with many privileges. We must not, however, become so absorbed in these privileges that we forget the responsibilities and duties that go with our citizenship.

In this regard Miss Kristine Marie Elizabeth Zethren wrote an essay entitled "My Duty as a Citizen," this composition winning first prize in the special Americanism Essay Contest sponsored by the American Legion Auxiliary.

Miss Zethren is 16 years of age, a sophomore at John Bapst High School at Bangor, Maine. She is the daughter of Colonel and Mrs. George W. R. Zethren, Colonel Zethren being commander of the 4038 Strategic Wing (SAC) at Dow Air Force Base in Bangor, Maine.

I feel that Miss Zethren's citizencharging piece is eminently deserving of RECORD insertion:

MY DUTY AS A CITIZEN

(By Kristine Marie Elizabeth Zethren)

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside-14th amendment.

Being a citizen of the United States by birth, I, like most oblivious teenagers, did not fully realize how fortunate I was to be an American citizen and took for granted all the rights and freedoms thus given. However, when I sat down to ponder my duties, I could only then grasp the magnitude and complexity of the axis of American Government, the great privilege which is mine—the democratic way of life—in which, to help insure the security and unity of my

country, I must participate.

The United States, like the rich land that it is, must be socially, politically, and economically cultivated so that it might be bountiful. This is the task of its people. True to tradition, it has a government of the people, by the people, and I am but one star in a galaxy, I am still important, if only minutely so, in the voice and decision that will govern. Although as a minor I am not expected to wield any great influence or bear any heavy task, in knowing my Government and expected duties I shall become a better citizen in the future. My duties as a citizen are not absolutely compulsory, as in the dictatorial Communist nations—I am not compelled to do anything with the fear of severe punishment hanging over my head—but when patriotism and love for my country are realized, I am proud to serve as best I can,

Education and democracy go hand in hand. Without a certain amount of knowledge, no man can understand the principles of law, government, guaranteed rights, and the very elements that sustain a democracy. Uneducated citizens sow the seeds of decline-political, social, cultural, economicand the fate of their nation hangs on a slender thread, ready to be broken by aggressors. Thus, my first duty, the basis of all my goals, is a sound education. With this, I can face almost any threat to my freedom, and I can make a firm stand for

my country.

In making use of this education, I must endeavor to learn the more basic laws and the Constitution of the United States. When one knows these things, he can support and fight for them. He can help abolish the graft and corruption that might arise in his government if citizens were blithely unaware, or not bothering to learn, of their country's legal institutions and governmental procedure. He can follow the trend of current events, foreign relations, and world crises. He can help fight for the betterment of his country and his fellow men. So shall it be with me.

Voting is radically important, whether it be for one's town mayor, his senator, or the president. When one votes for a governing official, he is entrusting himself to that person's judgment, intelligence, and integrity, the official represents him in a phase of government which, however slight, still affects his life. Thus it is clear that voting is one of a citizen's basic and most essential duties. Yet many people just shrug their shoulders and let some Tom, Dick, or Harry bear the burden, saying that their vote is not important. This attitude, if shared by any great majority, could clearly lead to corruption within our government.

Although I shall not be able to vote for a number of years, it will be wise for me to study today's prominent politicians and learn to evaluate their intentions and motives, so that in the future I may be able to vote with a reasonable amount of good

judgment.

Each citizen has a civic obligation to his community. He should be aware of its problems and participate in his local government. A graphic example of such a duty is my participation in school. I should uphold its rules and set high standards, for any mode of behavior reflects upon both my school and home. I should contribute my share for the benefit of the school and community, and, in short, set a good example as a student and citizen.

The last, and probably the most important point to bring out, is my duty as a citizen of obeying the legal institutions of my State and country. However, as I have previously stated, one is more capable of obeying laws if he studies and understands them. This type of obedience is essential to the unity and strength of the State (as to the unity and strength of the State, for without it there would be anarchy, chaos,

and eventually subjugation. To acknowledge and obey these laws is not only politically essential, but the very basis of humani-

tarian existence depends on it.

In conjunction with the written laws, there exists an unwritten code of moral and ethical conduct that is necessary in our highly advanced civilization. In setting high moral standards, learning social courtesy, and acquiring a respect for tradition and my elders, I shall not only be a better citizen, but a better person.

but a better person.

In summation, my duties as a citizen create a better understanding of the American traditions and institutions and promote opportunities for a happier, more wholesome life. It is only right that I give this small share, for I have received the great American heritage, the profuse rights and privileges guaranteed by the Constitution—America—melting pot of nations, the land of promise, where each man has the supreme rights of life, liberty, and the pursuit of happiness.

Another Slippery Summit

EXTENSION OF REMARKS

HON, HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. ROBISON. Mr. Speaker, for some time I have been hopefully watching the development of a union-management summit conference, from which might stem a better mutual understanding by each group of the other's point of view regarding the great, unanswered questions which the economic offensive mounted by the forces of worldwide communism pose.

I have fully realized that the path to such a summit was as fraught with danger of disaster by reason of suspicion and selfishness as was the path to that recent other summit from which the leaders of the Four Powers descended so precipitously. I would hope, however, that from the mere observation of the collapse of that effort would come a renewed effort on the part of our domestic leaders of the forces of labor and management to make their conference an outstanding example of the awareness of Americans, from all walks of life, for the need of a sense of partnership.

For that reason, under leave to extend my remarks, I call to the attention of my colleagues the following editorial from the New York Times of May 23, 1960, bearing on this subject:

AN EMPLOYER-LABOR SUMMIT?

The first meeting of the union-management summit conference has not given as much promise as the soundness and urgency of its objectives deserve. The mere fact that it has taken about 6 months even to get the first meeting and to complete the conference personnel suggests a lack of enthusiasm on at least one side. This impression is reinforced by the postponement of another meeting for 6 weeks or 2 months on account of other commitments of the members—which presumably seem to them more important.

Then the proposed makeup of the two groups has already disclosed disturbing differences of views. AFL-CIO President Meany has appointed the top officials of two of the most important unions to serve with him—men with nationwide experience in labor-management negotiations. Mr. Meany doesn't feel that the management representatives chosen by President Bannow of the National Association of Manufacturers are of equal stature, with one a president of a company that has had a strike by the union headed by a Meany appointee. Regardless of the obvious general competence of Mr. Bannow's designees, Mr. Meany's reservations are not good omens for summit success. But Mr. Bannow has promised to add some others.

As for the agenda, it looks as if the conference hasn't got that far. But surely there must be genuine agreement in advance of a meeting schedule of what is to be discussed and how—with an emphasis on a better mutual understanding by each group of the other's point of view rather than agreement on specific policies. Anyway, we wish the undertaking well in spite of the difficulties and dangers that seem to lie ahead.

Letter From Mr. George Meany, President of the AFL-CIO

EXTENSION OF REMARKS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. CONTE. Mr. Speaker, this letter from Mr. George Meany clearly indicates the concern of American labor over attempts to cut foreign aid. Its well-reasoned arguments are forcefully and intelligently presented. Therefore, I feel that it merits the serious consideration of this body:

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS, Washington, D.C., May 18, 1960.

Hon. Silvio O. Conte, House Office Building,

Washington, D.C.

DEAR CONGRESSMAN: I am deeply disturbed about reports which have been appearing in the press that the Congress might cut as much as \$1.5 billion from the mutual security appropriations which have been recommended by the President. The possibility of such action is particularly distressing after the very welcome action by the Congress last week in approving an authorization bill for mutual security just slightly under the \$4.1 billion level requested.

As you may know, the AFL-CIO recently held in New York its conference on world affairs. Labor was joined in this conference by top spokesmen from our State Department, Defense Department, and other widely acknowledged authorities on foreign polley. As a result of these deliberations, American labor is more convinced than ever that Communist imperialism must be fought with every means at our command, in every possible way. Military preparation is crucial, but it will be to no avail if we do not help our allies and the uncommitted nations of the world continue economic and political resistance to Communist aggression.

I am keenly aware of and sympathetic to the problems faced by Members of the Congress who find it difficult to support foreign aid when the administration refuses to give adequate support to domestic measures such as aid to education, aid to depressed areas, and similar measures. We have urged passage of such bills and continue to do so. America needs such help, and can afford it. Our failures in these areas, however, must not be permitted to interfere with our obligations in the world area. There will be little value in protecting and extending the frontiers of security at home if communism is permitted to extend its frontiers throughout the world.

On behalf of American labor, I urge you to resist reckless slashing of mutual security appropriations. Our freedom and our future are involved.

Sincerely yours,

GEORGE MEANY,
President.

Repeal the Two-Term Limit

EXTENSION OF REMARKS

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. BROOMFIELD. Mr. Speaker, just a few years ago, the 22d amendment to the Constitution was adopted, limiting the number of years a President could serve as Chief Executive of our Nation.

Since this amendment became a part of the supreme law of our land, there have been many criticisms of this provision.

There have been charges that it would seriously cripple the power of a President in his dealings with Congress. It has been said that this amendment even affects his role as titular head of his own political party and makes it extremely difficult to win support for his own programs among Members of Congress.

All these are valid criticisms, and we have seen the truth of these accusations during the past few years here in Washington.

But now we are faced with a much more serious effect of this amendment upon our Nation. We are faced with the very survival of civilization, with our existence as a nation.

The fact is that Premier Khrushchev has used our own Constitution against us. He has taken advantage of the 22d amendment to try to force his will upon us, to insult our President and the people of our Nation.

Mr. Khrushchev has said that he will not go to the summit for another conference until such time as President Eisenhower is out of office and a new President is elected.

We, as Americans, are prevented from returning President Eisenhower to office by a decisive margin to rebuke Premier Khrushchev, to show him that we oppose any such meddling in our internal affairs, particularly by one who has shown such a great disregard for truth, for honesty, for freedom and humanity.

What if Premier Khrushchev had not had the 22d amendment to lean on during his Paris outburst? Could he have successfully insulted our President and our people?

I do not believe so. The reason is that we, as Americans, would have had a means of showing up Premier Khrushchev in very short order.

We could have demonstrated to the world that we stand behind our President, and that we do not want to be pushed around by anyone. We could have returned President Eisenhower to

the White House for a third term.

Under such circumstances, I doubt very seriously if there would ever have been a walkout by Khrushchev at the Paris conference. I believe he would have had to tone down his remarks and his accusations about the U-2 flights. I believe he would have considered what a resounding vote of confidence by the American people in their President would do to his threats and insults.

Quite likely, there would have been no Paris walkout. There would have been no period of renewed tensions and

a dashing of hopes for peace.

The dangers in Russian prestige would have been too great. The odds would have been against Khrushchev.

President Eisenhower is the first President who has served under the terms of the 22d amendment. Already, this amendment has done great harm to our people, has caused serious damage to efforts to secure world peace, to end tensions and permit the world to live in some sense of security.

The weakness of this amendment has made itself readily apparent, and we should see to it that a President of the United States never again finds himself in this predicament.

Therefore, I urge repeal of the 22d amendment in the best interests of our

people and our future.

I am well aware of the fact that some members of my own political party were the strongest advocates of this amendment. However, it was not foreseen-it could not be foreseen-that this amendment would be turned against us.

If we are to give our President the responsibility for our foreign policy, for maintaining world peace, then we must give him the authority to cope with these

problems.

It is asking too much of any man to take on a dangerous and deadly foe with one hand tied behind his back, and that is exactly what we have asked our President to do.

A recent editorial in the Daily Tribune of Royal Oak, Mich., points out the dangers very clearly, and at this point I Would like to have this article inserted in the Congressional Record:

[From the Daily Tribune, May 18, 1960] REPEAL TWO-TERM LIMIT

When the Premier of Soviet Russia calls the President of the United States a "lameduck President, it is time we reconsider the 22d amendment.

This amendment was adopted in spite. It limits the terms of the President to two. It was urged by those whose sole intellectual gift was hindsight; men with little real understanding of the legitimate use of governmental power but with a vast greed for itif it is held by someone else.

By telling President Eisenhower that perhaps the Soviet Union will extend a new invitation for a Presidential visit-"in 6 or 8 months"-Premier Khrushchev automatically made the summit conference a 1960 cam-Paign issue. It is bald interference in our internal affairs.

The choice of paths to peace is, of course, a legitimate campaign issue. But an issue for Americans. We may disagree among ourselves as to which is the wisest course to pursue, and vote accordingly. But the point is that the discussion and decision will take place within a general agreement, as Americans, that our primary concern is with the security and future of the United States of America.

The danger in Mr. Khrushchev's gambit, for us as well as for the Soviet Union, is that he may misread the election returns as either for or against the Soviet Unionhe already has chosen to misunderstand the meaning of the U-2 flight.

Mr. Eisenhower, the first President to hold office under the 22d amendment, already has felt the effect of limitation on Presidential power in his relations with Congress.

It was well understood before the adoption of the 22d amendment, that a President in a position to succeed himself was in a more effective position to secure carrying out the decisions our Constitution requires him to make. Now Khrushchev has pointed up an even more dangerous limitation on the power to represent the United States effectively in foreign affairs.

The Problem of Germany: Willy Brandt's Story

EXTENSION OF REMARKS OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 4, 1960

Mr. COHELAN. Mr. Speaker, Willy Brandt, mayor of West Berlin, has just published his autobiography, "My Road to Berlin." As Mr. William Henry Chamberlain points out in the following review from the Wall Street Journal of May 19, 1960, Mayor Brandt is the symbol and voice of West Berlin, a German national figure and one who was a marked man after Hitler came into

Mr. Chamberlain also says that, with the breakdown of the summit conference bringing the problem of Berlin into even sharper focus:

It is a timely, if grim, moment for Willy Brandt * * * to bring forth his autobiog-

For this reason, I submit Mr. Chamberlain's review for the RECORD because it calls attention to a book that throws additional light on the situation in Germany and the city of Berlin:

BRANDT OF WEST BERLIN: HIS STORY RECORDS A CITY'S ORDEAL, A NATION'S HOPES

Premier Khrushchev, after blowing the lid off the summit conference, is meeting with East German Communist leaders in Berlin. Whether he will sign a peace treaty with the German Reds, as he has been threatening to do, is now a key questiona question that brings the problem of Berlin into even sharper focus. For if the West's rights to West Berlin are challenged by force, as the East Germans said they would be once a treaty with Russia was signed, the danger of world war would be extreme.

Thus it is a timely, if grim, moment for Willy Brandt, mayor of West Berlin, to bring forth his autobiography, "My Road to Berlin." That the free sector of the divided city is such a thorn in the Communist

side is no little of Brandt's doing. He has helped direct the molding of West Berlin into a showcase of prosperity and freedomto the enticement of defecting East Germans and to the despair of the commissars.

As a personality Brandt challenges interest on three counts.

First, he has succeeded his predecessor in office, Ernst Reuter, as the symbol and voice of West Berlin. He has traveled widely in the United States and in Europe and Asia to put the case of the Berliners for selfdetermination before the tribunal of international public opinion. His view on West Berlin, one which he stated to this writer in much the same words in Berlin last summer, is this:
"Whatever further negotiations may bring,

one thing is clear: Berlin must remain with Germany, and during the time of the di-vision West Berlin must remain with the Federal Republic. This is the will of the people, and this is what our Constitution explicitly states. This has also been solemnly proclaimed by the parliaments in Bonn and Berlin.

"Unfortunately, a perfect Berlin agreement is at present impossible. But it is not necessary that a change has to be made in a hurry-not until something better can replace the present status, unsatisfactory as

Mayor Brandt can cite facts and figures to show that West Berlin has made a very successful economic reconstruction, even thought it is a city with an older-thanaverage population and a predominance of women over men. Ten years ago there were 300,000 unemployed; now this figure has fallen to 38,000. Exports have risen tenfold. Berlin produces a wide variety of goods, "from the biggest dynamo to the finest wedding dress and the most exquisite china."

West Berlin cannot expand beyond the limits of the military demarcation line. But there have been impressive results in providing gardens, and plenty of air and light in the new housing developments. On a basis of peaceful coexistence, free West Berlin certainly has no reason to fear the economic and social competition of the Communist-ruled eastern sector.

Willy Brandt is also a German national figure. Under the leadership of the amiable and well-meaning but uninspired Erich Ollenhauer, the German Social Democratic Party, of which Brandt is a prominent member, went down twice to crushing defeats in national elections. Brandt is one of the young rebels, who carried out a face-lifting operation on the social democratic program, cutting out obsolete Marxist canons of class war, and trying to broaden the appeal of the party by such slogans as the following:

"Competition as far as possible-planning as far as necessary.

"The private ownership of the means of production must be protected and cultivated, insofar as it does not hamper the development of a just social order."

There will be another national election in Germany next year, and Willy Brandt may be put up as the Social Democratic standardbearer against the indefatigable Chancellor Adenauer. He seems much better qualified to win over middle-class voters than some of the exponents of the Marxian gospel.

Apart from his significance in the political life of West Berlin and Germany, Brandt's life story is worth telling on its merits. Born out of wedlock in the picturesque old Baltic seaport of Lubeck (scene of Thomas Mann's "Buddenbrooks") he grew up in a squalid social atmosphere that predisposed him to become a Socialist, although he won a scholarship in a good preparatory school.

As an active young Socialist, he was a marked man after Hitler came into power and found asylum in Norway. He learned the language so well that when he went back to Germany for underground work he

was able to adopt the disguise of a Norwegian student. He was a correspondent in Spain during the civil war in that country; he sympathized with the Republicans but abhorred the machinations of the Communists and describes with indignation the murder of the son of an old Russian non-Communist revolutionary by Communist goon squads.

When the Germans moved into Norway. Brandt was on the run again; he spent the war years in Sweden, keeping up contacts with German and other political exiles. He gives an interesting account of the German anti-Hitler underground which finally brought off the abortive assassination at-

tempt of July 20, 1944.

After the war Brandt returned to Germany, at first as a Norwegian citizen. He was a journalist and diplomat; then he decided to resume German citizenship and take part in the attempt to rebuild Germany on the basis of democracy and free institutions.

Under the storm and stress of a turbulent and active life Brandt shed some of his youthful pat Socialist formulas. He developed an attitude not uncommon today among members of European Socialist and labor parties: A feeling that both capitalism and socialism have changed so much during the last generation that the old attitude of class war ending in violent revolution no longer makes sense.

While his story is mainly one of personal experience and action, there are occasional thoughtful observations. Brandt remarks that Europe plunged into the first great war because no one foresaw its hororrs, while Hitler gained a head start in preparing for the second because the democracies were so shocked by the results of the First World War they fell into the trap of appeasement,

WILLIAM HENRY CHAMBERLIN.

Keep Colonel Olmstead

EXTENSION OF REMARKS OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. DULSKI. Mr. Speaker, just recently it has been brought to my attention that Col. Loren W. Olmstead of the Army Corps of Engineers, a former Buffalo district engineer, is facing retirement because an Army selection board has failed to recommend him for promotion.

Such action is very confusing to me. Time and again, as a member of the Subcommittee on Manpower and Utilization, Committee on Post Office and Civil Service, I have heard testimony from representatives of the armed services that it is necessary for them to hire consultants at an exorbitant fee because personnel with the needed skills and experience were not available within the departments.

Colonel Olmstead did an outstanding job in supervising the construction of the St. Lawrence Seaway, and certainly his vast experience and training could be well utilized. I join in the tribute paid to Colonel Olmstead in the following editorial which appeared in the Buffalo (N.Y.) Evening News on May 17, 1960:

KEEP COLONEL OLMSTEAD

The Buffalo Chamber of Commerce has joined several Members of Congress in urging President Elsenhower to promote Col. Loren W. Olmstead and keep him in the Army En-Colonel Olmstead, former Buffalo district engineer, faces retirement within a year because an Army selection board failed to recommend him for brigadier general.

Colonel Olmstead's distinguished career in the Army Engineers was climaxed by his outstanding work in supervising the design and construction of the St. Lawrence Seaway. For this and other achievements as Buffalo district engineer he received the Legion of Merit last year. The community came to know Coloncl Olmstead as an extremely capable and dedicated officer, engineer, and citizen. His promotion to general rank has been urged by Senators Javits, Keating, and WILEY, and Representatives PILLION, MILLER, and OSTERTAG.

Promotional decisions normally are the prerogative of military boards. But in this case it certainly appears strange that Colonel Olmstead's achievement in directing one of the greatest public works projects in history should not bring even the recognition of a general's star. The White House should give his case careful and sympathetic attention. Forced retirement of an officer of Colonel Olmstead's talents and experience would seem a significant loss to the Nation.

Address of Mr. Per Jacobsson, Managing Director of International Monetary

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, May 23, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Per Jacobsson, Managing Director of the International Monetary Fund, when accepting the 1960 World Trade Award at a luncheon held at the Mayflower Hotel, Washington, D.C., on Tuesday, May 17, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MR. PER JACOBSSON, THE MANAG-ING DIRECTOR OF THE INTERNATIONAL MONE-TARY FUND WHEN ACCEPTING THE 1960 WORLD TRADE AWARD AT A LUNCHEON AT . THE MAYFLOWER HOTEL, WASHINGTON, D.C., MAY 17, 1960

Mr. President, excellencies, ladies, and gentlemen, I feel greatly honored to have been chosen to receive here today the 1960 World Trade Award, given by the Washington Board of Trade. Having worked for nearly 40 years in international institutions—the Economic and Financial Section of the League of Nations Secretariat, the Bank for International Settlements, and now the International Monetary Fund—it is naturally a matter of great satisfaction to me that the efforts with which I have thus been associated in the field of world finance and trade are, in a way, recognized by this award. It is also very satisfying for any man to receive recognition from those among whom he lives and works, and to receive this award here in the city of Washington, where I am now living, gives to me—and naturally to my

family-a very great pleasure, and I therefore want to thank you most sincerely for the honor bestowed upon me.

It was in May 1914-before the First World War-that I took my first examination in economics, and I thus studied this subject before economics had been affected by what happened in the two World Wars and in the interwars period. A few weeks ago I came again across a statement in which it was said that one of the main causes of the First World War was the trade rivalry between the great powers in Europe, especially between Great Britain and Germany. I believe that this so-called rivalry played little or no part; the main cause, in my opinion, being exag-gerated nationalistic feelings—which had become especially intense when it was aggravated by the age-long feud between Teutons and Slavs. After all, let us not forget that the First World War began in Sarajevo. which is in presentday Yugoslavia, and the Second World War in the Polish Corridor, both places where the Teutons and Slavs lived next door to each other. There were, I will admit, some difference in oversea areas; but these colonial difficulties were at the point of being settled, and in the spring of 1914 an agreement had been reached on the financing and building of the Baghdad Railway. It is also true that the merchants, bankers, and shipping magnets in Hamburg, and in the city of London, who were probably those who most keenly felt the competition between their two countries, worked most assiduously for the preservation of peace right up to the last moment in July and August 1914.

Also before the Second World War many influential persons that were connected with international trade and banking, whom I knew personally, did all they could to try to avert a conflict. There have been trade wars in the hisotry of mankind, but they have been relatively rare; trade has much more been a means of briging nations together, rather than separating them. Men of commerce want customers that are well off and able to meet payments when they fall due. I often quote a saying by Benjamin Franklin: "In transactions of trade, it is not to be supposed that, as in gaming, what one party gains the other must necessarily lose.

gain to each may be equal."

Let me add that I am not alone in holding these views about the causes of, especially. the First World War. Two American economists, among the very best-Prof. Jacob Viner in Princeton and Prof. Eugene Staley in Stanford-have expressed somewhat similar views after close investigation of the

After the First World War, great efforts were made to restore the prewar system of the gold standard and of international trade, and in the 1920's these efforts were crowned with so great a measure of success that there were those who talked about a new era of 'prosperity forever." I was then working in the Economic and Financial Section of the Secretariat of the League of Nations, but I must say, however, that even at that time there were some of us who were not so happy about the future. I was Secretary to the Agricultural Commission of the World Economic Conference convoked by the League in the spring of 1927; and then I became aware of certain difficulties arising from the decline in the prices of many foodstuffs and raw materials which had begun about a year or so before. There was at the same time a pronounced strain in world gold markets. and the reparations question remained un-settled. Sir Arthur Salter, now Lord Salter then the Director of the Economic and Financial Section of the Secretariat of the League—was planning in 1928 to set up a gold delegation of the League to examine, in particular, the question of the strain in the exchange and gold markets and the trend of prices. I remember a beautiful afternoon at Salter's villa on the outskirts of Geneva when he and I met Mr. Benjamin Strong, then Governor of the Federal Reserve Bank of New York, together with his secretary, Mr. George Moore. We talked about all these questions, and Mr. Strong, too, became convinced that there were dangers ahead, and he said he would arrange for American membership of the gold delegation—which he did before he died in the course of the following year.

The gold delegation was set up, but events moved precipitately; the New York Stock Exchange broke in the autumn of 1929; the business trend turned downward; the U.S. tariff was increased in 1930; the pound sterling and a number of other currencies were devalued, starting in 1931; in 1932, Great Britain abandoned free trade, while in 1933-34 the dollar, too, was devalued. The 1930's were the years of the great depression, with much unemployment and stagnant world trade. In view of the increased tension in international politics, little could be done to improve matters, but all efforts were not suspended. Here in the United States, the Reciprocal Trade Agreements Act was adopted in 1934; and in 1936 the Governments of France, the United Kingdom, and the United States accepted the so-called Tripartite Monetary Agreement, to which there other governments subsequently adhered. These measures may not have played any great immediate role, but they were forerunners to subsequent more comprehensive innovations.

Thanks to the great foresight of the Allied Governments in the Second World War, they began at an early stage to prepare for the financial and economic system that they intended to establish after the war was over. There emerged from these preparations the International Monetary Fund, the International Bank for Reconstruction and Development, and also a somewhat simplified trade agreement-the General Agreement on Tariffs and Trade. However, it took some time before these institutions could get into full Working order. In the meantime the United States was preeminent in the field of trade and finance; that was the period, among other things, of Marshall aid. It will undoubtedly be the verdict of history that the United States used its preeminence with a magnanimity and generosity which, though it may well have been in its own enlightened interest, will stand out as an almost un-Precedented act of statesmanship.

As the Marshall aid period began to end, the World Bank and the Fund began to operate more actively. Each of these institutions has granted credits amounting to between \$3 and \$4 billion, and in the case of the Fund a considerable part, in fact two-thirds, of these credits has already been paid back, since they are repayable in not later than 3 to 5 years.

We all know that in the 15 years that have passed since the Second World War came to an end, production and trade have risen in a very remarkable way; that there has been no serious postwar depression; that currencles increasingly have been made convertible; and that in a great many countries trade restrictions and discrimination have been reduced to a minimum. Many factors have contributed to these satisfactory developments, but I am sure that they would not have been achieved to anything like the same extent had it not been for the act of statesmanship by the United States in the granting of foreign aid and the activities of the two world financial institutions, the Fund and the Bank, to which I have referred.

Only 3 or 4 years ago we were happy to be able to point to a few currencies that really seemed to be in good order. Since then many more countries have reestablished their position, and even introduced external

convertibility, so that really weak currencies are now almost an exception, particularly, in Europe. It is like a person learning to play golf: At first he is very happy when he can make a few good strokes—he remembers them and tells his wife about them. Then if he gets on and perhaps becomes a champion, he takes his good strokes for granted, and will remember only the bad ones—which worry him a great deal. So, in the currency field, we are now really worrying about only a relatively few currencies, but we are not without hope that they, too, will be put right within the not too distant future.

But in this world no sooner will some problems be solved than new problems will arise. The very fact that production has risen, that more budgets have been baland that better control has been established over the money supply, leads us to believe that the wartime infiation has come to an end-which is, of course, a highly desirable result. Now we have entered a period of intense competition in world markets, and in domestic markets, too. We seem to have witnessed the disappearance of the inflation mentality-for the last few months I don't think I have seen any reference in this country even to "creepinflation. The expectation is now that we have entered a period of more stable prices, and that means that we shall have to learn how to live without inflation. After so many years of rising prices, it will not always be easy for either businessmen or labor leaders, or holders of public offices, to adjust their attitudes and practices to the changed situation. But this adjustment is slowly taking place, and I think it is a good thing that it is happening at a time when there is still a boom in Europe, and business is quite good here in the United

Until the European countries had restored their productive capacity, and had overcome the difficulties preventing prompt deliveries, the United States had it more or less its own way in foreign trade. But today Europe is able to meet most orders without undue delay, and this has naturally affected U.S. exports. It so happened that the change in the export situation coincided with a recession here in the United States, which was accompanied by a deficit in the budget and credit expansion. But when business again turned upward, it was necessary, both for internal and external reasons, to take steps to balance the budget and to arrest the increase in the money supply. This was done, and the measures taken have helped to produce a more stable internal price level and to improve the balance of payments. In the first 4 months of this year, the outflow of gold from this country was not more than \$100 million, which is considerably less than in the corresponding periods of 1958 and 1959 and in itself is a clear sign of the improvement that has already taken place.

With the growing importance of Europe in the trade and payments field, the United States will have increasingly to take account of what happens across the Atlantic. At the same time it is only right that the European countries should be prepared to make an increased contribution to the assistance needed by underdeveloped countries. are therefore strong reasons for establishing a closer contact between western Europe, on the one hand, and the United States and Canada, on the other. At the time of Marshall aid, there was instituted in Paris the Organization for European Economic Cooperation-the OEEC. In this organization, America and Canada participated as assoclate members. On the initiative of Mr. C. Douglas Dillon, the Group of Four, under the chairmanship of Mr. Randolph Burgess, the U.S. Ambassador to NATO in Paris has proposed that the OEEC should be transformed into an organization, called the Organization for Economic Cooperation and Development—the OECD—in which the United States and Canada would be full members. I sincerely hope that this proposal will lead to positive results.

I should also mention the Common Market of six countries in Europe, which has given an impetus to a reduction of trade barriers and close cooperation between the member countries. Recently another group, of seven countries—the European Free Trade Association-has been formed, also aiming at a reduction of trade barriers. These are, in the main, very healthy developments but, as with everything human, not without their disadvantages and dangers. What is needed is a forum in which these disadvantages and dangers can be thrashed out and minimized, if not fully eliminated. I think it is in the interests of Europe and North America that full use should be made of the opportunities for establishing closer contact in the new OECD.

I mentioned earlier that in the 1920's people talked about "prosperity forever." I remember also that after the First World War there were those who talked about "peace forever"-and for many years one heard a great deal about "cheap money forever." Not so long ago we were told that we could look forward to a long period of almost uninterrupted prosperity—the so-called roaring sixties. But things often turn out differently to what is expected. In a book I published last year I said that the most important conclusion of my experiences of nearly 40 years in international work was that one must always be "prepared for the unexpected." And to be prepared, one has to have the proper organizations. These organizations may not always be able to do all that one would want them to do, but they can be of great help in many situa-In finance and trade we have now the International Monetary Fund, the World Bank, and the GATT-and I hope we shall soon have a closer contact between the two sides of the Atlantic in the OECD. I should like to end what I have to say today by stressing the importance of this new body, and make a plea for your support of it when the time of decision approaches.

Thank you all again for the award given to me here today, and for your attention to what I have had to say. Thank you, Mr. President.

Threat of New Berlin Crisis Bares Nikita's Dirty Hands

EXTENSION OF REMARKS

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. LOSER, Mr. Speaker, leave having been obtained to extend my remarks in the Record, I call attention to an editorial appearing in the Nashville (Tenn.) Tennessean, a leading newspaper of the South. I believe the editorial bespeaks the overwhelming sentiment of the South. I commend it to Members of the House. It follows:

Threat of New Berlin Crisis Bares Nikita's Dirty Hands

Instead of a disciple of peace and understanding, Nikita Khrushchev now has begun to reflect the Stalin image.

Evidence increases that President Eisenhower was right in saying that the Soviet Premier came to Paris to wreck the summit meeting—in other words to repudiate all the hypocritical words at Camp David,

There was method in the Khrushchev madness, as is now revealed by his declared readiness to sign an immediate peace treaty with East Germany, thus creating a new Berlin crisis.

Of course, it is announced that Mr. Eisenhower can avert this emergency, temporarily at least, by making humiliating concessions to Russia which no American President could be expected to do.

Had he desired, the Soviet leader could have accepted the administration announcement that spy plane flights over Russia had been discontinued and would not be resumed. But this was the great chance to rub it in, he decided, so he called for abject apology and the punishment of all persons

involved in the U-2 overflight.

No U.S. President in history has ever been spoken to with as little respect and regard, and the Russian schemer knew in advance that his demands would be flatly rejected. If he suspected that the American people would not also be outraged, he did not know their mettle. And if he thought that France and Britain would show the white feather, he was also wrong.

To all intents and purposes the Berlin ultimatum, which was glossed over at Camp David, has now been renewed, which is a good indication that the semblance of reasonableness during the visit to the United

States was a complete sham.

When Khrushchev begins to talk like a Stalin or a Hitler, it is time for the free world to close ranks against the crudest kind

of dictatorship.

The mistakes made by our country in recent weeks are apparent, but they need not have precluded discussions at the summit if Russia had a desire for understanding. And they are small by comparison to the major blunder Khrushchev seems bent on making.

What a blasphemy was uttered when Russia's leader threw up his hands at the preliminary summit meeting and said, that as God was his witness, his hands were clean

and his heart pure.

Venom and hatred now consume him, and his threat of trying to end Western rights in Berlin represent a new high in brinksmanship.

Once before Russian designs on Berlin were frustrated by the great airlift. On that occasion they retreated at the threshold of war, but now Khrushchev seems to say that the issue will be decided by force if necessary.

What he has in mind, to quote from what he said at Baku on April 25, is that "the terms stemming from the surrender (of Germany) will lose their force * * * consequently, the rights which the Western Powers obtained as a result of the surrender of Hitler Germany, including the right for further preservation of the occupation status of Berlin, will lose their force with regard to this territory * * *."

Causes of this Soviet change of front are still obscure. "Political factors at home" are involved, according to the Premier, and one of them may be growing army opposition to talk about disarmament. China's influence on Russia can also have significance.

Regardless of the reasons, however, Khrushchev has reversed his course, with the spy plane incident as an excuse, and it seems probable that he welcomed this propaganda break.

By making impossible demands on the President of the United States in insulting terms he is at the same time challenging the free world to a showdown, as if he were possessed of a conqueror's strength. This calls for NATO's reaffirmation of steadfast principles and the attention of the United

Nations which is obligated to take notice when a threat to peace exists.

It does not, however, call for President Eisenhower to bend the knee before an uncouth dictator.

That has never been the way of American leaders or peoples, as Khrushchev well knows. And if that blustering Muscovite continues his reckless course he must accept full responsibility for the consequences.

Keenotes

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record I include copy of my newsletter released today:

WASHINGTON, MAY 23, 1960.

KEENOTES BY REPRESENTATIVE ELIZABETH KEE

The collapse of the summit conference raises many grave problems for the United States and the rest of the free world. One thing appears to be certain—the cold war will be resumed with all of its dangerous implications.

The country is united behind the President. In view of Premier Khrushchev's violent and bitter attacks on Mr. Eisenhower, there is nothing else the country can do. A show of weakness at this point on our part or that of our allies could be

fatal.

The failure of the Summit negotiations to produce results is not surprising. But what is surprising is the violent manner in which Khrushchev chose to prevent them from even getting underway. The shooting down of the U-2 plane was the excuse he used. Obviously, he had made up his mind before coming to Paris to block any meaningful talks.

The important thing now is to present a united front to the world to meet an expected series of crises in the coming months. An inquiry into an unfortunate series of events preceding the Paris meeting can wait until a more appropriate time.

VETO BY PRESIDENT UNFORTUNATE

The veto by President Eisenhower of legislation to help in the economic rehabilitation of distressed areas is unfortunate. Twice Congress has passed this bill and each time the President has seen fit to kill it by veto.

In my opinion, the need for this legislation has been clearly established. There are thousands of people in various parts of the Nation who are at present leading hopeless lives. Their jobs are gone and the prospects of finding gainful employment are dim.

This legislation would have launched a cooperative program to rebuild these areas and create jobs for the unemployed. The President's six reasons for vetoing the bill did not seem to be very convincing to me.

Eventually, a program of this kind must be put into operation. The President's two vetoes have cost us valuable time in attacking a serious national economic problem.

WATERSHED PROTECTION PROGRAM STRENGTHENED

The House has voted an additional \$4.9 million for the watershed protection program.

The idea behind the program is this: By building dams and other water checking facilities on small streams, the danger of downstream flooding on larger streams is lessened without the need for large, expensive dams. Also, the damage to productive farm land is kept to a minimum.

This program has been a success. In West Virginia and other States, some projects are actually under construction and others have been completed. There have been so many requests by local interests for inclusion in the program that additional planning funds were essential.

Protection of soil is one of the major problems facing the Nation. Soil is one of our most precious assets. We must not

squander it.

I also strongly support the soil conservation program under which locally managed districts are formed to install soil conserving practices on a broad scale. Millions of acres are now included in soil conservation districts which are practicing the latest methods of conserving and preserving the soil.

This is a fine program which enjoys almost unanimous support in Congress,

Address by Senator Wiley Over Radio Liberty to People of the Soviet Union

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1960

Mr. WILEY. Mr. President, in the light of recent events—particularly Mr. Khrushchev's new hard line at the Paris meetings—the free world, I believe, must make a renewed effort to get across the truth about world affairs to the people under Communist domination.

Now, how can this be accomplished? There are, of course, a number of ways:

We recognize, however, that the construction of the Bamboo and Iron Curtains make it exceedingly difficult to get through to the dominated peoples.

Recently, I was privileged to participate in a broadcast to the people of the Soviet Union over Radio Liberty.

Incidentally, I believe the splendid work carried out by Radio Liberty, Radio Free Europe, Voice of America, and other private and publicly sponsored efforts to get the truth to the people under Communist domination, are indeed most commendable, and deserve the gratitude of the Nation.

The purpose of my broadcast was to provide the people behind the Iron Curtain with a realistic picture of the significance of the summit, of the U-2 flight, of the conduct of Mr. Khrushchev. Too, the talk reiterates the dedication of the free world—despite Mr. Khrushchev's unwillingness to discuss differences at the Paris meeting—to continue, in a resolute, fearless, undaunted effort, to find peaceful ways to resolve the differences between the East and West, and to create a better world.

Despite the resumption of Soviet jamming of radio broadcasts, I am hopeful that this message will get through.

Such broadcasts, I believe, represent the kind of efforts which will need to be broadened, not only through radio and television, but also through other contacts, in the light of the new hardened

Soviet policy.

Reflecting further upon this need, I ask unanimous consent to have two items printed at this point in the RECORD:

First, a statement released today, stressing the need for "going over the heads" of the Communist leaders to the people behind the Iron and Bamboo Curtains with the truth of world affairs; and. second, excerpts of my address over Radio Liberty, scheduled to be broadcast early this week to the people within the Soviet Union

There being no objection, the statement and excerpts were ordered to be printed in the RECORD, as follows:

WILEY URGES GREATER EFFORTS TO GO OVER THE HEADS OF COMMUNIST LEADERS TO PEO-PLE BEHIND THE IRON AND BAMBOO CURTAINS WITH TRUTH OF WORLD AFFAIRS

Senator ALEXANDER WILEY, Republican, of Wisconsin, senior Republican of the Senate Foreign Relations Committee, today urged a greater free world effort to go over the heads of the Communist leaders to dominated people with the truth on world affairs.

"Around the world, people of the globe find themselves alternately involved in hot and cold wars, because of Communist activity," Senator WILEY said.

Today, the hard core of Communists actually comprises only about 4 to 6 percent of the people in the Soviet Union; and about 2 percent in Red China, with additional scatterings of Communists elsewhere in the World—although fortunately a very, very small portion of the population.

"The question, then, arises: How long will the world tolerate the troublemaking of these perpetrators of discord, and advocates of a political-economic system of dictatorship contrary to the yearning, and will for freedom of all mankind? How long will we-as a world—allow such a minuscule minority to

keep us on the brink of war?

"We recognize, of course, that the hard-core Communists, particularly in Red China and the Soviet Union, have an iron grip of control on these countries. Insofar as pos-sible, however, I believe that we need a greater effort to go over their heads to reach the almost 1 billion people under domination, with: The truth about world affairs-for example, the real story of Khrushchev's tor-Pedoing the Paris meeting; and the dedicated efforts, outside the Communist orbit, to promote a real peace—based upon justice and order-by the non-Communist people and nations.

"In such efforts, of course, we must be careful not to drive the Communist leaders so tightly into a corner that they push the panic button and touch off a nuclear-missile

"Despite this need to tread carefully, however, I believe the United States and the free world can-and should-be far more effective in getting across the story of freedom.

"Last session, I introduced a bill, S. 2188, to provide a Citizens Council to make a reevaluation of our effectiveness-or lack of effectiveness—in getting the truth to the People behind the Iron-Bamboo Curtains. The purpose of the Council would be to: reevaluate the Communist global ideological challenge and reappraise our own efforts in the light of that challenge; increase public awareness of the importance of the battle of men's minds, and our efforts to (a) counter the Soviet offensive, and (b) lay a foundation of free ideas, translated into the language that people of other lands can more easily understand-upon which to build a better World; and, extremely important, to increase the use of ingenious know-how which our free enterprise system has developed for mass media, to a better freedom-spreading pro-

"Encouragingly, the idea of the Freedom Council has been endorsed by a number of outstanding individuals—well qualified to evaluate the need in the field, including the following:

"Former President Herbert Hoover: 'Your idea is magnificent.'

'David Sarnoff, chairman of the board, Radio Corp. of America: 'I heartily agree with your view that a greater United States and free world effort is needed to combat the Communist ideological offensive.'

"Howard K. Smith, CBS News: 'It's an excellent idea. One of our chief faultsan odd one for a nation that has produced so many fine speakers-is a recently acquired inability to articulate our case. It is most noticeable in our time when our chief adversary is a natural genius in public relations.

'I hope the bill is passed and the Council can become effective as soon as pos-

"Eric Johnston, president, Motion Picture Association of America: 'I like your idea to establish a Citizens Council for Advocacy of Freedom. It deserves the support of Congress.

"Dwavne Orton, president, Council for International Progress in Management; also editor of Think, published by International Business Machines Corp.: 'I am very much interested in your bill, S. 2188. This strikes me as a very sensitive and needed stroke on the ideological offensive.'

"Robert F. Hurleigh, president, Mutual Broadcasting System, Inc.: 'I am most grateful to you for contacting me regarding your proposed Citizens Council for Advocacy of Freedom, for the ideas outlined in your pending bill support the very philosophies on which the heavily accented news schedules of the Mutual Broadcasting System are now based. *

'If there is anything the Mutual Network or I can do to further your Council plans, please do not hesitate to call on us.'

"Julian Goodman, NBC News: 'The purposes of your plan for a Citizens Council for Advocacy of Freedom are highly laudatory, and I certainly endorse them wholeheartedly. Any move we can make in this direction would certainly be useful.'

"The proposal—providing a mechanism for improving our 'salesman's' techniques should, I believe, be enacted by Congress.

We can expect, of course, that the Communist leaders-through jamming of Western radio broadcasts; and through maintenance of the Iron-Bamboo Curtains-will continue to obstruct our efforts to get through to the dominated people. If we can achieve our objective-and I believe this is possible to a much greater degree than is now occurring-however, it would represent a major step toward reducing the power and threat of international communism and establishing ultimate peace in the world," Senator WILEY concluded.

EXCERPTS OF INTERVIEW WITH SENATOR ALEX-ANDER WILEY, SENIOR REPUBLICAN, SENATE FOREIGN RELATIONS COMMITTEE, FOR BROAD-CAST OVER RADIO LIBERTY, TO THE PEOPLE OF THE SOVIET UNION

Citizens of the Soviet Union: I welcome the opportunity to send warmest greetings to you from the people of the United States.

Historically, we have enjoyed friendship and mutual respect. Although people of different lands, we seek the same goals: Good homes for our families; freedom to go to the church of our choice; ever-better schools for our boys and girls—to enable them to grow intellectually, morally, and spiritually; jobs for our workers; an everhigher standard of living; and better and

better cities, farms, factories, roads, modes of travel-overall, a better way of living for all our people.

Although there are differences in the world, I do not believe any real difference exists between our people—who seek, and yearn for, a peaceful world in which to build what—to each of us—is the "Good Life."

Now, why can't we accomplish this objec-

As a nation, we are sorry that Mr. Khrushchev could not find it in his heart to sit down at the conference table with Prime Minister Macmillan, President de Gaulle, and our own beloved president, Mr. Eisenhower in Paris to discuss-reasonably and rationally—the issues troubling the world.

His excuse was the U-2 flight. However,

he has known for a long time-as we have known of counter activities-of air surveillance and other types of information-seeking activities. Had Mr. Khrushchev been willing to agree to an "open skies" proposalas recommended by President Eisenhower; or to work in a really constructive way to establish peace, the U-2 flight or, conversely, the spy activities directed by Mr. Khrushchev would not occur at all.

Realistically, there had been no great hopes for finding answers-magiclike-to all questions at the summit. However, we had thought that a pattern might be established for frank, open discussions on how to resolve some of the differences between our governments and create a more peaceful atmosphere.

We regret, too, that President Eisenhower will not be able to visit with you next month—as he had been invited to do—by Mr. Khrushchev. We had hoped that he could bring to you, personally, the warm greetings and "handshake of friendship" of the American people. A man devoted to peace, you will recall that he fought with your sons and daughters against a common enemy—nazism—in the Stalingrads of Europe—to free the world from fear of aggression.

If he could have visited you, we felt that across your great country-as throughout the world-would ring out resounding the familiar, warm, hearty greeting: "I like Ike."

Now the invitation has been withdrawn.

Why?

Mr. Khrushchev again says it was because of the flight of the U-2 over the Soviet Union. Was it really?

For years, both our Governments-even though Mr. Khrushchev has not as yet willingly admitted this-have tried to find out about each other's activities, particularly as

these relate to military power. Was the U-2 flight, then, really the basic cause of your Premier's refusal to contribute to world peace at the Paris Conference?

No. I don't think so; since it was only one small act, blown up out of proportion, indulged in for purposes of national interest by nearly all countries in the world, including the Soviet Union.

What, then, was the real reason for Mr. Khrushchev's refusal to sit down with the leaders of the Western Powers to try to find a road to peace?

Perhaps you, the people of the Soviet Union, best know the answer.

Any great guilt, however, and yes, condemnation, must be placed upon those who continue to thwart real progress toward

Unfortunately, we have listened much to Mr. Khrushchev "fiexing his missiles," threatening us, and others, with military destruction.

We don't like what we hear. We wish it had not been said. But we cannot ignore it. Like you, the Russian people, we, too, feel we have a great country with proud tradi-tions and real hopes for the future.

The objectives of U.S. policy-and this reflects the will of the people and leaders alike—are not to fight with you, but to be your friends.

In the face of warlike threats, however, we do not feel that we can go to sleep, then possibly be attacked, and one morning wake up to find ourselves slaves of another country.

Instead, we have found it necessary, against our will and traditions, to put more and more money, manpower, and brainpower into an effective, powerful, jet missile, atom space defense; incidentally, a strong, mighty force to be reckoned with carefully

by any would-be aggressor.

If we had our way, however, we would like to beat our swords into plowshares, to channel great resources, skill, and human ingenuity of our country and the world into farm machinery, hospitals, homes, schools, roads, food for the hungry, books and teachers for the millions in the world who cannot read or write; more electric and atomic power for factories, homes, and farms, and a million other uses for peaceful purposes.

In America, we are fortunate that most of our population enjoys a great many of these advantages. Yet we know that until the good things of life are brought to all people, at home and abroad, there can be no real peace.

We seek for other countries what we wish for ourselves, the right to create and live under a self-determined form of government. But our philosophy is more than live and let live; instead, we are willing to live and help live.

Unfortunately, this cannot be accomplished in a world of threat and counter-

threat by the great powers.

Recognizing the destructive power of modern weapons, we know that in a nuclear-missile war, both attacker and attacked would be largely, if not wholly, destroyed. Consequently, we shall continue to do all we can to establish a world of order, justice, and peace.

Despite the unwillingness of Mr. Khrushchev to negotiate at Paris, we as a nation, and our President, and other leaders are undaunted. We shall go ahead—relentless, fearless, in a dedicated way, to try to find ways and means—to create a more peaceful world.

In our efforts we shall depend also upon you—the people of a great country—to assist us in spirit, and as you can, in fact, to find the right road to a better world and a life of peace.

Mutual Savings Banks

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. MULTER. Mr. Speaker, the May 8, 1960, edition of the New York Herald Tribune carried a special section commemorating the establishment of the mutual savings bank system.

The first mutual savings bank was organized in Scotland 150 years ago. The first mutual savings bank appeared on the American scene 100 years ago. The National Association of Mutual Savings Banks was organized 40 years ago.

In the last session of Congress, and again in this session of Congress I introduced a bill to authorize Federal mutual savings banks in order to make it possible for every State in the Union and every one of our territories to avail them-

selves of the benefits that flow from the operation of these thrift institutions. I am sure that an earnest effort will soon be made to enact such a bill.

In order that our colleagues may be thoroughly acquainted with the history of the savings bank movement I have clipped from the special section of the New York Herald Tribune the following excerpts which I commend to the attention of our colleagues:

Possibility of U.S. Charter, Growth Share Spotlight

The problems of growth and possibilities of Federal charters for savings banks are expected to dominate private discussions at the National Association of Mutual Savings Banks 40th Annual Convention, which begins today in Washington.

The national association is expected to report on progress that has been made in developing a Federal mutual savings bank bill. The question of Federal charters has been under study by the association for more than

2 vears.

Speeches by national leaders and special discussion forums will also highlight the national association's 3-day conference. Speakers include Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, William McChesney Martin, Jr., Chairman, the Federal Reserve System's Board of Governors, and Maurice H. Stans, Director of the Budget Bureau.

While not included on the official agenda of the convention, the subject of Federal charters will probably come in for a good deal of attention from the 1,200 delegates attending the convention. A bill providing Federal charters for mutual savings banks was discussed on April 25 with President Eisenhower's top Senate adviser on money and fiscal matters. Present plans of the national association call for introduction of the bill in the current session of Congress.

Mutual savings banks now can be chartered only by individual States and are authorized in only 18. Federal charters would permit the industry to expand nationally without the necessity of getting permission.

MUTUALS SOON TO CELEBRATE 150TH BIRTHDAY IN SCOTLAND

Mutual savings banks throughout the world will celebrate on May 30-June 3 in Aberdeen, Scotland, 150 years of thrift promotion. In particular, they will pay homage to the man who first provided a banking facility where those of modest means could safely accumulate small funds for emergencies.

The man who conceived the idea of helping the small wage earners and small farmers of his parish was the Rev. Dr. Henry Duncan, of Ruthwell, in Dumfrieshire, Scotland. The system he devised is now known as mutual savings banking and is found today in 34 countries, from the Belgian Congo to the Virgin Islands and from Seattle to Helsinki.

The idea of mutual savings banking was an outgrowth of the humanitarianism of the early 19th century. Social reformers such as Defoe and Malthus were concerned with the pauperism and economic uncertainties that often accompanied the beginning of the industrial, money economy.

"FRIENDLY SOCIETIES" FORMED

From 1780 to 1810 a number of charitable institutions, many of them known as "Friendly Societies," were organized by wealthy, philanthropic sponsors among the small wage earners in the industrial communities of England and Europe. The members set aside small sums of money with the society, which were to be available to them at times of unemployment, sickness and death. Most of these societies were short-lived, and few were self-sustaining.

One such society had been in existence since 1796 in the village of Ruthwell, Scotland, when Dr. Duncan took up his post there. He found the Ruthwell Friendly Society incapable of providing emergency funds for those in need and believed that the element of charity in the organization did not contribute to the self-reliance and independence he considered essential to individual well-being.

Instead, he proposed a bank in which the savings of depositors would be entrusted to the management of leading citizens, some of whom would contribute an initial fund so that deposits could be guaranteed against loss and could begin to earn what Reverend Duncan called "premiums."

Duncan called "premiums."

Depositors were fined if they did not deposit regularly and could withdraw savings at the full interest rate only with the permission of the directors of the bank. In May 1810, the Ruthwell Savings Bank was opened. It has been in continuous operation since.

In December, 1813, a second savings bank was opened—in Edinburgh—which imposed no fines on the irregular saver and few restrictions on withdrawals. The principles of trusteeship of funds and mutual sharing of the earnings of the bank among the depositors, however, were retained.

positors, however, were retained.

By the end of 1815 Scotland was well covered with savings banks. In 1817 Parliament adopted a measure legalizing savings banking in England. Thereafter the savings bank idea spread throughout the United

Kingdom and into Europe.

In the 1800's in the United States conditions similar to those among the wage earners of England prevailed in the growing commercial and industrial centers. There were a few societies and charitable institutions, but they were considered inadequate to meet needs of factory workers in a period of financial instability, frequent bank failures, and long periods of unemployment.

PAMPHLET RECEIVED

In the spring of 1816 copies of a pamphlet describing the plan of a savings bank being formed in London came to the attention of individuals—all of them prominent in business and government—in Philadelphia, Boston, and New York.

ton, and New York.

In Philadelphia, it was Condy Raguet, a successful lawyer and philanthropist, who spearheaded the drive to develop a savings bank modeled on the English ones; in Boston, it was Thomas Eddy who brought together a committee of citizens for the purpose of applying to the State legislature for the incorporation of a savings bank; and in New York, it was DeWitt Clinton, later Governor of New York, who attended a meeting of the Society for the Prevention of Pauperism held to consider the feasibility of establishing a savings bank which could further the aims of the society.

The purpose of the three groups was the same—to establish a bank which would give positive encouragement to savings by those most in need of them. Their motives were also the same—to aid the growing numbers of individuals dependent upon money wages to provide for their future and avoid the stigma of charity. All members of the groups were public-spirited individuals with the time and the money to devote to aiding those less fortunate than themselves.

The Philadelphia group was first to begin operations. The bank was called the Philadelphia Saving Fund Society and received the first deposits on December 2, 1816. The Boston group was the first to receive a charter, on December 13, 1816, but it was not until the following spring that the bank, called the Provident Institution for Savings, began to accept deposits.

The New York group had to wait until 1819 before overcoming the opposition of the New York State Legislature for a bank charter. By then DeWitt Clinton was Governor of New York and with his enthusiastic endorsement of the bank it received its charter as the Bank for Savings in the city of New York.

The first deposits, totaling \$2,809, were received on July 3, 1819.

Governor Clinton was among the original trustees of the bank, some of whom served as the bank's first officers, receiving deposits personally on certain evenings of the week, and handling all details of investment, interest payments, and setting aside of reserves from earnings as protection for the depositora

A year earlier, the Savings Bank of Balti-more and the Salem Savings Bank of Salem, Mass., had been organized.

These first institutions have been in continuous existence since their founding. They set the pattern for the many that were to follow.

By 1850 the number of savings banks had risen to 108, of which 87 are still in existence, several of these representing merged institutions. Just prior to the Civil War there were nearly 300 mutual savings banks, With 700,000 depositors and deposits totaling \$150 million.

Very few banks were organized after World War I.

FIFTY THOUSAND IN RUSSIA-SAVINGS BANKS GOT START IN EUROPE, POPULAR STILL

The Soviet Union holds at least one economic belief in common with the capitalist nations: the need for thrift.

More than 50,000 savings banks are scattered throughout the Soviet Union (U.S. total: 517), reportedly paying a slim 2 percent interest on deposits. There are, how-ever, no commercial banks in Russia.

And while the Russian example may be unusual, it is not unique. Savings banks are located in most countries of Europe, includ-West Germany (880 banks, 6,424 branches), Italy 87 banks, 2,061 offices), and Spain where 80 banks operate 1,347 branches.

In fact, savings banks in the United States, as well as in other parts of the world, have historical roots in Europe. Savings banking in this country got a great deal of impetus from immigrants who arrived on our shores in the 19th century.

CATERED TO IRISH

For example, the Emigrant Industrial Savings Bank, New York, was formed after the great Irish movement here during the potato famine in the 1840's. It is now one of the largest savings banks in the Nation. When organized in 1850, it catered to the newly arrived Irishmen, and later to successive waves of Italian, Russian, and other immigrants.

Ties between savings banks here and overseas are more than a fact of history. From day to day there is a continuous flow of information between our banks and their counterparts in Europe. Officer-exchange programs also help banks to keep abreast of the latest developments, such as in machines and new techniques of accounting.

In addition, the U.S. National Association of Mutual Savings Banks is a member of the International Thrift Institution, located in Amsterdam, to which most European savings banks also belong.

Three conferences, scheduled for this summer, will highlight the international aspect of savings banks. On June 14-17 the 6th International Savings Banks Congress will be held in Stockholm, Sweden. About 20 U.S. savings banks will join hundreds from Europe at this meeting. Dr. Grover W. Ensley, executive vice president of the national association, will address the congress.

Bankers will also converge in Aberdeen, Scotland, to celebrate the 150th anniversary of savings banks. Activities of the weeklong session will include a visit to the birthplace of the first savings bank-Ruthwell Village, in Dumfrieshire, Scotland, where the

Reverend Henry Duncan formed the first mutual savings bank in 1810.

TO ATTEND MEETING

And at least one American savings banker will attend the 10th International Summer School for Savings Bankers at Oxford, England, July 3-9.

WELCOME IS PREPARED IN ALASKA-NEW STATE PAVES WAY FOR THRIFT

The first savings bank in Alaska may be located in Anchorage.

This was revealed recently by the National Association of Mutual Savings Banks in a statement halling passage of a law allowing establishment of these thrift institutions in the newest State.

Last month, Alaska's Gov. William A. Egan signed a bill permitting mutual savings banks to expand into that State.

In commenting on this development, the national association said several leading businessmen in Anchorage were interested in forming a mutual savings bank as a stabilizing factor in the community." It did not name any target date.

OREGON LAW PASSED

The Alaska legislation is the first since 1925 to extend the geographic limits within which mutual savings banks may operate. In that year, Oregon passed a law enabling these banks to open offices within its boundaries. Savings banks operate only under State charter.

The national association, in praising the new Alaska law, explained that it doubled the area in which these types of thrift institutions can operate. Now in 17 States comprising an area of 550,846 square miles, the new law opens up an additional 586,400 square miles.

The national association said there is a serious shortage of long-term financing in Alaska for housing and other con-struction. Since mutual savings banks have about 65 percent of their assets in long-term mortgage loans, it expects "mutual savings banks would be of major importance in developing this segment of the Alaskan economy in addition to promoting saving among the people."

The provisions of the Alaska law are similar to those governing mutual savings banking in other States. It authorizes the chartering of such banks on approval of the Department of Commerce.

MINIMUM CAPITAL SET

The law requires that banks requesting charters be reasonably certain of financial success, that its incorporators (founders) be of good character, and that it pass qualifications for insurance under the Federal Deposit Insurance Act. Alaska has stipulated that \$50,000 is the minimum capital with which a mutual savings bank may be estab-

Commenting on the extension of savings banks into Alaska, John deLaittre, president of the national association, said: "It is most gratifying to witness the eagerness and enthusiasm of Alaska business and government leaders to obtain the advantages of mutual savings banking for the citizens of their State."

The first mutual savings banks in the United States were chartered in 1816 in Boston and Philadelphia. The institutions are concentrated primarily in the New England and Middle Atlantic States with a few scat-tered through the Middle West and Pacific Northwest.

PEOPLE NOW SAVING FOR SPECIFIC GOALS

Has saving money gone out of style? This question is one bankers are asking themselves. But it is of importance to the general economy. Real industrial and eco-nomic growth can be financed only through savings-through money accumulated and

invested to earn a return for the individual and to pay for expansion.

"Has the instinct of the squirrel to store a supply of food been replaced by the instinct of the grasshopper to enjoy the feast of summer with no thought for the lean months of winter?" asks Dr. Grover W. Ensley, executive vice president of the National Association of Mutual Savings Banks.

Dr. Ensley's answer is one of cautious optimism: available evidence suggests people still save about the same percentage of their incomes as they did 60 years ago, but perhaps for different reasons. The ideal of thrift, Dr. Ensley says, "is a highly valued and important goal in life, and those who do not put aside savings greatly regret it."

CLEAR GOALS IN MIND

Yet, Dr. Ensley says, people no longer save for only a rainy day, and apparently "very few people save expressly for the purpose of earning income upon their savings." people evidently have a clear goal in mind, such as education of children, a vacation, a new motorboat, or perhaps a European trip.

Studies indicate, Dr. Ensley reports, that people save "not because they are under the same vagure moral pressure to practice thrift that may have motivated our great-grand-parents to practice thrift, but because they have in mind some specific material advancement in their standard of living."

He adds: "The average American wants a well-equipped home, a good car, an education for his children, and comfortable, secure retirement. He is willing to work for these things, and happily, he is willing to save for them."

The problem of savings has been magnified in recent years by growing competition for the thrift dollar-from traditional thrift institutions, from commerical banks, from the stock market, and even at times from Government securities.

Thus bankers are becoming increasingly concerned about the possibility that thrift is becoming outmoded. Some believe that the great emphasis in modern-day America on charge accounts, the easy availability of credit generally, has tended to undermine the traditional notion of what a prudent

man does with his money.

Not so, says Dr. Ensley. He saves for specific reasons, rather than for the vague, moralistic notion of a rainy day. But he still saves. A bank-particularly a savings bank-should take advantage of modern man's inclination toward having specific savings goals.

The basic approach is to provide additional services. First, this requires having a sufficient number of branches located in areas where people do their shopping or conduct other business.

Next, savings programs should be geared to the notion of specific goals. For instance, the Philadelphia Saving Fund has for more than 2 years provided their depositors with 10 different special purpose accounts. Other banks are following their lead.

STIMULATE NEW BUSINESS

"Not only have a great number of these special-purpose or convenience accounts been opened," Dr. Ensley reports, "but these accounts, according to the latest report from the bank, have been a psychological and promotional instrument in stimulating new business in many areas of the bank's operations."

"These convenience accounts have served as a stimulus to the incentive to save and have been a motivating force behind new business collectively. I think that such success calls for admiration for the innova-tor and for imitation by others."

Dr. Ensley does not agree with some bankers who contend social security payments and other pension funds have reduced the necessity to save in the traditional way. On the contrary, he says, while government and other pension funds increased in recent years by 40 percent, private insurance and private pension funds rose by 51.5 percent. "This substantiates my belief." he says,

"This substantiates my belief," he says,
"that the average American is willing to
work hard to raise his level of living, not
only for the next year but for periods of leisure and for his future years of retirement."

There is, however, one school of thought that contends people are becoming more selective in choosing a place to put surplus funds. Thus last fall when the Treasury issued notes carrying a 5 percent interest rate, people rushed to their local banks and withdrew substantial sums to purchase the new securities. Most banking institutions, at the time, were paying just over 3 percent interest.

Says the National Association of Mutual Savings Banks: "The individual is conscious of interest rates, and is willing to increase the risk elements if he can feel that the interest rates or yields are worth it."

There was, of course, no element of risk in buying the Treasury 5-percent notes. But there is no small element of risk in some investments, where people have tended to put their money—in mutual funds, for instance. Durin gthe recent 10-year bull market, when stock prices climbed ever higher ,there was little to remind investors that stock prices go down as well as up. It was in this period of almost constantly rising prices that mutual funds made their greatest gains.

Perhaps in recognition that people are taking a hard look around at investments, savings banks are trying to work out programs that enable them to pay higher dividends on savings accounts.

EXPLORE OTHER OUTLETS

Savings banks are looking into additional investment outlets that could make their overall investment programs more adjustable to changes in deposit inflows and also provide the basis for paying higher interest rates—while still maintaining historical standards of safety and availability, reports the NAMSB.

Thus savings banks have entered a decade in which people may not be impressed by the rainy day argument. The solution, as seen by Dr. Ensley, is to develop new techniques for guiding an dencouraging the instinct to save, an instict that is * * * (not) * * * outmoded * * *.

TWO-WAY PROTECTION GIVEN FOR THE DEPOSITOR'S MONEY

Mutual savings banks provide two-way protection for depositor's money—by the type of investments they make and through insurance corporations.

More than 500 of the Nation's savings banks provide deposit insurance. The majority are members of the Federal Deposit Insurance Corp., which insures savings accounts up to \$10,000. While some savings banks in Massachusetts and Connecticut are members of the FDIC, most are members of their own guaranty funds.

All of New York's 127 savings banks are FDIC members, as is the case in Delaware, Indiana, Minnesota, New Hampshire, New Jersey, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington. Deposits insured with FDIC amount to 82 percent of all deposits held by all mutual savings banks.

Aside from insurance, the investments these banks make also provide depositors with protection, Most of the deposits they hold are put into mortgage loans, a majority of which are insured or guaranteed by the Federal Government, in Government securities, or in State, municipal, and corporate bonds.

RISE IN SAVINGS HELD VITAL NEED

A higher rate of savings is the key to financing sound economic growth in the new decade, Julian B. Baird, Under Secretary of the Treasury for monetary affairs, said in a statement to the Nation's mutual sayings banks, now celebrating their 150th year.

The additional funds will be needed, Mr. Baird said, to help "finance in a noninflationary manner the \$400 billion or so of new plant and equipment, homes, highways, schools and hospitals required to meet the needs of the 13 million new American job-holders and their families in the decade ahead.

"I am sure mutual savings banks will continue to share with us the fight for fiscal soundness as they perform their essential national function of stimulating thrift."

INSURANCE DRIVE LED BY BRANDEIS

Louis Dembitz Brandels, the former Chief Justice of the United States Supreme Court, originated the idea of savings bank life insurance more than a half-century ago.

He became interested while investigating operations of a big life insurance company for policyholders. This was before the Armstrong Committee's findings resulted in drastic insurance legislation in New York State and set the pattern for the Nation.

Judge Brandeis combined the theory of a mutual savings bank with that of a life insurance company. Enabling legislation was first passed in Massachusetts in 1907, after a hard-fought campaign led by Judge Brandeis. It is now offered by savings banks in three States, New York, Connecticut, Massachusetts.

ASSOCIATION ON ALERT FOR MEMBERS—VAST POOL OF SERVICES CONSTANTLY AVAILABLE TO ALL

Services of the National Association of Mutual Savings Banks to member institutions range from turning out statistical data to "selling" the industry in Washington.

These services, in general, are designed to improve operations of an individual bank and for "advancement of the industry nationally."

Member banks receive a steady stream of statistical data concerning deposit and investment activities, as well as economic analyses which can form the basis for decisions of management.

HELP PLAN SERVICES

These same studies are often used in developing policies on national issues, particularly those concerned with housing, home financing, Federal debt management and taxation. Trend studies on savings, investments and spending help banks plan new services.

Aside from studies, perhaps the greater effort of the national association is put into "selling" the savings bank industry on a national level in Washington and to State legislatures in cooperation with State Associations

A new office in Washington, opened in September 1959, and an annual conference with key legislative leaders in Congress and with Government officials are some of the ways the national association takes part in the national scene.

But, the association says, "perhaps of greatest significance to the growth of savings banking are programs to extend savings banking beyond its present geographical confines."

The attack is along two lines: The association supports and helps draft legislation allowing savings banks into more States. They can now operate in only 18. The enabling legislation passed last month by Alaska is perhaps the first major payoff of this portion of the program. The national association helped frame the new law and has promised to provide whatever help it can in organizing the first savings bank there.

In addition to work in States, the national association has recently completed a com-

prehensive study aimed at developing a Federal mutual savings bank bill. It will permit chartering of national savings banks by the Federal Government.

The association recently said it "is directing its research, public relations, and legislative drafting efforts toward effective extension of savings banks system through Federal charters."

In addition to research projects and its legislative efforts, the national association carries out a number of formal educational programs. These are intended to help work out the problems of recruiting, training, and promoting personnel.

Since the summer of 1957 the association has sponsored a Management Development Conference at Dartmouth College for potential savings bank officers. They study such topics as economics, monetary and fiscal policies, history, international relations, philosophy, and the arts.

FIRST CLASS IN JUNE

This June the first class of the Graduate School of Savings Banking at Brown University, will begin three 2-week summer courses to provide a better understanding of management in a savings bank and the economic setting in which the industry operates.

LOW RATES ATTRACTIVE IN POLICIES—INTEREST GROWING IN LIFE INSURANCE

New policies and low rates are attracting more and more people to savings bank life insurance.

In 1959, a record 41,443 policies were issued, amounting to \$113,900,000. This boosted the total insurance in force to well above the \$1 million mark, the National Association of Mutual Savings Banks reported. A previous record of 39,416 policies, totaling \$96,100,000, had been set in 1958.

The trend is clearly demonstrated by figures for Bowery Savings Bank, New York, largest mutual thrift institution in the Nation. In 1950, this bank sold policies totaling just over \$3 million; in 1954 this figure edged up to \$3,600,000. But in 1959 it shot up to \$7,380,000—doubling in 5 years, and a hefty \$1,200,000 above the 1958 level.

DOUBLED IN 5 YEARS

For all savings banks in New York State offering life insurance the same trend shows up. Their total sales in 1950 amounted to \$19 million; by 1954 it had increased to only \$22 million. But in 1959, they sold more than \$50 million of new policies—again doubling in 5 years.

Why this sudden spurt of interest in the last few years? For one thing, New York State boosted the maximum policy to \$10,000 in 1958 from the \$5,000 which prevailed since 1948.

This, of course, allowed the banks to rack up higher sales per individual policy. It also brought in a flow of new customers attracted by the higher figure.

COST IS LESS

But bascially people seem to turn to savings banks for life insurance because it sometimes costs less. How much an individual can save depends on many factors—his age type of policy etc.

his age, type of policy, etc.

As a rule of thumb, though, the prospective customer might expect to save \$4 or \$5 a year per \$1,000 of coverage on an endowment policy. Insurance experts, however, caution that such comparisons are of limited use. Dividends over the years and operating costs of a company would enter into the final cost. And a regular insurance company could offer straight life insurance in large amounts for less money than a savings bank. But, some insurance men say, for certain types of policies, the banks charge less in premiums.

While savings banks offer many of the

While savings banks offer many of the same policies as an insurance company, the bank insurance is unique in some ways. For one thing, it is sold in only three States—Connecticut, Massachusetts, and New York. And not all savings banks in these States offer it.

SALES OVER COUNTER

For another thing, savings banks can sell only over the counter. They cannot employ salesmen or agents. And while this might make it a bit more inconvenient to buy such a policy, it can hold down costs.

There are no agent fees to pay, and the saving is passed on in the form of lower premiums. It also means most people will want to keep their premiums paid up to date—they have to sell themselves on the idea of insurance and there is no danger they will fall under the spell of high-pressure salesmen.

This persistency rate, as insurance men call it, means added savings for policy-holders. A company usually starts breaking even on a policy after it has been in effect a number of years. Until that time, administrative costs more than equal premiums.

DROPOUT RATE DOWN

Regular insurance company experience shows that up to 6 or 7 percent of the policyholders may cancel their insurance. But for savings banks the dropout rate is down to about 1 or 2 percent.

Aside from lower costs people seem to be attracted to savings bank insurance because these institutions have been able to offer new types of policies in recent years. One of the most popular is a decreasing term policy which can be written up to \$30,000. Under this plan, the insurance in force is high initially, then gradually sinks to \$1,000 or \$5,000 over a span of 20 years. This allows the policyholder to have high protection when he needs it most—perhaps to protect a growing family.

Another type of policy covers all members of the family. It can carry a total of \$10,000 for the husband, \$2,500 for his wife and each child. In a family of six this would mean a total policy of \$22,500.

TREND STRESSES MORTGAGES, SELECTED CORPORATE BUYING

In the postwar period, savings banks of the Nation have sharply reduced their holdings of government securities, but have poured money into the mortgage market. They have also hiked holdings of selected corporate securities.

However, while the trend has been toward more mortgages and corporates and away from governments, the exact amount held in any one year year depends on the general state of the economy and relative yields available. In addition, a certain amount of funds is always kept in government bills for liquidity requirements, since these investments can be easily converted to cash.

Thus savings banks emerge as major buyers in the mortgage market. And their activities in the government sector are also important in assisting the Treasury in carrying out its financing requirements.

Expressed as percentages of total assets, mutual savings banks increased mortgages from 24.8 percent in 1945 to 63.6 percent of assets in 1959. In this same period their holdings of governments dropped from 62.8 percent of assets in 1945 to 17.6 percent last year

In prewar years savings banks were fairly heavy investors in corporates. For instance, in 1910 they had more than 25 percent of their assets tied up in these securities. But in 1945 they had less than 1 percent of assets in corporate securities. Last year it climbed to 12.4.

Savings banks are not major investors in tax-exempt bonds. Thrift institutions, in effect, pay little in Federal income taxes and there is little attraction for them to buy municipal securities.

In dollar amounts, as well as in percentage of assets, the same trends show up in where savings banks place their funds.

At the close of 1959 they had more than \$24 billion invested in mortgages, against \$20 billion 2 years before, and \$8 billion in 1950. Mortgage holdings totaled only a slim \$4 billion in 1945.

While mortgages were being bought in increasing amounts by the Nation's mutual savings banks, they were gradually reducing their holdings of governments. In 1945, for instance, they had \$10 billion invested in government securities. Five years later they were still at the \$10 billion level. But by 1957, the figure had dropped to around \$7,500 million and last year government holdings amounted to \$6,800 million.

Holdings of selected corporate securities have remained fairly constant in the 1950's—averaging between \$3 billion and \$4 billion. At the close of 1959, they stood at \$4,800 million.

THEY CAN'T EVEN GIVE MONEY AWAY—
SKEPTICISM AND DISTRUST GREET INVESTIGATIONS

The woman opened the door just a crack and looked out suspiciously at a young man on the steps of her Brooklyn brownstone. "Can you tell me the last known whereabouts of John R. D.——?" he asked.

"Never heard of him."

Slam.

This sort of investigator often meets such a reaction or its corollaries: Skepticism, disbelief, mistrust. And all he's trying to do is give money away.

The job of a savings bank investigator assigned to tracing long-dormant accounts is complicated by the tendency of the American public to question anything that smacks of something-for-nothing.

IN 15 YEARS

Under New York State law the savings banker must report to the State controller the names of all depositors who haven't shown any account activity in the last 15 years and who can't be located.

The controller designates how the bank should go about advertising for these missing persons. In the meantime, though, the banks conduct full-time searches for their long-lost customers.

What do people say when the man from the bank tells them they still hold \$2,639 in their savings account? According to the investigator for Bowery Savings Bank, 24year-old Samuel Feldman, the reaction is often a grateful smile and a raised eyebrow.

Most people contacted by the dark young man ask suspiciously: "Well how much do I owe you?" They assume that anyone who'd go to the trouble of looking them up is looking for trouble anyhow. Bill collectors, maybe. When they learn that the money is waiting for them the attitude usually changes.

It's something like the transition lawyers have noticed when they inform a young couple that a no-account old uncle is dying. "But don't worry about the funeral expenses," the lawyer adds, "he can be buried right next to his new uranium mine."

Coming up with a windfall often raises complications for the recipients. One investigator reported a situation where the deceased depositor's five daughters no longer talk to each other. In Mr. Feldman's case he spends a great deal of effort porting over telephone directories and tracking down business addresses of extinct firms. If the missing depositor appears to be over 65 there's always the Social Security Administration.

COVERS FIVE BOROUGHS

Then it's out into the field—a sprawling five boroughs with about 9 million highly individualistic residents. The city is a place where hundreds of detectives have a tough

time tracking down a criminal whose height, weight, race, aliases, and usual haunts are carefully recorded. The complexity of the bank's task is illustrated by the fact that dope peddlers, maffia leaders, and the like, have been able to escape detection for a while. What of the law-abiding depositor who nods to the patrolman on the beat but is unknown to the local precinct?

And in so many cases the target of the bank's search now uses a different name, whether through marriage or just individual preference.

While Mr. Feldman's probes take him all over the metropolitan area his correspondence has turned up missing depositors in such far-away places as Hawali, Miami, and Ireland. He sounds sort of wistful when he lists these spots, as if he wished his job permitted him to do long-range searches on the spot instead of via airmail.

Physical distance is not the only complicating factor. There often are great gaps right within the same family. A savings bank investigator points out that one patriarch insisted he knew nothing of his daughter. As it turned out she had married outside of her family's religion and to them she was indeed lost.

Even when the errant customer is pinned down he doesn't always come in to straighten out his account. Mr. Feldman tells of a dozen letters written to and answered by a Brooklyn woman. She's always coming in to the bank, she says, but to date still hasn't taken the subway ride to the cash awaiting her on the pot-o'-gold side of the East River.

AND THERE'S INTEREST

When the dormant account is activated the bank adds on the accrued interest, a neat sum for someone who forgot all about the \$500 he deposited when he got out of the infantry after the war. Some veterans go even farther back. Mr. Feldman located a man in Cuba who promptly sent back a yellowed Bowery bank book. He no doubt found it in his barracks bag from the days when he went up San Juan Hill with the Roughriders.

Adding up all the odd cases and the just plain forgetful ones, Mr. Feldman reported a successful 1959 as 208 accounts were cleared up. They totaled \$52,000 with "very few \$10,000 or larger."

But the Feldman private-eye days are over. After a year and half of investigating he's turned to a more bank-sounding title: Senior teller.

MUTUAL SAVINGS VERSUS COMMERCIAL: WHAT IS THE DIFFERENCE AND WHY?

A bright, young Wall Street executive, who daily treads in the canyons of the Nation's financial district, recently walked into a leading savings bank, asked to see an officer, and said he wished to arrange a personal loan.

"He was," the officer explained later, "somewhat indignant when I told him a mutual savings bank cannot make ordinary consumer loans."

The young executive is not alone in his confusion. Bankers are learning, to their surprise, that most people have great difficulty in telling one type of banking institution from another.

A BIG DIFFERENCE

"It is a bit discouraging," a savings banker complained recently, "no matter how much advertising we do, people still seem to think a bank is a bank is a bank."

Actually, though, there is a big difference between types of banking institutions, and perhaps a still bigger difference in the types of services they can offer.

For one thing, there is a matter of ownership. A mutual savings bank is actually owned by the people who use it. The bank was originally organized by kindhearted, public-spirited citizens of a community.

But the mutual savings bank has no stockholders. All profits from its operations go to depositors, as dividends on accounts, into reserve funds, or into the business itselfusually a combination of the three.

In contrast, a commercial bank is a chartered corporation, fully dedicated to helping the Nation and the community, but also dedicated to turning out a profit for its owners, the shareholders.

Shares of the Nation's major commercial banks, such as First National City Bank, Chase Manhattan Bank, or Bank of America, National Trust and Savings Association are traded over-the-counter and can be purchased almost as easily as the shares of General Motors, or International Business Machines.

Aside from ownership, mutual savings banks differ from regular or commercial banks by types of services they can offer.

Mutual savings banks are the specialty stores of the banking industry, while commercial banks are giant department stores, offering a full range of services and expert advice on anything from conditions in Europe -to likely spots for a new plant in Africa.

On the other hand, mutual savings banks deal in only one commodity-thrift. They were specifically organized to encourage savings among people of moderate means, which perhaps account for some of the names-

Bowery, Emigrant, Seamans, etc.

The matter of thrift is still their primary function. Some, however, have branched out a bit and offer special low-cost life insurance, money order checks (but not checking accounts), and safe-deposit facilities. Some savings banks will make passbook loans, that is they offer low-cost loans for amounts not exceeding what the individual has on deposits.

But a commercial bank will make all types of loans, ranging from billion-dollar transactions for the Federal Government, down to a \$500 advance for buying a new auto. And, it is also only the commercial banks that can offer checking accounts, both regular and special.

INVESTMENTS DIFFER

In addition to the matter of ownership and types of services, banks also differ in the way they invest money deposited with

Savings banks, which usually can depend on having funds on deposit for some time, place much of their funds in long-range investments. At the moment something more than 63 percent of their \$35 billion is invested in mortgages. During the 1950's, savings banks played a major role in financing the big housing boom. They also buy Government securities, ranging in maturity from those due in a few months, to those stretching out to many years.

Mutual savings banks also help finance a variety of community projects, such as new schools, churches, shopping centers, housing developments, industrial buildings, and in the case of one upstate New York savings bank, the local theater (which went out of business before paying off the mortgage).

Commercial banks, however, can't count on having deposits around too long. Much of their funds is in checking accounts, or demand deposits. Big commercial banks also deal in time deposits which is money given to them for a specified period of time on which they pay a fixed rate of interest.

RATE RISE IS CENTER OF DEBATE—MANY INSTITUTIONS OPPOSED TO BOOST

Major commercial banks are likely to step up efforts to lift the 3-percent maximum rate they can pay as interest on time and savings deposits. Yet there is little to in-dicate the Federal Reserve Board is willing to go along with such a change.

In recent months big commercial banks, particularly in New York City, have spoken

out sharply against the ceiling. They argue that higher rates are being paid by thrift institutions—savings banks and savings and loan associations.

In addition, they point to sharp deposits losses they took particularly in the latter half of 1959, as funds, some of them foreign, shifted into other investments, such as Government securities, where interest rates were more attractive.

DEMANDS MAY INCREASE

Demands for lifting the rate ceiling are likely to increase in the months ahead, particularly if money continues in relatively tight supply and the economy continues at a generally brisk pace.

For thrift institutions, a boost in the rate would undercut one of their biggest arguments for winning new deposits-the ability to pay more interest than commercial banks.

In recognition of this important advan-tage the National Association of Mutual Savings Banks recently reported its member banks are streamlining their operations to speed service and reduce costs and are seeking new investment outlets so that they can continue to reward depositors with the highest rates consistent with safety and the ready availability of funds.

COMPETITIVE DISADVANTAGE

The case for commercial banks is based on the simple fact they are not able to compete effectively for deposits with other types of investments and other types of banking institutions as long as they must operate under the 3-percent ceiling.

Despite the reasonableness of their case and though deposit losses last year were large, they were not widespread. Weighing against commercial banks arguments is that losses occurred mostly in major banks-and

mostly in New York City.

However, the Fed's 3-percent ceiling is Nationwide in application. The Federal Reserve is understood to think any increase in this ceiling might spark unhealthy competition among smaller banks in other parts of the country.

SHIFTING IN DEPOSITS

In addition, the most serious competition for commercial banks is not other banking institutions, even though they pay higher rates, but the money market itself. report most shifting last year was in time deposits, money left with the bank by big corporations or foreign customers. Some losses were taken in commercial bank savings accounts-which must compete directly with thrift institutions-but most of these reductions were attributed to the Treasury offering of 5-percent notes.

Time deposits shifted out of commercial banks to take advantage of the Treasury bill yields, which at times ranged to more than 41/2 percent and to 5 percent for notes of longer maturities.

These rates contrast with the 3-percent maximum interest commercial banks can pay on time deposits maturing in 6 months or more and a 21/2-percent ceiling on those falling due in 90 days to 6 months.

OPPOSITION TO RISE

The effect of this rate disparity, of course, was to reduce commercial bank time deposits. But it is this source of decline-in time deposits-which argues against a change by the Federal Reserve. Losses in such deposits means that only big banks-mostly in New York City-felt the pinch.

In addition there is considerable reason to think that many commercial banks of the Nation are not in the least interested in having the rate changed. A number of small commercial banks still pay no interest at all on savings accounts and many pay less than the 3 percent maximum allowed under the Fed's ceiling.

The opposition of many small commercial banks to lifting the ceiling was found at the annual convention of the American Bankers Association last fall in Miami Beach. The outgoing ABA president stated frankly the association had not and would not ask the Fed to boost the ceiling.

ILLOGICAL POSITION

Despite the opposition of small commercial banks there is a growing opinion if economic conditions continue on the upside the Fed might at least reconsider its policy.

For one thing, the big commercial banksjust by force of reason-are winning some powerful support to their cause. For instance, the influential and highly respected New York Superintendent of Banks, G. Russell Clark, has spoken out repeatedly against the illogic of present regulation.

New York, of course, finds itself in a particularly illogical position. Mr. Clark imposed a 31/4-percent ceiling on rates savings banks can pay on regular accounts; but, in effect, he is powerless to control savings and loan associations, even those with State charters.

AUTHORITY BY STATE LAW

Under New York State law he has authority to impose ceilings on such associations. But he apparently stays his hand, since there is little to prevent a State association from converting to a Federal charter and thus escaping the strict rules of Mr. Clark's department.

Thus in New York State the lineup rates are as follows: commercial banks, under Federal Reserve rules, can't pay more than 3 percent on time and savings deposits; State regulations hold savings banks to 31/4 percent on regular accounts (and extra 1/4 percent is allowed on so-called 2-year money); savings and loan associations operate virtually free of ceilings-and generally pay fractionally higher interest.

In small States and in areas where money is not such an important commodity the situation is not as strained as in the Empire Yet it is the major banks who are State. taking the major losses. And while there is little to show conditions for them will improve, there is at least, a growing awareness that they are being forced to operate at a competitive disadvantage.

ALL EYES IN NATION NOW ON NEW YORK FOR IMPACT OF REVISED BANKING LAW-INFLU-ENCE SEEN CERTAIN IN ALL PARTS OF UNION

In the early morning hours of March 22, Governor Rockefeller, of New York, signed a bill providing a major overhaul of the Empire State's long-antiquated banking law.

Thus ended a fight that spanned more than a decade and has echoed in the State's legislative chambers, hearing rooms and around board tables of leading banks.

No sooner had the bill been passed than bankers across the Nation began asking themselves: What significance does this bill have for the banking structure of my State?

New York State, containing New York City. financial capital of the Nation if not the world, is often looked to for leadership in fiscal matters.

At the turn of the century, for instance, the findings of a State committee on insurance set the pattern for insurance industry. In addition, its giant financial institutions, both savings and commercial banks, handle funds belonging to people throughout the country. Indeed, loans made by these banks finance many projects even in faraway California.

REASON TO WONDER

Thus there was good reason for bankers outside New York to wonder what that State's new banking law held in store for their own institutions.

There is, of course, no certain answer. The effect of New York's new banking law will

vary by State and by type of banking institution. Its greatest impact may be on commercial banks, rather than on savings banks.

Yet there are certain aspects of the New York law which will probably greatly influence most sections of the country in solving their own banking problems. In addition, the many public statements being made by New York's influential superintendent of banks, G. Russell Clark, and the guidelines he eventually establishes under provisions of the law will also be watched with interest by other banking supervisors.

Perhaps the most important single aspect of the new law is its emphasis on competition between banks and between the various types of banking institutions. The New York superintendent regards this concept as a key feature of law. He will not only permit competition, but he will deliberately promote it.

QUOTES LAW'S PREAMBLE

Mr. Clark is fond of quoting a portion of the law's preamble which says, in part: "* * * that healthy and nondestructive competition be fostered among all types of banking organizations."

He added: "I would stress that this is a positive mandate that competition be fostered, provided that it is nondestructive in character. I will seek in my branch policy

to attain this objective."

This attitude of the superintendent, if not the wording of the bill itself, represents a departure from the traditional attitude, in itself a "hangover" from the depression years of the 1930's: that competition between banks is somehow just a bit disrespectful, if not outright harmful; that, if anything, there should be less competition, rather than more—apparently out of fear the whole banking structure might collapse under pressure.

NEW YORK CAN SHOW WAY

The idea that competition between banks is not only to be tolerated but fostered particularly in the heartland of the Nation's financial institutions will certainly cause other bank supervisors to reexamine their traditional notions about the subject. At the very least, New York has the opportunity to demonstrate—with billions of dollars at stake—that healthy nondestructive competition will be in the public interest.

Mr. Clark's determination to enforce competition is clear from statements he has made recently. For instance, he has warned that the one or two big banks on Long Island will not simply be replaced with a couple of other institutions.

"I would not like to see the present domination of each of these two counties (on Long Island) by a couple of suburban banks merely replaced by the domination of these two counties by a couple of the big New York City banks," he says.

Mr. Clark adds: "I take a dynamic view of the role of competition in the field of banking and insofar as this new legislation permits a change in the banking structure of the State, this opportunity should be used for the purpose of increasing and enhancing competition."

ANOTHER MAJOR CONCEPT

Aside from the notion of competition, both explicit and implicit in the new law, there is one other major concept that will probably have far-reaching influence.

This is the idea of growth—the best method of growth for banking institutions in a complex economy without harming smaller banks, but without restricting operation of larger institutions.

New York's solution to this problem, under its new law, has been to permit additional branching of thrift institutions, and to authorize holding companies for statewide expansion of commercial banks.

CURBED IN LAST 3 YEARS

Bank holding companies are by no means unique to New York or other States, but they have been operating in the twilight zone of questionable virtue also occupied by competition.

In the Empire State itself holding companies have been banned from forming in the last 3 years. Many other States are also questioning the wisdom of allowing such organizations to form within their boundaries. The New York case was particularly illogical since one statewide company had been doing business for a quarter-century.

However, the New York law casts holding companies in a new, more respectable light. They will be permitted to form and do business throughout the State, under Mr. Clark's supervision. Thus they are recognized as a perfectly legitimate means of expansion in a State where banking and money rank as a leading industry. Certainly other States can be expected to re-evaluate the usefulness of holding companies in their banking structure.

Retrospect Prognostication

EXTENSION OF REMARKS

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. IKARD. Mr. Speaker, recently I received a copy of an address entitled "Retrospect Prognostication" delivered by Mr. Oral Jones, before the Rotary Club in Wichita Falls, Tex. Mr. Jones was in the banking business practically all of his life until his voluntary retirement 3 years ago, and served for many years as vice president of the City National Bank in Wichita Falls. He is a past president of the Texas Bankers Association and one of the outstanding bankers of his time. In addition to his duties on his job, he devoted a great deal of his time to civic work, helping to build the city of Wichita Falls. I request that Mr. Jones' address be included in the RECORD as I feel that it will be an inspiration to all who read it, as it was to me.

The address follows:

RETROSPECT PROGNOSTICATION

(By Oral Jones, past president, the Texas Bankers Association, before Rotary Club, Wichita Falls, Tex.)

There is no magic by which we can automatically solve our problems, nor the world problems today, but we are not discouraged.

The puzzles which are before us can be untangled only by our own personal energy and initiative, we cannot delegate the work and thinking to someone else. Nor can we expect some great white father to take care of all our ills and needs.

The power that has lifted the world from savagery and chaos into a decent civilization where free men dare to breathe, even, has been the power of courageous men to assume leadership in the critical hours.

There was no great band of men who were gathered around the master at the foot of the cross, but the faithful few who stood the trial of that dangerous hour have spread their message across the world.

Today we can achieve progress if we have the energy and initiative that drove the pilgrims to establish a settlement on the bleak shores of America or compelled the heroes of Valley Forge to withstand the terror of winter.

We can compel the world to hear us only if we have the body and mental strength of those who established the original 13 United States.

An old song runs "Man's life's a vapor, full of woes. He cuts a caper and down he goes."

For centuries priests and sages and indeed history itself have been telling us that man and his earthly works will be destroyed by change and fall to dust.

But with a stubborness that frequently achieves greatness, man goes on working as if the monuments he raises, the governments he sets up, the art he painstakingly fashions could last forever.

Preeminent among those who have laid up treasures upon this earth, was J. P. Morgan. With consummate skill he built the House of Morgan into an institution so powerful it seemed impervious to change.

But, change, which has cut into the house over the years now reaches even the great name itself. Now it has become the Morgan Guaranty Trust Co. Though old "J. P.'s" most personal monument now takes new form, others he created live—his art collection, the big corporations he formed.

The closest man has ever come to scoring permanently over change and decay is illustrated by the essay on a 2,800-year-old golden bowl found in Iran. A soldier, whose skeleton was uncovered with the bowl, saved it in a holocaust. He was just doing his duty, not worrying about posterity. But his brave act preserved the record of a people and a culture buried and forgotten by history—thus he gave them a chance to survive in the minds of men.

The Russian and American rockets to the Moon which resulted in the first manmade orbits of the Sun, illustrate man's advances into the ageless void of space and are unfolding day by day.

Today we are interested in present problems and the immediate future—not the ageless traditions, nor the dim centuries ahead. What is before us in the remainder of

1959?

We firmly believe most American will live better. They will earn more money and spend more money.

Dollars will be tempted from easily replenished wallets by the greatest variety of things and services imaginative and enterprising man has yet conceived.

On paper, this will be America's most prosperous year.

Inflation will be the problem and recession is all but forgotten.

Prosperity, judged by the standards of the new economy, which is evolving in the 20th century's second half will hit a new peak, Inflation will attain a new peak, too, and those statisticians who measure from basics of 20 years ago, that postdepression, prewar year of 1939, will find less to cheer them than those who do not know of these matters.

As in other years of this decade, the automobile industry will power the economy. We will be moderately more prosperous or considerably more prosperous depending on success in Detroit.

Just out of reach of booming America is an almost unbelievable half-trillion dollar annual economy. The sale of new cars in 1959 and 1960 will determine whether we get a jet thrust toward this goal or whether we move toward it in a slower, more sedate fashion.

In this year, 1959, America will emerge from an economic phase to which we have become adjusted, a postwar economy, into a new one.

It is a natural growth, but its results will require their own specific adjustments on the

part of the public.

Perhaps for years to come economists will be debating the merits of the kind of prosperity with its creeping inflation which we are entering. It has its perils as well as rewards, most of all it requires greater responsibility to the economy on the part of America's leaders.

However, the view ahead for the rest of 1959 is better than the view analysts could

take a year ago.

We can be almost sure of these things:

Income will reach new records.

Prices will remain unchanged to slightly higher.

Spending will hit a new peak.

The gross national product, measure of total output of goods and services, will establish a new record.

Production will set a new high. Construction will set a new peak.

Savings will reach a new record. Business expenditures naturally will be at

a new high. In short, we will be prosperous, more prosperous than we have ever been before-

viding there are no unforeseen setbacks. Into this bright picture comes the annual

session of Congress. It has had all its usual noise and jockeying for position. What can we hope for out of Congress?

There definitely seems no change for tax cuts this year.

However, higher tax rates seem also as highly unlikely. We in the Wichita Falls area can take

comfort from the fact there is little chance the oil depletion allowance will be cut. It won't be changed this year.

Postal rates will not be raised. There will be a labor law passed in spite of all the investigations and noise about the

But a higher minimum wage law will be pushed hard.

Housing and construction is sure to get special help and the housing for elderly. for colleges and the military is being worked up by the Democrats who will use that heavy majority to the fullest.

We can almost be sure of greater Federal aid to schools, higher taxes on insurance companies and the continuing of the draft

While all this congressional twisting is taking place what about general retail business for the year?

There is a swift upsurge in detail sales that is rapidly approaching a boom. It started last fall, hit record levels in December and is still rising. In most cases, the retailers, who were scared this time last year, are ready to place bigger orders with the manufacturers.

There is only one bad note: Higher prices are sure to result.

Merchants are more optimistic than they have been in many years. They know the state of mind of their customers and why they are buying—the incomes are higher.

You can be sure of bigger sales in department stores, excellent clothing year plus more hard goods. Even appliances and furniture are making a comeback. For the supermarkets there is more volume.

Total sales are up 5 to 7 percent over last year in dollar volume. This means even an increase in physical volume in spite of higher

It will take hard selling to reach the heights this year but the merchants generally are planning more advertising, sales contests, special promotions, self-service and attractive credit terms.

The one big worry is prices. They are starting up already. Increases have been posted for appliances, TV, clothing, and shoes. Manufacturers are not as timid as they were a year ago about raising prices to meet their rising costs.

Most of these higher prices will be passed on to the customer. Thus there is another dose of inflation.

This trend for higher prices, this new threat of inflation will kick off a hot argument in Congress over what to do about it.

Eisenhower's insistence on a balanced budget is a part of the whole picture. His advisers, aware of probable price increase this year, argue that a Government deficit would only add to the inflationary spiral.

The liberals insist the Government should spend more money to further pep up the economy. They are suggesting such social benefits as education, housing, community benefits and facilities. This plus a strong defense might mean only deficit (10-cent dollar)

The liberals think they can hold down inflation—if it comes. They mean by tight restrictions and tighter Government controls.

We probably will wind up by seeing Government spending still high, and drugs, bread, autos, steel, insurance and other things essentially headed upward.

A typical illustration is that \$2 billion will be spent on new post offices. That will spread all over the country.

We no longer live alone in the world. must watch everything everywhere to be in a position to make intelligent decisions.

Money reforms abroad show the first sign of helping the U.S. exporters. They are getting inquiries from new foreign customers about prices and services. Heretofore, countries that sold their goods for pounds, francs, or marks, often couldn't convert the currencies into dollars-so they could not buy here. Now dollars are easier to get, opening up big markets for U.S. goods in such countries as France, Denmark, Sweden, Norway, Italy, Greece, and Argentina.

The methods of doing business abroad will

change rapidly in the future.

As for Russia. They do not want war with us. Despite all the bluster and talk from Khrushchev about Red military strength and about the damage they could do us here in the United States, he dreads the thought of stumbling into a war with the United States.

The Russians must have two major fears. 1. Our ring of strategic air bases from which the Russian heartland could be pulverized quickly.

2. A strongly militarized Germany. That might even attack as Hitler did.

It is possible that Berlin will heat up the cold war, but it is unlikely it will explode into global fury. We have drawn a line of no retreat and it is impossible to conceive the Reds dare cross it.

Russia is getting weary of the cold war. Its domestic economy is strained by heavy armament and at the expense of living standards in Russia.

The younger generation wants some of the wonderful luxuries that communism is supposed to have produced.

This doesn't mean the cold war is ended. But let us move back to the United States. The word debt needs some attention from all of us

From the dawn of man, we have been bombarded with the wise counsel about keeping out of debt. Yet today public and private debt in the United States is approaching the staggering and all but unbelievable total of \$1 trillion.

The debt of the U.S. Federal, State, and local governments, and of the people, was \$852.7 billion as of December 31.

In recent years this has been increasing at the rate of from 30 to 70 billions per year. There is no end in sight. However it must end somewhere or push us into unbelievable inflation.

This all produces talk about fiscal responsibility.

President Eisenhower's aim to get a balanced budget may get bipartisan help, but liberal elements in Congress may prevent such an event.

Reckless spending and debts can only add fuel to a flame of inflation which would rob all.

One thing is certain, if Congress passes any big spending measure not favored by the administration, Mr. Eisenhower will, forecast, make regular and persistent use of the veto.

Control must first: However, be exercised at local and State levels.

There is a great future in spite of all these cautious notes.

There will be 250 million Americans by 1976. February marked the 25th anniversary of the Federal Deposit Insurance Corporation. The FDIC has been so universally accepted that it is hard to realize that It has only been in existence 25 years. As of today, it is insuring deposits in 13,383 of the 14,095 banks in the country and insures 96 percent of all bank deposits. They will take un-limited goods and services. This means 130 million motor vehicles with all their industrial demands, unlimited services and goods for the great increase.

Paris will be 2 hours by air and people will cross the Nation within an hour.

More than 100 million people will work at

gainful jobs and each job will create its

I envey those young men starting their business and professional careers at this time.

We are growing at both ends. There are more babies and more people are living to ripe old age. Each presents its own particular problem.

These needs will not be met by magic but by cool intelligent planning and working.

The challenge is to use all your intelli-

"Have you learned lessons only of those who admired you and were tender with you and stood aside for you?

"Have you not learned great lessons from those who reject you, and brace themselves against you, or who treat you with contempt,

or dispute the passage with you?"

It will not be easy, but trouble should sharpen us for the task ahead for each of us-

Too many people lose their grip on life even before they have tested the means to see what can be done.

The starts are everything. Never mind if you lose the lead as you press forward.

Often the winners of the race concentrates on the last few seconds, and wins the prize. No matter how discouraged you may be. As you wend your way through life, never

lose that grip of yours. Keep feeding it with courage, patience, and humility.

A cheerful outlook is something that needs to be planned.

We can all plan it. We all need it. We must take a firm grip on it.

It is so sorely needed in this world of fears, loss of faith and spiritual cast of mind.

How many times have we lost our cast of How many times have we lost our desire to perform and our determination to keep right on giving extra cheer to those who

most need encouragement? Don't lose your grip on the interests most enriching to you. Believe, look to God.

Do your best to keep a grip on life and its interests. Walk right past the failures. Do not refuse to make the start. Associate with those who inspire you, and who keep themselves on a high plane.

Follow out a plan of life that will keep influencing others.

Live out today, and all tomorrows will take care of themselves

If you want to be healthy morally, mentally, and physically, just let go.

Let go of the little bothers of everyday life, the irritations and the petty vexations that cross your path daily. Don't take them up and nurse them, pet them, and brood over them. They are not worthwhile. Let them go.

That little hurt you got from a friend, perhaps it wasn't intended; perhaps it was, but never mind, let it go. Refuse to think

about it.

Let go of that feeling of hatred you have for another, the jealousy, the envy, the malice, let go all such thoughts. Sweep them out of your mind and you will be surprised what a cleaning up and rejuvenating effect it will have upon you, both physically and mentally. Let them all go; you house them at deadly risk

But the big troubles, the bitter disappointments, the deep wrongs and hearbreaking sorrows, the tragedies of life, what about them? Why, just let them go, too. Drop them, softly maybe, but surely. Put away all regret and bitterness, and let sorrow be only a softening influence. Yes, let them go, too, and makes the most of the future.

Then that little pet ailment that you have been hanging on to and talking about, let it go. It will be a good riddance. You have treated it royally, but abandon it; let it go. Talk about health instead, and health will come. Quit nursing that pet ailment, and let it go.

American Credo

EXTENSION OF REMARKS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, the Post Office Department is to be highly complimented on its "American Credo" stamps which feature the sayings of great Americans.

It seems particularly significant that the third stamp in this series emphasizes Thomas Jefferson's immortal declaration I have sworn * * hostility against every form of tyranny over the mind of man.

Mr. Speaker, I ask unanimous consent to include in the Record the address by L. Rohe Walter, Special Assistant to the Postmaster General, dedicating the American Credo Thomas Jefferson stamp at Monticello at Charlottesville, Va., on May 18, 1960:

Address by L. Rohe Walter, Special Assistant to the Postmaster General, Dedicating the Thomas Jefferson "American Credo" Stamp, Monticello, Charlottesville, Va., May 18, 1960

It is fitting that we should gather here to honor Thomas Jefferson in the one place he loved best. This is indeed the one best place in all America for the dedication of the third in our "American Credo" stamp series.

For Jefferson was drawn to the land, to the peace and open of the country. His most treasured moments were those when he could sit in this house, which he designed, and look out over the valleys and distant mountains of his native Virginia.

Basically, Thomas Jefferson was a man of the frontier, who had an implicit trust in the honesty, good faith, and commonsense of the people. He was distrustful of any great concentration of power, be it in the hands of government or of any group.

The individual was, to him, the basic source of the Nation's strength in every area.

In his first annual message to Congress, in 1801, he declared: "Agriculture, manufacture, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise."

He also believed that the individual's contribution to good government was vital. This remarkable man, whose primary interests lay in scholarship, and in the culture of his home and lands here at Monticello, was drawn into Government service through almost 40 years of his life, earning the eternal gratitude of the Nation he did so much to build.

Through the years he served his people in the representative bodies and as Governor of his native State; in the Continental Congress; as a trusted diplomat; as Secretary of State and Vice President; and as one of the most towering figures ever to hold the office of President of the United States.

But to Thomas Jefferson his enduring achievements were set forth in the epitaph

he wrote for his own tomb:

"Here was buried Thomas Jefferson, author of the Declaration of American Indpendence, of the Statute of Virginia for religious freedom, and the father of the University of Virginia."

These symbolized to Jefferson his striving toward his highest ideals of justice, freedom, and knowledge for marking.

Throughout his life he sought to achieve these ideals for his countrymen as for himself

He established for all Americans many of the basic tenets by which our Nation is still governed.

His thirst for knowledge was unquenchable. It is significant of the man to note that, after the Library of Congress was destroyed in 1814, the Government turned to Thomas Jefferson to acquire, from his personal library, 13,000 volumes which would become the basis for what is today the world's greatest single storehouse of knowledge.

Yet the total spirit of this giant among Americans is summarized in the 13 words which appear on the American Credo stamp

we dedicate here today.

Centered between a hand holding aloft a flaming torch on the left, and the signature of the author of the Declaration of Independence on the right, are the words:

"I have sworn * * * hostility against every form of tyranny over the mind of man."

In this short credo is summed up the principle which guided Jefferson throughout his life. Never turning from it and never willing to compromise, Jefferson gave us as lasting monuments many of the basic documents that have guarded our liberties since 1776.

It is imperative that we today reaffirm—rededicate ourselves to—this oath by which he lived.

Through his lifetime he knew many forms of tyranny—the arbitrary autocracy of the British crown, the military despotism of Napoleon, the cruel colonial wars of the 18th century.

But in our time we are faced with an incredibly more sinister, enguising tyranny—one that surpasses, in its use of force over the minds and hearts of man, any that ever existed in Jefferson's age, or any age.

We need voices today to speak out as Jefferson spoke—to inspire freemen everywhere to stand firmly against the despots who seek to destroy freedom forever.

We must look to that kind of forthrightness and moral courage with which he denounced categorically the arbitrary powers of the English crown, and denied its right to rule over the American people.

Jefferson did not take the easy way out, as so many did, of attributing unjust actions to the agents of the crown and Parliament. He struck directly at the source. As free American citizens, who have inherited the traditions of Jefferson, we hold a trust to carry forward eternal hostility to the enslavement of the human mind, wherever it may exist.

We owe it to ourselves, to our children, and to the noble traditions of those who formed our country, to attack tyranny in whatever form it may take domestic or

foreign.

In this spirit, I am profoundly honored to dedicate this third in the series of American Credo stamps to the name of Thomas Jefferson, joining him once more with his illustrious colleagues, George Washington, who was memoralized in the first American Credo stamp, and Benjamin Franklin, whose wise counsel was carried on the second

The stamp, which is printed in red and gray, will have an initial printing of 120 million, and tomorrow will go on sale at 36,000 post offices. Like all the others in the series, it is of 4-cent denomination. It was designed by Frank Conley.

I feel certain that this stamp, carrying the words of one of the founders of American independence, will bring inspiration to millions, both in the United States and abroad, as the others in the American Credo series have done so well.

I know that the message it carries will stir renewed hope, renewed strength, and dedication to all devoted to the principles which have governed our Republic since its birth, when Thomas Jefferson penned the document beginning, "We hold these truths to be self-evident: that all men are created equal."

Steuben Society of America Banquet

EXTENSION OF REMARKS

HON, ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BOSCH. Mr. Speaker, on Saturday evening, May 21, 1960, the Steuben Society of America held its 41st anniversary banquet in New York City. This society which bears the name of Baron Friedrich Wilhelm von Steuben of Revolutionary War fame lists under its policy and program:

1. This society aims to loyally support the Constitution of the United States of America, advocates the proper application of its provisions, and endeavors to inculcate the principles underlying government by a federal republic with limited, delegated powers.

This society is dedicated to maintaining the independence and sovereignty of the United States of America and its freedom

from all foreign influence.

The society was very fortunate in having for its speaker at the 41st anniversary banquet the Honorable Kenneth B. Keating, U.S. Senator from the State of New York. The Senator delivered a very timely and stirring address of tremendous interest to his audience and which I believe should be read by every citizen of the United States.

Under leave to extend my remarks, I include the text of the address to which I have referred:

STEUBEN SOCIETY, MAY 21, 1960

Mr. Chairman, members of the Steuben Society of America, it is a profound source of pleasure to me to have the opportunity to be with you here tonight. Your famous Steuben Society is more than an assemblage of outstanding and loyal American citizens. It is a part of the America that we love and -a symbol of the great stream of culture, of talent, of patriotism that has flown into our Nation from the great source of the German peoples, to strengthen and to ennoble this land we are proud to call our own.

Baron von Steuben can never be a mere name to Americans. He remains forever a part of our history, a part of our greatness,

a part of our pride as a nation.

This is a time to be proud to be an American. This is a moment in history when the spirit that has made us great—the spirit of freemen in a free society—is facing a challenge unique in the annals of our Nation.

And that challenge is being met-therein should lie our pride-by a massive and intense dedication to the principle that man is a creature of God, a creature of dignity-and that nothing we can strive for, nothing we can fight for represents a greater or more compelling cause.

We have known the face of danger here in America. It has surged before our eyes, cold and menacing, from the years of our

history.

It was the ugly face that Americans braved with men like Baron von Steuben at their

sides and in their vanguard.

It was the pitiless face we have seen on land and sea and in the air through all the wars of our birth, our growth and our maturity. A familiar face-but a foredoomed face-because the valor of American hearts, the strength of American arms crushed it to earth.

Now danger stalks the world again. It is not the danger dressed in uniform, the one we know only too well. It is rather the danger dressed in a garb of philosophy that is not only anti-God, but also anti-man. I here speak of man as a spirit, not as an animal, as an individual, not as a number. I speak of the mass operation to dehumanize man, to brutalize him, to legislate out of existence his soul, his conscience, his personality.

This is a new and ominous visage of danger. And it is not distant. It is not isolated in some remote land. It is pervasive. It is present. It is glaring at us on all sides. And you can read its identity card. It says, "communism."

Geography is no longer a lesson for children. It is a lesson for us all. The map of the world represents a study that should command far more attention than it does. For its blood-red areas are vast and growing.

The red stain has spread-is spreadingand as it seeps across new frontiers, as it trickles into new areas, the homeland of freedom undergoes a concurrent shrinkage, loses ground, loses strength, loses prestige.

This is the silent battleground upon which we fight this day. This is the threat to our way of life. This is the face of danger.

It is so often a well-masked face that we are prone to ignore its presence. As a nation we have been accustomed to fight conbattles ventional with conventional weapons.

Today the enemy may put on the very disguise of freedom in order better to fight reedom. In the name of liberation he practices enslavement. In the name of the people he oppresses the people. In the name of peace he would destroy peace.

This is a new pattern of conquest in the history of our world, new and ominous and deadly. As a symbol of its technique we have only to consider the ill-fated summit

conference.

It is apparent, grimly apparent, that Khrushchev went to Paris to obstruct, to confuse, to attempt to divide, rather than in the spirit of peace seeking or peace making.

And the pretext he has used to promote failure is in itself an affirmation of the

Soviet code of expediency, of total disregard for concepts of right and wrong.

Here we have the supreme frony of perhaps the greatest spymaster in history demanding an apology because his nation has been spied upon. Moral indignation is a mask that fits him poorly, yet he flaunts it before the world like an angel of innocence. Meanwhile, his espionage agents, scattered like termite colonies throughout the world, are eating away at the foundations of freedom wherever they are to be found.

And while those agents walk through our open doors, a great black expanse of secrecy marks the Communist areas on the strategic map of the world. It is a world hermetically sealed-in the military sense. Historically, our American cry of vigilance has been "on the ramparts we watch." And watch we must, so long as the shadow of an upraised fist falls across the sunlight of our freedom.

The resolve of the United States to live up to its role and responsibility as the leading Nation of the free world has been made unmistakably apparent to the Kremlin.

And if we must choose a symbol of this resolve it is to be found in Germany-in our unqualified support of the magnificent cita -. del of freedom that West Germany and West Berlin represent to this divided world.

Standing literally on the battleline of two opposing global forces, free Germany is an eloquent testimonial to human courage, the spiritual quest for freedom, for selfdetermination, no matter what the risks, no matter what the sacrifices.

It is one thing to be brave behind a wall of security; it is another and higher courage to face up boldly to danger, head high, heart high, firm in the sense and assurance that one is in the right, that there can be no compromise with principle, no dilution of the basic freedom that means more than life itself. Our support, our identification with the cause of free Germany is, to be sure, a great bulwark in their struggle. But we did not invent the raw courage of the German

We did not put the fire of patriotism, of dedication in the hearts of Chancellor Adenauer, of Mayor Willy Brandt, of all the millions of free Germans who stand solidly, steadfastly, and unafraid on the very rim of

In this regard, may I say a word or two about the matter of Khrushchev's threat to conclude a separate peace treaty with East Germany and turn over access to West Berlin to the Communist regime. It is seriously to be questioned whether the facts of lifefacts growing out of the very German character he has attempted to subjugate-will make such a move politically practicable.

By this I mean that the strong signs of instability in Germany—which is another way of saying the presence of the free spirit of Germany—may well make a peace pact with East Germany fraught with danger for the Kremlin. For it implies an Ulbrecht regime that will be on its own both in foreign affairs and in domestic state security, and such an eventuality may create more problems than it solves, so far as the Communist grand design is concerned.

It is especially appropriate, in these days when the fate of freedom is at stake in the world, that I should have the opportunity to speak before the Steuben Society. For in your charter, in your reason for existence, is typifled not only the spirit of a free America but the vigilance to keep it free.

Our strength, as a nation, must be measured by people, not by armaments. Our true strength is not in our military muscles, but in our citizens' hearts-in the spiritual dedication of people like yourself to the living honor of our great country, to the love it inspires in Americans, to the respect it inspires in all corners of the world.

Particularly is this spirit of dedication called for in an age of tremendous counterforces that press hard against our house of freedom, that chip away at its foundations, that would engulf it in the new, dehumanized society that communism seeks to create.

What is imperatively called for in this hour is an awareness of the presence of danger— and it is in this field that the mission of the Steuben Society becomes of paramount importance.

It is my feeling that too many Americans are prone to confuse their material wellbeing with a sense of security-to confuse their inalienable rights with permanent, impregnable liberty, to assume that labor-saving devices and freedom-preserving devices come in the same packages. The Steuben Society serves this Nation well when it raises its voice to remind us all that freedom is something that we can lose as well as win-and to keep it in our possession, cherished for the God-given attribute it is, we must have the eyes to keep watch on it, and the heart to fight for it in its hour of danger.

We live in a new and dangerous world, and we need Paul Reveres like yourselves to alert the country to the perils of indifference, of apathy, of the assumption that freedom is a birthmark that no power can removewhen it is actually an inheritance that can

be lost by default.

Above all, the struggle we are engaged in must be seen in the true perspective of our sense of survival as a nation, not in the false and twisted perspective of irrationality and blurred values. In this regard, let me say that I have been appalled at the number of letters I have received openly condemning our Nation for conducting spy flights over Russia. In the eyes of these citizens—yes clouded by a woeful misunderstanding of the facts of political life-we had no right to try to protect America and all freemen from the sudden fist that strikes out of the dark to smash our freedom, to smash all that we have fought and died to create, before and since the founding of the Republic.

These are honest, well-meaning citizens. Happily, they are a small minority. Yet it is symptomatic of the confused values of our time that such people are prone to plead the cause of the enemy of liberty by seeking to apologize for one manifestation of the very acts of intelligence-gathering which are employed against us unceasingly, night and day, year by year.

If we were the victims of a nuclear Pearl Harbor-and heaven grant that terrible visitation may never come-these same citizens would assail our Government for failure to have secured the intelligence that would have rendered such an attack impossible.

Patriotism, like charity begins at home. And that, too, is where vigilance begins— where security begins—in the minds and in the hearts of the American people.

We must be an aware people-an informed people-if we are to preserve intact and undiminished the precious gift of freedom that was handed down to us-that remains our sacred trust for so long as we live.

That is why I would wish to see the influence of your wonderful Steuben Society radiated throughout our land-why I would wish to see it galvanize to action a love of country, a devotion to country that too often slumbers in the soft featherbed of apathy, of indifference, of sheer unawareness of the tremendously meaningful hours and days we are living, in this world of hostility, of challenge, and of change.

In closing, may I leave with you this one observation. It has significance, I feel, in the light of what has been said here tonight. History has recorded for us the many ways in which human freedom has died-gloriously, cravenly, forlornly-but the saddest, most ignominious death of all is when freedom dies in its sleep.

Federal Power Commissioner Connole Is True Public Champion

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include in the Record two editorials that discuss the strange circumstances which surround the recent firing of Federal Power Commissioner William Connole. The first of the editorials appeared in the May 18, 1960, issue of the Capital Times, of Madison, Wis. The second editorial is from the May 20, 1960, issue of the Rural Electric Minuteman.

The editorials follow:

[From the Capital Times, Madison, Wis.]
IKE'S ASTOUNDING REASON FOR FIRING
CONNOLE

Before he left for Paris and the summit conference President Eisenhower issued a statement explaining why he refused to reappoint William R. Connole to the Federal Power Commission.

His explanation doesn't make much more sense than the way he has handled the spy incident.

Commissioner Connole is considered to be the one remaining member of the FPC who is consumerminded, who can be counted on, at least part of the time, to find in favor of the consumers as against the utility interests.

The President says he is replacing Connole because members of regulatory agencies should "not become identified as representing any point of view narrower than the broad public interest."

This is an astounding statement. It indicates that the President looks upon the consuming public as a narrow special interest.

But more astounding is the ignorance it reveals of his knowledge concerning regulatory agencies.

These agencies were set up originally to protect the public against arbitrary acts on the part of the industries regulated. In the case of the FPC the idea is to regulate utilities, recognizing that it is a noncompetitive business leaving the consumer without any protection except that provided by the Government.

Obviously, the President has been making his appointments to all these agencies without a thought to the purpose of the agencies. His appointments to the Federal Communications Commission have been notably lacking in any concern for the public's protection. The result has been a series of raw scandals and monumental frauds against the public, such as the crooked TV quiz shows.

[From the Minuteman] THE PRICE OF DISSENT

The strange case of Federal Power Commissioner William R. Connole continues to occupy much of the attention of official Washington. This week the circumstances surrounding the dropping of Connole lingered in the background of a House investigation of the conduct of FPC members.

To briefly review the facts, Connole was appointed to the FPC by President Eisenhower in 1955, for a term which expires next month. During his service on the Commission, Connole earned a reputation as a champion of the consumer in cases involving rate increases sought by the utility companies the FPC is charged with regulating.

In the process, the big natural gas companies came to dislike him intensely. It was widely known in Washington that they would strongly oppose his reappointment.

Most observers, however, felt he was sure to be reappointed. They pointed out that Connole had the solid support of consumer groups, and was widely regarded as having the keenest mind on the Commission.

In early spring, rumors began circulating that he would not be reappointed. The President confirmed this at a news conference on April 27. This is what Ike said:

"First why, this. Because it is my respon-

"First why, this. Because it is my responsibility to appoint people and to get the best people I can. This Mr. Connoie came to see one of my staff in December to ask about his reappointment, and they said they'd look into it. I think I can get a better man, that's all."

It was a curt, insulting way to fire a man. In the furor that followed, White House Press Secretary Jim Hagerty tried to take the edge off by saying the President did not believe an FPC Commissioner should represent "one segment of the economy." In other words, Connole was too much wedded to the consumer interest.

The President reiterated this view in a letter to Senator Thomas J. Dodd, of Connecticut, who had strongly protested the action. He wrote that Commission nominees should not "become identified as representing any view narrower than the broad public interest."

Dono replied in a public statement: "To regard the consuming public as merely a narrow interest or a particular point of view seems to me a misreading of the historical purpose of the Commission. Nor does the President take up the question on Connole's vastly superior qualifications and experience, as contrasted with the lack of those qualities in the man whom the President has nominated as Connole's successor."

This point is well taken. Except for such auxiliary functions as the granting of licenses on water power sites, the FPC's function is to see that the consumer is not exploited by the monopolies it is charged with regulating.

A public utility performs a function of the state and is created for public purposes. This is well established by court decisions. The utilities are given sweeping powers not available to other businesses, such as freedom from competition, the right of eminent domain, and virtually guaranteed profits. In return, the people have ifisisted upon public regulation of these monopolies—regulation to assure good service and reasonable rates.

Unfortunately, the effectiveness of regulation has been, at best, spotty. Too often the regulatory commissions seem more intent on protecting the interests of the companies than the interests of the public. A true public champion on a commission, such as Connole, is a rarity.

As NBC Commentator Martin Agronsky said in a recent broadcast, "None of this seems to have registered with the President. The price of dissent, like the price of gas, keeps going up."

An Election Year and the Middle East

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial by Dr. Jacob L.

Bernstein as it appeared in the Bulletin of the East Midwood Jewish Center, May 13, 1960, issue

AN ELECTION YEAR AND THE MIDDLE EAST

In an election year it is especially appropriate that a citizen look critically at our Nation's foreign policy or lack of policy. It seems clear that, in the area of the Middle East, there has been a failure on the part of the United States to utilize its prestige and power for achieving peace between the Arab nations and Israel. We find little evidence of a definite and affirmative policy with respect to nearly all Middle East issues. One might say that our policy has been disappointingly negative and passive.

Although the hostile acts by Arab States against Israel have been publicly disapproved by the United States, nevertheless, in various Government departments and affiliated agencies, we find an outward appearance of acceptance of illegal actions. For example, the refusal of Arab nations to permit the loading or unloading of American cargo at an Arab port if the ship had stopped at an Israeli port is met with seeming complacency or acquiescence. Again, the World Bank made a grant of \$50 million to the United Arab Republic to improve the Suez Canal despite the refusal to open the canal to vessels of non-Israeli registry which had loaded at an Israeli port. In the face of increasing Soviet military aid to Arab countries, the United States has done nothing to offset the danger or resulting imbalance.

One must therefore conclude that there has been no unequivocal and vigorous reaction by those responsible for our foreign policy to Arab violators of international law and to Arab flaunting of resolutions of the United Nations. Expediency, appeasement, and the economics of oil and markets seems to have been the motivating forces in our policy. Even as this is written, our State Department admits concern about threatened Arab reprisals for the picketing of the Cleopatra.

In this election year it is our right and our duty as citizens to voice a challenge on these issues. We must insist that party platforms and candidates, seeking our suffrage, take a clear and unmistakable position. We must demand that foreign policy be based upon the moral principles which will bring to all nations of the world, peace with justice under international law. Whether our Nation will display positive, constructive, and ethical leadership in world affairs depends in part upon each one of us. To play an active role in bringing this about is not only in consonance with true Americanism, but also in the best tradition and practice of our faith.

Minnesota Farmers Receiving Only 69 Percent of Parity

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, it is an unfortunate fact that of the 17 leading farm commodities in my neighboring State of Minnesota, only calves and potatoes brought a price of better than 90 percent of parity in the month of April. Most of the other commodities did not even come close to 90 percent of parity, and chickens were selling at 31 percent of parity. The parity average of the 17 commodities was only 69 percent.

Under leave to extend my remarks, I would like to include in the Record an article from the May 12, 1960, issue of Minnesota Agriculture which shows the comparison between the parity price and the actual price brought by these commodities during the past month.

The article follows:

FARM COSTS SET NEW HIGH FOR SECOND MONTH IN ROW, PRICES LAG

While farm prices remained sluggish and falled to even make a normal spring upturn, farm costs moved up to a new all-time record for the second successive month.

Nationally, the parity ratio held at 80, two points below the level in the same month a year ago.

In Minnesota, increases in the prices for corn, eggs, flax, and potatoes moved the overall price average up sufficiently to register an increase in the parity average for the 17 leading commodities to 69 percent.

The index of prices paid by farmers revealed increases in both farm operating and household costs.

Food, clothing, building materials, autos and auto supplies, feed, seed and farm supplies all were up compared with a month ago.

How far from parity?
APR, 15, 1960

Crop or product	U.S. effec- tive parity price	Average price received by Minnesota farmers ¹	Short of parity per unit	Minnesota average price as a percent of parity
Corn bushels Hogs hundredweights Cattle do All milk, wholesale pounds Butterfat pounds Cats bushels Eggs dozens Soybeans bushels Calves hundredweights Flax bushels Flax bushels Turkeys pounds Wheat bushels Potatoes hundredweights Chickens pounds Meep hundredweights Wool pounds	\$1. 65 21. 60 23. 90 5. 04 7. 75 . 85 . 47 2. 94 26. 40 3. 87 1. 28 . 35 2. 39 2. 36 9. 78 . 75	\$0. 85 15. 60 21. 00 3. 05 63 61 .30 1. 92 26. 60 3. 04 84 .27 1. 96 2. 45 .08 6. 10	\$0.80 6.00 2.90 1.99 1.2 2.24 4.17 1.02 83 44 .08 .43	5.77 8.66 6.60 100 7.76 7.78 8.100 3.66

Parity price average-17 leading commodities-Minnesota, 69 percent

(Average according to relative importance of products)

*Prices are as received by farmers at the point of 1st sale out of the farmer's hands and should not be confused with prices of specific grades or classes at central terminal markets.

Washington Report

EXTENSION OF REMARKS

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following newsletter of May 21, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, May 21, 1960)

Future historical analysis of the summit may record that President Eisenhower's conduct scored a great victory for the free world. Meanwhile, we can all be "Monday morning quarterbacks." We all can expect, also, the bitterest, least-temperate appraisals to come from politically motivated office-seekers. At the moment, the nicely staged show of bipartisan support represented by the Democrat leadership's message to Ike at the summit has been rudely shattered by Presidential-Aspirant Stevenson's sharp attack on Eisenhower's administration. spirit of constructive criticism would be more apparent if Mr. Stevenson had not alleged that it will take a Democrat administration and himself to do the job. Of course, we all know each person's evaluation of him-self is high. That's human. But it's another thing to suggest against the background of the Yalta, Potsdam and Teheran Conferences that a Democrat administration can better handle or solve foreign problems.

Health care for the aged continues as the focal point of the social security bill being prepared for House debate. A move to hold hearings to get further information was To me it is inconceivable that a defeated. right solution can come from ignorance of the facts. We still have no comprehensive knowledge of medical services available or of medical needs and how they are being met, since we lack information on State and local programs. All we have, as data, is Health, Education, and Welfare Department information on Federal programs, which are only a part and not the major part at that. In my view, this is not responsible conduct, neither to other Members of Congress who look to the Ways and Means Committee for guidance in this field nor to the people of the Nation, including the aged and all tax-payers. Fortunately, the final page of this story has yet to be written. I hope politics will not dictate it.

The Small Business Investment Act of 1960 expands the Federal effort to make equity type capital and long-term credit more readily available for small business concerns. We thus add to the Federal bureaucracy and the tax load, so that we can turn around and lend businessmen money to replace that taken from them in taxes. Tax relief, I believe, would be the greatest and soundest aid that businessmen or anyone else could ask of the Federal Government.

Debt reduction: Can debt be reduced by borrowing money to pay on it? To me, that's hardly more sensible than setting up a savings account by getting a loan at the bank. Yet there is periodic and favorable mention of a bill which would force Federal debt reduction without compelling a balanced budget or limiting the power to borrow further, which would leave us in exactly that situation. A better solution, it seems to me, would be enactment of a constitu-

tional limitation on the Government's power to tax, spend, and borrow and which would require a yearly balanced budget.

H.R. 5, the Foreign Investment Incentive Act, passed narrowly 195 to 192. Earlier this year it was left hanging in midair after partial floor debate. Though aimed basically at according U.S. firms doing business abroad the same tax treatment given foreign-based subsidiaries of U.S. companies, the 61-page bill was complicated and technical. It was not understood by many, I am sure, among both the proponents and opponents. Originally a move to simplify and equalize tax treatment, the bill soon became one of concern to the State Department (to help develon officially designated underdeveloped countries); Labor Department (that wage levels and working conditions in these industries must not be substandard according to each country's standard); Commerce Department (only 10 percent of goods manufactured by U.S. industries located abroad can be shipped back into the United States); and so on. Thus a tax bill became the vehicle for a lot of social proposals in no way related to taxes.

Construction of a Federal Center Building in Dallas may have been delayed indefinitely by a strictly partisan move among Democrats on the Public Works Committee. The vote, I'm told, was 18 to 7 with all Republicans voting for approval of the project and all Democrats (including 10 proxies) against.

Controversial issues lie ahead in the short time left before adjournment and political conventions: (1) Federal aid to education; (2) Federal aid to depressed areas; (3) Federal aid to the housing industry; (4) Interest rate ceiling. These are some that will provoke bitter partisan arguments. This does not assure a proper solution for the problems, of course.

Random notes: The television series will continue on WFAA-TV Sundays at 10:30 a.m. * * * A preliminary tabulation of the questionnaire returns is complete, and I hope to finish a survey of this year's answers by June 1. Any who mean to reply to the current questionnaire and have not yet done so should send it to me this month.

Korea and Paris

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. DORN of South Carolina. Mr. Speaker, when will our State Department and Presidents realize that summit conferences are often a cover-up for Communist aggression and strategy in an entirely different area of the world? The following by Kurt Lochmann in U.S. News & World Report is interesting:

Khrushchev's major aim has been, and remains, world revolution.

It is significant that the Soviet dictator's turn from flattery to abuse of the United States coincided precisely with the violent uprising in South Korea a few weeks ago. The events in Korea focused Communist attention once again on the utilization of revolutionary potentials anywhere in the non-Communist world.

Khrushchev will never overlook anything that he can interpret as a signal of capitalist decomposition. He so interpreted Korea. The Crisis of American Foreign Policy

EXTENSION OF REMARKS

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. BOWLES. Mr. Speaker, one of the most intelligent and persuasive voices we have in the field of the American foreign policy is that of my friend, Hans J. Morgenthau. Currently on leave from his chair as professor of political science at the University of Chicago, this distinguished author and teacher is a member of the Institute for Advanced Study, Princeton, N.J., and an associate of the Washington Center for Foreign Policy Research.

On February 22 this year, Dr. Morgenthau delivered the annual Brien Mc-Mahon lecture at the University of Connecticut, one of a praiseworthy series or lectures sponsored as a public service by former Senator William Benton.

In these days of crisis and reevaluation of American foreign policy, I do not recall reading anywhere a more concise and articulate statement of our predicament than this lecture contains. Under leave to extend my remarks, I include the text of Dr. Morgenthau's address as follows:

THE CRISIS OF AMERICAN FOREIGN POLICY
(By Hans J. Morgenthau)

If one were to consider the objectives of American foreign policy exclusively in terms of the control of territory, it would be hard to see wherein the crisis of American policy could consist. If one looks at a map and compares the regions which constitute today what one might call the American sphere of influence with those of, say, a decade ago, one finds that American influence reaches about as far now as it reached then. Or, to put it the other way around, one can say that in strictly territorial terms the Communist powers and, more particularly, the Sovie Union have not been able to make substantial gains in the last decade. So the crisis of American foreign policy must obviously consist in something more profound than the mere loss of territory.

In order to understand what constitutes the crisis of American foreign policy on this more profound level, it is necessary to take a look at the situation which existed in the aftermath of the Second World War, when the present foreign policy of the United States was formed. And in order to appreciate the revolutionary transformation, which American foreign policy then underwent, the really amazing adaptability of which it proved capable, it is necessary to take a look at the traditional approach which the United States has taken toward foreign policy from the beginning of its history to the Second World War.

The United States has had two great, permanent interests in the world: the preservation of its hegemonical position in the Western Hemisphere, safeguarded by the policies implementing the Monroe Doctrine, and the maintenance of the balance of power in Europe. The balance of power in Europe was from the very beginning considered to be at the service of that hegemonical position of the United States. It was obvious, considering the distribution of power which existed and still exists in the Western Hemisphere, that the security and the predominance of the United States could not be

challenged from within this hemisphere. If and when it was challenged, such a challenge could come only from beyond the ocean, that is to say, from Europe. And as long as there existed in Europe a distribution of power which would put effective restraints upon the great European nations, there was no danger that any of those nations would feel secure enough in Europe to seek adventures beyond the ocean in the Western Hemisphere. So the maintenance and, if necessary, the restoration of the balance of power in Europe constituted for the United States an element of security which was indispensable for the implementation and the successful operation of the Monroe Doctrine.

It follows also from this fundamental conception of the relations between the United States and the rest of the world that the United States, following the advice which Washington had given in his Farewell Address, would not think of being permanently involved in the affairs of Europe. Insofar as the United States consented to be involved, this involvement took the form of certain isolated expeditions, extraordinary interventions for the sole purpose of restoring or protecting the European balance of power.

The classic example of this type of isolated intervention is provided by the intervention of the United States in the First World War. The balance of power in Europe was threatened by Germany. The Western Powers were faced with the possibility of defeat and the United States intervened for the purpose of restoring the European balance of power, that is, of preventing one European nation from gaining a hegemonical position which would then have enabled it to look beyond the seas for new conquests in the Western Hemisphere. Once this objective was accomplished, the United States retreated from Europe; it brought its troops back. It had done what it set out to do, and it went back into the isolation and security of its hemisphere.

At the end of the Second World War, the United States was tempted to repeat that pattern of action. To bring the boys home seemed to be the last chapter in that intervention which sought, as had the intervention of the First World War, to restore the balance of power, to do away with the danger that threatened it, and once that objective was accomplished, to come back home and, as it were, forget about it. The United States was exposed to this temptation, roughly speaking, during the year following the death of Franklin D. Roosevelt. Sir Winston Churchill has called this period the deadly hiatus. It was followed by the formulation of a new American foreign policy.

This formulation of a new American foreign policy was accomplished in the spring of 1947 in what has been called "The 15 Weeks." Within those weeks, a radical changed occurred in the foreign policy of the United States. The Truman doctrine and the Marshall plan are the landmarks of that radical transformation. Through those instruments of foreign policy the United States acknowledged, almost as a matter of course, its permanent involvement in the affairs of the world. The frontiers of the United States were no longer drawn at the boundaries of the Western Hemisphere. They were now permanently drawn wherever there was danger of a radical change, especially of a violent nature, in the world balance of power.

The policy of containment was the most spectacular expression of this new policy. It implied the permanent stationing of American troops and the permanent commitment of American resources around the perimeter of the Soviet empire. The Marshall plan, on the other hand, implied a permanent and active involvement of the United States in the affairs of the world in

an even more intimate way. The United States now recognized its responsibility to help other nations which were threatened with economic disaster and, beyond it, its responsibility for a functioning international economic system.

Those were the classic, the heroic days of the new American foreign policy and to me, at least, it is still in retrospect an occasion for wonderment and also for admiration how quickly the United States adapted itself to new circumstances; how thoroughly it divorced itself from a tradition which had been hallowed by the whole historic development of the United States and by the authority of its greatest early statesmen; with what foresight, determination, and success it devised new policies which were adapted to the exigencies of the hour.

The present crisis of American foreign policy consists exactly in the inability of the United States to adapt its foreign policies to the new circumstances of the hour; to revise the pattern of foreign policy which was established in 1947; to renew it through innovations commensurate with the novel problems which the Nation faces today.

today.

In what respects is the situation which confronts us today on the international scene fundamentally different from that which existed immediately after the Second World War and which persisted approximately for a decade? Four fundamental changes have occurred.

First of all, the balance of military power had radically changed. In the aftermath of the Second World War, the United States was unquestionably the most powerful nation on earth. Under the umbrella of its atomic monopoly the United States formed the alliance system and, more particularly, the European alliances, implementing the policy of containment. The atomic monopoly of the United States provided a virtually absolute protection for the nations which felt themselves threatened by Communist aggression. This protection has disappeared. It has been replaced by an atomic stale-mate or by what Sir Winston Churchill has called a "balance of terror," that is to say, the United States is able to destroy the Soviet Union and the Soviet Union is able to destroy the United States in an all-out nuclear war.

In view of this stark and simple situation, an alliance with the United States is no longer being regarded by the allies of the United States as an unmixed blessing. still provides a certain protection, but it also implies a certain liability. Can the United States be relied upon to come to the aid of an ally if by doing so it risks its own destruction? And would such aid, even if it should be provided, not seal the doom of the ally, since it would in all likelihood be in the nature of nuclear war to be countered in kind by the enemy? The allies of the United States are raising questions such as these, and they answer them by seeking safety in greater independence from the United States. Elther try to develop foreign and military policies of their own, especially in the nuclear field, or else they tend to move away from the United States into a neutral or at least a more detached position.

The second great transformation which has occurred in the political world in recent years is the restoration of the economic and, to a certain extent, the political health of most of the nations of Western Europe. Fifteen and even 10 years ago, the alliance with the United States was for nations such as Italy, France, and Great Britain a matter not of choice but of life and death. Without the economic, political, and military support of the United States, those nations could then not have survived as independent national entities and would have been in great danger of being subverted by communism or swallowed up by the Soviet Union. Today,

this dependence upon the United States has to a great extent disappeared, especially in the economic field. It has become rather ineffective in the political field. And in the military field, as we have seen, its ambivalence has become obvious.

Furthermore, and most importantly, the foreign policy of the Soviet Union has fundamentally changed. Ten years ago, the greatest asset upon which the foreign policy of the United States could bank was the foreign policy of Stalin. Whenever there was a slackening in the Western effort, whenever there appeared cracks in the fabric of the alliance system of the United States, Stalin could be counted upon to make a drastic move which demonstrated to everybody concerned how necessary for survival the American connection was.

The foreign policy of Khrushchev is of an enitrely different nature. His is not, at least for the time-being, a policy of direct military aggression or of direct military threats. Even the Berlin threat is quite different from the threats which Stalin would have uttered under similar conditions or would even have followed up by action. as he did in the case of the Berlin blockade in 1948. Khrushchev's policies are aimed not so much at the conquest of territories by diplomatic pressure or military threats as at the subversion of the whole non-Communist world through the impact which the power and the technological and economic accomplishments of the Soviet Union make upon that world. This is obviously a much more insidious, a much more subtle way of undermining the position of the United States and of the Western World in general.

To these three fundamental changes which have occurred in the world during the last 10 years must be added a fourth one, the rise of the former colonial nations in Africa and Asia. This enormous mass of land and populations no longer belong to any of the power blocs. They are no longer under the control of any of the great powers. But they will in all likelihood have to seek the support of stronger nations and to fashion their political, economic, and social life in the image of one or the other of the great systems competing for their allegiance. Hence, they have become the great prize in the struggle between East and West. Whoever can attract the loyalties of these so-called uncommitted nations, whoever can impress them with the excellence and superiority of his form of government, of his social and economic system, will in all probability win the struggle for the world. And Mr. Khrushchev has proclaimed that the Soviet Union. through the attractiveness and achievements of communism, will conquer the minds of the uncommitted peoples and thereby inherit the earth.

It is against the background of these great transformations that we must consider the foreign policy of the United States. crisis of American foreign policy lies in the inadequacy of its responses to those great transformations. In a sense, the great handicap of recent American foreign policy has been the success of the original policy of containment. That is to say, the policy of containment, which has been widely criticized as being ineffective, negative, and static and as not being dynamic enough, has been not only sound as a minimal foreign policycontainment of the Soviet Union and of communism being the very minimum objective to which American foreign policy had to be committed-it has also been eminently successful. What the policy of containment really means is this: it says to the Russians poised in the heart of Europe, "Thus far and not farther. If you take one step beyond the line of military demarcation which was established in 1945 between your conquests and the Western World, you will be at war with the United States." Upon this unam-biguous warning, implemented by the stationing in virtual permanence of American troops at the line of demarcation in Europe, and the retaliatory nuclear power of the United States, the safety and the very survival of Western Europe and, through it, of the United States has depended.

That this policy has been eminently successful is borne out by the fact that at no place in Europe or anywhere else, for that matter, do the Russlans stand west of the line of demarcation which was established in 1945. By and large, the line of demarcation of 1945 is still the borderline between the Soviet Empire and the Western World; and as far as Yugoslavia is concerned, the line of demarcation today runs farther east than it did 15 years ago, the boundary of the Soviet empire being the eastern rather than the western frontier of Yugoslavia.

It was this success of the policy of con-tainment which led the United States to incorporate it into a general principle of American foreign policy, especially as applied to Asia. The United States thought that what had worked so well in Europe was bound to work as well at the periphery of the Soviet and Chinese empires in Asia. It did not work as well. It could not work as well for the simple reason that the threat which the United States had to meet in Asia was essentially different from the threat with which it was faced in Europe. The threat in Europe was primarily the threat of military aggression. It was constituted by the fact that the Russian armies stood in the heart of Europe 100 miles east of the Rhine. It is this stark fact which still constitutes the major threat to Europe today, and against this threat Europe has to be protected.

The primary threat outside Europe, that is, to Asia, the Middle East, and increasingly also to Africa and to Latin America is not military; it is the much more subtle threat of psychological penetration, of political subversion, of economic conquest, of the use of foreign aid and foreign trade for political purposes. And against this subtle and insidious threat the policy of containment, of military alliances, of military barriers is entirely ineffective. One has only to look at the Middle East in order to see this most clearly. The Baghdad Pact was established by Great Britain and some of the Middle Eastern countries at the instigation of the United States in order to create a military barrier against Communist penetration. But this barrier did not prevent the Soviet Union from gaining a foothold in Egypt. It did not prevent the Iraqi revolution and the Communist gains attendant to it. For the Communist gains were not due to any threat of military aggression emanating from the Soviet Union. Even if there had been such a threat, the military measures taken would have been entirely insufficient to meet it.

Not only has this policy—of which more examples could be cited—been ineffective in its own terms; it has also been counterproductive; for it brought about the very evils which it was intended to prevent. It alienated many nations and many groups within many nations in Asia, the Middle East, and Africa, which tended to look upon the United States as a nation primarily interested in gaining, as it were, mercenaries among the indigenous peoples for its own military purposes. The United States was suspected of wanting to bring war to those regions, while the Soviet Union could pose as the champion of peace and the nation interested only in ending the cold war.

The classic example of the counterproductivity of the policy of containment and of alliances, as it was conceived in recent years, is the case of Pakistan. We have an alliance with Pakistan. It is difficult, if you take a look at the map, to know against whom this alliance could possibly be directed, except against India. But obviously we have no interest in supporting Pakistan against India. While we support Pakistan against

some imaginary enemy, we force India to divert a considerable amount of its scarce resources to military purposes in order to match the military preparations of Pakistan. Since, of course, we realize that India is infinitely more important than Pakistan in terms of the overall world situation, we must support India in order to make up the difference between its resources available for economic development and those which have been diverted for military purposes. So we are really engaged in an armaments race with ourselves. With the left hand we support Pakistan militarily, while with the right hand we support India economically in order to help her bear up under the weight of the armaments which our support of Pakistan had forced upon her.

We have been led to this disregard of our own interests by what amounts to a kind of obsession with military alliances. The Baghdad Pact, the Eisenhower doctrine and, more particularly, SEATO-The Southeast Asia Treaty Organization-were all what one might call open-ended alliances. That is to say, they were based on unilateral declarations on the part of the United States, inviting whoever wanted to join to come in and join. Of necessity, the nations which joined did so not on behalf of the interests of the United States, but on behalf of their own interests. I remember vividly a discussion I had a couple of years ago with the Foreign Minister of one of our allies about the American alliance. He made no bones about the fact that for him the main purpose of the American alliance was to establish a special claim for his country upon the American treasury. In other words, an ally can expect to get more money out of the United States than a nation which is not an ally. However, this is no longer completely true because certain nations are able to play the United States off against the Soviet Union, and vice versa, and get the best of both worlds; they get rubles and dollars at the same time.

In any case, the policy of not choosing one's allies in view of one's interests but inviting anybody who wishes to join is really what one might call a collector's approach to allies. You collect allies as you collect stamps. But certainly it is not possible to base successful military or political policy on the disregard for one's interests and for the usefulness of one's allies.

It is also worthy of note that quite a number of our allies have turned out to be handicaps for the United States in political as well as in financial terms. They have been able to dictate to the United States the policies we are supposed to pursue with regard to them. Where they have not been able to do that, they have, in many instances, been able to impose a veto upon the foreign policies of the United States. What has been generally noted in recent years as the sterility of American foreign policy—the lack of initiative and determination, the immersion in old and safe routines—is in good measure the result of the limitations which the alliances impose upon the United States. Wherever there is need for a new departure, there is also an ally pulling at our coattails and saying. "No. If you want to keep me as your ally, you can't do that."

Our alliances, which have tended to become an end in themselves and, hence, a burden and a handicap for the foreign policy of the United States, are in urgent need of being rethought and revised. That rethinking and revision must aim at coming to terms with three fundamental issues. What kind of relationship and order ought we to establish between ourselves and our allies, especially the European ones, which will reflect both the community of interests and the dominant position of the United States within the alliance? How must we reformulate the military purposes of our alliances in view of a radically changed mili-

tary situation which is likely to change drastically again when the intercontinental ballistic missile replaces the manned bomber? And finally, what new political purposes must we set for our alliances in view of the reassertion of their particular national interests by our European allies and in view of Khrushchev's new foreign policy?

The great challenge which faces the United States today is indeed the new foreign policy of the Soviet Union. This policy moves on entirely novel lines, at least for Russian foreign policy, in that it tries to exploit the prestige of the Soviet Union in the economic and technological fields and to gain converts through foreign aid and foreign trade. The United States has been unable to oppose this new expansionist move of the Soviet Union with anything approaching an adequate foreign policy because it has been unable to devise policies which take into account the novelty of the challenge which faces it.

The challenge of Russian foreign trade is instructive in this respect. When the Russians speak of foreign trade, they mean something quite different from what we mean by foreign trade. When we speak of foreign trade, we refer to commercial transactions engaged in by private enterprises or individuals with other private enterprises or individuals for private gain. Only in marginal cases is there a public interest involved Which requires the Government to intervene in one way or another. For the Soviet Union, foreign trade is a political matter of the first order. It is as political as diplomacy or propaganda; it is another arm of Russian foreign policy. The Soviet Union engages in foreign trade not for the purpose of private gain but for the purpose of public gain; that is to say, for the purpose of increasing the Power of the Soviet state.

Take, for instance, the propositions the Soviet Union has made to certain businessmen in the United States and elsewhere in the petro-chemical field: not to buy petrochemical products, but to buy whole petrochemical factories with which then to produce products and compete with the already established firms on the world market. Or take the deal which the Soviet Union has made with Cuba to buy sugar at more than 2 cents below the price the United States is paying, which economically is difficult to justiry from the Russian point of view, but which makes a lot of sense politically; for it gives the Soviet Union a lever of influence in a matter which is of vital importance for Cuba. Or take the deal which the Soviet Union made with Egypt to buy its whole cotton crop for a number of years. This again from the Russian point of view makes no sense economically, because the Soviet Union does not need to import any cotton and actually resells Egyptian cotton on the world market. But politically, it makes the Egyptian economy dependent upon the Soviet Union. It creates ties between the Soviet Union and Egypt which could hardly be firmer if the two countries were tied to each other by a formal alliance.

Against this all-out drive—which uses forelgn trade as a political weapon as a general uses an armyis it sufficient for us to respond with "business as usual"? Can we afford to let our foreign trade be conducted as if the Russian threat did not exist, and allow it to get in the way of our political interests and help the Russians in the pursuit of theirs? Or is it not necessary for us to realize, as we have realized in other fields of economic activity, that there are certain segments of the economic sphere which are affected by the public interest and which, therefore, must be controlled and regulated by the public power?

Take another branch of American foreign policy which has falled to respond adequately to the Russian's challenge: foreign aid. We have embarked upon a rather expensive program of foreign aid, most of which goes into the military support of our allies. is genuine economic and technological aid in our foreign aid policy is based upon a simple, or rather oversimplified, philosophy which assumes that there is a relatively easy way to transform an economically and politically underdeveloped nation into a modern industrial and democratic one. That is to say, the infusion of foreign money and foreign know-how, competently performed, somehow will transform a backward, sometimes prerational, society into a rational, modern, industrial one, and a society thus transformed will become stable, democratic, and peaceful as well. It is assumed that there exists a close correlation between the increase in the standard of living, on the one hand, and social stability, democracy, and a peaceful foreign policy, on the other.

This is not the place to examine these assumptions critically. It must suffice to point out that their soundness appears to be very much open to doubt. Successful foreign aid infused into a primitive society is, by the very nature of its success, a revolutionary and disruptive element, not at all a factor making for social stability. This being so and in view of your consistent support of the political and social status quo in foreign countries, it may well be considered a blessing in disguise that in many countries our policy of foreign ald has not been successful; for had it been, it might well have undermined the very status quo to whose support we are committed.

However, what is important for our argument is the contrast between our conception of foreign aid as a technically self-sufficient undertaking, divorced from political purposes, and the conception of the Soviet Union. The Russians have an entirely different, political conception of foreign aid. They pay very little attention to the objective factors which go into the making of an industrial, balanced, socially stable nation. They don't ask, as it were, "What is necessary for your happiness or your economic and social development?" They ask, first of all, "What is to our advantage? What can we give you to pull you over to our side?"

The classic example of this approach is the paving of the streets of Kabul by the Soviet Union. It is a safe assumption that one of the last things Afghanistan needed was paved streets in Kabul, and that while it may be more convenient for the Afghan camels to walk on paved streets than on sand, it is not vital for the development of the Afghan econ-But the fact that the Soviet Union has payed the streets of Kabul, and established a modern bakery in Kabul which every day advertises its Soviet origin, makes a lasting impression upon the inhabitants of Kabul. By way of contrast we have established somewhere in the mountains an irrigation project, which is a very honest and may be a worthwhile thing, but it has no impact, or at best a remote one, in the political arena in which we and the Russians compete.

This political orientation which permeates the foreign aid policy of the Soviet Union, as it does Russian foreign policy in all its manifestations, is lacking in ours. We debate every year the question. How much ought we to spend for foreign aid in view of the budget? instead of asking the really relevant question, What kind of foreign aid policy ought we to have in view of our political interests? It is only after that question has been answered that it makes sense to determine the amount of money to be spent. And we ought to appropriate whatever money is necessary to implement the policy of foreign aid which serves the overall purposes of our foreign policy.

Finally, another and perhaps the most critical failure of American foreign policy has its roots not in American foreign policy proper but rather in the very life of America as a nation. There is a lot of discussion in Washington today, both private and public, of the proposition that America has lost its purpose, that it does not know for what it lives, that it does not know for what purpose it conducts a foreign policy and for what purpose it conducts a domestic policy. There is suspicion in the minds of many that we have been enraptured by the prospect of an ever expanding economy, that we are overimpressed with an ever higher standard of living, an ever lower working week, ever higher wages, that, in other words, the purpose of the Nation appears to exhaust itself in a kind of hedonism of production, the worship of the standard of living for its own

Obviously, such a purpose is unworthy of a great nation. A nation which identified itself once and for all with this kind of hedonism would, by that very fact, have lost its greatness. However much its production might increase, however much its standard of living might improve, it would be nothing more than an ant-like conglomeration of people living only for the enjoyment of this day and the next. Its collective life would really be limited to preventing any interference with the enjoyment of an ever higher standard of living. If this were a true picture of what the United States stands for, then obviously its foreign policy would also be aimless and without purpose.

It is interesting to note, and it is encouraging in one respect and discouraging in another, that foreign nations have a much clearer picture of what the United States stands for, what it has been created for, and what the underlying purpose of its national life is than the United States has itself. It is encouraging for instance, to note the popular enthusiasm with which President Eisenhower has been greeted on his visits abroad and it is discouraging that we should have been unprepared for this reception. In part, to be sure, this was a personal tribute, but to a very great extent it was a tribute to the Nation which he represented. Throughout American history the United States, in the eyes of other nations and in its own, has stood for something distinct, the repository of a particular purpose and the example of a particular achievement.

The United States is the only nation which was created with a particular purpose in mind. Other nations became aware of their particular purpose after the event. Looking back on their history, they realized what they had achieved and deduced their purpose therefrom. The Biblical prophets knew from history that the purpose of Israel was to bear witness to the one God. Pericles, beholding in retrospect the achievements of his city, could say in his funeral oration of Athens that it was the school of Hellas. Virgil could look back on Roman history and realize that the purpose of Rome had been to bring order under law to the world. in the Federal Convention at Philadelphia, two men in their twenties, Pinckney and Hamilton, looking to the future, debated what the purpose of our Nation, which was not even yet created, ought to be.

So perhaps, on the most profound level, what dissatisfies us in American foreign policy and what we have a right to call the crisis of American foreign policy is, in a sense, the crisis of our national life itself. We know that we are no longer fully aware of what we stand for, what we as a nation have come into the world to achieve and that, therefore, our foreign policy has lost that sureness of touch, that direction toward a purpose clearly conceived which it still had during the 15 weeks of 1947. Perhaps of all the reforms which one might suggest for the renovation and restoration of American foreign policy, none is more important than the rediscovery of the purpose of America.

On U-2 and Its Summit Collapse Aftermath Let's Have the Inside Facts

EXTENSION OF REMARKS

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. MOORHEAD. Mr. Speaker, today at United Nations Headquarters in New York there opens another chapter in the U-2 incident and its summit collapse aftermath.

Again, for propaganda purposes, the American people and the American President are likely to be attacked by spokesmen for that same nation which came to the summit with the now all too apparent purpose of wrecking it.

Against such propaganda attacks and against efforts to intimidate the American people by fanatical saber rattling, we should demonstrate our unity as a nation.

For the past week this spirit of unity has prevailed as it should have. Very soon, however, Congress and the American people must take a critical look at events leading up to the summit collapse to determine why and how it was that the administration apparently gave Khrushchev the tools for his summit wrecking job.

Yesterday, the Pittsburgh Press, an influential newspaper in my district, said editorially: "Congress is entitled to know the 'inside baseball' of the events leading up to the Paris debacle and of all the incidents and policies which figure in the story."

Under leave heretofore granted to insert my remarks in the Appendix of the RECORD, I include a copy of the editorial for I also believe that the "inside baseball" of this grim affair should be made known:

LET'S NOT FLIP A LID

Ike came home from his dismal experience in Paris to a warm and cheering welcome by thousands who turned out for his arrival in Washington, plus flag flying and other demonstrations around the country. All this was highly appropriate as evidence of

American unity.

The country shortly will hear a TV talk by Ike, centered on the summit collapse. We hope he will lay it on the line, as to just where we stand, and that his audience will be the biggest ever.

And then let us go about our business in dead earnestness—the everlasting business of staying strong. If Khrushchev pipes down temporarily, that is no excuse for another spasm of dreamy thinking that the cold war is over. No more than his explosive rantings should set us off on reckless and feverish crash programs.

This is a continuing problem and there is only way to deal with it—on a steady, continuing basis.

This is an election year, always a time for partisan excesess. There is no cause for muffling any issue, or gagging any platform

orator.

But there is such a thing as reasonable restraint, and our politicians can get across their messages and achieve their purposes by making use of it.

Congress is entitled to know the "inside baseball" of the events leading up to the

Paris debacle and of all the incidents and policies which figure in the story.

If there are differences in judgment, let's hear them. But let's not merely indulge in the old political game of all brag or all blame.

And let's not forget whose side we are on. The cold war has been taxing our resources for 13 years. It will be with us for an in-definite time to come. We will best live with it if we manage our strength consistently and with alert responsibility.

There is nothing like a level head, and a sensible tongue in it.

A Justified Veto

EXTENSION OF REMARKS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. RHODES of Arizona. Speaker, under leave previously granted, I would like to bring to the attention of the Congress the following editorial from the North Adams Transcript which backs a courageous Congressman for a courageous vote.

A JUSTIFIED VETO

President Eisenhower's veto of the \$251million-area redevelopment bill last week came as no surprise to the Nation and no disappointment to Northern Berkshire, though it is among the areas the measure was allegedly designed to help.

Democrats, sensing a good campaign issue, have attacked the President for being more concerned about a balanced budget than the plight of people in economically de-pressed areas. There may, in fact, be some truth to the charge the administration is overly concerned at limiting Federal spend-ing, even in vital areas. The sum asked for redevelopment assistance by the administration was only \$50 million, probably too small a sum to do what should be done.

The key issue, however, is not the amount of money involved but the uses to which it will be put. The President cited several valid objections to the present bill in his veto message.

The President's stand was supported in advance by our own Congressman Silvio O. CONTE, who has a keen interest in seeing a sound program of assistance for the hardpressed communities in his district. Even the Northern Berkshire Development Corp., set up to deal with local redevelopment problems, found the bill passed by Congress objectionable.

The worst feature of the bill is that it would take away much if not all the local incentive in redevelopment. As the President said in his veto message, "The Federal Government can and should help, but the major role in the undertaking must be the local community's. Neither money alone nor the Federal Government alone can do the

The President rightly objected to provisions for outright grants to undeveloped areas for construction of new roads, sewers, water mains, and other local facilities. Federal Government in that way would be subsidizing added competition for the depressed communities it is supposed to be

Representative Conte strongly objected to that feature of the bill, which he feared would result in the "rape" of industries in Massachusetts and throughout the north-

Through the Federal flood control, highway, urban renewal and housing programs, North Adams has gotten or is due to get a good share of Federal redevelopment assistance. It has, however, contributed substantial amounts to its own rejuvenation through construction of the new hospital, the police and fire station, the local share of urban renewal and some major water main and road construction jobs. Along with other area communities it has also begun working on the industrial redevelopment problem through the work of the Northern Berkshire

The President has pledged his coopera-tion in passage of a bill that will provide new Federal assistance in the development field. Prospects of that now are pretty slim, but it is still possible. If a new measure is to be drawn up, however, it should recognize the importance of local initiative and help areas which are at present working to help them-

Economics, Ethics, and Mental Illness

EXTENSION OF REMARKS OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the 11th Mental Hospital Institute, Buffalo, N.Y. on October 20, 1959:

ECONOMICS, ETHICS, AND MENTAL ILLNESS (Address of the Honorable John E. Fogarty, Member of Congress, second district, Rhode Island, at the 11th Mental Hospital Institute, at the Hotel Statler in Buffalo, N.Y., on October 20, 1959)

Distinguished guests, ladies and gentlemen, I am greatly honored by your invitation to present the academic lecture at this 11th Annual Mental Hospital Institute. I have a sense of some temerity, however, in addressing a group such as this on the subject of ethics and mental illness. All of you have, in the most practically real and effective way. dedicated yourselves to improving the condi-tion of the mentally ill. The staffs of the outstanding hospitals that have received the Mental Hospital Service Achievement Awards here tonight are in the front echelons of an army of many thousands who work against tremendous odds. These people, despite the magnitude and seeming hopelessness of the task, have made substantial gains in the campaign to improve care and treatment for the mentally ill, to help them recover more rapidly and more fully. As a layman, I can add to your great effort only my indirect help. my understanding, and my support for your

I have been closely concerned for a long time, as many of you may know, with the problems of mental and emotional disorders. The prevalence of these illnesses, and the regularity with which they afflict a large proportion of our people in every class and condition of society put them in a critical category all by themselves. If mental illness were acutely contagious instead of causing chronic invalidism and disability. our country and all the countries of the civilized world would long ago have declared a state of emergency against this epidemic.

As a nation, we are painfully aware of the economic costs of mental illness; we have deep sympathy for the misery of those who suffer from mental illness and the hardships endured by their families; we want to do as much as we can to alleviate this suffering-but we are not sure how much we can afford to do; what limits we should set to our efforts in the light to what we know at present; in what directions we should exert

our efforts most vigorously.

The dilemma was posed most succinctly in the recent report on the economics of mental illness. This report is the second in a series being issued by the Joint Commission on Mental Illness and Health as part of a national mental health survey initiated by Congress. The purpose of the survey is to bring together a comprehensive body of findings and recommendations that will serve as the basis for planning a stepped up, comprehensive national mental program.

Dr. Rashi Fein, the economist who worked out methods for estimating the direct and indirect costs of mental illness in the United States, estimates them conservatively at a minimum of \$3 billion each year. This fig-ure obviously does not represent the full cost of mental illness. It includes direct Costs of caring for the mentally ill expended by public and private agencies, by the patients and their families, by public institutions and private foundations. It includes estimates of such indirect costs as loss of production and loss of earnings. It does not include the costs of private care outside the hospital, of public assistance to the mentally ill or the handling of the mentally ill by police, court, penal, social welfare and other public institutions. Nor does it include the costs of related problems such as drug addiction, alcoholism, juvenile delinquency, and mental retardation.

The \$3 billion figure includes \$100 million as an estimated minimum direct cost of care provided by psychiatrists in full-time practice. It does not include the cost of payments to psychiatrists in part-time practice, to general practitioners, or to internists for the care of the mentally ill. I am sure that you who work in the field are well aware of the difficulty of gathering accurate statistics on this subject. It has been estimated that Perhaps 50 percent of the patients consulting general practitioners are suffering from complaints of an emotional origin. If this cost were included, we would have to add another \$1 billion to our \$3 billion annual

We all are, of course, painfully aware that even though we pay out \$3 billion annually, we are not providing our mentally ill with anything like the best care presently possible. The average expenditure per patient in a public mental hospital is just a little better than \$4 a day. This compares with a daily cost of approximately \$25 in a general hospital. The staff of the Joint Commission raise some very provocative questions in their preface to Dr. Fein's report. They ask: "How much would it cost to provide the highest possible standard of care for the mentally ill? Can we afford these costs? More exactly, which can we better afford. afford—the cost in human misery caused by mental illness or the cost in dollars to provide the best care we know how to give?

As a people, we Americans are committed morally and ethically to the proposition that each man and woman is entitled to the opportunity to realize his best capabilities. This includes the opportunity to receive proper medical care, regardless of income, social class, or the nature of the illness. subscribe to the statement in the constitution of the World Health Organization that "the enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition." However, we are a practical people. We also want to know whether large increases in the money spent to treat mental illness would be justified from an economic as well as a humanitarian viewpoint. Will increased expenditures tend to reduce the extent of the problem in the future? Where will the money come from? Should available increased funds be spent to step up research that hopefully will reduce the problem drastically at some future date-and, in the meantime, limp along with inadequate care for those who now are mentally ill or who become mentally ill in the

From an ethical point of view, I do not believe that we have any choice. not abandon one lota of the available potential for uncovering useful new knowledge through research. Equally, we cannot abandon the mentally ill. We are morally obliged to strive, to the limit of our abilities and resources, to improve the lot of the mentally ill, to make treatment more effective, to increase our efforts at cure and rehabilitation. Certainly people suffering from this illness are entitled to the same consideration as those with physical illness. As you know any person with acute appendicitis, can obtain a good surgeon to remove it regardless of his ability to pay. We do not provide similar services for the mentally Ill.

But because our resources are far from unlimited, we must make choices. What kinds of expanded services for the mentally ill are likely to be the most profitable? Where will our efforts be apt to bring the greatest payoff in terms of patient recovery?

Until fairly recently these were questions which could be answered almost solely on empirical evidence. And as a glance back over history will remind you, the answers that were accepted and applied in treatment were colored more often by the intellectual attitudes of the times than by detached Thus, little of constructive value was done to help the mentally ill in Western Europe until the age of enlightment at the end of the 18th century. Paradoxically, the period of the Renaissance, during which new emphasis was placed on the dignity and worth of the individual, was characterized by cruel and repressive treatment for the mentally ill.

As you know, it was not until the 1800's that a systematic approach to mental illness was predicated on the belief that the menill are entitled to the humane treatment that is the inalienable right of all human beings. This era of moral treatment, based on principles advocated by Pinel and Tuke, stressed the importance of attempting to influence the mentally ill by appealing to them with kindness and understanding rather than by regimenting them. Although it was believed that mental illness was caused by some unknown pathological process in the brain, the advocates of this type of treatment felt that their approach would do much to help their patients.

In that era, there were so few mental hospitals in the United States that only a small fraction of the people who needed hospital care would be admitted, but the hospitals that did exist were operated along excellent principles. They were small. superintendents were highly intelligent and well motivated. The atmosphere was friendly, comfortable, hopeful, and the superintendent was able to talk to each patient daily. Despite the paucity of treatment methods, the number of discharges and recoveries in these hospitals was substantial.

Further advances in care and treatment were made in the big mental hospitals that were established during the latter half of the 19th century. New discoveries made during the first half of the present century enabled us to conquer the psychoses due to pellagra and general paresis. The use of shock therapy changed the entire picture with respect to involutional melancholia. The various psychotherapies were developed, and much was learned about the anatomy, physiology, and pathology of the nervous In our own day, we have witnessed a period of remarkable progress which began shortly after World War II. Stimulated by the realization that mental and emotional disorders were a dangerous hazard to our safety as a nation, Congress, at that time, initiated our present ongoing program of support for research, training, and service in the field of mental health. In the short span of years since then, this activity has grown manyfold. Equally important, new work in the field of mental illness has been begun and stimulated by State and local government agencies, institutions, private founda-tions, citizens' organizations, universities and medical schools, training centers, and groups of all types throughout the country.

I have watched this campaign grow and spread, as you all have, and I must say the results have been impressive. New research findings have emerged—the tranquilizers and other psychoactive drugs have come into general use-we have developed new ways of training personnel and using people now available to treat patients-we have set up new kinds of treatment facilities and changed our uses of present facilities. growth in treatment resources and knowhow has been little short of phenomenal. Though we are still far from our goal, we have, I believe, what no previous period had. We have a handle with which to grasp the problem of mental illness. We have some tools that can help us decide, on a scientific basis, where our expanded efforts are most likely to bring results in terms of patient recovery.

Among the more useful tools, it seems to me are the epidemiological studies of mental illness. These studies have provided new knowledge about who becomes ill, how long they remain ill, what happens to the mental patient both in and out of the hospital, and the effects of new therapies and new kinds of domiciliary and outpatient care. This kind of information, obviously, is of first importance in long-range planning and in mak-ing critical decisions which will affect the patterns of caring for the mentally ill for decades to come. A great deal of this information has come from the many statistical studies of mental hospital populations sponsored and conducted by the States in the Model Reporting Area for Mental Hospital Statistics, with the guidance, cooperation, and assistance of the National Institute of Mental Health. Experts in this field have charted new ways of analyzing the problems of mental illness

To me, one of the most significant changes that has taken place in recent years is that communities are assuming more responsibility for the care of the mentally ill. ices and facilities that make it possible to keep people out of mental hospitals and still give them adequate care are being established throughout the Nation.

Of particular importance has been the increase of psychiatric facilities in general hospitals. The numbers of these hospitals accepting psychiatric patients rose from 43 in 1939 to almost 1,000 in 1958.

The increase in the number of outpatient clinics and the extent of their services has

been equally phenomenal.

New types of outpatient facilities and daycare and night-care centers have been opened.

Emergency psychiatric services are being developed which hopefully will obviate the need for hospitalization in some instances.

Nursing homes and chronic-disease hospitals are being used more and more for care of such groups as the aged mentally ill.

There has also been an increase in aftercare facilities in the community so that patients who have been released are less likely to relapse.

Within the mental hospitals, there have also been significant changes. In fact, from what I have read I would say that there has

been a virtual revolution in the way in which the hospital views and handles the mental patient, a revolution that has been reflected in the more hopeful attitude toward mental illness prevalent throughout our society to-The use of total push programs, begun about 10 years ago, have demonstrated that many backward patients—the ones for whom hope had long since been abandoned-could improve to the point where they can be returned to the community.

The open hospital has been another major

step forward in the attempt to prevent longterm hospitalization and its associated ill effects. The healthy activity and sense of purpose that characterize the modern mental hospital are a far cry from the atmosphere that surrounded the mental hospital even as recently as 25 years ago. The idea of the open hospital has come to our shores in recent years from England where it has worked out very successfully in a number of hospitals. As yet it is not so generally accepted here as abroad.

A number of commentators have pointed out an apparent difference in the amount of violence among British and American patients and have suggested that something in the British personality or the more uniform culture in Great Britain may make the open hospital more feasible there than here. the precedent for patient freedom in this country existed long ago. In 1842, Charles Dickens described, in his "American Notes," scenes in the Boston Lunatic Asylum that would do justice to the more enlightened of our present-day institutions. "Every patient in this asylum," Dickens wrote, "sits down to dinner every day with a knife and fork; . At every meal, moral influence alone restrains the more violent among thembut the effect of that influence-is found, even as a means of restraint, to say nothing of it as a means of cure, a hundred times more efficacious than all the strait-waiscots, fetters, and handcuffs. * * *"

One might logically conclude, therefore, that the success of the "open door" is dependent upon a real change in attitude toward the mentally ill. Opening locked doors and giving patients the social freedom that is rightfully theirs is not enough. There must be real conviction on the part of the entire hospital staff that the patient can improve. Patients must be given treatment; prove. Fatigues and the provided and organized on must be marshalled and organized on an individual basis so that each patient is given the benefit of all that is now known about treating mental illness.

More and more the hospital must take its place as part of a network of mental health services in the community. The treatment and rehabilitation programs of the hospital need to become more closely integrated with community health and social services, so that the patient can receive continuous psychiatric and social assistance that will change as his needs change-and so that he will be able to maintain his links to the community and to his family throughout the course of his illness.

Dr. Robert Felix, Director of the National Institute of Mental Health and president-elect of your American Psychlatric Association, pointed out this need at your meeting 2 years ago when he said: "I would envision the time when we would consider the hospital period not as a separate entity, but as an entity in the total therapeutic program of the individual." The hospital also must share its responsibilities in the total community forces available for fostering preventive programs and positive mental health Dr. Felix has also said: "* * * activities. members of our hospital staffs are going to be much more effective as a total therapeutic instrument in hospital programs if there are devices set up whereby they must spend some of their time in consultation with other agencies in the community.

This means that hospital staff would become involved in a whole array of community activities-such as industrial mental health, school mental health, the mental health aspects of law enforcement programs, and various community mental health activities in cooperation with civic leaders. Although these activities would, of course, burden the already overcrowded schedule of hospital staff, the benefits would far outweigh the difficulties—and the advantages would probably spur renewed and successful efforts at expanding hospital staff. Closer contact with the community would give the hospital physician, nurse, social worker, and psychologist a clearer understanding of the problems confronting the patient when he leaves the hospital. Such contacts would also stimulate professional personnel and other people working and living in the community to pro-vide services within the hospital and help the hospital staff.

Ideally, if we are to make the mental hospital an effective therapeutic instrument, it must be set within a larger community which itself is a healing communitywhich the general climate and the available services tend to minimize the unhealthy stresses which contribute to mental illness, and tend to promote mental health in a positive way. Recent research leaves no doubt that an individual's social environment has a tremendous influence on his mental health. In the hospital, a therapeutic environment means a climate in which the entire staff brings help to the patients and the patients help one anotherin which there is increased emphasis on patient self-government and the patient is given more responsibility for managing his own affairs-in which treatment and help and rehabilitation are dominant. In the community a situation conducive to mental health means ready and adequate help for families in trouble, before one of their members breaks down-it means helping families recognize the early signs of mental illness and seek the proper kind of help as soon as possible—it means halfway houses, sheltered workshops and social-therapeutic clubs for discharged patients-it means the establishment of mental health centers to serve as screening and referral agencies-it means psychiatric emergency services and fosterhome care and other measures to avoid longterm mental hospitalization.

The problem of avoiding long-term mental hospitalization is perhaps most acute with the aging-the group who are the particular focus of this Mental Hospital In-The problem represented by the disproportionately large number of persons 65 years and over being admitted to public mental hospitals will become an even more critical one in the years ahead. It is estimated that by 1980 the number of people 65 years and over in the general population will double. If the current trend remains fixed, the increased numbers of older people in our mental hospitals will be tremendous. This will pose additional problems, because older patients require a great deal of physical and medical care and special staff attention.

This emerging problem suggests increased emphasis on research in many directions. For example, we need to know more about the aging process itself, about the cause of mental illness in the aged, and about the cultural and economic factors that deter-mine choice of the hospital for needed care. Not all patients with mental diseases of the senium are cared for in mental hos-There are a variety of other facilities available—homes for the aged, nursing homes, chronic disease hospitals. We need more facts before we can decide which facility can furnish the most appropriate care.

Perhaps we should give more thought to foster home care of the aged patient whose condition does not necessitate hospitalization but who does not have a family able or willing to give him the help he needs. In thinking of such foster care, we should not ignore the contributions that might be made the increasing numbers of healthy and active older people in our populationple for whom the responsibility of providing a foster home for aged patients would mean the difference between aimlessness and a sense of purpose and being needed that are essential to everyone's mental health. Payments for providing such foster care might mean the difference between self-respecting independence for thousands of healthy elderly people and the economic dependency others that in itself can breed psychological problems for the aged. Perhaps this approach could help the older people to help themselves.

But the question of institutional or community or home care of the aged mentally ill, as of other types of mental patients, is only one aspect of the problem. The choice The choice of treatment and treatment facility will change with constantly changing medical knowledge about prevention, treatment, and rehabilitation. It will change as attitudes of the community toward mental illness keep changing. It will change as we learn more about the complex interactions of biological, psychological, economic, and social forces that influence mental health and mental ill-The mental hospital is in a strategic position to contribute to the accumulation of that knowledge as well as to test it out with patients. It can be a living laboratory for the study of mental illness. The establishment of research activity within the hospital itself would help to strengthen its ties with university and other research centers, and would make the hospital more attractive as a place to work and learn. In thus branching out into other activities, the mental hospital may help to solve the chronic problems of insufficient staff that has tended to keep it ingrown and isolated in the past-

I am aware that most of these thoughts have occurred to all of you, perhaps many times. I am also aware of the numerous practical problems and obstacles that daily frustrate your attempts to move ahead. But, as you carry on your deliberations at this Institute, and as you work in your respective hospitals throughout the coming year, you should know that there is broad and generous public support for your efforts. I believe I express the feelings of the vast majority of our people when I say that our country is committed to a full program of activity in the field of mental illness, up to the limit of our economic, and scientific

An Educator Says Now Is the Time To Ask Searching Questions

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. PORTER. Mr. Speaker, my able friend, Lucian C. Marquis, political science professor at the University of Oregon, asserts that now is the time for criticism and that now is the time for Congress to ask searching questions about administration policy. A number of us have just addressed such questions to the President. We await his replies.

Under a previous unanimous consent, I am including the entire text of the letter written to me by Professor Marquis on May 13, 1960:

EUGENE., OREG., May 13, 1960.

Representative CHARLES O. PORTER,

House Office Building, Washington, D.C.

DEAR REPRESENTATIVE PORTER: I am writing to you out of deep concern because of the U-2 plane incident and because of the administration's anouncement of the proposed resumption of underground nuclear testing.

As a teacher of political science I realize that intelligence activities are one of the hard facts of life. At the same time I wonder whether we can afford the luxury of this type of intelligence. General Powers of SAC tells us that the Russians have the capacity to strike at American targets and to destroy them. What assurance do we have that the Russians do not misread the incursion of a single plane? Are the gains of such an intelligence mission worth the risk of nuclear war?

When some years ago a Soviet spy was apprehended in Brooklyn, the Russian Government could and did completely dissociate itself from his activities. Aerial intelligence, on the other hand, directly and immediately implicates the sponsoring government.

Equally disturbing is the question of responsibility. While the administration in Washington acknowledges its general policy decisions on this kind of flight, it was not aware of the particular timing. The disturb-ing implication is that immediate decisions which could be of the most far-reaching consequences, viz the unleashing of nuclear War, are made at some lower echelon. Quite apart from this irresponsible delegation of Power what might be the tactical conse-Were our SAC bases alerted to the Possibility of a Soviet reprisal to the U-2 incursion? Would President Eisenhower have been available to make an urgent decision? On the basis of the evidence (including the unpreparedness of the administration to give any decent explanation of the incident) we were in no way prepared. This in the face of the administration's argument that through these flights we wish to avoid another Pearl Harbor.

As to the ramifications of this incidentthe impact on world opinion prior to the summit, the ace it places into the hands of Soviet negotiators, the distrust is engenders among allies who have not been consulted (witness Norway's protest to our State Department) - are these to be subordinated to

the possible gains to intelligence?

The administration's justification of its bolicy is couched in the most fanciful doubletalk. It is saying to the Russians in effect-If you weren't such bad boys, ringing down your Iron Curtain, we wouldn't have to fly over your territory. What would the administration's reaction after a Soviet plane had been shot down over Kansas and the Russians were to reply that they Were compelled to such illegal flights because We barred their diplomats from large parts of the United States?

And finally, in a kind of postscript to this sad affair, the administration announces the resumption of underground nuclear testing at a moment when some slight but hopeful progress had been made at Geneva-the Russians having agreed to holding joint technical tests. What justification can be given for this decision? May this not appear to the rest of the world as a desperately

spiteful act?

It has been argued that this is no time for criticism. But if we do not criticize now, if the Congress does not now ask searching questions about administration Policy then when else is the time? Are we blindly to accept administration decision to continue such flights? Are we entitled to

know who makes immediate policy decisions which can have such far-reaching consequences for us and for the world? What justifications are there for the resumption of nuclear testing? These are not carping questions. Unless they are asked now it may be too late. I should like respectfully to urge you to further bring these sentiments, which are not merely confined to myself, to your colleagues in Congress and to continue to exercise to your fullest power your constitutional prerogative of checking the executive branch.

Truly yours,

LUCIAN C. MARQUIS.

Iowa Citizen Praises Birmingham

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. HUDDLESTON. Mr. Speaker, recently there appeared in one of Birmingham's two daily newspapers a letter to the editor which was, in effect, a thank you note to the citizens of our fine community and a refutation of a widely publicized false impression of the city emanating from a New York newspaper. This letter was from a citizen of Waterloo, Iowa, Mr. Edward J. Jacobson, who in a time of crisis and in a strange city, found in Birmingham and her people what he calls a needed "warmth and comfort.'

In addition to his eloquent expression of commendation and appreciation of the people of Birmingham, Mr. Jacobson, in his letter, praises the facilities and personnel of an institution in which we in Birmingham and Alabama take great pride, the University Hospital & Hillman Clinic of the University of Alabama Medical Center.

I am pleased to insert a copy of Mr. Jacobson's letter in the Congressional RECORD, under leave heretofore granted, and earnestly commend it to the attention of my colleagues:

VOICE OF THE PEOPLE-IOWA MAN TELLS STORY OF BIRMINGHAM'S HELP

I read the article in the Birmingham News which appeared in the New York Times. If that reporter had come to Bir-mingham under the circumstances Mrs. Jacobson and I did, I am sure his version of Birmingham and the very good people there would be entirely different.

On Saturday, April 9, my wife, our daughter Jean and I were having our lunch when we were interrupted by a phone call. It was a long distance call from University Hospital in your city to inform us that our older daughter Joan was there and had been involved in an auto accident. She was thrown out of an overturning car and seriously injured. She was en route to Florida with friends for Easter vacation from Rockford College at Rockford, Ill.

Several of your kind citizens who were passers-by made it possible for her to be assisted and brought to the hospital. The doctor requested we come, and plane connections being poor, we started driving. I stayed behind the wheel for 20 hours while my wife studied road maps and signs. Three cups of coffee and one piece of pie was our limit on food, only to reach Bir-

mingham, a place we had never been or even had any idea of what it was like.

We arrived on Sunday, April 10, at 12:30, at the edge of Birmingham, asking our way around. Everyone went out of their way to help us find the hospital. We arrived there at 1 p.m. to see our daughter. We had not been there long when we could see she had the care and love of the best doctors and nurses available.

We were strangers in this big city but yet we felt like this was a sort of home. knew our daughter would be well again. Later, we rented an apartment and our landlady was just like a mother to us. The minister called on our daughter, and we attended the church of our faith on Easter Sunday. It was wonderful to be in church a thousand miles from home and feel the warmth and comfort that we so needed at that time.

When our daughter was out of danger, we went shopping, only to be treated royally again by the good people of Birmingham. We will never forget the fine meals we were so graciously served in the various eating establishments. The service stations and garages, too, afforded us the same courteous service.

Then the good word came that we could start home, taking our daughter with us. This meant a great deal to us knowing that in 5 or 6 weeks she will be able to walk again. As we stood on the 10th floor of the hospital the night before we left, we were somewhat saddened looking out at the beautiful lights of the city. It is a second home to us and there will always be a warm place in our hearts for the good people who made our life so wonderful while in that big and beautiful city.

Can this be Birmingham? It sure can. EDWARD J. JACOBSON.

WATERLOO, IOWA.

Being Intelligent About Intelligence

EXTENSION OF REMARKS OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, May 2, 1960

Mr. DADDARIO. Mr. Speaker, a good many words have been spoken in recent days about this Nation's intelligence operations and their efficiency and effectiveness. When policy decisions may be made on the basis of secret intelligence material, there is a conflict which can be settled only by full and frank discussion of these policy matters by the responsible political authorities without disclosure of agencies, sources, or methods. When political authorities allow the impression to gain currency that they are not in full command of their decisions, or that their information may have been faulty, they encourage speculation and comment which is not in the national interest.

In that connection, I would like to submit for the RECORD an editorial which appeared in the Hartford Courant and which contains an authoritative understanding of the intelligence cycle. The editorial states that one reason why intelligence activities of this Nation often appear to be both inept and amateurish is that there has seldom been an adequate appreciation of the importance of intelligence on the part of responsible persons in the Government.

It seems to me that the recent events. when coupled with incidents that have occurred over more than a decade now. indicate a need for a continuing review and supervision of the national intelligence machinery. The article which is cited in the editorial, and which I have not included at this point, believes that CIA is far too large and the responsibilities assigned its Director are too great to permit effective control. These are technical matters which deserve congressional study and decision. The entire field, it is apparent, deserves continuing congressional supervision by a committee which might well be organized along the lines of the Joint Committee on Atomic Energy.

The editorial follows:

BEING INTELLIGENT ABOUT INTELLIGENCE

Elsewhere on this page today appear some penetrating comments on the organization of the Central Intelligence Agency, and perhaps more important, on our whole approach to the subject of military intelligence. The article, which appeared in the London Daily Telegraph, was written by Donald McLachlan, himself a British intelli-

gence officer during World War II.

Although Mr. McLachlan's article is reasonably comprehensive, it fails to mention the principal reason why our intelligence activities are often both inept and amateurish. That reason is that there is not now nor has there ever been an adequate appreciation of the importance of intelligence on the part of responsible persons in the government, whether in the armed forces or in high elective positions. During the entire period between World War I and World War II, aside from such routine tasks as were performed by the attachés, military intelligence received little attention from anyone. And the intelligence commanders the various corps area commands, the G-2 assistant chiefs of staff, were principally public relations officers and nothing more. Even today, in the Department of the Army, all of the top General Staff officers but one have the title of Deputy Chief of Staff and the rank of lieutenant general. The one officer who does not have this rank is the director of intelligence, who is only an Assistant Chief of Staff, with the grade of major general.

Perhaps Washington's failure really to understand and appreciate the importance of military intelligence is a reflection of the attitude of the American people who, generally, look with disfavor upon espionage of any kind. But in this world in which we live our national existence demands that we make every effort to learn all we can of what our potential enemies are up to. Whether we like it or not, we must have well-trained and efficient intelligence agencies, and the sooner we realize that fact the

better it will be for all of us.

It might be pertinent here also to suggest that all intelligence activities must of necessity be conducted with the utmost secrecy, and that all governmental agencies con-cerned give consideration to what they are to say or not to say should anything resembling the U-2 incident arise again. too, we can take a lesson from the British. After the U-2 incident had been discussed by Prime Minister Macmillan and Selwyn Lloyd, the Foreign Secretary, the British Foreign Office spokesman was asked for comment. He said: "It would appear to be an intelligence operation and it is not the habit of the British Government to comment on operations of that nature either of its own or of its friends."

That should be our policy, too.

Chances for Milk Sanitation Legislation Have Become Brighter

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Speaker, the Dairy Record, one of the Nation's leading publications in the dairy field, has commented editorially on the ever-increasing support for my national milk sanitation legislation. Under leave to extend by remarks, I would like to include this editorial from the May 4, 1960, issue of this magazine in the RECORD:

BEHIND THE NEWS

While the possibility of passage of the National Milk Sanitation bill did not change materially as a result of the House hearings last week, its chances are brighter today than they have ever been. The nominating convention of the two parties will call for an early adjournment of Congress which makes it appear doubtful at this time that the bill can be passed at this session. How-ever, there is the remote possibility that it could be brought up for action on the floor of both Houses before adjournment.

Last fall it appeared almost hopeless that the measure would receive much attention at this short session, but it is evident that proponents of the bill introduced by Representative Lesrer Johnson, of Wisconsin have been extremely busy in gaining supports for

the legislation.

A major victory was won by backers of the bill when Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare, in a letter to Representative OREN HARRIS, chairman, Committee on Interstate and Foreign Commerce, reported favorably on the bill and Assistant Surgeon General, David E. Price of the HEW, at a commerce subcommittee meeting of the House endorsed the measure.

Secretary Flemming stated that the objections of the Department to previous sanita-tion bills had been eliminated in the Johnson measure and he pointed out that HEW has consistently held that health regulations should not be used as domestic trade barriers to the interstate shipment of milk and milk products of high sanitary quality.

He stated further that despite the vast

improvement that has been made in the sanitary quality of milk accruing from State and local milk sanitation programs, there still remain many areas where the sanitary quality of milk and milk sanitation practices do not meet presently accepted standards. For this reason, he declared that the bill would result in added health protection for a substantial segment of the Nation's pop-

Appearing at last week's hearing, speaking in favor of the bill, were representatives of consumers groups, State health boards, agricultural groups, Congressmen, Governors, and State agriculture departments from the Midwest, the East and the Southwest.

All presented strong arguments why the bill should be passed and one of the strongest offered was that in actuality the measure is for the protection of the consumer. It was pointed out that in many areas when there is a period of shortage milk is purchased from outside sources and it is in many cases of dubious quality.

Appearing in opposition to the Johnson bill were for the most part representatives of producer groups, principally from the East,

South, and Southwest. Philip Alampi, New Jersey Secretary of Agriculture, stated in his brief that the milk markets in the Northeast have very adequate milk sanitation regulations and that health standards can best be determined at the local or area level. He declared that enactment of the bill would tend to lower the quality of milk shipped into receiving States and that lowering of quality standards would be detrimental to the promotion and expansion of market outlets for milk. He also argued that the purpose of the bill is to permit the shipment of milk for fluid use from States of surplus production into distant markets but that goal would not be accomplished because the price differential between surplus States such as Wisconsin and Minnesota and northeastern importing States is not sufficient to induce the movement of a permanent supply of milk from the surplus producing areas.

Also appearing in opposition to the measure was Paul R. Jackson, executive officer, Milk Inspection Association of the Oranges and Maplewood, N.J., who represented the New Jersey Health Officer Association. He argued that the bill will give authority to the Surgeon General to promulgate and amend the Federal Milk Sanitation Code and that this would be an unwarranted delegation of authority. He also declared that the bill would abrogate the home rule

of local agencies.

Libraries, Education, and Society

EXTENSION OF REMARKS OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the Drexel Institute of Technology, Philadelphia, Pa., on May 17, 1960:

LIBRARIES, EDUCATION, AND SOCIETY

(Remarks made by Representative John E. FOGARTY at Drexel Institute of Technology on May 17, 1960, on occasion of his receiving the Distinguished Achievement Award from the Graduate School of Library Science and the Library Alumni Association)

Today I saw for the first time the impressive new quarters of the library school here at Drexel. I am sure they bring to you a deep sense of pride and gratification-much as your Distinguished Achievement Award. and this opportunity to meet with you have given me. It is a fine thing to feel that one's efforts have played some part in strengthen-

ing the American heritage.

A library school—or legislation to aid 11braries—can do just that: It can enrich society and strengthen the Nation. It does this mainly through the enduring contribu-

tion of libraries to education.

America's strength was once felt to lie predominantly in her agricultural and geographic advantages. Since the turn of the century, industry and natural resources have been paramount. Both, of course, remain essential to our country's strength and her

¹ The Graduate School of Library Science (third oldest in the United States and among the first five in enrollment) and the Drexel Library are housed together in the Library Center, opened in the fall of 1959, and the latest addition to the physical plant in the current expansion program.

leadership among free peoples. But the close of World War II brought sharply into focus another basic resource—education; and recent years have commanded its critical appraisal. It is now clear to many that agriculture and industry, however prolific, cannot insure supremacy or even survival without a stronger fiber of education in the social fabric.

The modern concept of education is a broad one. Besides the schools at all levels, many institutions and media are recognized as educational—partly because of their mounting interest in the role. There are more and more educational uses of films and recordings, radio and television, magazines and newspapers, pamphlets, and books. There is an upward trend in the publication of all factual matter. I believe these changes reflect generally a felt need of people for a broader view of the world about them.

One institution with a growing educational mission is the library. It is axiomatic, of course, that libraries should serve scholarship; but I refer to a more active part in the educational process. Increasingly the progressive library is concerned with information—with collecting, lending, and promoting current reading matter, films, recordings, and other educational materials. Thus the library aligns itself with institutions and forces that are shaping our national destiny.

It is my conviction that this is the way in which libraries of all types can best serve the community in our dynamic times. Libraries are more than storehouses; their

broader function is to teach.

For many years I have given my best thought to certain needs and aspirations of our people. This has been basic to my responsibilities as a Representative to Congress from the Second District of Rhode Island, and as chairman of the subcommittee in the House of Representatives which is concerned with appropriations to the Department of Health, Education, and Welfare. I am pleased to say that many libraries and library groups are closely allied with the Department in several of its programs. They collaborate in activities of the Office of Education and the National Library of Medcine. They share particularly the interests of the Public Health Service in aging, juvenile delinquency, and blindness.

As an interested layman, I should like to express briefly some views on the library's role in these tremendous problems.

One of the great paradoxes of the modern world is the problem of our aging population—the medical and social needs that have risen as a result of our longer life span, which is largely attributable to advances in medicine and public health. Since 1900, people over 50 have increased in our population from 13 percent to more than 22 percent. By 1970, nearly 25 percent of the American people will be over 50, and 10 percent will be over 65. This implies a continued increase in those burdens that weigh so heavily upon the aged—health problems, occupational difficulties, lowered income, unsatisfactory living conditions, loneliness.

In attempting to come to grips with such a problem one naturally turns to institutions and individuals that might be expected to help. A group that has outlined its objectives with regard to the aged is the National Library Association. It has spelled out in congressional testimony how the public library renders direct services to the elderly; supplies middle-age groups with literature on retirement plans, housing and income; coordinates interested civic groups and educational programs; and assists personnel who work with the aging through books, films, and exhibits.

These seem to me excellent, practical objectives that might well be extended to all libraries. In addition, I should like to see library schools expand the training of librarians to work with the elderly. Some studies should be undertaken to settle the question whether cultural and educational interests can actually retard mental decline, and to learn how libraries can help bring out and utilize the older person's best attributes. It would be a great credit to library science, and quite fitting, if some library group were to lead the way toward salvaging the elder population's vast resource of experience and skills.

The library's place in our culture is nu-clear: it offers literature, information, and recreation to many groups, the young as well as the old. I feel that its values to youth have barely been tapped. In many young people, there is a spirit that rebels against education-or rather, against being taught. This finds a terrible and ruinous expression in the juvenile delinquent, whose rebellion may lead to total loss of educational contact. And yet the delinquent or predelinquent does not necessarily resist learning. His indifference or hositility may embrace only the formal aspects of education-the classroom and its implication of discipline and conformity. The same individual may sometimes be reached through an appeal to his curiosity, his need to excell, or his natural love for reading, music, or some related pursuit. Every era has its Bohemian movement, which is essentially rebellious and yet intellectual or artistic.

The difficulty, of course, is to capture and old interest. The library has strong comhold interest. petition, and I can offer no formula. I only know that the mind of youth is capable of intense application in response to the right With no coercion whatever, youth can master difficult sports, jazz music, automotive mechanics, radio engineering. And we have all seen young people come to public libraries in underprivileged metropolitan sections, drawn by up-to-date material on invention, the space age, sports and recreation, career opportunities, and interesting lives. I have seen this in districts where crime and violence beckon constantly to every child. In light of these things, I am confident that ways can be found to enhance the appeal and effectiveness of libraries in helping the prospective citizen.

You may be interested in certain resolutions passed at the recent White House Conference on Children and Youth, which included nearly 100 librarians among the delegates.

One resolution called for adequately supported studies to determine the effects of reading books, magazines, and newspapers upon young people. Another recommended that much more extensive use be made of films and other instructional material in both formal and informal education. Several resolutions were aimed at augmenting the opportunities for training and participation in dramatics, theater arts, and film production.

With direct reference to libraries, it was resolved that action should be taken to extend the availability of public library service to every citizen; that libraries be established in schools, colleges and universities, with a view to helping them achieve higher standards; and that reading, training in the selection of literature, and recruitment of personnel trained in reading guidance be vigorously promoted.

One of the forums resolved that young

One of the forums resolved that young people should be encouraged to study the great ethical, moral and religious truths, and to use these to formulate codes of conduct for their guidance toward good citizenship.

I believe we shall soon see legislation and other efforts to implement these recommendations at local, State, and Federal levels.

Meanwhile, library workers will be able to draw on the resolutions in seeking interest and aid.

Another medical and social area in which libraries are making a valuable contribution is blindness. Despite public and private efforts over many years, the number of blind persons in this country is about 350,000 and is steadily increasing. The Public Health Service's National Institute of Neurological Diseases and Blindness is attacking the problem from the medical standpoint. On the social side, I believe there is need for a good study on problems related to blindness and the needs of the blind. One objective would be to help create a national atmosphere more favorable to the blind person and his role in society. This would call for studies of existing conditions, including the problem of providing books and recordings. The best library services now available for the blind should be augmented and extended.

Some of you may not know that the Library of Congress program to provide books for the blind is currently operating under an appropriation of \$1.6 million, which is a little more than ever before. To date, the Library has provided about 5,600 titles in Braille and Moon type and 4,000 talking books. Approximately 70,000 of the Library's

machines are now in use.

As I have indicated, many grave medical and social problems call strongly on libraries among other key groups. Assistance to libraries themselves has been made available through the Library Services Act. In fiscal year 1960 allotments are based on the maximum authorized appropriation, \$7.5 million. In this session of Congress, I have introduced a bill to extend the act for another 5 years beginning July 1.

This Office of Education program has helped to bring library services to 30 million people in rural America. It has provided trained personnel, 200 bookmobiles, and 5 million books and other materials. Fifty-two States and territories are now participating. Since the beginning of the program in 1957, the matching requirements have stimulated local governments to increase their library appropriations by 45 percent. One of the most encouraging results is the development of an effective system of libraries, with strong centers, cooperative processing, and so forth. And throughout the Nation there is a growing awareness of the meaning of libraries in education.

In my own State of Rhode Island, progress under the act has been typical. A special unit, Public Library Services in Rural Areas, was set up in the office of the secretary of state to administer the program. A director, assistant director, clerical staff, and a bookmobile were added and new quarters obtained. A book grant was made to rural libraries, with provisions for emphasis on reference materials. Books are ordered and processed by the State agency. A series of workshops has been held at headquarters, and State consultant and bookmobile services have steadily grown.

Another law that has much significance for libraries is the National Defense Education Act of 1958. This is primarily designed to strengthen, improve, and expand education in the United States at all levels. Libraries are specified as basic to the educational process. I should like to call attention to the fact that projects developed under the act may include books and other materials, and that these are not yet available in adequate quantity and quality. Library materials to aid both teachers and students are needed for a balanced program.

Of the 10 titles in the act, title III offers the most direct opportunities for libraries. This authorizes \$70 million a year until July 1962 for improved science, mathematics, and modern foreign language instruction in public schools. Federal funds are available for laboratory and other special equipment. By

³ Senate Committee on Labor and Public Welfare, Aug. 4, 1959.

the language of the act, special equipment includes printed materials (except text-books) and audiovisual materials and equipment. Minor remodeling and special equipment needed by the library because of its necessary expansion may be included under projects approved by the State educational agency and the U.S. Office of Education.

Other titles also pertain to libraries and librarians. Title II, for example, which provides loans up to \$5,000 for college students. Persons training to become librarians are eligible, and 50 percent of the loan will be canceled for those who serve as school or teacher librarians for 5 years. Another example is title IV, which provides graduate fellowships aimed particularly at the preparation of teachers for colleges and universities.

I urge all of you to review the provisions of the National Defense Education Act (Public Law 85-864) and to be sure your students are familiar with the aspects pertaining to libraries. The ALA or the U.S. Office of Edu-

cation will gladly supply details.

While speaking of Federal aid to libraries, I will make a point that may seem to the older hands here a little obvious. I refer to the fact that a library in the modern sense, adequately stocked and staffed to pull its own weight in an educational program, requires strong support from many quar-ters—particularly in the form of funds. A school of library science would do well to train its advanced students in the practice of fund raising. You must have support at local, State and national levels. To this end, librarians should take steps to increase public awareness of the library-to make it felt as a part of the community. It is largely through trustees and friends of libraries that the trend toward a more educational role must be advanced.

Such a role is necessarily diversified, and I have mentioned only some aspects. I have merely alluded to the library's part in cultural enrichment. Society depends upon the library for many things, not the least of which is its capacity to deepen appreciation and stimulate interest in the arts and sciences, in our principles and traditions, and in the peoples of other lands. This is an intangible role, but nonetheless a real one. It evokes a vital spirit in every American—the spirit to see our country progress

and lead.

In this complex troubled world, the sciences loom in importance. Our prestige among nations depends largely upon our scientific preeminence. No amount of military preparedness could compensate for a lag in scientific knowledge or manpower. Nor can we ignore the value of the health sciences in a military and economic sense, for the cost of disease is the greatest burden any country can bear in war or peace. All this has direct bearing in the library field. You must continue, and I hope expand, your efforts to interest more people in the various sciences-in their support, their progress, and their application. Again the library is a powerful force for motivating, guiding and teaching.

It is a responsibility of libraries to help keep alive the spirit of culture and learning I know of no better way than to cherish and promote the freedom to read. As a nation we are not given to slogans or glib phrases for expressing our deeper values. is not easy to tell in a word or two what America stands for. Yet we can say that our country and its Constitution are flatly opposed to censorship-that anyone can go to a public library and read any book fit to print, whether or not the ideas it expresses are generally accepted. This is specific enough, and should be widely proclaimed as a basic fact. It is the librarians who make such freedom possible by seeing that all sides of a social issue are presented, trusting in the American way to speak for itself. Freedom to read is fundamental to true democracy.

I have rambled a good deal, but I believe I can sum up the main theme. The library in modern society is particularly important as an educational institution. To enhance its social value, it must strengthen its edu-cational role. This may be effected through the teaching of librarians, studies in the use of the library as an education instru-ment, promotion of science, and aid to special groups such as the young at critical ages and the elderly. Progress along these lines will require friends, funds, and a strong voice in the community. Finally, libraries of all types, in preserving the freedom to read, in the broadest sense, both serve and exemplify the American ideal.

Eleven Electric Co-ops and How They Grew

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Speaker, on the 25th anniversary of the rural electrification program, Fred Steffen, State editor for the Eau Claire (Wis.) Leader, wrote a review of the splendid accomplishments of 11 area electric cooperatives, 10 of which are in my district. Their success story is typical of the success stories of the more than 1,000 electric cooperatives across the Nation. Under leave to extend my remarks, I would like to include this article in the RECORD:

TWENTY-FIFTH ANNIVERSARY FOR REA-ELEVEN ELECTRIC CO-OPS, INCLUDING WORLD'S LARGEST, IN THIS AREA

(By Fred Steffen)

Twenty-five years ago today President Franklin D. Roosevelt signed his name on an Executive order and "turned on" the Rural Electrification Administration.

On May 11, 1960, the world's largest cooperatively owned power generating station is on the Mississippi River at Alma, 45 miles southwest of here. An 80,000-kilowatt unit now in final stages of testing will boost plant capacity to 190,000 kilowatts.

Since F.D.R. signed that order 11 cooperative electric companies have sprung into being in the area served by this news-

At the beginning of this year a total of \$21,330,653 was invested in these power distribution businesses. The 11 co-ops serve 39,270 families and other patrons around Eau Their 11,880 miles of line would extend almost half way around the world.

This is the result of efforts of 317 charter members of the 11 co-ops, 2 of which, Trempealeau and Jump River, were chartered with 9 members each. Over at Ellsworth, the Pierce-Pepin Co-op was started with 10. By the time they were ready to serve their first customers during the hectic formative years of 1936, 1937, and 1938 they had 2,580 patrons signed up.

The original investment totaled \$2,635,129 for all 11 firms. Today, the investment in each the Barron and Clark Co-ops exceeds that figure, and the membership of eight of them exceeds the original total for all.

Principal factor in the continuing growth of the cooperatives has been the availability of Federal funds at low-interest rates to permit construction of needed building

Today the average "equity" or member ownership of the 11 co-ops in the area is 33 percent. The St. Croix and the Clark Electric Co-ops top the list. St. Croix with 40-percent ownership and Clark with 39.62 percent. In the overall area the members own approximately \$7 million worth of the total investment of \$21,330,653. This membership-ownership is more than double the original Government investment in the area.

Ownership is figured by the co-ops in "capital credits" according to the use each member has made of the co-op and to the amount of income from year to year. Most co-ops retain the credits while they repay their Government loans but at least one in this region, the Barron co-op, is paying capital credits to the estates of deceased mem-

To date, according to Manager Otis Berger, the Barron co-op has paid out \$17,787.80 in settling the capital credits for the estates of 212 deceased members. The largest payment was for \$440.42 to the estate of a man who had been a member for 20 years.

To the question of why do the co-ops keep coming back for funds, Wisconsin Elec-Co-operative officials reply that rural demands for power have increased steadily over the years resulting in "heavying up" or revamping lines to carry heavier loads. In 1959, for instance, REA borrowers sold 83 percent more power than they did just 5 years before.

Gov. Gaylord Nelson joined with former Gov. Philip LaFollette and H. O. Melby, WEC president, recently to observe the anniversary. LaFollette, who was governor when the systems were started in Wisconsin said, "The things that seem important now are the things that proved to be of lasting and increasing value, such as con-servation and rural electrification * * * it's important to tie your efforts to something that will live on after you."

Nelson said that the contribution of the rural electric cooperative movement "is unexcelled by any other cooperative movement

of any kind."

Thumbnail sketches of the growth of the 11 co-ops bringing electricity to rural areas of Wisconsin follow

Barron: Largest in terms of membership with 6,836 and investment, with \$3,498,713 the Barron County Electric Co-op is headed up by Willis Jerome and managed by Otis Berger. It was chartered by 77 members in August of 1936 and today has 26 percent equity in the system.

Buffalo: Richard Dierauer is president of the Buffalo Electric Co-op and Eli J. Maule, manager. It has 2,269 members who own 32 percent of the co-op's \$1,448,978 investment. It has 823 miles of line and was organized in 1936 by 17 members.

Chippewa: Located at Cornell, the Chippewa Valley Electric Co-op has an investment of \$1,624,649 with 3,248 members and 871 miles of lines. President is Henry E. Grape and manager is Ray L. Cleaves. It was launched in 1938 with 21 members on a \$60,000 loan to put up 60 miles of line.

Clark: The Clark Electric Cooperative maneged by W. A. Dallman is located at Greenwood. Its president is David A. Krutsch. It began with a \$700,000 loan serv ing 250 original members. Today it serves 5,000 over 1,440 miles of line and a total investment of \$2,262,211.

Dunn: W. E. Owen is president and Anton J. Brensdal manager of the Dunn County Electric Co-op with headquarters in Menomonie. It began with 41 charter members in April of 1937 who borrowed \$50,000 to erect 26 miles of line. Its 3,885 members today own 39 percent of the \$1,950,399 investment in 1,265 miles of line.

Eau Claire: A loan of \$315,827 to build 97 miles of line for 71 users started the Eau Claire Electric Co-op in March of 1938. Walter Roach is president and Virgil Dufeck, manager, of today's \$1,653,738 plant that serves 3,334 members along 881 miles of line. Jackson: In October, 1937 there were 23 organizers of the Jackson Electric Cooperative which is managed by Arthur M. Larson and whose president is Donald J. Peasley. They built 148 miles of line. Today the co-

ops 2,553 patrons along 875 miles of line are

served by a \$1,654,250 systems.

Jump River: With headquarters at Lady Smith the Jump River Electric Co-op has an investment today of \$2.111,239 and serves 3,022 patrons along 1,090 miles of line. began with 100 miles of line and 80 members in November 1938. President is Vern Birong and manager is Harold J. Cleary. President is Vernon

Pierce-Pepin: Sidney Peterson is president and A. M. Anderson manager of the Pierce-Pepin Electric Co-op which has 3,400 members along 790 miles of line and an investment in plant of \$1,677,002. Member equity is one-third. Ten members started the co-op in April, 1936 on a loan of \$330,000 to build 150 miles of line serving 209 members.

St. Croix: There are 782 miles of line in the St. Croix Eelectric Co-op with headquarters at Baldwin where David Rodli is manager. William Rutzen is co-op president. There are 2,317 members who own 40 Percent of the co-op which has a plant investment of \$1,467,929 compared to the 35 charter members from November, 1937 who borrowed \$186,000 to start it.

Trempealeau: Located at Arcadia, the Trempealeau Electric Cooperative has 3,046 members along 1,187 miles of line and an investment today of \$1,981,541. E. R. Finner is president and E. F. Thornton manager of the co-op which started with nine charter members in February, 1937 with the largest initial loan in this area of \$426,538 to serve 554 patrons along 425 miles of line.

Mr. K. Overplays Hand

EXTENSION OF REMARKS OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, the summit conference having been deliberately sabotaged by Khrushchev and since the cold war is on in earnest again, I wish to include in the Appendix of the RECORD an editorial which appeared in the State Journal of Lansing, Mich., on May 18, entitled "Mr. K. Overplays Hand." I am pleased to call the editorial to the attention of my colleagues:

MR. K. OVERPLAYS HAND

Cold war tensions have been increased by events leading to collapse of the summit conference that was billed as an effort to Improve East-West relations.

Soviet Premier Khrushchev dashed hope for the long-awaited discussion of cold war problems by Big Four leaders that might have resulted in some progress in strengthening the foundations of world peace.

President Eisenhower sought to create an atmosphere favorable to the conference by announcing that United States reconnais sance flights over Russia had been suspended and would not be resumed.

This did not satisfy Premier Khrushchev who was determined to squeeze every drop of propaganda advantage out of the spyplane incident and who demanded, in insulting terms, that President Eisenhower admit aggression against the Soviet Union, apologize for the ill-fated flight of the U-2 and punish those responsible,

Mr. Eisenhower properly refused to bow to Khrushchev's demands that he humiliate himself and the American people before the

The Soviet Premier must bear sole responsibility for wrecking a conference that could have been held had he accepted the U.S. decision to discontinue its reconnaissance flights as the accomplishment of his purpose.

By greatly overplaying his hand, Khrushchev has committed a major tactical blunder which has drawn upon himself the denunciation he had hoped other countries would heap upon President Eisenhower.

If Khrushchev had hoped to divide the Western allies he is doomed to disappointment. Instead, he has united them more firmly in the face of the common danger emphasized by his shockingly reckless display of truculence in Paris.

Statement of Walter A. Stilley, Jr., for the Hardwood Plywood Institute

EXTENSION OF REMARKS OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. DENT. Mr. Speaker, although the following statement was introduced in our committee for the purpose of testimony against minimum wage advances, I cannot think of a more eloquent plea for a "stop, look, and listen" warning in our handling of foreign aid, trade, and af-

When I think of the years of abuse suffered by the Democrats from their Republican opponents because of our socalled giveaway programs and then to watch this administration pervert the whole sublime purpose of foreign aid to a profiteering, public gouging, and exploitation of friendly peoples, I cannot help but think of the U-2 incident and all its implications.

Simply put, Mr. Stilley asks one important question—"How do we raise standards elsewhere without lowering our own?"

STATEMENT OF WALTER A. STILLEY, JR., FOR THE HARDWOOD PLYWOOD INSTITUTE

Mr. Chairman, members of the committee, my name is Walter A. Stilley, Jr. I am president of the Stilley Plywood Co, of Conway, My company has manufactured hardwood plywood for many years. About 2 years ago we added water skis to our product lines. We were forced into the ski business due to a substantial part of our hardwood plywood business being taken over by imports of cheap Lauan plywood from Japan. Fortunately, we had a new press which we could use to make ski blanks at a time when water skis were coming into great demand. Our ski production has saved our business, at least for the time being. The Japanese, finding we have a good market for the skis will undoubtedly start shipping skis or ski blanks to the United States at prices less than our costs and our ski business will go down the same road taken by our plywood business.

I am appearing on behalf of my company and other southern hardwood plywood producers who are faced with problems similar to mine. We are forced to oppose an increase in the minimum wage, not because we would not like to be able to pay a higher wage to our workers, but because we are faced with a competitive price situation due to uncontrolled low-priced plywood imports where any additional costs may force us to discontinue our present production of hardwood plywood.

The hardwood plywood industry has been under the sustained attack of low-priced hardwood plywood from Japan for many years. Hardwood plywood imports have increased from 66.7 million square feet valued for duty at \$8.5 million in 1951, to 1.318 billion square feet valued for duty at \$98 million in 1959. Hardwood plywood imports in 1959 took over 57.3 percent of all the sales of hardwood plywood in the United States. Hardwood plywood imports in 1959 increased 411 million square feet over 1958. During this period, the domestic producers had shipments of approximately 945 million square feet. The 1959 increase in plywood imports represented nearly 50 percent of our total shipments in that year.

Plywood sales are lost to the domestic producers solely because of the low prices of the imports. The price of the imported plywood, duty paid, landed United States, is less than our costs of labor and material for comparable panels. We are able to sell our plywood by giving special services and because some Americans, knowing of our problem, believe that the United States is importing unemployment by not helping American industry which is under the assault of low-priced imports.

In the year 1959 the smaller southern hardwood plywood producers operated on a near break even basis. In almost every company costs were pared down to the very bottom and at the expense of sound management principles to achieve an "in the black" result at year's end.

It is now proposed to increase the minimum wage which will have a material effect in our labor costs which represent 25 percent or more of the total cost of production. I have been supplied with some information on what could result from such an increase. The situation in my company is about as

An increase in our company to \$1.25 would result in a payroll increase of \$173,000 plus \$14,000 payroll tax, a total of \$187,000, which would require a 10-percent increase in our hardwood plywood prices. I can assure you that my customers with low-priced imports available will not accept a 10-percent in-crease in my prices. A smaller increase would reduce our payroll increases proportionately, but any increase would bring an increase in our prices and reduce our com-

Another plant with an annual payroll of \$11/4 million states that its payroll would increase 12 percent and it would require at least a 4-percent increase in its prices.

A third mill estimates its increase in payroll at 25 percent because of the need to bring all wages in line with minimum rates. This would require a 10-percent price increase according to this producer.

Our companies have not been able to increase their production to meet normal increases in costs. The steady increase in imports at low prices has forced us to fight a defensive action to just keep operating, in hope that the policy of permitting the eventual destruction of our industry by imports would be changed. Any increase in cost now or at anytime that plywood imports are unrestrained will hasten the destruction of our

We have no recourse against the plywood imports except in Congress. Our industry has fought a losing battle in two escape clause cases. The latest decision in June 1959 found, of all things, that imported hardwood plywood was not like or directly competitive with American hardwood plywood although (1) the imported plywood is made by the same process; (2) similar woods being used; (3) was sold in the same form, sizes, thicknesses, and (4) for the same or similar uses. I cannot begin to explain this decision. I can say that the Japanese sent a delegation of seven to the State Department and this group also sat through our hearings at the Tariff Commission. Certainly, if we did such a thing in a foreign country we would be accused of attempting to intimidate. In any event, we have been denied consideration for our problem while the Japanese and other foreign countries have been encouraged by loans and grants to come into our markets.

Low-priced imports from countries paying wages a fraction of our minimum wage are unfair competition. If your committee deems it essential for the welfare of our country that there be some increase in the minimum wage, then we would like to propose that you attach a proviso to such authorization which would require the minimum wage not be increased above \$1 an hour in any industry producing a product where the imports of a like or similar product have increased since March 1, 1956, the date of the increase in the minimum wage to \$1 per hour, and such increase in imports has created a competitive burden for the domestic industry. It could be further provided that where administrative action had been taken to restrict the imports of such products, the increase could be allowed for such industry.

I am informed that our present \$1 minimum wage is higher than the hourly wages paid in European countries and is several times the going hourly wage in the Asian, African, and South American countries. I am sure your staff can obtain this information. Until the foreign countries reach a rate comparable to our minimum wage there will be no way for our industries to meet the low wage costs of most imported products. Therefore, any increase in the minimum wage in industries where imports of their products have increased will give an additional price differential to the foreign producers and increase the unfair competitive advantage such producers presently possess.

The Congressmen from the States where we have plants can tell you that this is a matter of the survival of our industry in the South. If Congress or the administration would grant us the protection from the unfair competition of cheap plywood made in low-wage foreign countries we could endorse a minimum wage increase and pay it willingly.

Thank you for hearing me; my industry appreciates your consideration.

Jobs After 40

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 12, 1960

Mr. HOSMER. Mr. Speaker, the following excerpts from a talk on "Older Worker Placement" by Ewan Clague, Commissioner of Labor Statistics, U.S. Labor Department before the Older Worker Forum in Philadelphia on December 5, 1957, clearly illustrate why we must break the employment age barrier:

Middle-aged and older men and women today constitute a very considerable part of our manpower resources, and by 1965 they will constitute an even more important part. We expect a 10 million increase in labor force between 1955 and 1965, and half of the increase will be persons 45 years and over.

Only if we can make the best possible use of the skills, ability, and capacity for continuous work of all of these people, will we be able to produce the goods, both civilian and military, which are needed. * * *

By 1965 we expect our population in the United States to have reached 193.3 million persons. Our labor force is expected to increase from 68.9 million to 79.2 million in 1965. However, the age distribution will be different. We will have many more of the younger age groups (14-24) and a good many more of the older group (45 and over), but hardly any more in the middle age groups from 25-44, than now. * *

These projections point up for us * * * the great importance of the worker over 45 in our factories and service industries of the future. If we practice or introduce the right hiring and personnel policies now, then the gradual change in the composition of our labor force will not produce the waste, shortages, or unemployment which might otherwise occur. Since we shall not have a large reservoir of just the preferred age groups, it is all the more important that we learn to make the best possible use of the manpower resources that will be available.

These figures given by Mr. Clague illustrate the fact that our economy needs to learn how to use the productive skills of our older workers. But there are human needs in addition to economic needs. What about the individual who wants to continue working; who needs to work in order to be happy? Studies show that a great many people want to work after they reach 65, even though they are eligible for old-age pensions.

Unless our society can develop methods by which persons can continue to work as long as they are able to work, we shall be faced with an ever-growing number of discontented and unproductive older persons, who will have to be supported by younger persons economically, emotionally, and spiritually.

The problem becomes more acute in periods of depression or recession when there is a labor surplus. Those who do the hiring are more apt to insist on rigid age barriers during such periods because it is easier to find workers with characteristics precisely of the type specified. This makes it even harder to place older workers than is usually the case. Moreover, the increased failure of businesses in depression and recession periods throws more older workers on the labor market. The economy comes out of the recession eventually, but many of the older workers never reach full productivity again.

For those mature people who are able to work, the greatest emotional need they have is to be able to work, to be able to support themselves, to be able to think of themselves as economically useful people.

There are also tremendous social costs in denying employment to older workers under 65. There is the cost of supporting such workers, either through public assistance benefits or private help. There is the loss in taxes which would be paid by such workers if they were employed. And finally there are the numberless social services which are often required when families suffer financial reverses.

It is plain that we cannot continue to lengthen man's lifespan and at the same time lower the age at which he is allowed to continue as a productive member of

society. Sooner or later we will reach the point where the burden of supporting large numbers of older workers who are not fully productive will become too much for our economy to bear.

Therefore, there are at least three compelling reasons why all citizens of good will should work to break the age barrier to employment. One is economic—we must do it in order to keep our productivity high and our economy prosperous; a second is social—everyone in our society must help to bear the cost that arises when an individual is denied the opportunity to support himself and his family; a third is human—we must do it to keep our society stable.

The Federal Government and Higher Education—Final Report of the 17th American Assembly, May 5-8, 1960

EXTENSION OF REMARKS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. BRADEMAS. Mr. Speaker, I was privileged to be among the participants in the 17th American Assembly held at Arden House, Harriman, N.Y., from May 5 to 8, 1960, on the subject of "The Federal Government and Higher Education."

The American Assembly was established at Columbia University by Dwight D. Eisenhower in 1950. Its purpose is to supply background, define issues, stimulate discussion, and evoke conclusions in matters of large public interest.

Two national assemblies are held each year on subjects of importance and time-liness, and about 60 men and women, widely representative of American leadership from business and labor, education, and public life, meet for several days to discuss the assembly topic.

Following is the list of participants at the 17th American Assembly:

LIST OF PARTICIPANTS AT THE 17TH
AMERICAN ASSEMBLY

Robert C. Anderson, director, Southern Regional Education Board, Atlanta.

Norman P. Auburn, president, the University of Akron, Ohio.

Milo P. Bail, chairman, Commission on Colleges and Universities, North Central Association of Colleges and Secondary Schools, Omaha.

William Benton, publisher, Encyclopaedia Britannica, New York City.

Buford Boone, publisher, the Tusca-

loosa News, Alabama.

Maj. Gen. John W. Bowen, Assistant

Maj. Gen. John W. Bowen, Assistant Chief of Staff for Reserve Components, Department of the Army, Washington, D.C.

JOHN BRADEMAS, Representative from Indiana, Congress of the United States-Paul J. Braisted, president, the Edward W. Hazen Foundation, New Hayen.

Courtney C. Brown, dean, Graduate School of Business, Columbia University. William P. Bundy, staff director, the President's Commission on National Goals, Washington, D.C.

A. Boyd Campbell, president, Mississippi School Supply Co., Jackson.

JOSEPH S. CLARK, U.S. Senator from

Pennsylvania.

Catherine B. Cleary, vice president, First Wisconsin Trust Co., Milwaukee.

James S. Coles, president, Bowdoin College, Maine.

L. V. Collings, chairman, Standard-Vacuum Oil Co., White Plains, N.Y.

John D. Conners, director of education, AFL-CIO, Washington, D.C.

H. H. Dewar, member, Board of Governors, New York Stock Exchange, San Antonio.

Peter O. Dietz, Harriman scholar, Columbia University.

Theodore A. Distler, executive direc-Association of American Colleges, Washington, D.C.

Marriner S. Eccles, chairman, First Security Corp., Salt Lake City.

John R. Elliott, Harriman scholar, Columbia University.

Clarence H. Faust, president, the Fund for the Advancement of Education, New York City.

William C. Fels, president, Bennington College, Vermont.

Brig. Gen S. F. Giffin, U.S. Air Force, Director, Office of Armed Forces Information and Education, Department of Defense, Washington, D.C.

Mrs. Carl J. Gilbert, Dover, Mass.

A. Crawford Greene, McCutcheon, Thomas Matthew, Griffiths & Greene, San Francisco.

Reuben H. Gross, associate, a Study of the American High School, New York City.

Ralph S. Halford, vice provost, Columbia University.

Seymour E. Harris, professor of political economy, Harvard University.

Frank N. Hawkins, associate editor, Pittsburgh Post Gazette & Sun Telegraph, Pennsylvania.

Ernest V. Hollis, director, College and University Administration Branch, Division of Higher Education, Department of Realth, Education, and Welfare, Washington, D.C.

John C. Honey, executive associate, Carnegie Corporation of New York.

Morris Iushewitz, secretary, the New York City Central Labor Council, AFL-CIO.

John Erik Jonsson, chairman, Texas Instruments, Inc., Dallas.

Allan B. Kline, Western Springs, Ill. Douglas M. Knight, president, Law-rence College, Wisconsin.

J. Kenneth Little, director, Survey of Federal Programs in Higher Education, Department of Health, Education, and Welfare, Washington, D.C.

Herbert E. Longenecker, vice president, University of Illinois; presidentelect, Tulane University.

The Most Rev. J. M. Marling, bishop of Jefferson City, Mo.

John H. Martin, president, United Lumber Yards, Modesto, Calif.

James McCormack, Jr., vice president, Massachusetts Institute of Techhology.

Eugene McElvaney, senior vice president, First National Bank in Dallas, Tex. Frank E. McGinity, Harriman scholar, Columbia University.

John D. Millett, president, Miami University, Ohio.

John S. Millis, president, Western Reserve University, Cleveland.

Malcolm, Muir, chairman and pub-lisher, Newsweek, New York City.

Garrison, Norton, president, Institute for Defense Analyses, Washington, D.C. Thomas Parran, president, Avalon Foundation, New York City.

John A. Perkins, president, University of Delaware.

The Rev. Canon J. W. Pyle, the Cathedral Church of St. John the Divine, New York City.

Very Rev. P. C. Reinert, president, St. Louis University, Missouri.

John W. Rollins, chairman, Rollins Leasing Corp., Inc., Wilmington.

Harold S. Shefelman, Weter, Roberts & Shefelman, Seattle.

G. Kerry Smith, executive secretary, Association for Higher Education, Washington, D.C.

Frank H. Sparks, president, Council for Financial Aid to Education, Inc., New York City.

J. E. Wallace Sterling, president, Stanford University, California.

Maj. Gen. W. S. Stone, U.S. Air Force, Superintendent, U.S. Air Force Academy, Colorado.

Russell I. Thackrey, executive secretary, American Association of Land-Grant Colleges and State Universities, Washington, D.C.

Charles E. Thwaite, Jr., chairman, Trust Co. of Georgia, Atlanta.

Dennis N. Warters, president, Bankers

Life Co., Des Moines. Alan T. Waterman, director, National

Science Foundation, Washington, D.C. At the close of their discussions the participants reviewed as a group, under the chairmanship of the distinguished president of the American Assembly, Dr. Henry M. Wriston, the following state-Although there was general agreement on the final report, I should like to make very clear that it should not be assumed that every participant

mendation included in the statement. The statement follows:

THE FEDERAL GOVERNMENT AND HIGHER EDU-CATION-FINAL REPORT OF THE 17TH AMERI-CAN ASSEMBLY-THE NEED AND THE CHAL-

necessarily subscribes to every recom-

This Nation has urgent need to know and understand the value and condition of higher education.

We Americans believe in education. But we must understand and appreciate as never before the goals, attainments and requirements of our colleges and universities.

As a people we must recognize the essential contributions of example and achievement provided by both privately and publicly sponsored institutions. We must recognize the necessary freedom of colleges and universities to pursue the goal of truth wherever it may lead. We must understand and accept the difference between equality of educational opportunity and variability of individual talent for higher education. recognize that expansion of educational opportunity means both the improvement of educational quality of many kinds and the growth of diverse educational institutions.

American society has achieved its present position of freedom and power through the interacting initiative, labor, and faith of individuals, groups, and governments. Each of these forces has an essential role in higher education. No one person or set of persons, no one organized body, no one level of government can be expected to sustain and expand the system of higher education which will be required for our national and individual well-being.

Higher education cannot attain its pur-

-the growth of the individual and the expansion of knowledge for the public goodunless students and their families take their responsibility seriously. Higher education is not a universal right. It must be available primarily on the basis of talent and interest. It must be considered a continuing challenge to the student's moral sensitivity and will to work. Students and their families must be expected to bear a part of the cost of higher education. Tuition and other fees should be increased in those institutions in which present fees are nominal or disproportionately low. A program of student aid should accompany increases in fees to assist those who cannot pay higher charges.

Equally, however, higher education needs a deep commitment from all Americans. Every citizen must realize that he shares a direct and individual responsibility not merely to sustain but actively to enhance the value in our society which only higher education can provide.

The discharge of the total responsibility for higher education requires persistently more effective management of all colleges and universities, and it calls for continued participation and increased support from individuals, corporations, foundations, and all levels of government. The whole enterprise will suffer seriously if supoprt of higher education by the Federal Government comes to be regarded as a substitute for other sources of support. Federal support should be only supplemental. To have it otherwise would endanger the idea of distributive responsibility which is the bedrock of effective democratic practice.

Hundreds of millions of dollars from the Federal Government are already flowing to colleges and universities. The amounts volved suggest great aid to higher education.
This suggestion is misleading and therefore calls for critical analysis.

PRESENT AND FUTURE PROGRAMS

There are four general categories of Federal participation in higher education. They do not have precise boundaries, but the activities within each have similar philosophical justification and therefore call for similar consideration as well as similar procedures and administrative treatment.

They are:

1. Services purchased from the colleges and universities by the Federal Government for example, the ROTC, the management of technological and scientific laboratories, technical assistance projects overseas, and the solution of specific problems through re-search and development. In these areas the Government is discharging its responsibility by using the universities as means.

2. Programs of higher education by the Federal Government to meet specific national needs. Examples are Federal encouragement for the education of scientists, engineers, physicians, nurses, or language specialists, through scholarships, fellowships, and loans to students. Such Federal participation constitutes deliberate intervention for impelling national purposes.

3. Research support by grants or contracts such as those awarded by many Federal agencies to colleges and universities engaged in graduate and professional education. These programs encourage and support research both as an end in itself and as an essential means to advanced education.

4. Programs directly supporting institutions of higher education such as the appropriations to the land-grant institutions, loans for student housing and other income-producing buildings, and construction grants of the National Science Foundation and the National Institutes of Health.

In its estimate of national needs for higher education in the next decade, the assembly gives emphasis to both quality and quantity. Our society demands highly educated people, in every field and in large numbers. At the same time there is an obligation to encourage the incentive of each individual, and to guarantee him the chance to develop to his full capacity. Each person, like each college or university, must have his necessary freedom of individual choice. Our colleges and universities are many and diverse, and fortunately so. They must have appropriate support without any restriction of their indispensable freedom.

In meeting its obligations to quantity, quality, and variety, higher education must as a result face these conditions: It must (a) keep its various fields and disciplines in a rational relationship with one another; (b) maintain responsibility both to the vast expansion of knowledge and the deepened moral consciousness of each educated person; (c) accomplish its ends without regimentation whether of students or teachers.

The serious difficulties which we face involve both people and money. Enrollments are expected to double in the next 10 years. Faculty salaries must be substantially increased; many kinds of education, including the costliest, must be extended; obsolescence and inadequacy of supplies, equipment and physical plant must be remedied. For these and many other reasons, the expenditure for higher education should treble.

The current shortage of competent faculty will become more acute. We must also greatly expand our facilities even with increased and more effective utilization of physical plant. Judgments and recommendations about present or future Federal programs must relate to this high level of national urgency and necessity.

In meeting these responsibilities, we should maintain the well-established Federal tradition of making no distinction between public and private institutions. But these institutions in turn must maintain individual responsibility for their own programs; and they must demonstrate capacity and will to join together freely to guard against unnecessary restrictions or centralized control.

We wish to comment about several specific phases of current Federal activities in higher education in the four categories mentioned above.

Category 1. Services purchased: In any purchase of services, the Government should pay the full costs of the services it requests. There is no justification for requiring the colleges and universities to provide services to accomplish governmental ends at a financial loss to the institutions. Hence the Government should negotiate contracts which include full direct and indirect costs. The colleges and universities expect no profit; they should take no loss.

Category 2. Programs of the Federal Government to meet specific national needs: We believe the National Defense Education Act is highly useful and should be continued beyond the expiration date of the present act. The act should be amended in connection with the student loan program, however, so that future teachers both in private schools and in institutions above the secondary level can have the same benefits of loan cancellation which now apply only to those who follow careers in public primary and secondary teaching.

The disclaimer affidavit required by this program is an example of unwarranted Gov-

ernment interference in institutional policy; it should be expunged from the student loan program and from all other Federal programs which involve higher education.

We distinguish between the positive oath of loyalty and the negative disclaimer affidavit. We condemn the latter as a direct inquiry into belief, and hence contrary to the principles upon which this Nation was founded. Further, this affidavit is required of college students and not of most other recipients of Federal funds. In particular, the act in no way defines or lists the subversive organizations which must be included in the affidavit; some students might in innocence join an organization which could at some future time be listed as subversive.

We must register one other objection: It is a hindrance to education to interfere with the policy of individual States, as recent National Defense Education Act legislation has done, by the direct allocation of graduate fellowships to specific institutions in violation of an agreed State plan. This is unwarranted Federal trespass from State functions.

Category 3. Support of research: Federal grants for research, which loom so large in many university budgets, should include the full indirect cost to the university of conducting the program. These grants further the purposes of the institution itself, and thus are not wholly parallel to the purchase of services for a Government purpose. However, such programs inevitably tend to create some imbalance and distortion in the operation of the institution, and if the institution is in addition compelled to divert its own funds to their support, these adverse effects become excessive. Only if Government assumes the full cost is the balance between benefit and interference an equitable one.

Category 4. Programs directly supporting institutions of higher education: We approve and endorse the practice of the National Science Foundation and the National Institutes of Health in making funds available for research facilities appropriate to undergraduate instruction, particularly in liberal arts colleges. Many scholar-teachers come from these colleges, and they must not be neglected. Therefore we urge the extension of such programs.

The program of loans for college housing and other self-liquidating facilities should be continued. It should be operated on the same formula as now prevails.

A serious issue of Federal action concerns the extension of direct Federal support beyond these existing programs. The best available projections of total need leave serious doubt whether the required financial resources can be obtained from State and local governments, from tuition fees, and from private sources, including corporations. We urge that funds from these sources be expanded to the maximum, and repeat that no Federal action should operate to discourage them. Nevertheless, in the last analysis the need must be met.

THE PROGRAMS

Of all the appropriate areas of increased Federal support, the assembly thinks that the one most worth stressing and posing the least threat to college and to university freedom is that of assisting with the provision of capital facilities.

We recommend that institutional aid be provided on a matching basis through a program of Federal grants for construction of facilities, including libraries, but excluding dormitories (which are otherwise provided for) and athletic facilities.

There is also some sentiment for direct aid to institutions for instructional purposes and direct assistance to students through Federal scholarships. Careful thought must

be given to both of these—the amounts of help which may be necessary and the ways in which both the colleges and the Government might administer such programs. Financial assistance to institutions for instructional purposes might best be established in proportion to enrollment and on a matching basis.

ORGANIZATIONS

There is a definite need for one organization to coordinate the efforts of spokesmen of American higher education to speak on the national level on the issues about which all institutions are concerned. The American Council on Education could serve this purpose. The colleges and universities of the country must, however, take the major initiative in guaranteeing the accomplishment of this essential job. First, they must take the responsibility of defending their own freedom, and this will make possible the fusing of their collective efforts for freedom within the structure of the American Council on Education.

There should be a private and unofficial body designed to keep constantly before the public the importance of maintaining vigorous institutions of higher education, and of encouraging the support of education by public opinion. This nongovernmental citizens' committee for higher education should take as its major function the interpretation to the country of the achievements and the urgent needs of its many and diverse institutions of higher education.

Education is a vast and a vital national concern. The President, the Congress, and the public should have up-to-date, frequent, regular, and authoritative official information. To these ends there is a need for a council of advisers on education in the Office of the President. It should be established by law and perform a function analogous to that of the Council of Economic Advisers. This Council should make an annual report to the President on education—its advances, its deficiencies, and its needs. It should lay adequate stress upon higher education. which is becoming increasingly important to the national welfare. The report of this council, like the report of the Council of Economic Advisers, should also be transmitted to a joint committee of the Congress which would hold hearings upon it, in order to reach conclusions and draft its own reports.

The New Suez Crisis

EXTENSION OF REMARKS

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. FARBSTEIN. Mr. Speaker, a few weeks ago, the Congress of the United States approved an amendment to the state of policy of the Mutual Security Act, an amendment which has written a moral principle into our foreign aid legislation.

This amendment, which I drafted and introduced as a resolution into the Committee on Foreign Affairs, of which I am a member, was favorably recommended to the House of Representatives where it passed without any debate, thus reaffirming our traditional support for freedom of the seas and economic cooperation and registering our opposition to economic warfare, boycotts, blockades

and restrictions on international waterways, which some recipients of our aid use as instruments of aggression against other nations which also receive American dollars.

When the amendment was introduced on the floor of the Senate, it aroused tremendous interest throughout the country, partially because of the bitterness surrounding the debate and partially because of its implied call to our Government to establish a positive and firm policy in our Near East diplomacy. After the Senate vote, many newspapers presented their views on what had been accomplished. I would like to call the attention of the Members of the House of Representatives to the editorial which apeared in the New York Post on Monday, May 2, 1960:

THE NEW SUEZ CRISIS

For many long months Colonel Nasser has derisively flouted a resolution of the United Nations Security Council calling for free navigation by ships of all nations through the Suez Canal. He has barred the waterway to Israeli vessels and imposed a blacklist on American ships which touch at Israel's ports.

Time and again U.N. Secretary General Dag Hammarskjold has appealed to Nasser to end his lawless blockade. again Nasser has brushed him off.

Nasser's political life was saved when the U.N., with American support, challenged the Israeli attack of 1956 on the ground that it was a clear violation of international law and the basic principles of the U.N., no matter how grave the provocations. The Post supported that stand.

Now the issue arises anew: Is Nasser above that law and those principles? Do we have a double standard which obliges Israel to respect the rules but permits Nasser to defy them? The questions have come up again because significant groups of Americans are contesting the policy of surrender to Nasser's caprice.

On New York's waterfront spokesmen of the Seafarers and Longshoremen Unions have been picketing an Egyptian ship—the Cleopatra-to prevent its unloading here. This is their protest against the blacklist.

In Washington the Senate-by a vote of 42 to 25—has approved an amendment to the mutual security bill empowering the President to withhold aid from nations which restrict the use of international waterways. The amendment, sponsored by Senator Paul Douglas, Democrat, of Illinois, mentions no names; but it unmistakably challenges the view that we can buy stability in the Middle East by craven capitulation to Nasser. Cairo's ensuing cries of outrage and new

retaliation against U.S. shipping were predictable. Nasser long ago concluded that U.S. diplomacy runs to cover at the first sign of his wrath. Presumably he believes the formula will work again.

The Douglas amendment is an attempt to reestablish our national dignity in dealing with the U.A.R. ruler. It proposes that restrained retaliation replace the demonstrably

futile policy of massive retreat.

AND MR. FULBRIGHT'S CRUSADE

With pious posturings and scornful references to the "pro-Israel bloc," Senator Ful-BRIGHT, Democrat, of Arkansas, chairman of the Senate Foreign Relations Committee, has found only gloom and doom in the belated American reaction to Nasser's intransigence. He has gratuitously charged that Douglas and his cohorts are seeking to placate an "uninformed minority." He has condemned his Senate colleagues for "inflammatory"

FULBRIGHT accepts Nasser's explanation that the blockade is a reprisal for mistreatment of Arab refugees. He ignores the long record of Israel's effort to negotiate an overall peace settlement in which the fate of the refugees would be a major issue. He impugns the motives of Senator Douglas and others who disagree with him.

FULBRIGHT'S moral blindness has become one of the drearier exhibits of our time. In the South's racial crisis he has remained above the battle, finding equal merit in the claims of the oppressors and the victim. Now he can detect only sinister political craft in those who refuse to remain neutral when Nasser defies the U.N.

We do not minimize the complexities of the Middle Eastern conflict, nor do we disparage the problem of the Arab refugees. But neither do we have any reverence for the Fulbright form of realism. It manages to rationalize lawlessness when committed by the bully, in Little Rock and Cairo alike. It is neutrality in favor of injustice. It is conduct unbecoming the crucial offices he

Israel's 12th Birthday

EXTENSION OF REMARKS OF

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. GILBERT. Mr. Speaker, Israel is celebrating the 12th anniversary of its independence, and the people of Israel have our sincere congratulations and felicitations, and the good wishes of all free nations.

The people of Israel, because of their indomitable courage, unfailing industry, and strength of purpose, have accomplished magnificent results and reached incredible goals in the short period of 12 years. The new nation, surrounded by enemies who have sworn her destruction, has been attacked and has emerged victorious; it has successfully absorbed nearly a million immigrants: it has made the desert bloom and the reclaimed land now supports great numbers of people: it has made tremendous advances in its industrial and agricultural production; its ambitious building program has produced many new villages and towns; its program of aid and support to the new states of Asia and Africa is proving beneficial not only to them, but also to the cause of democracy.

The life of the State of Israel is one of constant struggle; Israeli villages are victims of the "fedayeen" or guerrilla attacks encouraged by Egypt; Israeli ships are barred from the Suez Canal; she suffers from the economic boycott imposed by all the Arab States; to maintain her defenses, a large portion of her resources must be channeled to defense, thereby retarding her advancement in productive and constructive fields of endeavor. Despite these almost insurmountable obstacles, her progress has been miraculous.

The Israelis are to be commended for their willingness to make the tremendous personal sacrifices necessary to Israel's progress and growth, as well as her freedom. They have not neglected their cultural and educational pursuits, and their already high standard of living is being steadily increased.

The encouragement and support given to Israel by the United States were well deserved and the faith Americans showed in the new democracy was well founded.

Although this is a time for rejoicing in the freedom and progress of the new State of Israel, it is also a time of stocktaking and rededication. Israel's enemies still begrudge her existence and threaten her downfall; the obstacles of the blockade and boycotts still remain. Vigilence is necessary and the personal sacrifices must continue until peace among Israel and the Arab nations is a

Israel has earned, and deserves, all the continued aid, encouragement, and support which our country can give her. She is our friend and ally; it is our duty to help Israel in all ways possible, so that she may continue to enjoy her freedom and statehood, and achieve the security and peace for which she strives.

Grover S. McLeod Addresses Coffeeville High School Graduating Class

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 10, 1960

Mr. HUDDLESTON. Mr. Speaker, on May 16, 1960, Mr. Grover S. McLeod, a prominent Birmingham attorney and citizen, delivered an address to the senior class of Coffeeville High School, Coffeeville, Ala. I had occasion to see a copy of Sam McLeod's speech and was most impressed with it, believing it to be one of the finest commencement addresses I have ever come across. Thus, I am taking the liberty to call it to the attention of my colleagues, by inserting it in the CONGRESSIONAL RECORD, under leave heretofore granted:

A CHALLENGE

(By Grover S. McLeod)

Mr. Kornegay, seniors, student body of Coffeeville High School, and parents, as we are assembled on this momentous occasion, I wish to thank Mr. Kornegay, your principal and my friend, for inviting me into your privacy so that I might partake of this cherished moment. And let me further thank the parents of the seniors for allowing me to share with them this their great moment of pleasure.

Let me issue a challenge to you on this day of matriculation. You buds that are to blossom into flowers of our community life, I challenge you to be our future leaders. I challenge you to be our doers and our makers of a better tomorrow.

CONTINUE YOUR EDUCATION

Let me challenge you to continue your education, whether it be in the endeavors of university training or whether it be in the art of agricultural and mechanical knowledge-continue. Continue to learn and grow in knowledge and wisdom. Your teachers have attempted to show you those subjects that merit study, those things that are worthy of pursuit; yet, your teachers will tell you, and no doubt have told you, that this knowledge is as a single star unto the universe. The knowledge you have is a trickle, let it become a steady stream. I challenge you to explore—seek knowledge, study, and cease not your education at this

plateau.

I will point out to you that the tortoise won the race from the hare, even though the hare was deft of speed. And you might, as a corollary, apply this fable to your lives. Though you possess brilliance, if you cease learning at this point, then you will be overtaken by one who is not so brilliant but continues to learn and grow.

RESPECT YOUR ELDERS

Let me challenge you, graduating seniors, who are rapidly unfolding into adulthood, to honor and respect your parents. Advisedly, it should be said that in your learning endeavors, do not lose sight of the fact that your parents wish for you to excel and grow to even greater heights than they, but in your growth do not lose the respect and warmth for your parents which nature has so warmly blessed you.

We know that in certain sections of this country it is considered a matter of community acceptance for children to be rude and disrespectful to their parents, but I challenge you to respect your parents, obey them, and do not embarrass them with untoward behavior. An outward sign of respect is indicative of good breeding, culture, and refinement. What you do or make of yourselves will be a reflection, not only unto yourselves, but also unto your family and community.

YOUR RACE

As a part and parcel of the same thought, much has been written on the racial problem, most of it sheer nonsense, and most should never have been published. The greater portion has been written by persons who, for a price, would be like the California hitch-hiker—go either way. Racial integrity should never have been an issue, except there were those who wished to disrupt your community; and yet, you should be apprised that always there are persons who are opposed to existing institutions. If it be accepted by the majority, then they readily oppose its existence and immediately seek its destruction.

I say to you and challenge you, be prideful of your Caucasian race. It is the greatest race that exists and needs no apology. Your race, in the narrowest sense, is your family. It is what you are. You can be nothing more than the genes in your body. You are a part of a race that has contributed to the ease, both mental and physical, of all races. So I say to you, with emphasis, be not of faint heart in defending your family and race. There are those who seek to inject sympathy, religion or morals into these issues so that we may more readily destroy ourselves; yet, I say to you, should not commonsense be used along with pride, social acceptance, good health, destruction of your kind, and visual observance. I say to you, use the latter as your guide and be caretakers of a great race.

WORK-SUCCESS

And, now, may I issue to you a challenge to work and work hard, no matter which way your turn your talents. It is the speaker's considered opinion that the secret to success, if there be one, to a person with a healthy mind and body, is work. And I say that if you work and work hard, yet have only mediocre talent, you will find success and you will be an attribute to your family and community.

With states one cannot find a better illustration to prove this point than that of Switzerland. There a people have used hard work to overcome the adversities of climate, inaccessibility to the sea, rough terrain, smallness of size and warlike neighbors. Of all the currencies throughout the world the highest value is placed upon the Swiss franc. And value of currency is symbolic of con-

fidence by others in the wealth and productivity of a nation.

And along with work, I challenge you to be honest in the handling of the funds of others. I say, take hard work, honesty, and a bit of ability and one has a triangle which promotes success. Placed together you will have a healthy mind, and a healthy mind naturally begets a healthy body. I challenge you to freely utilize this triangle in the building of your future.

THRIFT

In an era of commercial advertising that encourages the spending of not only your present earnings but your future earnings as well, I say to you, ignore this beckoning finger. And I advise you to do the opposite. Make thrift a part of your character. One should not obligate his future efforts even before his labor has been expended.

Saving is a fountainhead to wealth. As a matter of fact, without it one would not have the tools for the production of wealth. So I say to you, with emphasis, if you save, it will not only make you wealthy but it will make you a more stable person and it will make you free.

Study nature, for even she, in her flirty way, is thrifty. Without seed being saved through the cold of winter there would be no next year crops. So I challenge you to make thrift a part of your character.

CLEAN COMMUNICATIONS

We live in a world that is blessed with the ease of mental communications. We have a readily understandable written language so that something written today can be communicated to others at a future date. Written communications serve as a reservoir of knowledge, so that one can see knowledge is cumulative. This is done by transcribing the written word. We also have the art of communicating the melody by transcription, so that not merely a few may enjoy the great voices and great music. And, if you please, we have a marvelous language so that mental expressions or thought may be communicated from person to person and an understanding is readily had by the com-munication. This is the spoken word.

Yet, amidst this marvel of communication we have the written word which communicates filth and trash. At times one would think that sex is everything and one would think that such wordage is the norm. We also have the melody, if it may be called such, going out in the form of records that degrade us all. Such as, the low Negroid type of music. We also have the oral spoken language used commonly to utter the filthy side of our life.

I urge you and challenge you to read those works that are lofty in nature, read those works that are a credit to you as a people and those that will make your mind stretch and grow so that you will be a better person after experiencing the communication.

I urge and challenge you for the ease and betterment of your soul, to listen to the finest in music and avoid the low in melody. I challenge you to eliminate from your conversation the ugly and sordid that is so prevalent and discourage the use of same in conversation directed toward yourself. Let not your mind be a wastebasket for the language of others.

The following of this advice will enrich your lives and make your body a better place to house your soul.

EMULATE THE GREAT

In a day and age that is dominated with psychologists who are saying in loud tones that children should freely find their place in society and that they should avoid emulating others. I say to you, that this is sheer nonsense. I challenge you to emulate the good, emulate the great, copy the best of your predecessors and discard the bad. Do

not be affrightened to emulate the successful in life. We readily do the same with great deftness in the kingdom of plants. From the most successful plants we select seeds for future growth. Do likewise in your life. Select from your elders those parts that are the best and build unto yourself a character of good.

GOOD HEALTH

Heretofore I have mentioned the subject of a healthy body. To attain success, it is imperative that one's body or machine operate at a peak of efficiency. What nature has given is hard to improve upon; yet we can care for our bodies so that we can protect what nature has heretofore given, and this we should do. I challenge you to keep your bodies healthy, by continuing healthful eating habits, healthful living habits, and continue the use of your exercises. I say refrain from strong drink. Refrain from excesses of all kinds and more so, keep to a minimum the medical chemicals that enter your body.

SUMMATION

In summation, may I say that those who do not have goals in life obviously wander about and seldom get beyond the first rung on the ladder of success. In contrast, those who have attained the greatest success in The goal life have had the greatest of goals. is seldom written out as one would a blueprint or chart. However, it is indelibly written in the person's mind, in his hopes and aspirations. May each of you set a goal that you wish in life and proceed forthrightly toward attaining the same. Set your sights high so that if you only halfway attain your goal, you will have attained great success in the eyes of your family and community. Pursue your goal toward success, and I dare you to be adamant in reaching the same.

It is the opinion of most who have attained great success, that in retrospection, the greatest experience lay along the road traveled toward success, that this was the greatest experience of all; and the experience made the trip worthwhile.

May I challenge you once again to set your sights high—aim high, and may you grow as the pines of our woods—tall, straight, healthy, and upon maturity, a great asset to your community.

A Gold Medal Proposed for Dr. Thomas A. Dooley, Humanitarian

EXTENSION OF REMARKS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. BRADEMAS. Mr. Speaker, I have today introduced a joint resolution authorizing the President of the United States to confer a gold medal on Dr. Thomas Anthony Dooley III, the young American founder of two mountain hospitals in northern Laos.

The text of the resolution follows:

JOINT RESOLUTION TO AUTHORIZE THE PREST-DENT OF THE UNITED STATES TO CONFER A MEDAL ON DOCTOR THOMAS ANTHONY DOOLEY III

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, in recognition of the gallant and unselfish public service rendered by Doctor Thomas Anthony Dooley III in serving the medical

needs of the people of Laos living in the remote areas of the Lao jungles, and of peoples in other newly developing countries, the President of the United States is authorized to present to Doctor Thomas Anthony Dooley III, in the name of Congress, an appropriate gold medal. For such purpose, the Secretary of the Treasury is authorized and directed to cause to be struck a gold medal with suitable emblems, devices, and inscriptions to be determined by the Secretary. There is hereby authorized to be appropriated the sum of \$2,500 for this purpose.

SEC. 2. The Secretary of the Treasury shall cause duplicates in bronze of such medal to be coined and sold, under such regulations as he may prescribe, at a price sufficient to cover the cost thereof (including labor), and the appropriations used for carrying out the provisions of this section shall be reimbursed out of the proceeds of such sale.

Mr. Speaker, the heroism of Dr. Dooley, unselfishly accomplished in the remote jungles of Laos, deserves the highest appreciation and recognition of the American people. This remarkable Young humanitarian is showing how the struggle for men's hearts can be waged with the life-giving weapons of medicine. SISTER MADELEVA CALLS DR. DOOLEY OUR GREATEST

During his visit to the campus of Saint Mary's College, the distinguished president of the college, Sister M. Madeleva, C.S.C., described this remarkable 33-Year-old physician as "our greatest Samaritan." Dr. Dooley's visit came only a few months after his emergency opera-

SAMARITAN

tion in New York for cancer of the chest. Mr. Speaker, at this point in the Rec-ORD I should like in insert an excellent article describing this visit. The article was written by Walton R. Collins, and Was published in the South Bend Tribune

on November 15, 1959:

DOOLEY DESCRIBES HIS WORK IN LAOS (By Walton R. Collins)

Dr. Thomas A. Dooley, boyish founder of two mountain hospitals in northern Laos a few miles from the Communist China border, brought the stench, the pain, and the compassion of his Asian clinics into O'Laughlin Auditorium Saturday.

It was a return appearance, possibly his last, at St. Mary's college where a dozen years ago, while a student at the University of Notre Dame, he played the piano for Sunday

afternoon tea dances.

Since then, he has served as a doctor in the Navy in the Far East, returned to Laos after leaving service to set up and stock two hospitals and train the native staffs to run them, and helped set up Medico to do similar chores throughout Asia and Africa.

Early this fall, he underwent an emer-

gency cancer operation in New York.

In an hour-long talk Saturday, the 32-Year-old physician held a capacity audience spellbound as he described his life in Laos, which he called "the cork which keeps the Poison of communism from running out into the rice bowl of Asia."

MUST KNOW AMERICA

Behind his work in Laos, he said, is the philosophy that "Asia must know America, and the state of t

"Governments can go only so far in seeking peace and order. Individual Americans must take it from there." And he warned:

"Asia possesses a potential for catastrophe which could alter the history of the world." The first of the Lao hospitals he founded in 1956, Dr. Dooley said. He moved to the second after building and stocking the hospital with medicines, and preparing native staffs to carry on treatments.

In helping found Medico (Medical In-ternational Cooperation), a private organization to which doctors and nurses give a year or 2 of their professional lives to set up similar clinics in the "15th century areas" of the world, the Notre Dame graduate described how he raised \$2 million worth of drugs and equipment and \$300,000 in cash in less than 6 months.

Medico teams are now working in Kenya, Burma, Jordan, Cambodia, and other African and Asian countries.

PARTY OF COMMUNITY LIFE

His newest hospital in Laos, Dr. Dooley said, is "5 miles from the Chinese frontierright on the rim of Red Hell." His team is "an intimate part of the community life," and operates on the belief that "to help create the image of America, we must work on a person-to-person level and use powerfully the tool of gentleness."

His 30-mat hospital processes 100 patients a day, 7 days a week, said Dr. Dooley, who

is assisted by two other Americans.

"In 1 year, one village hospital such as this one can take care of 36,000 persons at a cost of \$25,000.

"We perform three or four major surgical procedures a day, and have a training program for 27 students. We have no desire to make them into images of us."

People using his hospital are required to pay for services, Dr. Dooley said. "An operation for a pig, a delivery for a chicken, and pills for eggs or rice."

The people are proud to pay us," he said, "Endless giving away undermines adding: the self-respect of a people, or of a nation.'

Within a few months, the second Lao hospital he established will be turned over to its native staff and a third will be started, the physician said.

In Laos, he warned, the "dogs of war have been unchained again, and once again peo-

ple are dying in war."

Two Communist provinces in that nation have been "waging war since 1954," he reported. A coup in 1957 ended a coalition between the Lao Government and these Red provinces. Present aggressions are designed to "regain the control of the Communist provinces and again form a Communist coalition."

When the Lao Government asked for a United Nations army to stop aggressions by the Reds, Dr. Dooley said, "it worked on the fact that when you ask the U.N. for an army, you get a subcommittee; when you ask for a subcommittee, you get an observer; and when you ask for an observer, you get an argument."

Laos got its subcommittee, and as objective observers its members "came back without absolute proof of Communist aggression in the Lao territory," because the method of communism "is to get behind local movements and use them as fronts for its pur-

But individual members of the U.N. team, Dr. Dooley said, "like myself, are convinced that communism is" the aggressor in Laos.

GUEST AT LUNCHEON

Before his talk, Dr. Dooley was a guest at a luncheon with Sister M. Madeleya, C.S.C., St. Mary's president, and other college and community leaders.

He received the keys to a Lark station wagon for use in Laos from A. J. Porta, executive vice president of Studebaker-Packard

He received, on the O'Laughlin Auditorium stage, two scholarships to St. Mary's for Lao girls. One, for \$2,200, was presented by the college administration. The other, for \$2,000 came from the student body.

Dr. Dooley heard himself described as "one of the most outstanding humanitarians" in a note of greeting from absent Mayor Edward F. Voorde of South Bend; as "one of St. Mary's finest sons and a citizen of the world" by Mayor Albert L. Doyle of Misha-waka, and as "our greatest Samaritan" by Sister Madeleva.

The young physician, whose gaunt appearance shows the ravages of his recent bout with cancer, was to stay overnight in the Morris Inn before continuing today a monthlong speaking tour of the United States.

And after that, said Dr. Dooley Saturday: "I'll be back in Laos a month from today."

DR. DOOLEY SAYS ALBERT SCHWEITZER A "GREAT SAMARITAN"

On meeting Dr. Dooley, I was deeply impressed by his earnest conviction that individuals have a responsibility beyond that of governments to seek peace among nations. We can readily understand this attitude of unselfish public service when we read the following statement in his book, "The Edge of Tomorrow":

Since my earliest days in medical school the work of Dr. Albert Schweitzer has been one of the great inspirations of my life.

Mr. Speaker, the people of my district feel a close tie of affection with Dr. Dooley because he was a premedical student at the University of Notre Dame in South Bend, Ind., already preparing for a life that was to be devoted to helping

A fine example of the support of Dr. Dooley in my district is the story of Mrs. C. J. Steckel of Elkhart, Ind., set forth in this article which appeared in the Elkhart Truth of April 5, 1960:

ELKHART WOMAN SEEKS FUNDS FOR WORK OF DR. DOOLEY

An Elkhart woman hopes to organize financial support here for Dr. Tom Dooley, young American doctor who operates a jungle hospital in Lãos.

She is Mrs. C. J. Steckel, who has reviewed Dr. Dooley's books for a number of local organizations. Her audiences have frequently asked what they can do to help the doctor in his fight against disease and communism.

Three months ago Mrs. Steckel asked this question of Dr. Dooley in a letter, and Monday the answer came.

SPECIFIES NEED

"Many thanks for your offer to help and request for a project," he said.

'I am in need of sterile administration sets. In fact, I need 1,500 of these. I understand that back in the States they sell for 100 for \$150. Can you possibly do anything to keep me supplied with this item?

He added that he was instructing his New York office to supply her with the catalog number of the exact item needed.

WORKS IN LAOS

Dr. Dooley is the founder of Medico, a nonprofit American medical program for underdeveloped countries. Royalties from his best selling books go to this organization. It has offices in New York, but Dr. Dooley himself works in Laos, five miles from the border of Red China. The patient-doctor ratio in that area is about 2 million to one.

He returned to the United States for surgery last year, after having developed cancer, but is now back in Asia.

He is a Notre Dame alumnus.

Persons interested in helping with her project may contact Mrs. Steckel at JAckson

Mr. Speaker, I hope very much that Congress will indicate the appreciation of the American people for Dr. Dooley's great service by authorizing the President of the United States to confer on him the gold medal provided by my resolution.

Nasser, the Suez Canal, and Israel

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. O'HARA of Illinois. Mr. Speaker, in the Mutual Security Act of 1960 is a statement of policy, originating in the House Committee on Foreign Affairs, that forthrightly sets forth the position of the United States that the Suez Canal, and all other international waterways, should be open for the free and unhampered passage by ships of all nations. This is our national policy and it conforms with the best American traditions since the beginning of our national history.

David Lawrence, the well known and respected columnist, in the New York Herald Tribune of May 2, 1960, refers to a Member of the other body who "castigates his colleagues because they voted against the use of American taxpayers' funds to help Nasser carry on his economic boycott against another country in the free world.

Mr. Lawrence continues.

The House of Representatives has adopted a similar provision advocating the principles of free navigation. For a majority derived from both political parties sees no reason why the U.S. Government should continue to send mutual security funds to Egypt if the latter seeks to destroy the economy of Israel, a country which also receives such funds from America.

EISENHOWER PLEA IGNORED

Nasser has ignored the pleas of President Eisenhower to reopen the Suez Canal to the ships of all nations, though diplomatic help toward that end was promised by Mr. Eisenhower after Britain and France intervened in 1956 in the Middle East war. At the least, it was a factor in placating Israel which early in 1957 withdrew its armed forces from the battle zones with that understanding.

The United Nations has tried repeatedly by its resolutions since 1948 to bring about a reconcillation between Israel and Egypt. But Nasser refuses to negotiate directly or indirectly. He says a state of was exists, and he uses that technical reason in trying to justify closing the Suez Canal to Israel's

shipping

If it be concluded that a state of war exists then why did the World Bank, which is part of the United Nations, organization, decide last December to make a loan of \$56 million to Egypt to widen and improve the Suez Canal. Cannot it be argued that the World Bank has thus taken sides in a war and has helped one of the so-called belligerents? Plainly Dictator Nasser cannot have it both ways.

NEW ANGLE IN BOYCOTT

Within the last few days another grave development has occurred. A maritime union in New York City decided not to help unload ships coming from Egypt. Immediately the maritime unions in Egypt and other Arab countries retallated by refusing to unload American ships in their ports. But the real reason for the boycott imposed in this country is the union's fear of damage to the jobs of American seamen in the future, because the Cairo government persists in refusing to let ships from any country go through the canal if, at any time previously,

they have carried any cargoes to Israel. This means that American companies with products destined for other countries in the world must maintain a fleet of ships solely for the Israel trade, and cannot even separate the voyages of their own ships. Once a vessel serves Israel, it goes on the blacklist imposed by Nasser not only against Americans but against the ships of all other countries.

Within the last 24 hours, Nasser has issued a bitter attack on President Eisenhower blaming him for the boycott by American seamen in New York City. He holds President Eisenhower responsible for what the unions are doing, though he himself disclaims any responsibility for what the Arab unions are doing.

Should American taxpayers' funds be used to support any regime which discriminates against American seamen in this manner? Although the Senate and House recorded an emphatic "No," one Member now accuses his fellow Members of Congress of playing politics and of being influenced by a pressure group. The veterans committee of the Jewish War Veterans called this remark an insult to the loyalty and patriotism of the members of this group who have served this country loyally in war and peace. It added:

"It is apparently the view that American organizations must abdicate their right to speak out on issues affecting the foreign policies of the United States."

PUTS BLAME ON NASSER

But it is the Nasser government which is trying to sabotage American foreign policy. Within the last few days the Vice Foreign Minister of the United Arab Republic (Egypt), on his visit to Chile, told a news conference there that the Cairo government "will resolutely help Cuba defend herself against aggression if Cuba requests it, and if it is within our possibilities." There was a time when such a pronouncement would have been regarded as a public insult to the United States because of the Monroe Doctrine, which warns nations outside this hemisphere to keep out of Latin-American affairs.

And yet this Member imputes improper motives to other Members of Congress who resent the pro-Communist tactics of Egypt's dictator.

Mr. Speaker, in proper observance of the rules of the House, and because the moral issue involved is of paramount interest, I have taken the liberty of deleting all three personal references, both critical and friendly, to Members of the other body in Mr. Lawrence's article.

Political Bickering No Sign of Divided Nation

EXTENSION OF REMARKS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the Flint (Mich.) Journal, entitled "Political Bickering No Sign of Divided Nation, Mr. K." I believe the article graphically illustrates that while Americans can wage fierce political campaigns and openly express their political dif-

ferences, we are, nevertheless, completely united in our opposition against the Soviet threats and that we are determined to preserve our honor as leaders of the free world.

The editorial follows:

POLITICAL BICKERING NO SIGN OF DIVIDED NATION, MR. K.

Why did Soviet Premier Khrushchev deliberately sabotage the summit meeting?

There have been as many guesses as there are foreign correspondents and analysts. Their answers, more or less, all fall in one of four areas.

Khrushchev discarded his peaceful coexistence pitch in a fit of rage over being made to look bad when the U-2 operations were revealed.

Internal disorder in Russia called for an international incident around which to rekindle dedication to the cause of communism.

The Communist Central Committee is fed up with Khrushchev's sweet talk and has stripped him of his power. It is calling the shots now and the Premier is merely carrying out his orders.

Red China is dictating the new get tough Communist tactics.

Whatever the reason, the lid has been blown off, and the situation is one which must be taken seriously. If the West has learned anything about Khrushchev and his Red playmates, it should have been not to treat them lightly or with contempt. They don't play the diplomacy game according to Western rules.

We have been lulled into believing the Communists don't want to provoke a shooting war—not now, anyway. They're just blowing off steam.

But that's what the Western leaders thought about Khrushchev's threat to wreck the summit. His raving about the U.S. spy plane was interpreted as a play only to gain an advantage at the conference table in Paris. He wouldn't go far enough to endanger the summit.

Not much he wouldn't. He went—or was sent—to Paris for one purpose. He carried a diplomatic bomb which functioned perfectly. Hopes for a relaxing of international tension were blasted into small bits.

And while the West is reeling from this unexpected back stab and trying to anticlpate what Khrushchev's next move in East Berlin might be, Communist China is making a move.

Nationlist Chinese sources report that the Reds are massing ships and planes across from Formosa, defended by the U.S. 7th Fleet. It is a good guess that the Reds may revive assaults on Quemoy or other Nationalist islands in an effort to involve us in something just short of a major war.

Pelping newspapers, as might be expected, gave prominent displays to stories of the summit breakup and placed the blame on warlike United States. Even before the one and only meeting was held Monday in Paris, the Chinese Reds were attacking us on radio and in the press. With an air of "I told you so," Mao Tse-tung twitted Communists who called President Eisenhower a man of peace. He did not mention Khrushchev by name, but the Soviet Premier used that description of Mr. Eisenhower after his U.S. visit last fall.

Red China is being credited with at least a behind-the-scenes role in wrecking the summit because of its record of opposition to relaxation of East-West tensions.

In 1958 Khrushchev tried to arrange a summit meeting at the United Nations without Pelping's participation. Suddenly he made a trip to Pelping—and the proposed summit meeting was called off. In a matter of weeks, the Chinese Reds opened a bombardment of the Nationalists offshore islands,

and this country immediately rushed ships and planes into the Formosa area to meet

Apparently Mao feels the time is ripe to test us again.

While there is danger in underestimating the extent to which Khrushchev-whether he is power happy or running scared—might go to capitalize on what he feels is a diplomatic victory, he and Mao may be making just as serious a mistake.

They may be underestimating this coun-

Khrushchev made many references in Paris to the upcoming U.S. elections. He apparently feels this is a good time to get tough because our country is split down the middle by internal strife and political bitterness.

But his understanding of our political system is as faulty as is his belief that our high standard of living is an indication of

a weak, decaying society.

He will discover that Americans can wage fierce name-calling political campaigns and engage in petty bickering at local, State and national levels. But in time of crisis, when their Nation is challenged, they stand shoulder to shoulder in a unity that has made this country the strongest and most powerful in the world.

That such a crisis happens to coincide with a national election matters little. Like a closely-knit family group, we enjoy the right to argue among ourselves, but no outsider had better try to step in to cause

trouble.

This spirit-a burning love for our country that Khrushchev and other Communists will never understand-is already in evidence in support of Mr. Eisenhower in this

hour of peril.

The type of unity that has seen our country through its most trying days was best expressed by H. Roe Bartle, Kansas City mayor who spoke at the annual chamber of commerce meeting here Tuesday night.

"Let me say to you that I am a loyal Democrat. I am more than that. I am a died-in-the-wool southern-born Democrat.

And I am proud of it.

"But tonight my heart and my support is with President Eisenhower in Paris. He may be a Republican President, but he is my president and a representative of my country."

If Khrushchev is counting on a divided America, he needs some new spies over here. They've miscalculated and underestimated

the American people.

Northwest Fir Lumber Prices Continue To Fall

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following news story which appeared in the Wall Street Jour-

nal Monday, May 23, 1960.

It presents the story on the northwest fir lumber front. That story is not encouraging. Prices are down. Warehouse stocks are up. Production is running ahead of order. Mill inventories are more than 31 percent bigger than a year ago at this time.

One lumber wholesaler summed it up with "things are deathly quiet in the home building areas."

We will be needing the legislation to come in the omnibus housing bill.

We need the help proposed in the Emergency Home Ownership Act—H.R. 10212-which has been approved by this body and which now is pending before the Senate.

The Wall Street Journal news story follows. It sums up the danger signals now before us:

NORTHWEST FIR LUMBER PRICES CONTINUE TO FALL-DESPITE HOME BUILDING PICKUP IN APRIL, KEY PRICES ARE OFF \$2 IN PAST 2 WEEKS-PRODUCTION IS RUNNING HIGH

PORTLAND, OREG.-Despite optimistic talk about home construction picking up, fir lumber prices at mills in the Northwest continue to slide downward.

Prices on key grades of green fir have slumbed as much as \$2 a thousand board feet in the past 2 weeks. Most observers here are disturbed since there has been no price rise, which normally follows a seasonal upturn in homebuilding.

"It's been a sick market all spring and it looks like it's going to stay that way all summer," said one Northwest lumber wholesaler.

April housing starts did show a pickupto an annual rate of 1,135,000 units from 1,125,000 in March-but one Northwest lumberman said, "Maybe starts picked up in April, but that was only a makeup for the bad building weather that held starts down in February and March."

PRICE DOWN \$14 PROM 1959

Beliwether grade green 2 by 4's, sential items in home framing, now bring about \$66 a thousand board feet in carload lots at Northwest mills. This is down from \$68 a thousand early in May and nearly \$14 a thousand lower than a year ago. Prices on British Columbia lumber shipped into the United States are slightly lower, while prices on fir lumber bought in Oregon for California are slightly higher.

"It's a miserable situation. The price could go down another \$1 tomorrow a lot easier than it could go up," says an Oregon

lumber wholesaler.

Weak demand and too much production get equal blame for the soft lumber prices.

"Things are deathly quiet in the home building areas," said another Northwest lumber wholesaler. April's 1,135,000 seasonally adjusted annual rate of starts is well below the 1,434,000 rate in April 1959. Federal experts and homebuilding officials have predicted 1.2 million starts in 1960, which could be below 1959's 1.3 million.

Fir orders have echoed the wholesaler's claim that homebuilding is quiet compared to last year. Orders for fir lumber received Northwest mills for the first 19 weeks of 1960-through May 14-were down 9.5 percent from the same period last year, according to the West Coast Lumbermen's Association, an industry group representing 66 percent of the fir region capacity.

Orders climbed 6.5 percent over production in the latest reported week ended May 14. It was only the second week this year that orders have exceeded production. While the upturn was encouraging, lumbermen point out that only a very small portion of the upturn occurred in the important rail market, that accounts for nearly 70 percent of all lumber shipments. Most of the gain came in cargo-water shipment orders that traditionally are more spasmodic in nature than

PRODUCTION RUNNING AHEAD OF ORDERS

Production is running ahead of orders so far this year and is higher than output for

the comparative period during last year's building boom.

"There's just too much lumber being produced," conceded a sawmill operator. Output has exceeded demand by nearly 10 percent in the year ended May 14 and is 4.2 percent above production in the like 1959 period

Mill inventories, which have stacked up at alarming rate from the heavy production, are currently over 31 percent bigger than they were a year ago at this time, according to the WCLA. In the past month, inventories have declined slightly, but in April and May of a year ago, a much greater decline was registered.

Many see the giant stocks in mill warehouses as a deterrent to any price upturn before late summer or fall.

The figures on housing starts as presented by the May 1960 construction reports of the Bureau of the Census tells the same dismal story.

The article follows:

NONFARM HOUSING STARTS IN APRIL 1960

Nonfarm housing starts totaled 110,400 in April according to preliminary estimates of the Bureau of the Census, U.S. Department of Commerce. The April starts for privately and publicly owned units were 13 percent above March, but 22 percent below April

The 108,900 privately owned dwellings begun last month represented a seasonally adjusted annual rate of 1,135,000, compared with the estimated rate of 1,125,000 for February. When averaged for the first 4 months, the seasonally adjusted annual rate amounted to 1,147,750, 18 percent below the 1,401,000 for the same 1959 period.

Starts in publicly owned projects in the first 4 months of this year totaled 8,200 units compared with 11,600 in the same

period in 1959.

Needed: New Power Company Propaganda Probe

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. ULLMAN. Mr. Speaker, I call the attention of my colleagues to the following article which appeared in the May issue of Public Power magazine. Mrs. Reid's story speaks for itself, as do the facts which she has brought together regarding the massive and continuing campaign of antipublic power propaganda:

[From Public Power magazine, May 1960] NEEDED: NEW POWER COMPANY PROPAGANDA PROBE

(By Virginia Reid)

"The record in this investigation establishes conclusively that the electric and gas utilities, since about 1919, have carried an aggressive countrywide propaganda campaign. In it they have made use not only of their own agencies, but have enlisted outside organizations in active, and often secret, aid. In it they have literally em-ployed all forms of publicity except 'sky writing,' and frequently engaged in efforts to block full expression of opposing views. The record shows that this propaganda has for its objective the disparagement of all forms of public ownership and operation of utilities and the preachment of economy, sufficiency, and general excellence of the privately owned utilities"-Federal Trade sion, summary report to the Senate of the United States on efforts by associations and agencies of electric and gas utilities to influence public opinion, 1934.

The Nation was shocked by revelations of privately owned utilities' propaganda brought to light in the Federal Trade Commission investigations of more than a quarter century ago. But the opinion-molding machinery of the holding company barons of the twenties was small and ineffective compared with the power companies' vast, modern and well-organized national public relations program of today.

Every day thousands of dollars of electric revenues are being expended by the power companies in a massive assault upon public opinion. Just how much is being spent in how many ways could only be answered by another thoroughgoing investigation into the operations of the present-day corporate descendents of the holding company empires.

Occasionally the heavyhanded tactics of the twenties are in evidence: utility money turned up in a State official's hands in Illinois; an ex-Governor of Arkansas has described how he was promised and threatened by utility officials; a Mississippi company official has told of lavish entertainment paid for by unsuspecting electric ratepayers.

But much of today's power company propaganda campaign is a far cry from the fre-quently crude ventures of the old utility State committees whose sordid histories were among the more dismal chapters of the Trade Commission investigation. Today's power trust employs the most advanced Madison Avenue techniques that its ever-growing revenues can finance.

Although many of the details of the power companies' efforts to shape and distort public opinion are well-kept secrets, some facets have been exposed to public view. Enough is on the record to suggest the existence of an all-out campaign against public power at the Federal, State, and local levels. Such warfare can have only one objective; a complete nationwide power company monopoly of electric service—aptly described by Theo-dore Roosevelt as "a monopoly far more powerful than anything known to our experience."

ECAP'S NATIONAL ADVERTISING

Best known of the weapons in the power companies' antipublic power arsenal is, of course, the display advertising of the electric companies advertising program (ECAP). ECAP was launched in 1941 by the large

advertising agency, N. W. Ayer & Son, Inc., with some 50 power companies' support. Since then, the number of participating companies, and the size of the budget have been greatly expanded.

nearly two decades, ECAP has employed newspapers, magazines, radio, television and films to boost the virtues of the power companies and assail public power. How ECAP uses modern polling techniques to develop its campaigns was first disclosed nearly 10 years ago in Public Power (July

A booklet issued by ECAP, "The Public and You," advised the power companies that they were making little headway in trying to convince the general public that the Tennessee Valley Authority was a bad idea (63 percent approved and only 10 percent disapproved of TVA, a small change after 2 years of intensive vilifying of TVA in ECAP ads). But the pollsters discovered that 69 percent of the people interviewed were opposed to socialism, and a power company battle cry was presented to subscribing companies with this logic:

"It is apparent that to link our fight to the TVA question would run us into a lot of opposition, most of it based on lack of knowledge. But to link our fight to socialism is something else again. The people do not want socialism.

"We're on favorable ground there, ECAP advertising in magazines and on the radio will stress the fight against the socialistic state more in the future. It should be stressed, too, on the local level in speeches, radio talks, interviews and other public expressions of management opinion.

And it was, too.

How effective have ECAP's ministrations to the public mind been? According to the New York Times of July 13, 1953, "One of the biggest shifts in public opinion in the United States is credited" to ECAP. Again opinion polls were cited to demonstrate a significant shift toward more support for private business and less for public operation after a dozen years of ECAP advertising.

One of the most revealing reports on ECAP's program has come from the Saturday Evening Post, which in 1957 reprinted ECAP ads in a booklet which contained this frank

"By the end of 1956, the Post had carried 169 ECAP advertisements-more than any other major publication. They are reprinted here to show how one industry, advertising its cause consistently and persistently, has been able to help shift the great weight of public opinion. ECAP advertising is designed to win public support for the independent electric light and power companies. Most people 15 years ago favored Federal public power. Today, the balance has swung in favor of the electric companies.

"In the August 19, 1950, issue, the Post warned editorially, 'we can't salvage free enterprise without a battle.' The advertisements which follow have been used in the battle along with the editorial comment to help turn the tide of public opinion."

The modern pretenders to Ben Franklin's editorial mantle may not have been pleased with the promotion booklet's linking their policies to advertising, but the Post's editorials in the power field have decried public power with a vigor at times rivaling ECAP.

After reprinting the 169 ECAP ads, the Post booklet bluntly concluded:

"This continuing campaign by the electric light and power companies is classic proof that advertising can mold public opinion as well as increase the sale of products and services.

How much has ECAP's advertising cost? No total cost figure has been made public, but the sum is known to be many millions. For example, while many readers are most familiar with the ads carried in national magazines such as the Saturday Evening Post, N. W. Ayer & Son estimated in 1958 that more than \$100 million had been spent by companies using ECAP ads in local newspapers in 16 years. This \$100 million is in addition to the multimillion-dollar expenditures made by ECAP in national media.

The Federal Power Commission in 1958 placed the cost of 26 ECAP ads at \$1,996,661. but just how many millions have been spent by ECAP to shift the great weight of public opinion could be developed only by an investigation such as that conducted by the Federal Trade Commission some 30 years ago.

Nor is this an idle question, since it relates to another vital query: who has paid the bill for this opinion molding? The shocking answer appears to be the electric consumers served by the participating companies for the most part.

In 1958, the staff of the Federal Power Commission recommended that the cost of nine ECAP advertisements—a total expense item of \$863,130-be excluded from company rate bases because the ads were held to be political in content. The companies have protested and the matter is pending at the Commission. Also in 1958, the Internal

Revenue Service ruled that the costs of ECAP ads held to be political in nature could not be deducted by the companies as business expense for purposes of computing their Federal income taxes.

But these belated efforts to relieve the ratepayer of the costs of ECAP advertising only emphasize that for nearly 20 years most of the cost has been paid for in electric bills of the companies' customers-plus, ironically, consumers of public power systems and cooperatives which purchase power from the private companies. As Senator Estes Ke-FAUVER has phrased it, these electric consumers have been paying for their own brainwashing.

PUBLIC INFORMATION PROGRAM (PIP)

Less well known-but not necessarily less active or effective in molding public opinion—is the power companies' national public relations organization, known as the public information program (PIP).

PIP was organized in 1949 by a group of 10 power company executives meeting in Chicago. "We had one thing in common the belief that the people should be told of the rapid growth of public power as a threat to the business-managed electric industry and the traditional ways of American business," wrote James W. Parker, then president of Detroit Edison Co. (Public Utilities Fortnightly, June 8, 1950).

Bozell & Jacobs, Inc., a public relations and advertising firm, was employed to coordinate the PIP program, and a little more than a year after the organizing meeting it was reported that more than half the industry was participating.

PIP was set up to operate at three levelslocal, regional, and national. Providing background speech material, press, and employee information is an important part of the program.

Regional groups were organized to hold monthly meetings to develop a coordinated program for each region. Employee programs utilizing forums, meetings, and pamphlets are a part of the program.

Booklets and brochures denouncing public power are another feature of PIP's program. The information program has included such titles as "Sixteen Myths of Public Power," "Socialism Is Not for United States," "Let's Guard Our Freedom," and "Is It Worth a

ECAP's advertising program and PIP's public relations campaign are the two leading national propaganda agencies of the private power companies but they receive potent support in their efforts from two other national power company organizations: the Edison Electric Institute (EEI), the companies' national trade association, based in New York; and the National Association of Electric Companies (NAEC), the companies' Washington lobby.

In addition to their own propaganda mills, the power companies have other allies workfor them less obviously. The classic example is the Industrial News Review, published by E. Hofer & Sons in Portland, Oreg.

"CANNED" EDITORIALS HIT PUBLIC POWER

Industrial News Review is a packet of editorial material sent each week without charge or obligation to newspaper editors throughout the country. It is frankly financed by power companies and other industries whose views are reflected in the "canned" editorials offered in the Industrial News Review. Editorials denouncing public power are a frequent feature.

Editors are urged to use material from the Hofer service "with or without credit, in whole or in part." That many do is testified to both by studies made of use of this material and by the fact that E. Hofer & Sons has been providing sponsored editorials to American newspapers since 1913. In fact,

Samuel Insull discussed arrangements for national coverage by the Hofer organization at a meeting of the National Electric Light Association in March 1923, and Mr. Hofer himself testified concerning his services in the Federal Trade Commission investigations.

The Hofer organization is only one of several which provide editorial material to newspapers, and it is probable that others may include power companies among their clients.

From what is on the record, it is clear that the private power companies' propaganda operations are vast and costly—utilizing both "hard sell" and "soft sell" to shape the opinions of the American people in an important area of public policy. It is equally clear that the American people are entitled to know the facts about the "underwater portion of this propaganda iceberg" which seeks to fasten a 100-percent monopoly of a vital service on them.

Annual Poll

EXTENSION OF REMARKS

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith the results of my annual poll of my constituents.

The answers to questions 5—farm supports—and 11—Federal aid to teachers salaries—were broken down and tabulated as to those giving their occupation as farmers in the first instance and teachers in the second instance.

[In percent]

	Yes	No	Unde- cided
Should labor unions be brought under antitrust laws? In an effort to combat juvenile delinquency, should the Federal Government at taxpayers'	87	9	4
expense establish a Youth Conservation Corps for boys 16 to 21 to work on reforestation and other conservation projects on publicly owned lands?	60	35	5
3. Do you favor diplomatic recognition of Communist China?	20	69	111
4. At present, persons drawing social security benefits are penalized if they earn more than \$1,200 a year. Do you believe they should be permitted to earn a greater amount without			
penalty?	76	18	6
5. Do you favor continuing agriculture price supports?	20	74	6
Those giving their occupations as farmers on this voted as follows. 6. Do you believe the Federal Government should have more authority to regulate radio and	31	65	4
TV programs?	38	56	6
7. In some areas in the South, certain people because of their race are reportedly not permitted to register to vote. Where this happens should the Federal Government provide Federal			
registrars on a temporary basis?	70	21	9
 Do you favor legislation to provide Federal aid for school construction? Should we make an all-out effort to surpass Russia in the exploration of outer space, regard- 	41	50	. 3
less of cost?	28	69	5
10. Sould Congress increase postal rates to help meet postal deficits?	50	47	3
11. Would you favor Federal aid to raise teachers salaries?	21	74	5
Those giving their occupation as teachers on this voted as follows.	23 84	74 10	3
12. Do you favor the proposed summit conference between the free world and the Soviets?			0
Strike affect a major sector of the national economy and/or national defense? 14. Do you believe merging our Army, Navy, and Air Force into a single Military Service would increase efficiency, reduce waste and duplication of effort and matericl, and remove	83	14	3
interservice rivalry?	77	18	5

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person Ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

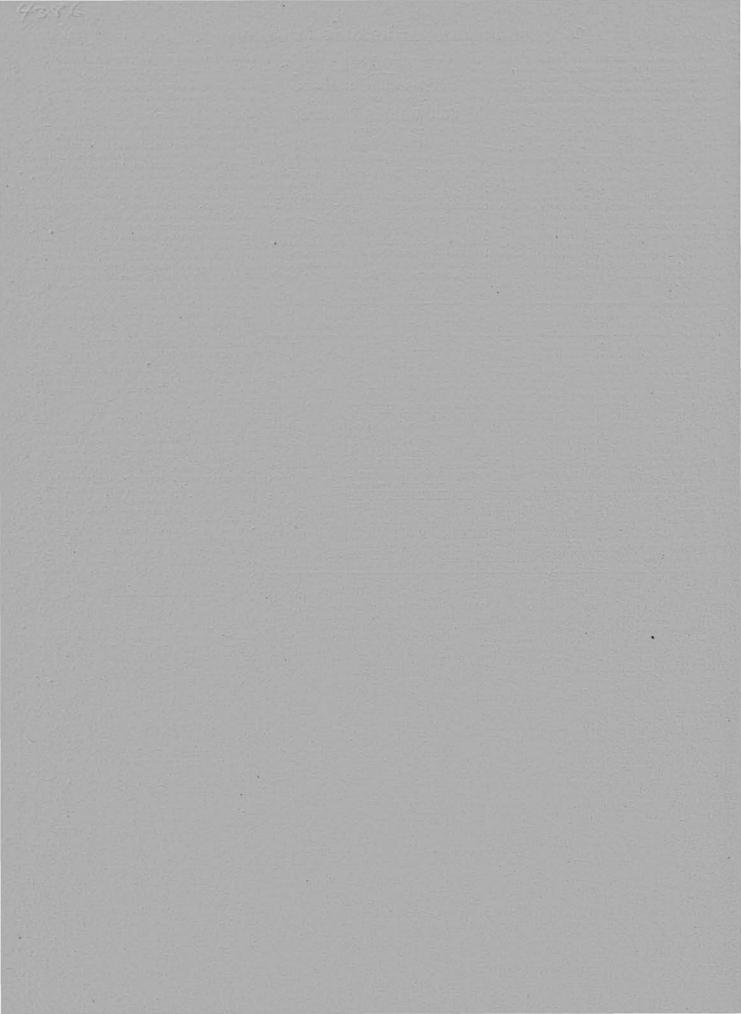

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senste, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Address Delivered by Senator Smathers Before the Atlanta Bar Association

EXTENSION OF REMARKS

HON, RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. RUSSELL. Mr. President, last Friday the Bar Association of the City of Atlanta had the good fortune to hear a timely address by our distinguished and able colleague, the Senator from Florida [Mr. SMATHERS].

The Senator's remarks dealt with the crisis that is confronting our Nation as a result of the U-2 plane incident and the subsequent breakup of the summit conference in Paris.

Mr. President, I believe all of us can brofit from the calm and reasoned analysis that the Senator from Florida has made of these momentous events. Certainly all of us wholeheartedly support his conclusion, namely that this Nation must make it unmistakably clear to Khrushchev that we intend to stand firm in the face of his blusters and threats. As he has so well stated it:

We must show that we do mean business—that we will not abandon our rights nor shirk our duties. * * * This is the surest road to peace.

Mr. President, I ask unanimous consent to have the remarks of the Senator from Florida printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Let me turn now to a subject which has been dominating the world's front pages during all of the past fortnight.

I refer, of course, to the U-2 "spy-in-thesky" incident and the consequent breakdown in the summit meetings at Paris.

First of all, let me say this about the crisis atmosphere in which we now find ourselves: Basically, all that has happened is a dashing of expectations; nothing fundamental has changed at all.

Regardless of what might have happened at Paris in the way of relaxing world tensions, the Soviet Union would not have given up its intention of converting the world, by hook or crook, to communism. The tactics may change, but never the final strategy.

Accordingly, just as there was never any ground for wild anticipation, neither is there, in the current situation, any reason for panic

No doubt we will see, in the months ahead, a lowering of temperatures in the cold war. We must be prepared, again, for a series of challenges to Western solidarity and, again, we must meet them coolly—as we have met previous challenges.

Certainly, the danger of thermonuclear war has not been diminished by the developments of May 1960—but, neither, it seems to me, has this danger been much increased. Unless the Russians achieve military preponderance, they have nothing to gain from war.

No one wins a war of mutual annihilation. The Russians are realists, and they know this as well as we do.

One of our most important tasks is to see to it that the Soviet Union never obtains the military preponderance which will make the

risk of war seem attractive.

If the "spy-in-the-sky" incident has not in fact materially altered the reality of the world situation—as opposed to its appearance—what then has occurred? What is all the fuss about?

Personally, I think there is a certain amount of real comfort to be derived from the U-2 flight. It demonstrates, to our citizens and to the world at large, that the myth of Soviet impregnability is exactly that—a myth. If a single, unarmed, slow-moving spy plane can penetrate Soviet airspace to a distance of 1,300 miles, then obviously a mass flight of Strategic Air Command bombers can also penetrate to perform SAC's assigned tack of retaliation in event of surprise attack.

Nonetheless, while I take this consolation from the U-2 affair, I must say that the timing of the flight and our handling of its exposure were major blunders.

I say this for these reasons:

I have always believed in the positive value of conversation between East and West even though they cannot, in the nature of things, lead to a total resolution of differences. I think they could, in favorable circumstances, affect the nature of the competition between East and West, changing it from cold war competition to peaceful economic, political, and social competition.

Such a change would materially reduce the possibility of accidental war and the danger of limited but still quite deadly warfare such as we have experienced in Korea and Indochina.

Accordingly, I regret the timing of the U-2 flight insofar as that flight has become a factor in the interruption of conversations between Mr. Khrushchev and the Big Three.

Nonetheless, it must be clear from his performance in Paris that Mr. Khrushchev wanted the summit meeting to disintegrate, that the U-2 incident was the vehicle of the breakup but not its cause.

Had Mr. Khrushchev been disposed to continue the dialog between East and West he could have accepted, without damaging the world position of the Soviet Union, President Eisenhower's statement that U-2 flights had been canceled and would not be resumed.

Indeed he would have seemed magnanimous, and he would no doubt have won a considerable propaganda victory.

Instead, Khrushchev made a series of demands the United States could not meet under any considerable circumstances.

Why?

The answer, I think, crept out in Mr. Khrushchev's tirade Monday. The U-2 incident, he said, had become a factor in the internal politics of the Soviet Union.

We in the West have known for a long time of the behind-the-scenes jockeying in the Kremlin over the policy of peaceful coexistence. Arrayed against Mr. Khrushchev and his supporters have stood the Stalinist clique with its nostalgia for the old days of the malled fist, and, in tandem, the generals of the Red army and air force. Over Khrushchev's shoulder at all stages has loomed the menace of Red China and its Stalin-type leadership.

These groups have never had any confidence in the policy of peaceful coexistence. They have, according to our certain knowledge, sabotaged it every inch of the way and now, with a boost from the U-2 incident, they have stolen the initiative.

Mr. Khrushchev, in other words, is playing the simple cat-and-mouse game of political survival in the toughtest league there is—the Kremlin hierarchy.

Kremlin hierarchy.

Where does all of this leave the West?

Fortunately, I think, Mr. Khrushchev has overreached himself with world opinion.

His phony innocence deceives no one. "As

His phony innocence deceives no one. "As God is my witness," he said on Monday, "I come here with clean hands and a pure soul."

The only way I know to describe this statement is with the Yiddish word "Hutspeh" ("u" like the "oo" in "foot") which may be defined as the quality shown by the man who murdered his mother and father and then demanded mercy because he was an orphan.

The world surely recognizes Nikita Khrushchev for the sanctimonious hpyocrite he is.

And so I would judge that we have not lost much, if any, ground in our propaganda battle with the Soviet Union.

We will have to play our hand carefully with respect to the U-2 incident, but, for the moment at least, we do not seem to be at any great disadvantage. Happily, the Russians have done a very clumsy piece of work and have muffed their opportunity.

great disadvantage. Happily, the Russians have done a very clumsy piece of work and have muffed their opportunity.

More serious, I think, are the pressures the Soviet Union is certain to exert on the circle of countries which serve as U.S. airbases. Norway, Turkey, Pakistan, Japan, and others have already felt the hot breath of Kremlin displeasure and they are squirming under it

Given the delicate state of the political situation in many of these countries as it affects relations with the United States, we will have to exert the utmost dexterity to avoid the loss of our forward bases and at the same time prevent the raising of political issues which could do enormous damage to friendly governments with their own electorates.

This task will require cool and careful diplomacy on the part of the administration and great restraint on the part of all U.S. political leaders. We can afford no further blunders. Neither should criticism of the administration's handling of this episode be permitted to degenerate into a backbiting exchange of charge and countercharge. The country's interests are above personal or party interests. At all times we should strive to maintain bipartisan unity at the water's edge. It is the key to survival.

Now, let me add this further thought. We need as a people, in developing this bipartisan unity at the water's edge, to recognize that we are in for a long, hard pull.

The U-2 incident is merely an episode.

Those who were pinning all their hopes on a miracle at the summit were bound to be disappointed sooner or later. They have merely been disappointed sooner.

Let's remember that the springlike atmosphere of the 1955 summit meeting was subsequently dispelled by Hungary and by Suez—

and yet the Big Four managed once again to find its way to the summit.

Regardless of which phase we are in summit or contrasummit—we need to keep our vision as firmly fixed on our goal as the Soviet Union's vision is fixed on its goal.

Their cause is world revolution by whatever route; our cause is the spread of democratic methods and institutions as a means of checking communism and contributing to the economic progress of the free nations of the earth.

We dare not allow our glance to be diverted from our objective by scare tactics nor even by overt actions short of war.

If there is a nuclear stalemate in the world, if there is a balance of terror, then this stalemate and this balance affect the Russians as well as they affect us.

Cowardice in the face of danger will only cause us to give away what cannot be taken from us.

Regardless of what cards he draws, the man who does not know the value of his own hand will walk away from the poker table without his shirt. He will be bluffed into throwing away his winning hands and suckered into entering pots he cannot claim.

This metaphor, I think, holds except in three respects: The stakes are higher. The play of the hands is infinitely more complex. And this is no game.

We are in the deadly serious business of seeing to our survival as a nation, as a civilization, as a species.

The greatest danger, as I see it, to survival in all three of these categories is that our antagonist will miscalculate.

We must not in a moment of vacillation allow him to misjudge the point at which we will yield no further, as Hitler misread the intentions of the British in the aftermath of Munich.

We must show that we do mean business—that we will not abandon our rights nor shirk our duties. We must demonstrate that we shall stand firm in the face of threats—and, if we do this, then we shall make the men in the Kremlin realize that the line has been drawn and they cannot cross it without unleashing the fury of a war which no one can win.

This is the surest road to peace. It will not be an easy road—the Communists will put roadblocks every mile along the way and try to tempt us and our allies, with detours which they can make attractive looking indeed at the entrance, carefully camouflaging the beartraps to which they lead. But it is the road we must follow, whatever sacrifices it may require, if we as a nation are to survive—if Western civilization is to be preserved.

Afterthoughts on the Summit Conference

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. EVINS. Mr. Speaker, we all agree with Stephen Decatur, the American patriot, who said:

Our country! In her intercourse with foreign nations may she always be in the right; but our country, right or wrong.

However, we would be derelict in our responsibility if we did not take precautions to see that errors are not repeated in the future. In this connection, in my newsletter this week I reported some

afterthoughts on the summit conference, and, under unanimous consent, I include this newsletter in the Appendix of the RECORD. The newsletter follows:

AFTERTHOUGHTS ON THE SUMMIT CONFERENCE

The tragic failure and collapse of the Paris summit conference this week has shocked the world. All Americans, and indeed the free world, had hopes that this conference might open the way to lessening the cold war and lead to a permanent and more lasting peace. Now the pathway toward peace is less clear. The cold war continues and the ways to solve it more difficult to determine.

In the midst of the blowup of the summit conference, our Nation and our President have been humillated as never before in our history. Our friends and our allies have been given great cause to doubt America's competence, our judgment and effectiveness as a leader in foreign affairs.

Despite these results and the blasting of our hopes and plans for some progress toward peace, we must, as a nation, remain united. It was Stephen Decatur, American patriot, who said: "Our country. In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

Democratic leaders have joined with others in sending a telegram to the President to acquaint the people of the world with the fact that we in this country stand united in matters of international affairs. Our leaders cabled the President:

"We feel that total failure of the summit conference and increasing mistrust on both sides will be serious and deeply disturbing to the world. All of the American people earnestly desire peace, an end to the arms race and ever better relations between our countries."

Others have publicly said that we should not try to brush under the rug our mistakes, fallings and shortcomings. It is known that Premier Khrushchev of the Soviet Union is difficult to deal with and having this knowledge our Nation should have fully and properly prepared for the summit conference. On the eve of a conference as important as this one—which carried with it the hopes of peace—the President should have required that all flights over the Soviet Union at this time be cleared with the White House. This was not done. It seems that one agency of the Government does not know what another agency is doing. Their work was not coordinated and most of all the President seemed not fully informed about the situation.

At first there was a denial that the plane had been ordered flown over Soviet Russia. Another report merely stated that the plane was on a weather observation mission. An additional report admitted that the plane was on a spying mission, and even at this point our leaders should have stated that the situation was being investigated and thus provide a cooling-off period. However, the President implied that reconnaissance flights or spy missions over Soviet territory would be continued. Later, at the opening of the Paris summit conference, he announced that such flights had been ordered discontinued.

In the face of these conflicting reports, the Soviet leader was given a wedge and an opportunity to sabotage and torpedo the conference, a device for which he was obviously looking.

While we must stand behind our country and behind our Nation's President, it seems only honest to admit that in our bureaucratic workings we are not infallible, and that administrative mistakes and mistakes in timing have been made; there has also been a lack of coordination in planning.

The miscalculations and unpreparedness which our country's leaders have displayed in its presummit and summit activities are

regrettable. The collapse of our plans at this crucial time has vividly pointed out the need for a reexamination and a reappraisal of our Nation's handling of foreign affairs.

The failure of the summit conference has thus demonstrated the failure of the President to come to grips with the vital details which are so very important in all matters and doubly important to this Nation and to the peace of the world.

Someone has said that there is no substitute for doing our homework and that there are some matters that cannot be delegated.

America will recover our position and its prestige, which has been shattered, but we must learn from the lessons of our bungling and failures. We must profit by our mistakes and, above all, we need to be ourselves, Americans at our best, and not flinch from facts, truth, and realities. In this hour we need to be fed not just good and pleasant words, but truth, however distasteful; then we can march forward together with new ideas and well-thought-out plans and policies in the field of foreign affairs and patiently continue to work for the promotion of peace.

An Act of Prudence

EXTENSION OF REMARKS

Hon, EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article written by Arthur Krock and published in the New York Times of May 24, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—AN ACT OF "PRUDENCE" IN THE RIGHT PLACE

(By Arthur Krock)

Washington, May 23.—With the return to Washington of U.S. officials who were in Paris when Soviet Premier Khrushchev stifled the embryo of the 1960 summit conference, it is possible to assemble the background of the Sunday, May 15, order for the limited "alert" of the American Armed Forces. This action and its author, Secretary of Defense Gates, have been harshly criticized by Adlai E. Stevenson and others on these assumptions and conclusions:

- 1. The timing was a worse show of "incompetence" than the dispatch of the U-2 a few days before the summit conference was due to assemble, because it was an act of deliberation, whereas the sanction of pilot Powers' overflight was part of a routine operation which the Central Intelligence Agency had carelessly allowed to become uncoordinated with development of high policy.
- 2. Secretary Gates gave the order when Prime Minister Macmillan and President de Gaulle were still laboring to get the summit conference back on the track, when (in Stevenson's words) "there was still a chance to save the situation."
- The exercise also was executed "incompetently" because the Secretary "forgot to advise" the Pentagon press officials of the order.
- 4. This neglect was compounded by the fact that the order was issued on Sunday when these officials are off duty, and that added to its general atmosphere of emergency which assured the excessive interpretation made of it by some field commanders.

5. It was a conceivable impression in command areas that the President, being in Paris, was alerting the Armed Forces for a surprise attack on this country. And the whole incident supplied Premier Khrushchev with another item for his thesis that the President is controlled by warmongers whose design was to wreck the summit conference.

NO NOTICE TO ANYONE

The actual circumstances in which the order was issued greatly weaken this arraignment and support the view that the alert was an act of prudence in the Secretary's plain line of duty. Therefore it was deliberate, as a matter of course. And the Secretary did not advise Pentagon press officials of the order because of its basic purpose. That was to make a quiet test of command readiness, particularly with respect to communications. And the only effective method of testing is what the Pentagon calls a no-notice exercise. That necessarily covers press officials and most others.

The fundamental criticism of the timing, the order, rests on the premise that it was issued when, as Stevenson asserted to have been the fact, there was still a chance that Macmillan and De Gaulle could save the situation from collapse. But by Sunday midnigth, May 15, when Gates called for the limited alert, the judgment of the American delegation was to the contrary, and this was based on knowledge—which proved accurate—of what Premier Khrushchev would say to the other heads of state on Monday.

THE ADVANCE INFORMATION

During the course of Sunday he had given this summary to President De Gaulle, then to Prime Minister Macmillan, and by midnight they had reported to President Eisenhower the fallure of their efforts to induce him to modify his demands so that the summit conference would be possible. The only statement Khrushchev left out of his advance summary was the withdrawal Monday of his invitation to President Eisenhower to Wait Souter Pursident.

Visit Soviet Russia.
On May 12 the Secretary had consolidated all long-distance communications service of the Armed Forces in an agency under the Joint Chiefs of Staff. Convinced Mr. Khrushchev had come to Paris to wreck the conference, and in view of the custom of the Communist powers to probe certain borders in such circumstances (Berlin, Turkey, the Middle and Far East), he decided on the military communications test as an act of prudence, conveying no implication to the field commanders of preparation either for aggression or for defense against a possible surprise attack on the United States.

Gates then informed the President and Secretary of State Herter of his decision, to be taken on his statutory responsibility. There was no dissent, its basis and limited scope being known. After about 7 hours the notice exercise was pronounced a success, and it will be frequently repeated. This vigilance should be reassuring to the American people.

Our Federal Excise Tax Structure

EXTENSION OF REMARKS

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. BARR. Mr. Speaker, today I introduced a resolution into the House of Representatives authorizing and direct-

ing the Ways and Means Committee to begin a study of our Federal excise tax structure. The purpose of this study is to determine which taxes the United States can give up and return to the States for educational and other purposes. We are estimating budget receipts of \$9,100 million from excise taxes in fiscal 1960, and from a preliminary check it would seem to me that about 5 percent of this total, or about \$500 million comes from taxes that could be collected efficiently by the States. All the taxes under the budget heading "Retailers Excise Taxes" and including the taxes on jewelry, furs, and so forth, could probably be efficiently collected by the States. The total under this budget heading comes to an estimated \$377 million for fiscal 1960. It also seems that about \$150 million from the budget heading "Miscellaneous Excise Taxes" and including taxes on admissions, club dues, billiard tables, and bowling alleys could be turned back to the States.

Because of the fact that our business is conducted more and more on a national level, it becomes increasingly difficult for the States to collect certain taxes. They simply cannot get the money stopped as it flows across the country. This is the reason I have asked for a study by Ways and Means to determine what excise taxes now collected by the Federal Government could be efficiently collected by the States. As I mentioned above, a preliminary check seems to indicate that taxes totaling about \$500 million would fit this test.

Since the collapse of the summit conference, the Congress has been besieged by new spending requests. The very next day the Department of Defense came to us and asked that we put back in the appropriation bill about \$300 million for an atomic aircraft carrier and about the same amount for Bomarc missiles. In my opinion this is foolish. I for one had no hopes of any results from the summit and voted for the defense budget assuming that the cold war would be around for quite a while. Khrushchev's belligerence came as no particular surprise to me, so I am not going to be stampeded into an enormous increase in military spending.

History has been telling us for several thousand years that nations are not murdered by an aggressor; they usually commit suicide by neglecting their internal problems. This is a good time to remember the lesson. If we are stampeded into diverting more and more of our national resources into military funds rather than facing the purely local problems of schools, teachers' salaries, sanitation, hospitals, libraries, police protection, and transportation, we can kill this Nation as effectively as the Communists could by aggression.

The solution of these local problems by local and State governments has become increasingly difficult because the United States has literally crowded them out of many fields of taxation. If local governments are going to solve local problems, they must get their hands on some money. The old standby of local government, the property tax, is just about "on the ropes." There is not much room

for additional revenue from this source. So the alternatives are simple. The Federal Government can try to solve local problems, or it can vacate certain fields of taxation and let the States go after this money. I would favor trying the last alternative first for the simple reason that it is so difficult to devise a national program to fit the diverse problems of all the States in this country.

The proposal that I am bringing forward could provide an initial \$500 million for local problems. This should mean about \$12½ million a year for our State of Indiana and about \$2½ million a year for my congressional district. It would at least be a start in facing up to our local problems of education, urban development, sanitation, and police and fire protection.

A Boycott Boomerangs

EXTENSION OF REMARKS

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. YOUNG of Ohio. Mr. President, a recent editorial, "A Boycott Boomerangs," which was published in the Cleveland Plain Dealer, one of Ohio's great newspapers, on May 7, 1960, is worthy of careful study.

This editorial offers an exceedingly clear commentary on the situation faced by us in the Suez Canal controversy. It reiterates the fact that officials of our State Department seem to have disregarded our moral commitments made to Israel at the time of her withdrawal from the Sinai Peninsula.

I ask unanimous consent that this editorial be printed in the Appendix of the Record. I commend it to my colleagues in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BOYCOTT BOOMERANGS

In New York harbor, a seaman's union picketed an Arab ship as a protest against the Arab boycott of American vessels that trade with Israel. The picketing was called off yesterday on assurances the union's grievances would be taken up by the U.S. Government with Arab governments.

At the same time there is a violent argument in the Senate over a provision in foreign aid legislation that would indirectly condemn the United Arab Republic's ban on Israeli shipping through the Suez Canal, thus bringing the Middle East problem back into Congress and into public debate.

The State Department holds it is embarrassed and chagrined over these recent developments, contending that the New York picketing and the Senate's directives which earlier had been accepted by the House, interfere with its conduct of foreign policy. The Department has the vocal and active support of Senator J. W. Fulbright, Democraft, of Arkansas, chairman of the Senate Foreign Relations Committee.

A strange aspect is that the Arab boycott of Israel and Israeli products and shipping stirred but feeble protests. Even the U.S. Navy for a time cooperated in the boycott. Now that retaliatory action is taken and a

protest is registered in the U.S. Congress, a terrible hue and cry is raised. Why is that?

As noted in this space before, we are not endorsing or condoning boycotts, picketing, and blockades. To the contrary, we condemn them. We do say, however, that those who take up such weapons have no right to complain if similar weapons are used against them.

It might be timely and fair to recall to President Eisenhower and the State Department, the President's speech on the night of February 20, 1957, when he called on Israel to retire from Egyptian territory after the

Sinai invasion of 1956:

"We all hope that the Government of Israel will see that its best immediate and longterm interests lie in compliance with the United Nations and in the declarations of the United States with reference to the future.

"Egypt, by accepting the six principles adopted by the Security Council last October in relation to the Suez Canal bound itself to free and open transit through the canal without discrimination, and to the principle that operation of the canal should be insulated from the policies of the country.

"We should not assume that if Israel withdraws (from the Gaza Strip and the Straits of Aquaba) Egypt will prevent Israeli ship ping from using the Suez Canal and the Gulf of Aquaba. If, unhappily, Egypt does hereafter violate the armistice or other international obligations, then this should be dealt with firmly by the society of nations * * *."

The Senate and the union merely took up where Mr. Eisenhower left off, while the State Department ignored what Mr. Eisenhower

Mr. Frank Austin Bond

EXTENSION OF REMARKS OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. CONTE. Mr. Speaker, the recent passing of Mr. Frank Austin Bond, native of North Adams, Mass., ended a career of distinguished service and unselfish dedication to civic activity which spanned more than 40 years. With the exception of his student days at Cornell University and honorable military service in World War I, Mr. Bond spent his entire life in the town of his birth

which he so dearly loved.

In the years of his career the posts he held were many and varied. He first undertook civic responsibilities as a member of the school committee in 1916 and later as city councilman, both elected positions. But far and above official positions, he gave his time and energy to those voluntary tasks of incalcuable community benefit. He was president of the YMCA, chamber of commerce, and Community Chest. During World War II and after, he served as a member of the North Adams Draft Board. In 1943 he was chairman of the war fund drive and in 1944 a director of the State war fund council of the National War Fund. The Governor appointed him a trustee of the soldiers' home in Chelsea.

In the wider field of politics, Mr. Bond was a member of the Republican State Committee and in 1944 attended the GOP national convention as a delegate.

His many offices of public service included membership in 1934 on the NRA committee for savings banks and advisory committee on civil defense for the State, in 1954.

His career as a businessman was varied and successful. He headed the North Adams Industrial Co.: president of the Richmond-Wellington Hotel Corp.; director of the former Blackinton Mills Corp.; and president of the Hoosac Savings Bank.

To all of these multiple activities, whether civic, public service, or business, he contributed his ability and energy, integrity of character, and humane dedication. His unselfish devotion merited the friendship and respect of the entire community which owes him so much

I know that this distinguished body joins me in expressing my profound sympathy and deep condolences to his family. The city of North Adams remains as his monument, the only one I am sure, he would have liked best. We join this community in paying reverent respect to the memory of this great American citizen.

The War That Can Be Won

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 24, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that my address entitled "The War That Can Be Won" and describing the massive research effort that can defeat cancer be printed in the Appendix of the RECORD. I delivered these remarks on May 5 at Wheeling College, Wheeling, W. Va.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

THE WAR THAT CAN BE WON

(Remarks of Senator HUBERT H. HUMPHREY at Wheeling College, Wheeling, W. Va., Thursday, May 5, 1960)

I take my theme for today's talk from one of the youngest of living Americans-former President Harry S. Truman. He said on May 24, 1951: "The only kind

of war we seek is the good old fight against man's ancient enemies-poverty, disease, hunger, and illiteracy."

Poverty, disease, hunger, illiteracy.

Each of these ancient enemies could be the topic of many volumes, let alone a single speech.

Today I shall talk mainly about the worldwide fight against one disease—cancer.

And it is appropriate that I should talk

about it here in West Virginia.

During three decades, the late Senator Neely led the fight for cancer research on the floor of Congress-led it, with magnificent eloquence and determination, until he himself was cut down by this dread disease.

As long ago as 1928, he proposed an ap-propriation of \$100,000 to the National Academy of Science to make a thorough study of the incidence of cancer in this country. It was slashed to \$50,000.

In 1946, while a Member of the House of Representatives, he introduced a bill to appropriate \$100 million to be used over whatever period was needed for a large-scale research offensive against cancer.

Matt Neely's words and efforts were not in vain. Last year Congress voted \$90 million to the National Cancer Institute for 1 year's

research.

When Senator Neely began his fight, 125,-000 Americans were dying each year of can-Last year it was 260,000.

Because cancer has reached epidemic proportions in this country, we must mobilize

every resource to conquer it.

I, therefore, pledge to the American people that, if I am elected President, I will call a White House conference early in 1961 to bring together the best medical and scientific brains in this country to plan an accelerated attack upon this disease.

I earnestly hope that all other candidates for the Presidency will take the same posi-

Cancer strikes without regard to political party. It struck down Senator Taft and Secretary of State John Foster Dulles, just as it did Matt Neely and Senator Brien McMahon.

It pays no heed to the Iron Curtain, either. Almost a year ago a Senate Government Operations Subcommittee, of which I am chairman, issued a report entitled: "Cancer: A Worldwide Menace."

That document pointed out that cancer kills 2 million people a year in all parts of the world, that its incidence is rising in 33 countries, and that it is the second leading cause of death in the Soviet Union, as well as in the United States and most of Europe.

In transmitting this report to the Senate, I pointed out that this disease is one "whose ultimate conquest will undoubtedly involve an unparalleled effort of worldwide biomedical research."

American doctors who have visited the Soviet Union recently report that Russia has embarked upon a massive 15-year plan for medical research on cancer.

We keep secret—and the Soviet Union keeps secret—the research that goes into the development of ever more devastating weapons.

But we have no reason to keep secretand every reason to share—the research aimed at this deadly enemy, which spares neither American Senators nor Communist commissars.

That is why, when I had my 8-hour talk with Mr. Khrushchev a year ago, I spent much of it urging upon him a worldwide attack upon the killers and cripplers of mankind-cancer, heart disease, tuberculosis, malaria, and many others.

It made sense to him-even to this hard, cunning, and dedicated Communist. He liked the idea of what I call "Health for

Peace."

Indeed, I have long advocated a "Works of Peace" program aimed at poverty, hunger,

and illiteracy as well as disease. I have voted again and again for programs of oversea technical and economic aid. And

I have always maintained that the Americans of Cabin Creek are as fully entitled to help—the kind that helps people to help themselves—as the people of Afghanistan or Africa.

I have talked, too, about "Food for Peace"putting our God-given abundance of food to work providing balanced diets in West Virginia and wherever in the world people are hungry.

I have talked, too, of "Education for Peace"—a coordinated, worldwide attack upon illiteracy which would make use of the soft currencies we receive in repayment for development loans and for sales of surplus

These ideas-these "Works of Peace"-are not original with me. They draw upon a rich American tradition—and, may I say, a Jesuit tradition as well.

The great Jesuit missionaries preached the word of God-but they also healed the sick, fed the hungry, and taught the illiterate.

Indeed, in many places they gave the peo-ple among whom they worked the very gift of literacy—putting into writing languages that hitherto had been only spoken.

There are some people who say that wars among men will only end when we face the attack of a common enemy. Half cynically, half humorously, they have suggested that the world will unite only to repel invaders from Mars.

We don't need to wait for the little green men to launch their science fiction attack. Our common enemies—poverty, disease, hunger, and illiteracy—have always been with

Until day before yesterday, we lacked the knowledge and the resources to attack them effectively.

Now what we principally lack is the intelli-

gence and the will.

I pray that, within my lifetime and certainly within yours, this will be the only war that anyone in this world will seek.

Rev. John J. Lach, American Slovak Organizer

EXTENSION OF REMARKS OF

HON, RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. MADDEN. Mr. Speaker, the people of Whiting, Ind., and throughout the Calumet region of northwest Indiana, mourn the passing of Father John J. Lach on May 9 of this year.

I have personally known Father Lach for over 30 years and sympathize with his relatives and parishioners in their bereavement. He was a great religious leader, humanitarian, and his services Were always generously given to his parish and also to charitable and civic

projects in the community.

I am submitting an article written by Mr. John C. Sciranka, American Slovak journalist of Passiac, N.J., which appeared in the Bethlehem, Pa., Bulletin and other Peerless publications. He reveals some of the accomplishments in the life of Father Lach. Mr. Sciranka was editor and also former publisher of Slovak Amerike newspaper, the oldest Slovak publication in America, founded in 1839.

[From the Bethlehem Bulletin, May 20, 1960] A TRIBUTE TO FATHER JOHN J. LACH, NOTED AMERICAN SLOVAK ORGANIZER

(By John C. Sciranka)

On May 9, the Slovaks of America, in particular, and their countrymen all over world in general, were shocked to hear the news that Father John J. Lach, of Whiting, Ind., one of the most popular American Slovak priests, organizer and publisher, passed

Father Lach was one of the most energetic Slovak leaders in America, who was constantly doing something for his fellow men. He loved to undertake things, sometimes even those which seemed impossible to accomplish. However, the bigger the projects the better he liked them. He put all his efforts into his work. But he always remained a devoted parish priest, who considered Whiting, Ind., and the parish of Immaculate Conception as his little domain.

His rectory was a sort of an unofficial Slovakian embassy in America. Every intelli-gent Slovak, no matter what part of the globe he lived in during the past quarter globe he lived in during the past quarter century, heard about Father Lach and his great work for the Slovak people, especially in religious and cultural fields.

BORN IN NEW JERSEY

He was born in Hibernia, N.J., June 9, 1894. as one of four sons and a daughter born to the parents of Mr. and Mrs. Joseph Lach, nee Mary Rekucsky. Hungering for higher education, he attended St. Johns University, Brooklyn, N.Y., anticipating to pursue law. But soon he changed his mind and transferred to St. Procopius College, Lisle, Ill., where he completed his education for priesthood and was ordained for the diocese of Fort Wayne, Ind., on June 10, 1922, by the late Bishop Alerding.

Even while a student at St. Procopius he showed great organization talents and ability, especially in sports and music, which he later put into great use. Among some of his many activities, Father Lach organized the Catholic Slovak Athletic Association of the Midwest; he was chosen first president of the Catholic Slovak educational campaign of the Midwest; organized Father Lach's Slovak symphonic band, which toured the United States, played for President Hoover on the lawn of the White House; later toured Eu-He later served, rope, including Slovakia. also, as president of the USO committee of the Slovak League of America and represented the same organization at the first United Nations Assembly in San Francisco.

HEADED BOND DRIVES

He headed the World War II American Slovak War Bond drives and sold over \$50 million worth of bonds, thus launching the Liberty ships of Gen. Milan R. Stefanik, noted French-Slovak scientist. Rev. Stephen Furdek, known as "Father of American Slovaks and Father Joseph Murgas, noted priest scientist. Sgt. Matej Kocak, distinguished World War I hero and recipient of two Congressional Medals of Honor was also honored by a bomber.

Father Lach was active in Lake County, Ind., where he was director and treasurer of the Calumet Park Cemetery Corp. and headed various charitable drives in the Calumet region such as the Lake County Tuberculosis and the Whiting-Robertsdale

Community Chest drives.

He was a pastor of the Whiting Parish of the Immaculate Conception since June 22, 1926. During this period he built the Immaculate Conception Junior High School and convent.

In 1951 he became publisher of the Slovak Amerike, oldest Slovakian newspaper in America founded on December 21, 1889, and moved it from New York to Chicago, Ill. a publisher he began to raise funds for the Slovakian refugees in various countries and established publishing houses in Buenos Aires, Argentine and Rome, Italy. He also established a publication for Slovak authors and poets in exile. He published "A Treasury of Slovak Folk Songs," which was compiled by Dr. Leonbard Deutsch, graduate of Vienna Institute of Technology, who also studied musicology, philosophy, and psychol-ogy as a pupil of Freud and Adler. Dr. Deutsch subsequently turned to the teaching of music, a profession with which he was occupied all his life in New York City. He is known as a compiler of "A Treasury of the World's Finest Folk Songs" and worked out a piano method for amateur students, based on Adlerian psychology; wrote an elementary

piano book, "For Sight Seeing" and wrote a text book on his piano-teaching method, "Guided Sight Reading, A New Approach to Piano Study" which attracted the attention of Father Lach and they became close friends.

Father Lach was a leading fraternalist and was a member of all the national and Catholic Slovak fraternal organizations in America. He attended many national conventions and served on important commit-

FUND RATSER

However, he liked to work singlehanded on various cultural projects which yielded great sums of moneys for various charitable and educational purposes, especially for the Amercan Slovaks. He raised money for scholarships, especially for the theological students in Rome which he visited in 1955 with his intimate friend, Monsignor Mylnarovich, national president of the Catholic Federation of America of Valparaiso. Ind., and a noted American Slovak author poet, who will celebrate his golden and jubilee of priesthood on June 12

Father Lach sided the Slovak Franciscan Fathers in establishing their monastery at

Valparaiso, Ind.

He published various religious books of which Monsignor Mlynarovich was author and which had the imprimatur of Most Rev. Andrew G. Grutka, D.D., bishop of Gary, Ind., who conducted the funeral services of Father Lach. He is survived by three brothers and a sister.

The Slovaks consider Father Lach's death an irreparable loss in their struggle for freedom from Communist oppression. He will be always remembered as an outstanding organizer and generous philanthropist who tried to make this world a better place than he found it.

Changing Times for Counties

EXTENSION OF REMARKS OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Tuesday, May 24, 1960

Mr. KENNEDY. Mr. President, I invite the attention of the Members of Congress to a recent article by Bernard F. Hillenbrand, executive director of the National Association of County Officials, the association representing all county officers throughout the Nation, entitled 'Changing Times for Counties.'

Mr. Hillenbrand has long dedicated himself to the improvement of our Government at the local level, and his views merit our attention. The article deals with one of our most important domestic problems-county government Eighty-three percent of our Nation is served by our 3,047 counties. No more difficult challenges confront us on the domestic scene than those with which these governments must deal. In community after community, the problems of public transportation, schools, hospitals, traffic, and public health are We achieving enormous proportions. find that there is danger from the pollution in the air we breathe and in the water we drink.

I know that the Congress is aware of these problems, but we are only beginning to grapple with them. I ask unanimous consent that the article by Mr. Hillenbrand be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHANGING TIMES FOR COUNTIES

(By Bernard F. Hillenbrand, executive director, National Association of County Officials)

Senator Theodore Green of Rhode Island is the oldest man to serve in the U.S. Senate. On the occasion of his recent birthday one of the reporters asked him how it felt to live to be 90 years old. He replied that it wasn't bad—particularly when he considered the alternative.

By the same token, when citizens in any metropolitan area consider the alternative answers to urbanization problems it is very likely that they will turn to the county as the last best hope.

Frankly, the word "county" conjures up a vision in many peoples minds of fat politicians sitting around a pot-bellied stove spraying tobacco juice into a copper spittoon—and plotting how to grease the political machine. The actual fact is that a typical county courthouse is more apt to be a modern, air-conditioned building with automated data processing machines in the basement, an ultra modern sheriff's transmitter on the roof and everything in between just as modern—and as symbolic—of the 20th century.

The following observations are drawn from nationwide trends and developments in county government. They are not based upon a study of any particular local situation and may or may not apply in any individual community. Our basic premise is that county government will become the dominant unit of local government in the United States in the next decade.

Here are some of the facts:

In the 6-year period from October 1951—October 1957, the U.S. census reports that county government (as reflected in the number of full-time employees) increased an incredible 36 percent—an average of 6 percent per year. For comparison purposes, municipal governments and the population generally increased only 3 percent per year.

Virtually every State in the Union reports that its county governments have been authorized to undertake a host of new governmental responsibilities.

One hundred thirty-three million three hundred sixty thousand Americans are served by our 3,047 counties who employ 668,000 people and spend about \$6.5 millions a year.

WHY THE NEW IMPORTANCE OF COUNTIES?

A portion of the increase in the importance of county government is the expansion of traditional State mandated county administered services, due both to population increase and the traditional American demand for improvement and expansion of existing services. This includes administration of justice, elections, roads and highways, vital statistics and record keeping, health and welfare, administration and administration of agricultural programs.

The really significant growth of county government has come in the urban areas where existing local units have demonstrated fairly conclusively that they are not capable of solving area-wide problems. Here we find counties entering in a massive way into providing municipal type services such as police and fire protection, planning and zoning, water supply, sewage disposal, civil defense, industrial development, refuse collection and disposal, air pollution control, airports, traffic and parking, parks and recreation, finance administration and even urban renewal.

CENTRAL CITY

St. Louis County is a typical metropolitan area. There are 100 local government units competing to provide local government services and to capture the elusive tax dollars.

It becomes quickly apparent that certain functions such as civil defense, transportation, planning, water and sewage, and others require either some general government or at least a degree of intergovernmental coordination of such a high degree that it is equal to a general government.

The problems as seen from the viewpoint of the various interests in a typical urban area are quite complex. Those in the central city find that the mass migration into the suburbs has actually resulted in a loss of big city population. Those who remain behind are often the very old, the very young, and the minority groups; in essence, the lower income groups. Those whom the college professors like to call the leader group—the professional people—leading businessmen and industrialists—have fied to the suburbs.

Cities, like people have a life cycle. They are young and then they are old. The hearts of many of our central cities are sick. The decayed parts must be cut out and redeveloped. This takes money and the life giving new industry—the new shopping center—those few choice residences that pay their own way taxwise—are locating outside the taxing authority of the city.

SUBURBS

Those who have moved into the suburbs have problems that are just as grave. They would like to live out in the country but they want big city services. They want a modern library system, first rate schools and buses, public health facilities, parks and recreation, and above all a decent transportation system into the central city and around the suburbs. Urban sprawl makes the per unit costs of services prohibitive. They often incorporate but they unwisely exclude industrial and commercial development and create unbalanced communities that cannot survive financially. My home county of Montgomery, Md., for example, has two of these incorporations that now want to dissolve.

AREA SOLUTIONS

One of the first approaches to the problem of urbanization is annexation. Rather, it is selective annexation. Try to get the industry and powerplants but don't annex the areas with the big school population. This doesn't usually work because the most desirable areas have already incorporated. Suburbanites resist annexation and very often when the central city people find out what it will cost initially to bring the suburban facilities up to those of the central city they are also less enthuslastic.

It is at this point in the typical urban area that the county begins to be considered. The State legislature may first allow the county to create special service districts to provide sewage or water to unincorporated areas. Later, other municipal-type services are authorized.

Often there is a crisis as, for example, a municipally owned airport that must be expanded. It is not located within the city. It serves the people of an entire area and ordinarily operates at a loss. Municipal officials urge the county to assume responsibility.

We have dwelt overlong on the entrance of counties into these new areas because we want to emphasize several very important points. The expansion of county government through providing municipal-type functions is proceeding everywhere on the basis of the county assuming one new function at a time. The only apparent exception that has come to our attention is the Dade County, Fla., experience with Metro. Here

the voters authorized the county to enter into many new fields of regulation and policing of municipalities. The first impulse was to rush into these new, untried fields and this proved a source of considerable irritation and friction. Now the county is following a new policy of moving more slowly and into only those areas where there is consensus that areawide action is necessary.

This brings up the second point-namely, that in no instance is the impetus to expand county government into new areas coming from the county officials themselves-except in response to pressure from citizens or other public officials. Quite the reverse-many feel that the countles are being too conservative and that perhaps they should take the lead in these urban areas. What we are the lead in these urban areas. saying is that the expansion of county government is not anything like a power grab by county officials to enhance their own prestige. Likewise, we see no danger at all that counties will replace municipalities. county officials are pretty much dedicated to the idea that if municipalities are discharging their functions to everyone's satisfaction then there is no reason at all for counties to get involved. Most county officials have plenty to do already without hunting for more. County officials often complain pri-vately that they are put upon by municipal officials who ask the county to take over responsibility for unpopular functions such as the licensing and regulation of dogs. Experience has taught them that if they regulate the dogs the dog lovers are up in arms and if they don't, the garden growers are unhappy.

ADVANTAGES OF COUNTY GOVERNMENT

In the beginning we noted that county government looks particularly good when we consider the alternatives. Students of the metropolitan problem are very fond of pointing out that the area from Portsmouth, Va. to Portland, Maine, is one large continuous city. No one has actually suggested it as yet in this particular instance, but the assumption is that what is really needed is a supergovernment that will encompass an entire area—cutting across county and State lines. Certainly, our county officials are very much opposed to any "supergovernment" arrangement which goes beyond the established politically accountable units of existing government.

Another alternative to expanded county government is the expansion of direct State administration of some functions such as roads and public welfare. We reject as equally undesirable the expansion of either State or Federal Government into areas that can be handled locally no matter how much more difficult it is to do them at the local

Speaking now about the positive advantages of county government for a wider role in the family of governments we would cite its long history. Henrico County, Va., for example, was formed in 1611 and it will not have served the United States (and the Confederate States of America) as long as it served colonial Great Britain until the year 1967.

Counties are also the basic unit of organization for the two political parties. They are the basic unit of organization for many governmental and nongovernmental functions. The American Medical Association and the American Bar are organized on a county basis. A large portion of our educational system is county oriented. Census figures and most statistics are tabulated by counties. Soil conservation and most of our agricultural programs are county oriented.

Perhaps the greatest advantage of a county is its representative character. We have found that this is the one concept that is most difficult to get across to the public. If these remarks succeed in bringing this one point home we will be satisfied. With some

minor exceptions every person who lives in a municipality or other political subdivision is also governed by a county—a county to which he elects representatives—a county to which he pays taxes—a county that has been created to serve him as a citizen.

Perhaps because the municipal citizen has a separate set of municipal officials to elect and supervise he neglects to take as deep an interest in his county government as he should. This leads to the further erroneous concept that the county is a rural form of government—this again in spite of the fact that the 95 million Americans who live in cities are also served by their county and are equally obligated to pay attention to county affairs.

COUNTY PROBLEMS

In all candor and at the risk of making many people unhappy, we must say that typically counties are not now effectively organized to perform their new tasks. An analogy will best illustrate one of the reasons for this. Mr. Glannini started out to be a fruit peddler on the streets of San Francisco. He started loaning small sums to his friends and later started a bank—and then many banks until his Bank of America became one of the most powerful financial institutions in the world. It isn't hard to see that the "organization" he needed when he sold fruit and the organization he needed when he presided over a financial empire were vastly different.

So it is with counties. Some have simple functions and have no need for complexity. Others have vastly outgrown their humble beginnings—and yet the structure stays—indeed, in many States it is riveted on by constitutional mandate. We must confess that we have never really understood the basic governmental theory under which counties were created. The concept that executive, legislative and judicial functions should be separate and distinct is clear at the Federal, State and municipal level. Yet the three functions are mixed at the county

COUNTY REORGANIZATION

One thing our experience has taught us is that a large part of the urban problem lies in a faulty approach. Many scholars decide in advance the type of structure that should prevail at the county level and then they have tried to fit the functions that the county performs into this structure. This is like deciding the type of organization you need to manufacture shoes and then studying how to fit the manufacture of shoes into your predecided organizational structure. If this approach were followed in the shoe industry we would soon be barefooted.

From this we would conclude that a prudent man would not make any recommendations about the organization and operations of a county until he had studied it carefully. Alone and with others he would study every function presently performed and those likely to be performed. He would weigh them against the latest management and organizational techniques proved and accepted in the world of government and business. Above all he would remember that he deals here with the public business and the vital and sacred things of a democratic society.

PATTERNS EMERGING

Again, from a national point of view upwards of 200 counties are, or have been, under intense study and review by county officials, charter revision groups, newspapers, management consulting firms, schools of public administration, foundations and others. Certain patterns are emerging from these studies. The first pattern, of course, is that responsible people are taking a constructive look at county government.

These studies appear to be most successful when they are made with the active

cooperation of the county officials and by officially created groups that have very broad community support. They also appear to be far more successful when they get right to the specifics and do not build a reservoir of ill will by keeping the public and those most interested in the dark as to how proposals might affect them. Delay, indecision, and vagueness give rise to rumor that creates senseless opposition.

Study groups are also concluding that county government is disorganized to a certain extent with too many independent boards and commissions. This diffuses responsibility and makes it almost impossible for the citizen to view his county as an entity or to understand how it functions. Special districts and authorities independent of popular control are most strongly opposed by the county officials in our National Association of County Officials. As a matter of policy we have urged that all legislative power be vested in the Board of County Commissioners and that this county governing body should speak for the county as a unit.

As a corollary some studies are concluding that too many of the department heads are being elected. This is the area that is most controversial and where some good hard thinking is needed. Many who approach these studies with preconceived ideas are amazed to discover, for example, that an elected coroner can be a most extremely capable and qualified public official. They review the operations of elected clerks and recorders, treasurers and finance officers and many others and find the duties being discharged very well. Almost without exception they find that the elected department head will give more courteous attention to citizen no discharged than they get from nonelected public officials.

It is often charged that county reorganization is made more difficult because of the fear of elected officials that they will lose their jobs. If this is so, it certainly is not unnatural. For the most part, the department heads who are criticized are those that are held by career political leaders. They have devoted their lives to a public position and certainly couldn't be blamed if they resisted having their jobs eliminated because you have changed the rules half way through the game. In most cases it is found that even when, to simplify the voters job the position is made appointive, the encumbent who held the position is the new appointee.

While this is a little more difficult to define, it develops from the previous discussion what might be termed a recognition that a county is a political unit and that many of its decisions should be political. The decision as to whether a county is going to spend its money to build a mental health clinic or a school addition is in one sense political, i.e., it should be decided by public discussion at the only place all the public is represented—namely, the political arena.

Industry is recognizing this more and more. Witness the determined efforts of many respectable forward thinking companies to get their officials active in local partisan politics. This may be the forerunner of getting local political parties more "issue" oriented and less "personality" oriented.

Almost without exception, study groups are finding that counties lack executive leadership. The Nation has a President; States have Governors; cities have mayors, but counties do not have a single executive head. Many approaches are being made to the problem. In some cases the chairman of the board of commissioners is being given broader executive powers. In some counties they are turning to an appointed county manager or administrative officer accountable to the county board for some administrative functions.

The newest and most interesting trend, however, is toward an elected executive somewhat comparable to a strong city mayor. Baltimore County, Maryland; Westchester, Nassau, Suffolk and Eric Counties in New York, and Milwaukee County, Wisconsin have all recently adopted this plan. New Orleans Parish and Baton Rouge and Jefferson Parishes (counties) in Louisiana have also adopted variations of this same idea.

Finally, while there is a great variety of recommendations of what functions should be transferred initially to county government there is substantial agreement that planning and zoning should be countywide. To have a hundred or more local governments all acting independently in planning and zoning matters in a single county generates chaos of the first order.

Strangely enough the key problem that is stimulating the emphasis upon countywide planning is the sudden realization that unless we act immediately we are not going to be able to preserve open spaces and park and recreational sites in urban areas. They are vanishing at an astronomical rate before the developers' bulldozers. The need for immediate action is urgent.

To sum it up, the county has much promise as the key to unlocking the problems of urbanized America, just as now and in the past it has served rural America. New functions and new responsibilities call for careful review of county structure and organiza-

tion to gear it to its new role.

We believe that the county which, in a quieter day, reflected the American philosophy that "the government that governs least governs best" will rise to the stormy present and will provide the leadership in solving such ultra complex urban problems as those of highways and transportation, industrial development and urban renewal.

As Congressman Robert Evererr of Tennessee says, "Times are changing—cotton's going West—cattle's coming East—Negroes going North and Yankees coming South."

County times are changing and we are trying to change with them.

Critic at Large-On the Future

EXTENSION OF REMARKS

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1960

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Hoke Norris, entitled "Critic at Large—On the Future," which appeared in the Chicago Sun-Times on Friday, May 20, 1960:

CRITIC AT LARGE—ON THE FUTURE

(By Hoke Norris)

On first looking into "Fallout: A Study of Superbombs, Strontium 90, and Survival," edited by John M. Fowler—a speech that should be made upon a summit somewhere but probably never will be:

Gentlemen, we are gathered together here to consider nothing less than the survival of the race of man. Then let us at the outset brush aside the irrelevancies, the non sequiturs, the nonessentials, the inconsequentials, the lies, and the follies.

the lies, and the follies.

It is not relevant for us to accuse each other of espionage and sabotage. It is not relevant that on both sides there have been stupidities and inanities, that (for instance) the spies of each of us have been captured redhanded (no pun intended), and that a plane belonging to one of us has been sent

across the land of another, and there shot down.

LIES AND FOLLY

It does not follow that because our ideologies differ, we should therefore go to war. It is nonessential that, in embracing one way of life, we despise all other ways of life. It is an inconsequential accident of circumstance that we speak different languages, worship different gods, tread different earth, support different political systems, get drunk on different drinks and attempt different hangover remedies. It is not true that all good rests on one side, all evil on the other.

It is folly for us—like two bullies in a barroom or two Ivans deep in vodka—to boast and parade and call upon the world to witness our strengths and powers. We both have great strengths and powers. We also have appalling weaknesses. We are vain, stubborn, stupid children with H-bombs in our hands.

What shall we do?

For a long time we have been exaggerating and exploiting our dissimilarities and our disagreements. On what can we agree? In what are we allke?

ONE HUMAN RACE

We can agree, first, on some negatives. We could destroy each other's armaments and industries. In their final meaning, however, these do not much matter. They are material symbols and little else, and perhaps we'd be better off without them anyway. They could be destroyed and in the long time of the world, they would be remembered little if all

But we cannot destroy these empty, but powerful, symbols without destroying also a thing far more perishable and far more precious. This thing is man. A small raid, we read in Fowler's book, would destroy urban life. The rural survivors could emerge 3 months later, but upon a devastated countryside on much of which they could not grow food for generations to come. Radiation would cause illnesses that would main or kill many of the survivors. Cancer and genetic damage would make hideous, tortured creatures of men, women, and children. A large attack—well, multiply these consequences by infinity.

Is man worth saving from this death of the race, and of the soul? We must agree that he is, and that he is worth saving because of his common heritage and his common capabilities, aspirations, and strengths. The race that created "Hamlet" and "War and Peace," "Huckleberry Finn" and "Remembrance of Things Past," and painting, the symphony, the fugue, and the cathedral, the race that can see the beauty of snow beneath evergreens and hear beauty in the song of a bird, that can recreate itself in the human child—that race is worth survival, and that race, wherever situated, whatever the superficial differences among its members, is all the same in all its human, spiritual and esthetic virtues, in all those verities and aspirations that are meaningful and eternal.

And, therefore, gentlemen, never tend to know for whom the bell tolls; it tolls for you,

May Craig Visits Africa

EXTENSION OF REMARKS

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. MUSKIE. Mr. President, on March 13, 15, and 16, 1960, three more articles appeared in May Craig's column entitled "Inside in Washington."

Additional Property

In her March 13 column, Mrs. Craig published her analysis of the work which has been done in the Congo in fighting tuberculosis, malaria, and other diseases.

On March 15, she reported talks with officials in the Belgian Congo, who explained their great need for capital and foreign investments.

By March 16, Mrs. Craig had taken her readers all the way to Johannesburg, in South Africa, which she found to be very different from many of the other countries she had visited in that vast continent.

I ask unanimous consent that the three articles be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Inside in Washington, Mar. 13, 1960] APRICA ON THE MOVE—AMERICAN AID HELPS CONGO FIGHT DISEASE

(By May Craig)

LEOFOLDVILLE, BELGIAN CONGO.—This country is the strangest combination of ancient tribal "savagery" and modern European facilities—airport here has the longest runway in the world. This hotel has nice bathrooms, airconditioning in the rooms. The waiters are barefoot, immaculate in pants tied close around the ankle. Lock on my door sticks so I have to have one of the black floor men unlock it and they laugh at me because they know the trick and I can't seem to make it.

Once in a while you see a black woman with her baby on her hip as American mothers carry babies. The maidens have beautiful, slim, highbreasted figures. The child rides on the lower back with legs spread around mother's hip. Often they will have a child on the back, a child in the belly, one by the hand, a heavy load balanced on the head.

The Belgians perhaps gave in too quickly to the demand for freedom. They had a 4-year plan but the riots killed that. They had to choose between giving up to freedom between January and June of 1960, or try to stay by force, which would have meant drowning in blood. One competent American predicted a dictatorship far to the right. There will be hard times which may be blamed on the big foreign companies who will stay or come in, which criticism will be encouraged by the Soviet Union, which will hope to profit as they may in Cuba. There has been a conference in Brussels in which Belgian Government and Congolese leaders agreed to prepare the masses as quickly as possible to take over the reins.

Outside of Leopoldville there is massive tuberculosis, malaria a "river blindness" from a small fly that lives in the rivers. Belgians are working on this. But there is only one doctor per 20,000; in Nigeria, one doctor per 110,000. There is a deep protein deficiency, worse among mothers and children. In the U.S. taxpayers say why should we spend so much for foreign aid; and why not let the Western Europeans handle the African needs. But people of our country learned the hard way that smallpox and typhoid are problems of a whole community, of a whole nation. People without children pay taxes for schools. So, with the world so close together, we cannot leave Africa steeped in disease, ignorance, hatred of the whites. They are the least developed. so they need help most. President Eisenhower has sent special message to Congress asking more money for new African countries south of the Sahara.

This trip is necessarily too short for voyages far into the interior, but we do the best we can and are black and blue from

bruises acquired jouncing over rough roads in buses. We find we are somewhat circumscribed everywhere we go by the local government wanting to occupy us with their side, but we do the best we can and the opposition everywhere tries to get to us.

This Congo River is fascinating. The three-story high river boats, just like our TV—paddle wheels and all. Leopoldville is built just before the first rapids that cut it off from the sea, but upstream there is a thousand miles of clear water to Stanley-ville.

We went to the great bronze statue of Henri Morton Stanley, first white man to travel the Congo River, who got caught by the rapids and had to trek for months through the jungle to the sea. On the shore of the Congo, on the site where he launched his first little boat on the Congo, on his second visit after he knew about the rapids, there is a modern shipyard, and he looks down from his rocky monument on the shipyard, and with raised hand salutes his river. In every U.S. Embassy and consulate we have visited in Africa there is a bronze bust of Abraham Lincoln, who is a hero in Africa because of the emancipation of the American Negro. There are large colored framed photographs of President Eisenhower, or whoever is the current President, but the Lincoln busts stay on forever.

They could build locks around the rapids, but do not plan to. It would be vastly expensive, and they depend more on roads, rail, and motor eventually. The European residential area of the city is beautiful, large estates in gardens. The old African residential is a jumble of mud huts, some thatched, many with corrugated roofs, and fenced in by rusted woven iron slats which were on the runway beds of quickly laid American airfields during World War II. Minute Americans left, the natives rushed out and tore them up for fences-showing their desire for some kind of privacy. Bel-gians said they had a hard time getting the Congolese to live in the apartment houses. but that once in, they like it and become proud of it. I heard differently-that they like to be in one house and on the ground. It is always a question, whether our civilized artificial living is good, in the long run. The Belgians are trying to get the Congolese out of the old huts and into the new, burning the old. They are spending a good deal of money on drains, sewage, bicycle paths, and so forth.

There is tremendous interest in the Americans as we go around; not too many come to the Congo, because it is tough traveling. They wave to us as we go by. They have cut out much segregation here; it's largely a matter of money now.

[From Inside in Washington, Mar. 15, 1960]
AFRICA ON THE MOVE—CONGO WILL NEED
CAPITAL AND INVESTMENT

(By May Craig)

LEOPOLDVILLE.—And so we said farewell to the Republic of Congo and its three affiliated republics making up Equatorial Africa, gave our last look to the great Congo River—Africans spell it with a "K." It is a troubled country, unprepared for freedom except emotionally. They have a few leaders, educated but inexperienced in government. The rest know nothing of the disciplines of self-government. June 30 they take the last step to freedom in the Belgian Congo. We left from the airport at Brazzaville in the Republic of Congo.

This happened to six of us yesterday—we wanted to see some of the contenders for power after June 30. We made a date to see secretary to Joseph Kasavubu, of the Abako, who first had the dream of uniting the Belgian Congo to the rich Republic of Gabon, in the Republic, which would give control of site of the proposed Inga hydro-

electric plant on the Congo, leave out some of the poor part of the country, have fine seaports. We arrived at the secretary's office to find a thousand blacks congregated, and an adamant secretary, despite engagement. It took an hour of palaver in a tiny room with closed curtains and only an airhole under the corrugated iron roof, to get Kasavubu on the phone. The Belgians are not anxious for us to talk alone with the Congo revolutionaries. We trekked off to Kasavubu's house and had lunch. They gave us bottled cold water and I drank That's nothing but tap water from the Congo," said a skeptical colleague, after I had drunk, so I lived in terror the rest of the day, waiting for the dread amoeba to strike, but it did not, probably because I am stuffed with antimalaria, antidysentery pills.

Kasavubu has an organization, he has the African "imystique" as they call it. He seems naive about political and diplomatic procedures. He told us the story of how Africa was divided up by the white men. The explorers of the Congo did not conquer it in war, they did not get it by treaty; hardly any of the white European countries did. They just took Africa. In 1885, in Berlin, they got together and agreed on how they would divide it up. The United States did not share in this political geographical division—we had already taken the America of the Red Indians and killed most of them off. But we did, in Berlin, get agreement on equal trade rights in Africa, commercial.

equal trade rights in Africa, commercial, Kasavubu wrote all the consulates here 2 years ago demanding revision of the Berlin agreement to give the Congo back to the Congolese. Congolese. He did not get any answer, he said, but later said that the U.S. Consul replied that we had not shared in the political division, only on the equal trade rights. In any case, he did not seem to realize that as a private citizen he had no formal rights to deal with foreign diplomats. He wrote to the U.N., which, by its charter, does not interfere in the internal affairs of a member country. He tried to get in the world press and said he couldn't. Hence—the riots. The Belgians capitulated in January 1960. They will be free in June. There will then be a struggle for power among the leaders.

At an evening party at the residence of the Belgian Governor General—who has spent time in Maine and spoke of the cool climate, the beautiful autumn, the lobsters—we met and talked with Patrice Lumumba of the Mouvement National Congolese and Jean Bolikango of the Front Unite Bangala who is regarded as a "front" for the Belgians. He may throw in with Lumumba, who is by far the most sophisticated. He said frankly that the Congo will need capital and foreign investments. He would, if in power, provide adequate protection for foreign capital. He hopes to start on the Inga power project in 2 years; said that American aluminum companies have been here surveying.

All these three want to avoid Soviet entanglement, though they do not use the name. They call it dictatorship powers or something like that and we know who they mean.

Kasavubu was bitter about the deficit the Belgians say they have here. He said they didn't talk about deficit until the Congolese began to talk about independence. He said he would ask an international body to oversee a strict accounting of the moneys to see if there is a true deficit. As to foreign capital contracts, he said he would have a group of expert accountants go over the books, examine the terms of the contracts: if good, all right; otherwise renegotiatc. Lumumba, on the other hand, said he would honor the contracts, hold onto them if in the interest of the new free Congo.

I got a mosquito bite at the Governor General's garden party. They had sprayed before we came, and again while we were there, great mist of spray among the palms

and low on the grass, cover your glass of coke while it is thick. The, were all appalled that there was a mosquito and inquired anxiously if I had taken malaria pills and I said yes, for a week before I left home, they said the malaria type here is not dangerous but "has a bang." I want no bangs and have had none up to now.

Asking Monsieur Van de Put, editor of Le Courier d'Afrique, why the Belgians did not try to stay, by force if necessary, he shrugged and said: "Belgians will fight for Belgium, not for the Congo. If they do not want me, I can go elsewhere." He has been here 12 years, employs more Africans than Belgians or other whites. "Congolese are cheaper," he said cannily. He is Belgian.

[From Inside in Washington, Mar. 16, 1960] Africa on the Move—A British Oasis in a Hot, Humid, Hurried Trip

(By May Craig)

JOHANNESBURG.—This is an oasis in this hurried, torrid, humid trip through lands of strange people and languages. We are nearly 6,000 feet up, delightful climate, fine old British hotel in a practically English city—though, like the British overseas and in London, the menus are in French and the food is elegant—strawberries with whipped cream, good milk to drink, roast beef on a cart in dining room with a big silver cover and they cut your slices right at your table. Outside World War II and the Korean war, the B-29 bomber training trip and the Arctic, this is the toughest trip your correspondent has ever had—mostly because of the dripping heat.

On the flight here we flew low around and over the Victoria Falls, beside which all other falls pale. It is not only extremely wide, though the edges are crooked, but it falls into deep rocky chasm through which it runs for many miles in rapids, not like Niagara which runs right from the falls into an open visible river. We will visit the Falls by land later. The spray rises so high, with constant rainbows, that mist can be seen from miles and miles away. It is on the Zambesi River.

We stopped the day in Livingstone, in Rhodesia, named for British explorer Cecil Rhodes who founded the Rhodes Scholarships. Our former Rep. Robert Hale, and Senator Fulbright, chairman of the Senate Foreign Relations Committee, are Rhodes scholars and the latter helps us with people round the world who are Rhodes scholars, W. J. Busshau of the Government Chamber of Mines, who gave us a lecture on money especially gold, which is mined near here, as distances go, is a Rhodes scholar. David Livingstone, you remember, was the British explorer who got lost in Central Africa and James Gordon Bennett I, owner of the New York Herald, sent Henry Mortan Stanley to find him at any expense. When Stanley, a Britisher finally found him ill in the jungle among savages he uttered the famous line: "Dr. Livingstone, I presume?"

They really give you soap in this hotel, plenty of towels, the sheets are darned but This is a Union, including the Orange Free State (Dutch) and is part of the (British) community. There are 13 million blacks immediately to the north, in a ferment against apartheid, completely rigid separation of the European and non-European races. The bus in which we ride has a sign: "Europeans only." These Dutch ancestors were the Hollanders who settled this then uninhabited country. They are called Afrikaans. Blacks are called natives. There are many Chinese, who came first as coolies and are now often merchants, and many Indians from India. They are lumped as non-Europeans, which causes resentment in Red China and in India and adds to the racial hates. There did not used to be such a rigid apartheid and some of the Britishdescent people here, born here, their fathers before them, say that apartheid must go before gradual integration as the blacks get education and experience. The Dutch are stubborn, they will not give up their home that they made out of jungle and desert; some of the British feel that way. Some fear there will be a bath of blood as the natives see other blacks to the north getting independence.

Two-thirds of the gold of the world is mined here. We cannot take the time to go to the great city of Cape Town far down on the tip of Africa, where there are diamond mines. Mr. Busshau's lecture on money criticized the U.S. monetary policy. He said that for 800 years the Byzantine empire kept its money stable. That the United States has given up the gold standard relationship to the "folding money" and thus, we have inadequate check on its issuance. The gold is fleeing from the United States in trade. and the paper is worth less all the time. How long this can go on he does not know. only the confidence in the U.S. Government keeps our money-respectability in the world. If we want to do this domestically, OK, he said, though unwise, but we cannot expect to stay in international trade unless we join in stability of money. The Venetians changed the value of the money, he said, but did not spend it right off. We do.

He called Americans "reluctant imperial-

He called Americans "reluctant imperialists," and when I asked why, he said that down the history of civilization, there has always been one nation which had power and influence and responsibility. Rome did, for centuries, the British did, now it is the United States. He shrugged off the question, who next, but we knew he meant the Soviet or Red China.

They have several school systems in this country. One government for the natives; two government for Europeans, one for British, one for the Dutch descendants; and private schools. Racial integration is absolutely forbidden in the government there. Those who want to send their children to private schools pay for it steeply, but there are natives and other races there, and white parents of these children think it necessary for future living together. They hope some day the elected government which holds with apartheid rigidly will be superseded by government which knows integration politically must come, and better peacefully—they are now in the minority.

Limestone as a Roadbuilding Aggregate

EXTENSION OF REMARKS

HON. DENVER D. HARGIS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. HARGIS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following report on the uses of limestone as a roadbuilding aggregate. The report was presented by D.O. Woolf, highway research engineer for the Physical Research Division of the Bureau of Public Roads, during the 15th annual convention of the National Limestone Institute, Inc., held in Washington early this year.

The report follows:

This paper deals with some of the considerations given limestone when it is selected for use in roadbuilding. The paper is divided into two parts: preventive engineering and wishful thinking. The first part covers matters in which the producer can

take action. The matter mentioned in the second part can also be acted on by the producer but for proper treatment assistance and cooperation by the State highway departments is required.

PREVENTIVE ENGINEERING

Preventive engineering considers the characteristics of limestone which are found objectionable by the highway engineer, and determines methods for use to correct these conditions. It is similar to preventive medicine which endeavers to remove the causes of disease. There are few objectionable properties of limestone which cannot be corrected by one means or another. Possibly it may be found that some of the corrective measures are expensive. But it certainly would be better to treat the stone and be able to sell it than to have it rejected as unsuitable.

Limestone is a general name for a rock composed essentially of carbonates. With respect to construction materials, limestone includes rock composed principally of calcium carbonate, or mixtures of calcium and magnesium carbonate. Rocks having the latter composition will frequently be called dolomite, but it would be more fitting to describe them as magnesian limestones unless their chemical composition meets certain requirements. Limestones usually contain some foreign matter such as clay or silica, and if the amount of the impurity is large, the rock may be named a clayey or argillaceous limestone, or a siliceous ston. Pure calcium limestones are quite unusual and may be of more value for other purposes than roadstones.

Limestone furnishes one of the most widely and extensively used aggregates for roadbuilding or other types of construction. This is due to its wide distribution, ease in quarrying, and desirable properties. Most deposits of limestone which are worked for construction material contain thick beds of the rock. When this is crushed, the crushed stone tends toward having a chunky instead of a slabby shape and is most desirable for use as an aggregate in concrete or bituminous construction. Limestone quarries for roadbuilding purposes is suitably hard and tough, and usually has a good surface texture permitting proper adhesion of cement paste or bitumen.

Some deposits of limestone worked for construction material do contain objectionable impurities. These include excessive amounts of clay, shale, or chert. Limestones may also have poor resistance to weathering, that is, to freezing and thawing, or may contain materials which react chemically with the alkall in portland cement to cause an excessive and objectionable expansion of concrete. Some limestones, a relatively few of them, may be hydrophillic or water-loving, and when used in bituminous construction, would tend to release their coating of bitumen and absorb a film of water. This would not promote the durability of the pavement.

Some of these defects of limestone sound as if they were formidable obstacles to the successful use of limestone in roadbuilding. Some may be, but others can be nullified with recourse to preventive engineering. Consideration will be given to each of these presumable defects and methods outlined for their correction. No significance is given to the order in which these matters are discussed.

FREEZING AND THAWING

The action of frost is one of the most severe conditions to which roadbuilding rock is subjected. Failure of rock by frost action appears to be dependent upon the ratio of the amount of absorbed moisture to the total permeable void space in the rock, to the size of the pores and capillary tubes in the rock, and to the rapidity of the decrease in temperature. Some years ago an investi-

gator of baked clay products suggested that if the ratio of the freezable water in a solid exceeded 95 percent of the pore space or voids, the material would fail when subjected to freezing and thawing. No application of this to roadbuilding materials is known although many authorities have stated that concrete, for example, will fail quickly if subjected to frost action when completely saturated. The same should apply to all rocks except those which have such large pores or tubes that water can move very freely through the material.

Although determinations of the absorbable water to the total volume of pore space in a rock can be made without much difficulty, determinations of the size of pores and tubes fequire special equipment and considerable time and labor. For this reason, these determinations seldom are made in acceptance tests of roadbuilding material. The engineer is content with determinations of the amount of water absorbed at atmospheric temperature and pressure and during a relatively short time, usually 24 hours.

Studies made by the Bureau of Public Roads have shown that sedimentary rocks which absorb less than 2 percent water seldom need to be considered as unsound. Consequently if the rock has a low absorption, the engineer can be reasonably certain it will have adequate resistance to freezing and thawing.

In some sections of the country, much of the rock has a relatively high amount of absorption. This presents an interesting situation. The producer desires to sell his stone; the engineer wants to build the best highway possible; and both as taxpayers expect a reasonable return for their money.

There are several things to be considered which might permit the accomplishment of the three desires mentioned above. First, it has been stated that stone will fail under the influence of frost only when highly saturated with water. Second, tests in the laboratory have shown that at atmospheric temperature and pressure, stone which is initially dry requires a long time to reach complete saturation. Third, although information of this subject is very meager, it is believed that stone in a concrete or bituminous pavement may not become saturated if initially dry.

The above indicate that one method for obtaining pavements of greater durability would involve drying the stone prior to its use. This may require a higher cost for the stone, but if it means the difference between a durable and a nondurable pavement, the increased cost would be justified.

A parallel action with respect to a completed concrete pavement is mentioned. This would, of course, apply to concrete made with any aggregate but consideration can be given here to limestone concrete. In the construction of bituminous pavement, material may be added to the asphalt to prevent stripping of the asphalt from the stone. construction of concrete pavement, air-entraining agents may be added to the mix to furnish a more durable concrete, accelerators may be used to hasten the setting of the concrete, or retarders may be added when a delay in the hardening of the concrete is considered advisable. If it is permissible to use these drugs for asphalt or concrete, use of another one to decrease the absorption of water by concrete may be equally permissible. By reducing the absorption of the concrete, use of more absorptive rock than is now deemed proper may be feasible.

CHERT CONTENT

Chert may be a most objectionable material. It is frequently found as seams or nodules in limestone. It is composed of several varieties of silica some of which may be chemically reactive with the alkali in portland cement. Chert usually is highly absorptive and under suitable conditions

may be readily damaged by frost or have a large change in volume. Chert causes poports in concrete and may initiate the failure of concrete or bituminous road surfaces.

The highway engineer is pleased when he can obtain limestone free from chert. Of course not all limestone deposits contain this material, but where it is found, the manner of occurrence dictates the method to be used for its removal. Fortunately chert does have two desirable features. One is that a small piece of chert is less likely to cause physical damage to a highway structure than a large piece. Second, the durability or quality of chert improves directly with its specific gravity. If limestone which contains chert is crushed to a small size, the chert pieces would be less liable to cause physical damage than if they were larger. With respect to specific gravity, the removal of pieces of lightweight would add immeasurably to the durability of a crushed limestone containing chert.

In an article in a recent issue of Rock Products, a description is given of a method for the beneficiation of limestone containing chert. In the method, a suspension of iron ore in water is used to separate lightweight pieces, including most of the chert, from limestone of good quality. Tests of the process by the Missouri State Highway Commission are reported. The crushed limestone tested was found to furnish the following fractionations:

Limestone in sink, 2.65 to 2.81 specific gravity.

Chert in float, 2.30 to 2.49 specific gravity. Limestone in float, 2.34 to 2.66 specific gravity.

Although the recovery was not reported, the plant was stated to process 50 tons per hour and to remove all but 0.2 percent of the 3 to 4 percent of chert in the crushed stone.

SHALE CONTENT

Shale is another objectionable material, which may be found in limestone. Shale is a consolidated clay and sometimes is called claystone. The distinction between clay and shale may be difficult to make. Some writers separate the two based on their physical behavior on wetting. The clays slake and fall apart but the shales hold their shape. Shale has poor resistance to weathering. When freshly exposed, shale may be moved only by blasting but after some months it would turn into loose soil. This lack of resistance to the weather is the principal objection to shale.

Like chert, shale may be found in thick or thin seams. Thin seams are not so bad unless they are closely spaced and cause the limestone to break into thin slabs. Thick seams are most undesirable as the shale may be found in sizable pieces in the crushed stone as prepared for use. With its poor resistance to weathering, shale can initiate the failure of bituminous pavements. Shale is usually less of a problem in concrete aggregates. If near the exposed surface of the concrete, the pieces of shale may break down and be removed from the concrete forming a hole or pit, but this damage is more disfiguring than harmful. An accumulation of pieces of shale in concrete would reduce the strength and lessen the life of the structure. Some varieties of shale expand when wet, and may assist frost in the destruction of pavements.

Due to the materials from which shale is formed, the manner of formation, and the point of consolidation from clay to shale, these materials have quite a variable density and composition. Data on the density of shales found in roadbuilding aggregates are surprisingly limited. Some information was found applying to shales in one Midwestern State. The specific gravity varied from 2.25 to 2.64 with an average of 2.45. In the discussion of the paper, it was stated that many

shales are much lighter with specific gravities which rarely are over 1.75.

Available information indicates that limestones having any objectionable shale content might be treated by two methods. One would be to blast as much in advance of crushing as is possible and to keep the crushed stone in small stockpiles for as long as is possible. This would permit weather-ing to attack the shale and reduce it to small pieces or dust. Rescreening or washing the stone may be necessary. The other method would involve processing the stone in a heavy media plant as was mentioned for chert. This treatment possibly would be more suitable for some quarries than others due to the specific gravity of the shale. In this matter each deposit of limestone must be considered separately. The amount of shale present, the specific gravity of the shale and the limestone, and permissible requirements for the shale content must all be considered.

ALKALI-AGGREGATE REACTION

The statement has been made that limestone is not chemically reactive with the alkali in portland cement. Unfortunately this is not correct for all varieties of limestone. In his principal paper first describing the reaction, Stanton stated that one reactive aggregate was a siliceous magnesian limestone. It appears to be true that few commercially operated deposits of limestone are known to contain alkali-reactive material but any sedimentary rock might have deposits of opal. These deposits may vary greatly with the result that alkali-reactive material could be of significance in rock from one portion of a quarry and not from another.

The reaction occurs between the alkali in the cement and alkali-soluble silica in the aggregate. The end product of this reaction is a gelatinous material or gel which has the property of being able to absorb a considerable volume of water. When sufficient gel collects at a point in a piece of concrete and water becomes available to it, the gel will expand greatly. If the pressure of the expanding gel is not otherwise relieved, the concrete will crack. Exposure to air will cause the gel to dry and shrink, but the crack will permit the free entry of water and development of gel at another location in the concrete may begin. Entry of water will also promote the failure of the concrete Where freezing temperatures occur.

In several of his reports, Stanton has commented on two features of the alkali-aggregate reaction which have not been given the attention they deserve. One is that if the amount of reactive aggregate is steadily increased, the amount of expansion will increase to a maximum, and then suddenly drop to an insignificant value. The second feature is that the amount of reactive aggregate required for the maximum expansion of a mortar or concrete will vary with the size of the reactive aggregate. If the reactive aggregate is finely divided as powder, only a very small amount may be necessary to produce the maximum expansion of concrete, and the addition of another small amount of reactive aggregate may cause the expansion to become negligible.

In recent years, studies of various materials in finely divided size to control the expansion of concrete due to this reaction have been made by a number of research laboratories. Some of these materials have been found effective, others have not. But one material has been overlooked in these investigations. If an aggregate contains reactive material, the least expensive and possibly most effective substance for controlling or supressing expansion due to the reaction may be the particular aggregate in question in finely divided form. Any producer who finds his rock to contain reactive material

should consider the use of the powdered rock to control expansion due to this reaction.

The addition of the powdered rock will not prevent the reaction, but the latter will proceed so rapidly that it may be completed before the concrete has hardened. Of course the producer would be expected to determine the amount of powdered rock to be used with various combinations of cement and aggregate. The cost of determining this would be insignificant if it would permit the use of stone otherwise condemned as alkalireactive.

SLIPPERY PAVEMENT

Concrete or bituminous pavements built with most types of coarse aggregates are likely to become slippery if used by heavy enough traffic. A report of a concrete pavement in Pennsylvania states that under light traffic, the pavement gave very satisfactory service for a number of years. When heavy traffic began to use the road due to a change in location of adjoining roads, the pavement became dangerously slippery in a few months. This is a problem for every highway engineer and stone producers should also be concerned with it. Widespread attention to the prevention of slippery pavement may have crystal-lized in 1953 with the publication of an article by Larson. At that time, a study of slippery pavement disclosed that for con-crete the most dangerous were those in which both fine and coarse aggregates were prepared from limestone. Further study has shown that a very simple solution of this problem is possible. That is, for concrete pavement to carry heavy traffic, avoid the use of limestone sand with limestone coarse aggregate.

This item of preventive engineering may not have the approval of the producer of limestone sand but from the point of view of the highway engineer it is most desirable. The engineer must consider the traveling public and discontinue the use of combinations of aggregates which do not give good results.

WISHFUL THINKING

The wishful thinking mentioned here is concerned with the grading of coarse aggregate. Some years ago when the economic alue of concrete pavements was recognized, the portland cement used was a rather expensive material. Efforts were made through the grading of the aggregate to obtain a concrete mix of proper strength with the use of the least amount of cement. Although a number of formulas for the grading of the aggregate were proposed, little use of these was made in large paving projects possibly due to tolerances which producers could not meet or to lack of inspection on the project. With the development of more knowledge of the influence of the grading of aggregate on the properties of concrete, a demand for more care in the sizing of the aggregate arose. State highway departments began specifying the grading that the coarse aggregate should have and usually required a maximum size of 2 or 21/4 inches. As some difficulty was found in obtaining uniformly graded aggregate in different shipments, some States started requiring that the aggregate be sup-This has assisted plied in two or three sizes. in obtaining aggregate of more constant grading but improvements in this respect still could be made.

In 1948, Jackson and Allen made reports of the Autobahnen in Germany. One item of interest is the use of coarse aggregate with a maximum size of about 1 inch. The authors were much impressed with the quality and uniformity of the concrete obtained and attributed this in part to the use of aggregate of small size.

It has been shown above that the use of a coarse aggregate of smaller size than is customarily specified will permit an improvement in the quality of limestone through the removal of undesirable material. It is be-

lieved that the preparation of coarse aggregate in this smaller size will aid in obtaining material of more constant grading from shipment to shipment. And it is also believed that aggregate with a constant grading would be most welcome to the highway engineer.

The wishful thinking covers two points: That someone would be daring enough to specify limestone with a maximum size of 1 inch for concrete pavement, and that limestone producers would screen their stone into individual sizes and recombline each shipment to the required grading. By individual sizes, reference is made to the 1- to ¼-inch, ¼- to ½-inch, and ½-inch to No. 4 sizes. If stone were so sized and recombined as required, the engineer would be assured of aggregate of more constant grading and the limestone producer could eliminate unwanted material to better advantage.

SUMMARY

The principal defects of limestone as a roadbuilding aggregate have been mentioned and methods for the correction of these defects suggested. Application of these methods may rest on economic considerations including the availability of other types of aggregates. Mention was also made of the use of coarse aggregate for concrete of a smaller maximum size, and for more uniform grading, the separation of aggregate into individual sizes. Stone of smaller size should more readily be treated to remove unwanted materials.

Washington Talent Search Program Patterned After New York's Higher Horizon Project

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. KEATING. Mr. President, I want to call attention to an article in this morning's Washington Post which compares the newly initiated talent search program in the District of Columbia to New York City's higher horizon educational program for advanced public school students. Both of these programs are designed to aid especially able underprivileged students in overcoming the many and varied hurdles which often deter them from getting the type of intensive and high level educational preparation for which they are qualified. Mr. President, I commend those responsible for these two excellent and forwardlooking programs, and ask unanimous consent that the above referred to article from the Washington Post be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 24, 1960]
NEW YORK SCHOOL PLAN LIKE DISTRICT'S
HELD SUCCESS

(By Erwin Knoll)

New York City's higher horizons program to raise the educational and cultural goals of underprivileged children, which is the model for a similar project launched in Washington last fall, will be extended to 63 New York public schools in September.

The New York Board of Education announced yesterday that success of the project has prompted it to add 19 elementary schools to the 44 schools which participated this year.

The program, started in 1956, offers intensive counseling, remedial instruction and cultural experiences in an effort to overcome the stifling of educational motivation in children from families struggling economically and without educational tradition.

A talent search project closely patterned on the New York program and financed by a grant from the Eugene and Agnes E. Meyer Foundation was introduced last fall at Macfarland Junior High School, Iowa Avenue and Webster Street NW.

School officials reported this month that the assignment of remedial instructors, counselors and social workers to Macfarland already has produced notable achievement gains among many of the 200 seventhgraders taking part in the program.

The talent search project is to be extended to adjacent Roosevelt Senior High School and—if it proves effective—to other schools serving needy neighborhoods.

New York educators reported that in 4 year's experience with "higher horizons," improvements have been noted in pupil's school achievement, attitude and behavior, and parents have taken an increasing interest in their children's performance.

The New York program draws heavily on the support of community organizations and institutions to provide low-income youngsters with cultural experience to which they would not be exposed normally.

Negroes in Perth Amboy

EXTENSION OF REMARKS

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following excerpt from the "History of Perth Amboy, New Jersey," by William C. McGinnis:

NEGROES IN PERTH AMBOY

It is not recorded whether any slaves were brought to New Jersey under the concessions of Berkeley and Carteret. In 1680, 15 years after the date of the concessions there were only 120 Negroes in the colony, and most of them were brought in from other colonies. The bond white servants who sold their services to settlers in order to have their passages paid from England and Scotland and the Negroes who were owned outright were alike designated as servants by many people in early colonial New Jersey. In 1698 the Quakers of New Jersey and Pennsylvania recommended to their own people that they stop owning slaves. Quakers as a sect gave up slavery, but other denominations of Christians did not. When the Crown took over the government of the colony, 1701-2, slaves were brought in from Africa.

Queen Anne in her instructions to Goy. Lord Cornbury called the Governor's attention to the Royal African Co., which brought Negroes from Africa and sold them as slaves. The instructions continued: "And whereas we are willing to recommend unto the said company that the said province may have a consistent and sufficient supply of merchantable Negroes."

Negro slaves were brought to Perth Amboy from Africa under the Royal Governors, be ginning with Lord Cornbury, 1702. At the function of Smith and Water Streets there were barracks in which the slaves were housed on arrival. Throughout the colony most of the field labor and domestic services of most families was performed by Negro There were some indentured or bond servants who were white. In the years immediately before the revolution there were approximately 300 families in Perth Amboy. There was only one that did not own slaves. That was the family of Thomas Bartow, a man of considerable wealth, who was opposed to slavery

In his History of the Arts of Design, William Dunlap, writing about Negro slaves said: "My father had several families of them of all ages." Thomas Bartow guide, tutor and friend of William Dunlap a small boy. It was due to Bartow's influence that Dunlap freed the family slaves shortly after his father's death in 1791. Many years later Dunlap in a letter to his friend William Whitehead told of his studying with Mr. Bartow. He said: "This commenced my acquaintance with Homer, with Pope, with Milton, with Troy, Greece and Rome. I learned to love books and pictures, and my love for them has continued." 10 years of age William Dunlap had a greater knowledge of the classics than most high school graduates have today.

That the importation of slaves was being carried on to a considerable extent in the province in 1763 is shown in a letter from Governor Hardy to the Lords of Trade in London:

PERTH AMBOY, May 2, 1763.
Right Honorable the Lords Commissioners

FOR TRADE AND PLANTATIONS.

My Lords: By the Intrepide Man of War, I sent the bills passed at the last sessions of the General Assembly of this Province in September. There is among them one entitled "An Act for the laying a duty on Negroes and Mullato slaves imported into this province" which I would not give assent to without a suspending clause not to take effect until His Majesty's pleasure shall be known; it may be proper likewise to inform your Lordships that the reason for laying a higher duty in the western division than the eastern, is that in the province of Pennsylvania the duty is 10 pounds proclamation on all slaves imported, and in New York only 2 pounds currency; this consideration induced the Assembly to make such a defference in the two divisions. * *

Your lordships most obedient humble

servant,

JOSIAH HARDY.

(Whitehead, pp. 38-40.)
For 80 years the Quakers in Pennsylvania advised their members against encouraging slavery, and in 1776 all slaveholders who would not free their slaves were excluded from membership in the Society of Friends.
Quakers in all the other colonies soon fol-

lowed their Pennsylvania brethren.
SENTENCED TO BE BURNT ALIVE

A.D. 1729

At a special Court (by virtue of an Act of ye Generall Assembly of New Jersey, intitled an Act for Registering Slaves), held at Ferth Ambody ye tenth day of Januari In ye third year of his Majestie's reign, Anno Dom. 1729, before three of His Majestie's Justices of ye Peace for ye County of Middlesex. In conjunction with five principall Freeholders of ye said County: In order to try An Negro Man named Prince for murdering one William Cook, A White man. Present:

The Indictment Against the said Negroman being read to him, he pleaded not guilty to ye Murder, he was charged with; but it Appearing to ye Court by sundry Evidences

and other substantial profis that he was guilty of ye said Murder, The Court found him guilty, and pronounced sentence Against him, which was that he should be burnt Alive, on ye twelfth of this Instant, which sentence was accordingly then put in Execution. (J. Lawrence Kearny, scrap book.)

tion. (J. Lawrence Kearny, scrap book.)
There were three "risings" of slaves in the Provinces. The earliest was in the Eastern division not far from New Brunswick and Perth Amboy. In early writings it was said to be near the Raritan. The purpose of the insurrection was to obtain their freedom by a general massacre, and then join the Indians to fight for the French.

In the provinces of New York and New Jersey, slaves were severely punished for crimes. Burning alive was a frequent punishment. In Perth Amboy on July 5, 1750 two Negroes were burned alive for the murder of Mrs. Obadiah Ayres. One of them was a boy 16 years old recently brought from Africa. The other was a man. A Negro was hanged at the junction of New Brunswick Ave. and Woodbridge Road (Amboy Ave.) for theft. (Whitehead pp. 318-19.)

New Jersey has a bad record in its treat-

ment of slaves as a colony.

On February 15, 1804, New Jersey adopted a law which gave freedom to every child born of slave parents after July 4, 1804; the males on reaching twenty-five years of age, and the females twenty-one. Under the operation of the act, slavery had practically disappeared before the beginning of the Civil War. The importation of slaves into the State was prohibited as early as 1786.

In 1810 the City had a population of 815. Included in that number there were 49 slaves. When the law of 1820 was adopted there were only 30 slaves in Perth Amboy, but the number of slaves in New Jersey at that time was nearly ten times the number of people in this

city

The number of slaves in New Jersey had been decreasing for many years before the Civil War as is shown by this tabulation:

1790	11,423		
1800	12, 422		
1810	7, 557		
1830	2, 254		
1840	674		
1850	236		

Whitehead, page 320.

Perth Amboy's record in its treatment of Negroes is somewhat mixed. St. Peter's Church has a good record. Negroes were admitted as members of the Church from the time of its first services in 1685. They were admitted to the Church School in 1763. As late as the 1860's Negro children were not admitted to the one public school in the city. But beginning with the first public school building in 1871 there has been no discrimination in the schools. In the past decade several Negro boys have been elected presidents of the senior classes at Perth Amboy High School, and one at St. Mary's H. S.

As late as the 1930's and early 1940's Negroes were denied equal rights. In 1936 I was State Director of Adult Education (WPA) and Superintendent of Perth Amboy Public Schools. I called a meeting in Perth Amboy of the State supervisors of W.P.A. Negro Schools. Segregation was common New Jersey practice not only in WPA education but also in the public schools, Middlesex County being a notable exception. I went personally to every public eating place on Smith Street trying to find a place where the Negroes could get lunch and no eating place would serve them.

As in Bethlehem, "There was no room at the Inn." Lunch was served to them in the High School cafeteria where teachers and students welcomed them cordially.

In 1949 the Board of Education appointed the first Negro teacher, Mr. Herbert Richardson was appointed to teach music in the Samuel E. Shull School. He is one of the most popular teachers in the school system.

RIGHTS

It is a strange thing that in a large section of the United States, the fundamental rights of many American citizens are denied because of the color of their skin. In Acts 17: 26 we read that God made of one blood all nations of men. But in the South a great majority of the people, by custom, by preference, by law, and by professed belief, relegates Negroes to a position of second-class citizenship. Those people are professed Christians, and yet they use the cross of Christ as a symbol of hatred, terrorism, and oppression. They ignore the admonition, "Love thy neighbor as thyself."

Men who exhibit a flery cross on a hilltop or close to a Negro family's home are Chris-

tians who have lost their way.

The denial of civil rights to Negroes in the South does great damage to the United States in the family of nations. Negroes in the South are deprived of their civil rights by public officials, including judges and lawenforcement officers. Many churches ban them from membership.

But in the North, too, the Negro is, to some extent, treated as a second-class citizen, and is denied equal opportunity.

The September 1958 bombing of a synagogue in Atlanta was a shocking thing, shocking to the South as well as to the North. But it was not a surprising thing. The rabble rousing politicians of the South are the indirect sponsors of cross burners and bombers. The rabble rousers include southern Governors, Senators, and Congressmen. Members of the White Citizens Councils and the KKK are their followers. When men in the seats of the mighty in government uphold and advocate defiance of the law and the Federal Constitution, cross burning, bombing, and mob violence are the inevitable consequences. The Atlanta bombing is the fourth bombing of a synagogue in recent months. Other bombings this year have included schools and homes of Negroes. One was the home of a Negro clergyman.

In the pledge of allegiance the words, "With liberty and justice for all," mean "justice for all." Racial problems including problems of integration are religious problems. They involve the highest concepts of various religions, and are parts of our Bill of Rights, because the principles on which our Government was founded are the principles of religion. Racial problems are also problems of government. They are the concern of the courts, law officers, and the Congress

of the United States.

THE FIRST NEGRO VOTER

Thomas Peterson was the first Negro voter in the United States. He was sometimes known as Thomas Mundy. Before moving to Perth Amboy his father was employed by the Mundy family in Metuchen where Thomas was born in 1824. His parents came to Perth Amboy in 1828 where Thomas lived

all his life from 4 years of age.

The fact that Thomas Peterson was the first Negro citizen to vote has been established beyond question. It was established when a claim was made for that honor by a Negro voter of Princeton, N.J. Tom Peterson did not want to have the distinction of being the first Negro voter unless his claim to it was just, and so a committee of prominent citizens of Perth Amboy was selected by him to make an investigation and report committee was made up of J. L. Kearny, Patrick Convery, William Paterson (former mayor), John Fothergill (former mayor), and I. T. Golding, city treasurer.

J. L. Kearny was the person who had suggested to Mr. Peterson that he vote and Patrick Convery received and recorded his

vote at the poll.

Thomas Peterson cast his vote in Perth Amboy on March 31, 1870, the day following the adoption of the 15th amendment to the Constitution. The Princeton claimant, an honorable and popular citizen, cast his vote on April 13, 1870. He readily conceded the fact that Thomas Peterson voted before he The committee made a thorough investigation and found that there were only a few elections on March 31 and none March 30 and that no Negro had voted anywhere except in Perth Amboy.

Thomas Peterson was a good citizen. He

served as custodian of School No. 1.

On Memorial Day, 1884, the citizens of Perth Amboy at a large meeting at city hall presented Thomas Peterson a medal. On the obverse side of the medallion was the profile of Abraham Lincoln and on the reverse these

Presented by citizens of Perth Amboy, N.J., to Thomas Peterson, the first colored voter in the United States under the 15th amendment, at an election held in that city,

March 31, 1870.

The following is a copy of the program. The presentation of a medal to Thomas Mundy Peterson, Decoration Day, May 30, 1884, in the city of Perth Amboy, N.J., in commemoration of his having been the first colored citizen in the United States to cast a vote under the 15th amendment, with addresses by Hon. William Paterson and others, Perth Amboy, N.J.

The Middlesex County Democrat Print,

Reprinted 1935, H. E. Pickersgill, Perth Amboy, N.J.

On the inside of the south wall of St. Peter's Church a visitor will note a bronze tablet with the words:

In memory of Thomas Peterson, first Negro voter of the United States under the 15th amendment at an election held in this city March 31, 1870.

His body rests in the southern portion of the churchyard. Erected by the Negro History Club of Perth Amboy March 10, 1940.

A newspaper clipping in the possession of Mrs. Johannes Garretson Koyen (without date) reports an interview with Thomas date) reports an interview with Peterson: "I was working for Mr. J. L. Kearny on the morning of the day of election, and did not think of voting until he came out to the stable where I was attending to the horses and advised me to go to the polls and exercise a citizen's privilege * * *. When I went home to dinner at noon I met Mr. Marcus Spring of Eagleswood, a place about a mile out of town, and he, too, advised me to claim the right of suffrage at the polls.

"The question at stake that day was not a party issue but rested upon the adoption of a new charter. A desire had arisen on the part of some people of the town for a revised charter, while others wished to surrender the charter altogether and revert to a township government. As I advanced to the polls one man offered me a ticket bearing the words 'revised charter' and another one marked, 'no charter.' I thought I would not vote to give up our charter after holding it so long; so I chose a revised char-

"Our side won the election by a vote of 230 to 63 and I may mention as a coincidence that I was afterward appointed one of a committee of seven to revise the charter.'

The article goes on to state that "Peterson was born in Metuchen, N.J. His father was Thomas Peterson. His mother's name was Lucy Green. The former came from free parents, but the latter's parents had been slaves in Governor Newell's family; in Monmouth County. When 4 years old, his father moved to Perth Amboy. On February 10, 1844 he was married to Daphne Reeve whose

family had been slaves on the Bell estate in Perth Amboy.

Peterson's statement continued. "For 7 ears I was employed by the city as janitor of the public school, and last year I was a delegate to the Republican county convention." Thomas Peterson was janitor of School No. 1 in 1870-77. The medal described in this history was presented to Peterson on May 30, 1884. In the above newspaper report and interview there is no mention of the medal. It is safe to state that the date of the newspaper article is between 1877 and 1884.

Thomas Peterson's grandson Alfonso, lives in Rahway, N.J., with his wife and 11-year-old daughter, Althea. He was born in Perth

Amboy.

It has long been a matter of St. Peter's Church history that Thomas Peterson was buried in St. Peter's Churchyard, but the exact location was not known. Reverend William H. Watson and this writer recently located Mr. Peterson's grave beside the grave of his wife. In August 1959 the church collected a special fund and placed a large stone:

Here lies the body of Thomas Mundy Peterson, first Negro voter in the United States under the 15th amendment at an election held in Perth Amboy, March 31, 1870. Member of a committee to revise the city

charter, born October 6, 1824; died February 4. 1904.

His wife, Daphne Reeve Peterson, born October 2, 1820, died November 23, 1891.

Note.-William A. Newell was Governor It was his ancestors who owned

Daphne Reeve's slave ancestors. When Mr. Peterson went to church or to any other gathering of people he wore his medal. After Mr. Peterson's death the medal was owned by Judge Harold Pickersgill. Later the Rev. George H. Boyd tried to buy it for St. Peter's Church and offered to pay a good price for it. The new owner refused to sell it to the church. It was sold at auction in New York. It was finally sold to Xavier University in New Orleans and is in the University Museum. Xavier is a Negro Catholic institution. If Perth Amboy could not have the medal it is good to know that it is in a Negro institution, but it should be in Peterson's hometown. Thomas Peterson's

granddaughter, Mrs. Helen H. Ewing lives in New York, 2042 Madison Avenue, St. Peter's Church, Very Rev. Dr. George H. Boyd, Rector; Rev. William H. Watson, As-

National Anthem.

NAACP, PERTH AMBOY BRANCH

For many years the National Association for the Advancement of Colored People has worked for the betterment of Negroes throughout the United States. Several white people are members of the Perth Amboy NAACP. The officers of the local organization are:

Henry M. Wade, president; Mrs. Mary E. Wilson, secretary; Mrs. Leola M. Wood, assistant secretary; Mrs. Geneva Miller, treasurer; Kenneth F. Wood, executive, board chairman; Ira Wilson, program chairman; Mrs. Leola M. Wood, youth adviser; Aldan D. Markson, legislature chairman; Rev. Herbert M. Martin, housing chairman; William Morton, labor chairman; Herbert Richardson, educational chairman; Patrolman James Hodge, publicity chairman; Mrs. Hilda Hodge, freedom fund chairman; David Mandel, legal redress chairman; Elsie Gibbs, community coordination chairman; Alston Smith, life membership chairman.

Mrs. Mollie Chapman recalls that there were some families of ex-slaves that migrated to Perth Amboy from Nova Scotia by way of Harriet Tubman's underground railroad. They were the Lawrences, the Stillwells, and the Woolseys. Mollie's grandmother was Jane Lawrence, one of the aforementioned ex-slaves. Her father, Samuel Lawrence—born in 1846 in Perth Amboy—made a living in the then prosperous oyster industry in this city. Evidently, he met with some measure of success which enabled him to purchase a tract of land where the St. James A.M.E. Zion Church now stands. Othese families, Mrs. Chapman and her brother, Warren R. Lawrence, of Hoboken, N.J., are the only survivors.

Around the turn of the century, there came an influx of immigrants from the West Indies and migrants from the South. The circumstances that led these people to Perth Amboy are many and varied. The West Indian, by nature, is a man of the sea. Around this time the Barber Asphalt Co. owned and operated a fleet of ships between Perth Amboy and Trinidad. These were the prepassport days, so we can see how it was possible for certain of these men to make a one-way trip, terminating in Perth Amboy. Among the first of these were William Arthur Gumbs, D. Gumbs, and Joseph Hodge. These men are still local residents.

The growing Negro population presented the same problems of community life that confronted other ethnic groups. The Negro, by nature, is a God-fearing individual, and it had to be that one of his foremost desires was to have a place of worship of his own.

D.R.C.'S

The D.R.C.'s is an organization that came directly from the church. The group was organized in 1911 as the Dress Reform Convention, and carried the name "D.R.C.'s." In 1935 this was changed to Daughters of Race Culture. The organization is a benevolent as well as a social club. In both World Wars I and II, they bought war bonds and donated their services to the hospital. The club affiliated with the New Jersey State Federation of Colored Women's Club in 1923, and is the second oldest club in the federation. The purpose of the federation is work and serve, and the motto, "Lift and Climb." The federation is affiliated with the National Association of Colored Women, the National Council of Women in the United States, and the International Council of Women.

The "D.R.C.'s" is the oldest Negro club in Perth Amboy, having been organized for 46 years. At its 46th anniversary celebration 8 of the 12 members received awards for 25 years of service in the Federation.

Dr. Edward Swift was the first Negro doctor in Perth Amboy, and Mrs. Rosetta H. Dove was the first Negro social worker. Both of these persons saw the need to in-

stall in the youth of that day, a sense of race pride through an understanding of racial heritage and awaken latent creative abilities.

Dr. Swift conducted an opportunity class at the St. James A.M.E. Zion Church and formed two clubs "the Fraternity Boys" and the "Sorority Girls." Mrs. Dove, through her affiliation with St. Peter's Episcopal Church, strove to accomplish the same goals. She established courses in dramatics, handicrafts, and engaged in numerous community projects.

Here are some of Perth Amboy Negro firsts: First nurse, Placid Jean Dove (Parker); 1945, first teacher, Herbert Richardson; 1947, first policeman, Walter Gibson; 1948, first postal employee, Joseph Raysor; 1958, first paid fireman, George Hodge.

SONS AND DAUGHTERS OF ANGUILLA

The Sons and Daughters of Anguilla, British West Indies, was organized in the fall of 1921 by the late Nerlah Richardson. The society was granted a charter on September 7, 1922. Elected to office were: Charles B. Richardson, president; Nerlah Richardson, vice president; Charles W. Gumbs, secretary; Sydney Nurse, treasurer.

The group is composed of all people who are descendants of Anguillians and their husbands and wives. The purpose of the organization is to strengthen the bond between the people of Anguilla and their descendants now residing in the United States. During the winter of 1923, some of the members moved to New York where a sister organization, the Anguillian Benevolent Society was formed. In 1945, the society purchased property at 178-180 Chauncey Street. It consists of two apartments and hall known as "the Carribean Hall." At the present time, there is a membership of over 50 financial members.

Looking Ahead to the Golden Years

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. WILEY. Mr. President, throughout history, aging has been defined variously as:

Age does not depend upon years, but upon temperament and youth. Some men are born old and some never grow so—Tyron Edwards.

In our revolutionary time, the average lifetime has been extended to 70 years and many living to be 100 and more.

The Nation, I believe, will need to take a new look at its thinking and policies in relation to our growing ranks of senior citizens, now estimated to be over 15 million. Among these people is a great resource of experience, knowledge, understanding and, yes, in many a willingness and ability to continue our lifetime works and do a good job. In many areas of employment, retirement is required at 65 years. Currently, there is effort to further reduce this retirement age.

The big question confronting the Nation is, then, how will these people occupy the next 10 to 30 years of their lives? For those who wish to retire, there should be an opportunity to enjoy the fruits of life. However, retirement

brings along with it the need for a series of economic and social adjustments.

Recently, the National Association of Retired Civil Employees—in its publication, Once in a Lifetime—published a "Senior Citizens Bill of Rights."

Recognizing that a creative effort is needed to provide a bright outlook for the more than 15 million citizens in the over-65 bracket, I ask unanimous consent to have this bill of rights—reflecting light upon the challenges in this field—printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SENIOR CITIZENS BILL OF RIGHTS

Each of our Senior Citizens, regardless of race, color, or creed, is entitled to:

1. The right to an opportunity to continue to be useful.

2. The right to an equal opportunity to obtain employment based on merit, not birthdays.

3. The right to freedom from the spectre of want in old age and burial in a pauper's

4. The right to a fair share of the community's recreational, educational, and medical resources.

5. The right to obtain decent housing suited to the needs of later years.

The right to the respect of the community, based on service to the community.
 The right to the support of one's fam-

The right to the support of one's family to an extent consonant with the best interest of the family.

8. The right to live independently, as one chooses.

9. The right to live with dignity as a free human being unfettered by antiquated concepts of the "proper role of old people."

10. The right of access to all available knowledge on how to make the later years happy years.

Relations Between the White and Colored People of the South

EXTENSION OF REMARKS

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mrs. BLITCH. Mr. Speaker, the following resolution was adopted by the Charlton County Grand Jury and I would like to have it included in the Congressional Record for the benefit of the Members of Congress:

Be it hereby resolved by this group in official duty as the Grand Jury of Charlton County, Ga., that we do deplore the deterioration of the relations between the white and colored races, a deterioration which has set in since the 1954 decision by the Supreme Court of the United States, stating that separate but equal school facilities are not adequate for providing sufficiently for the colored race from an opportunity standpoint. A court decision which in effect reversed the U.S. Supreme Court, in an opinion that has been held for over 70 years previous to 1954.

We do deplore the forces from outside our county and from outside the State that have through promotion of discord, strife, and agitation built up this degree of de-

terioration of harmony and well-being that existed between the white and colored races prior to these agitations and promotions of strife

The relations between the white and colored people of the South for the past 100 years at large have been on a better basis than anywhere else in the world, in its entire history.

It is clear to us that separate but equal facilities for the white and colored races is the best way to carry on harmony and good will between the races, when especially there are as large a number of both two races as exist in the South today.

We unanimously and vehemently agree that separate but equal school facilities are that which we will be willing to support.

We recommend that a copy of this resolution be sent to Hon. John Sibley, chairman, Legislative Study Group, Atlanta, Ga.; Hon. Ernest Vandiver, Governor of Georgia; Sena-tors Richard B. Russell and Herman Talmadge, Washington, D.C.; and Congresswoman Iris Faircloth Blitch, Washington, D.C., and the attorney general, Eugene Cook, Atlanta, Ga.

We stand, united for segregation and/or separation of the races.

Disarmament and the Summit

EXTENSION OF REMARKS

HON, HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 24, 1960

Mr. HUMPHREY. Mr. President, on May 5, I was privileged to address faculty and students of Bethany College, Bethany, W. Va., on the subject of disarmament. I ask unanimous consent that my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DISARMAMENT AND THE SUMMIT—BETHANY COLLEGE, WEST VIRGINIA, MAY 5

Only 11 days from now President Elsenhower, Chairman Khrushchev, Prime Min-ister Macmillan, and President de Gaulle will begin the summit meeting at Geneva.

I have no crystal ball, and I will not attempt to prophesy what the outcome will be. I do know what I hope President Eisenhower will work for, with all the influence and Persuasive power he and I mean he, and not any stand-in-can bring to bear.

I hope that he will propose that disarmament and arms control will be put at the very top of the agenda, and that the other three leaders will agree.

I know that armaments and political tensions among nations feed upon one another. I know that many students of international affairs maintain that you cannot make any progress on one without the other.

I cannot agree to that. It reminds me of the law that some town passed about the crossing of two railroad lines: "When two trains meet at the crossing, neither shall proceed before the other."

I think that, for the time being, we and the Soviet Union shall have to agree to disagree about Berlin—and, indeed, about the two Germanies, and all the other political problems that clutter the international

The Russians have given no indication that they are, in the field of political problems, ready to stop propagandizing and begin serious negotiation. That does not mean that we should forget these problems, or condensate the serious and the serious negotiation. or condone them.

It does mean, however, that our immediate major effort should be in disarmament, where the Russians seem in a mood to "talk There are obvious reasons for this. The Russians have come to recognize that the armaments race threatens both sides of the Iron Curtain with mutual annihilation. Moreover-as the recent news of strikes and riots among Soviet workers emphasizes—the men in the Kremlin have compelling domestic reasons for wanting to beat some of their swords into ploughshares.

Indeed, I noted over a year ago-on my return from my visit to the Soviet Unionthat Chairman Khrushchev needed peace. I predicted even then that he would launch a big push for disarmament. We should have

been ready, but we weren't.

There are two major steps toward disarmament that can and should be taken at the summit meeting. One of these is to resolve the major obstacle standing in the way of a nuclear test ban agreement. second is to lay down general directives for the future course of the current 10nation disarmament talks.

Because time does not permit, I shall not describe the test ban treaty in detail. Agreement on some important points has been

reached; on others it has not.

I believe, however, that it is fair to say that the major obstacle to agreement is the dispute over the number of veto-free, onsite inspections that shall be permitted in the Soviet Union each year.

Like so much in this complex question of disarmament, this is a highly technical question. I shall explain it as best I can.

If the treaty is agreed upon, control posts would be set up within the Soviet Union as elsewhere in the world-to monitor shocks to the earth's surface.

Up to a certain number of times each an international inspection team should have the right, free of veto, to make onsite investigations on an event registered at the control posts which could not be identified as an earthquake.

The U.S. position is that at least 20 inspections a year would be needed in the Soviet Union to check for possible prohibited explosions. I fully support that position, Indeed, I have publicly warned the Soviet leaders that no treaty which provides for less than 20 would command the two-thirds majority in the Senate needed for its ratification.

I know the traditional Russian bent for secrecy-a bent long preceding Soviet assession to power. But I hope they will recognize that this is a modest and reasonable adjustment to make.

The achievement of a test-ban agreement at the summit—or, to be more realistic, the removal of this major obstacle—would sound trumpet of hope for troubled and fearful

Such hopes, however, would be cruelly disappointed if the summit conference stopped there-and did not make a real effort to get the 10-nation disarmament talks off the dead center where they are currently

The problem is that the great powers each want to ride off in a difference direction and therefore are getting nowhere. If the summit conference can decide on the direction of the next steps in these negotiations, even in very general terms, it would be most helpful.

Meanwhile, there is a lot of urgent homework that we need to do. We need to know much more about controls before we can seriously negotiate them. We cannot expect the Soviets to do this work for us. They are allergic to controls, and will accept as little as they can. Asking them to develop controls is like expecting a man condemned to be hanged to make his own rope.

I have been warning for many months that we are not prepared for serious negotiation on controls. At long last, the Department

of State itself has acknowledged this fact. Here is a quotation from the testimony of Mr. Raymond Hare, the Deputy Under Secretary of State, before the House Appropriations Committee:

"In reviewing our approach to disarmament, it was further found that the most serious deficiency in the U.S. approach has been the lack of adequate planning and studies in the field of disarmament."

At long last, too, there are reports of a possible upgrading of the Office of Disarmament within the Department of State. That is good as far as it goes-but it doesn't go nearly far enough. It comes late—I don't say "too late"—and it is certainly too little.

What we really need—as the Senate Disarmament Committee proposed as long ago as September 1957—is a special agency devoted to the single and comprehensive problem of disarmament—a sort of "Manhattan Project for Peace."

Early in February I introduced legislation to establish a National Peace Agency. It should have the services of some of the ablest and most dedicated people in the country. It should have authority to coordinate the many different projects in the general disarmament field which are presently splintered among the Department of Defense, the Atomic Energy Commission, the Central Intelligence Agency, and the Department of

Its single, overriding assignment should be to find a way to end the arms race. In the existing agencies, this is at best a parttime or occasional assignment. Then, too, there is a built-in contradiction in expecting any Department of Defense to give wholehearted enthusiasm to limiting armaments—or any Atomic Energy Commission to show as much zeal for curtailing atom bombs as for developing more effective and

The Department of State would continue, of coures, to carry on disarmament negotiations-and I have introduced legislation to upgrade this function by establishing an Assistant Secretary of State for Disarmament and Atomic Energy Affairs.

The quest for safeguarded disarmament must be at the heart and center of American foreign policy. It must be placed as far as possible within the framework of the United Nations because disarmament is a concern of all countries, and not only of the great powers. By making our statements on disarmament in the forum of the United Nations we can-if our case is sound-rally behind it the moral force and the conscience of mankind.

We have a better than even chance making the last four decades of the 20th century decades of peace. And if we can keep peace for the next 40 years, there is real hope that the habit may take hold for good.

Postal Workers Need Raise

EXTENSION OF REMARKS

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I am including a letter written by a friend of mine and published in the Fort Worth Star Telegram of recent date.

The letter deals appropriately with the need for an increase in pay for the postal workers throughout the country.

During the past 11 years, nongovernmental wage earners performing work

requiring skills commensurate to those employed in the postal service have received increases averaging a total of 68 cents more per hour.

Postal and other governmental employees have found it increasingly difficult to cope with the rising cost of living while nongovernmental workers in similar activities have gained buying power averaging approximately \$1,-424.80 per year more than the modest gains enjoyed by the postal employees.

For these reasons, it has grown ever more difficult to recruit the type of people we need in the postal service and ever more difficult to hold the services of those dedicated public servants presently engaged in this vital activity. The letter follows:

POSTAL WORKERS NEED RAISE

Representative James H. Morrison and 50 other Members of the Congress introduced H.R. 9883 which provides for a reasonable salary raise for postal workers. The fact that such a large number of Congressmen are sponsoring this bill indicates how popular such legislation is in this Congress.

Industrial workers have received many wage hikes since postal people got their last raise in 1958. Postal pay wage scales have always lagged far below those of union paychecks. Processing the mail for fastest delivery requires great skill and constant study.

There is widespread demand for the passage of H.R. 9883 as the average postal transport worker family needs a salary of \$6,500 per year to maintain a decent standard of living. If H.R. 9883 is passed, postal pay (level 4) will still be 46 cents per hour lower than that of the steelworkers. Every time the postal employees ask for a salary raise someone yells inflation. Higher wages may not cause inflation as the cost of living increased during last September while the steelworkers were sitting on their hands during the steel strike. A pay raise is needed to elevate the sagging morale of postal clerks as a large percentage of them work at other part-time jobs to make a liv-ing for their families. If they could get a living wage for 40 hours per week it would be possible for them to do more work in processing the mail, although production has increased much faster than costs in the last decade. Improved mail service would come with higher morale of the postal workers with higher pay scale.

A high Government official recently stated that we have a great wave of prosperity sweeping over the country. With the passage of H.R. 9883 postal workers may be able to enjoy some of this prosperity. This would help the national economy and help prevent a recession.

Herbert B. Barrier, Secretary, Fort Worth Branch, National Postal Transport Association.

Mandatory Capital Punishment in District of Columbia Should Be Eliminated

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. KEATING. Mr. President, the Washington Post recently published a very informative series of articles by

Milton Viorst concerning the mandatory death provisions of the District of Columbia Criminal Code. The articles summarize the proposals which have been made to soften the rigors of the present code. They make the point, which is often overlooked, that the harsh provisions of the present law actually serve to defeat justice and have not reduced the homicide rate in the District.

There is widespread agreement that the mandatory death penalty should be eliminated. The principal proposals which have been advanced would preserve the death penalty in first degree murder cases, but make its imposition a matter of judgment in each case. In short, an opportunity for the exercise of discretion would be allowed before the defendant was sentenced to death.

The bill I have introduced on this subject (S. 2083) would retain the death penalty unless the jury recommended life imprisonment and the judge concurred in the recommendation. I prefer this language to that advanced by the Judicial Conference, under which, in effect, the penalty would be life imprisonment unless the jury recommended and the judge concurred in a sentence of death. However, either proposal would effectively achieve the most important objective of reform in this area, the elimination of the automatic death sentence. Personally, I am much more concerned about accomplishing this objective than about the exact language of the new provision. And I hope that Congress will not let differences over the language of either of the pending bills obstruct a solution of the problem.

Mr. President, the Washington Post has contributed a great deal to an understanding of this issue by the publication of these articles. I commend this series to the attention of all Members and ask unanimous consent that the articles be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 16, 1960]
PUNISHMENT OF MURDER IN THE FIRST DE-GREE—DISTRICT OF COLUMBIA CODE IS ONLY AMERICAN LAW REQUIRING DEATH

(By Milton Viorst)

"The punishment of murder in the first degree shall be death by electrocution."—District of Columbia Code.

This is the District's unequivocal law that requires the death penalty in all first-degree murder convictions.

It is the only code under the American flag that allows neither judge nor jury discretion in capital punishment sentences.

Senator Kenneth B. Keating, Republican, of New York, has called this demand barbaric. He has said it is an "anachronism in the law." One after another, the States have eliminated it, but in the District it has hung on and on.

"This is not because people of the District of Columbia are more bloodthirsty," Keating said, "or less concerned about humanizing justice than the people of the rest of the country.

"I believe it is simply because Congress cannot give the affairs and problems of the District of Columbia the attention which they would receive from a locally elected legislative body.

URGED HOME RULE

"These obsolete provisions of the District of Columbia Criminal Code would long ago have been moderated and it would not be necessary for Congress to turn its attention to this problem at all if the people of the District enjoyed home rule," he said.

First-degree murder must possess an element of premeditation or must have been committed in the course of another felony. But juries differ on what constitutes premeditation, and judicial decisions have not thrown much light on the question.

KEATING himself has introduced a bill to make the death penalty discretionary.

It provides that a convicted murderer be sentenced to death unless the trial jury recommends life imprisonment. The judge can, however, override the jury and impose execution.

Modeled after the New York law, the Keating bill is being considered by a District subcommittee composed of Senators Vance Hartke, Democrat, of Indiana; Francis Case, Republican, of South Dakota; and J. Allen Frear Jr., Democrat, of Delaware.

The bill preferred by the Judicial Conference, the organization representing the District's lawyers and judges, reverses the New York procedure.

Introduced in the House by Representative John L. McMilan, Democrat, of South Carolina, chairman of the District Committee, it provides for life imprisonment as the standard penalty unless the jury recommends death. The judge can reject an execution recommendation, however, and impose a life sentence.

The Keating version would require an affirmative act by the jury to spare a life. The McMillan bill would make the jury declare affirmatively to take a life.

affirmatively to take a life.

Judge E. Barrett Prettyman, chief judge of the court of appeals, thinks a death sentence should be made on a positive decision. He would not allow a jury to escape its responsibility by deferring to a statute in the criminal code.

Both bills, however, take the automatic element out of the present law and give judge and jury the chance to examine each case in terms of a human being and the crime he has committed.

Whichever version may appeal to Congress, few disagree that a change is needed.

"It is obvious to me," Keating testified at a Senate hearing on his bill recently, "that we canot do justice in any case without an opportunity to weigh all of the mitigating as well as aggravating circumstances connected with a crime before determining an appropriate punishment.

OPPOSES ABOLITION

"I do not advocate abolition of capital punishment. In fact, I would be opposed to such a measure.

"But I certainly believe that it is barbaric to force imposition of the supreme penalty on any human being without an opportunity for the exercise of judgment and discretion"

Keating says he anticipates resistance to repeal of the law from only two sources—those who oppose capital punishment, no matter what the circumstances, and those who feel no other punishment is suitable for a murderer.

A hard corps of professional defense attorneys might also raise some questions. Kearing said. He added:

"A few defense lawyers * * see some tactical advantage in confronting a jury with a stark choice between completely freeing a defendant or sentencing him to death * * I hope we will not be influenced by attempts to convert criminal cases into a gamble in which the stakes are death and the payoff is acquittal.

"We have long since abandoned the ap" proach to law as a game of wits."

[From the Washington Post, May 17, 1960] PUNISHMENT OF MURDER IN THE FIRST DE-GREE-II: DISTRICT OF COLUMBIA HAS ONE OF NATION'S HIGHEST HOMICIDE RATES

(By Milton Viorst)

An average of 70 homicides are committed in the District of Columbia every year, giving the city one of the highest homicide rates in the Nation.

But despite the mandatory death penalty under District law for first degree murder, only one man has been electrocuted in the

Relatively few homicides become first degree cases. But in the last 7 years, 121 defendants have been indicted for murder in the first degree.

From 1940 to 1950, 18 persons died in the District's electric chair. In the 1930's, 19 persons were electrocuted and in the 1920's, the District executed 13.

In the last decade, the death penalty virtually passed from use.

Legally, the presence of premeditation or deliberation distinguishes first-degree murder from other forms of homicide-unless the murder is associated with another felony.

But juries have been notorious in ignoring the premeditation factor, making of first-

degree cases what they chose.

The U.S. attorney's office boasts a conviction rate of 78 percent on overall criminal prosecutions. Of these convictions, 84 percent have been affirmed on appeal.

But of the 121 first-degree murder indictments, juries have returned verdicts of guilty

only 13 times.

Of the 13 convicted murderers, 1 man was electrocuted.

The sentence of one was commuted to life imprisonment by the President. Three cases are on appeal. Eight of the convicted persons are either at St. Elizabeths, or free on legal technicalities or serving jail terms for lesser offenses.

Results of the other 103 cases follow:

Twenty-four guilty of second degree murder by jury verdict.

Seventeen guilty of second degree murder by plea.

Eleven guilty of manslaughter by jury verdict.

Eighteen guilty of manslaughter by plea. Eleven found incompetent to stand trial. Six acquitted by jury verdict.

Two acquitted by direction of judge.

Eleven acquitted by reason of insanity.

Eight dismissals.

Clearly, juries in the 1950's did not want to send men to death. Statistics demonstrate this is true throughout the Nation and the Western World. Hanging juries are no longer the rule.

Some speculate that jurymen, as well as Judges, have learned from modern psychiatry that behind a felon's guilt lies a com-

plexity of psychological factors.

Others attribute it to the advance of civili-Zation, to prosperity, to society's growing sense of security, to cyclical fluctuations in human attitudes or to the threat of nuclear annihilation.

Whatever the cause, it is clear that jurors in the District of Columbia would rather convict defendants of second-degree murder or manslaughter than of murder in the first

Legislation pending before Congress would replace the automatic death penalty for firstdegree murder with a law to make its use discretionary. It would change the law to suit the practice.

"Under our mandatory death provisions for first-degree murder, it is especially difficult to achieve a first-degree conviction," U.S. Attorney Oliver Gasch has said.

"If juries were given the opportunity to exercise their discretion with reference to the death penalty, juries would be more likely

to follow the instructions of the court and return first-degree verdicts," he said.

Gasch acknowledges that District juries

have, in many cases, faced the responsibilities of the death penalty with fortitude. But more often, they have been reluctant to take human life.

"Permissible rather than mandatory capital punishment," he has said, "may well be the answer.'

[From the Washington Post, May 18, 1960] PUNISHMENT OF MURDER IN THE FIRST DE-GREE-III: OFFICIALS CLAIM MANDATORY DEATH BLOCKS JUSTICE

(By Milton Viorst)

The men who administer justice in the District of Columbia claim the mandatory death penalty for first degree murder obstructs justice.

Their reasons for requesting a discretionary rather than a mandatory death sentence are not emotional.

Some may oppose capital punishment, but no serious abolition movement exists here. If it did, there is no discernible sign that it would be supported in Congress.

Officials are motivated by the hard, practical considerations of law enforcement. They favor the legislation pending before Congress that would eliminate the automatic nature of the death penalty in first degree convictions.

Oliver Gasch, U.S. attorney for the District of Columbia, explains that the district court of appeals scrutinizes every last technicality of a capital punishment case-far more minutely than any other appeal.

A minor error of jurisprudence that has no bearing on substance would be overlooked in another case but becomes sufficient reason for ordering retrial in a capital punishment case, Gasch said.

The result is a string of retrials and interminable delays in the administration of justice.

A check of the criminal docket shows the following history of the recent first degree murder convictions:

Willie Lee Stewart, indicted in 1953 for the heldup killing of a grocer, three trials, case now before the Supreme Court,

Robert E. Carter, indicted in 1953 for killing an off-duty policeman, case affirmed on two appeals, executed 1957.

Clarence E. Watson, indicted in 1953 for bludgeoning a 45-year-old secretary to death during a rape attempt, three trials, case dismissed in 1957, defendant now serving time on an associated charge.

Lawrence E. Kitchen, indicted in 1951 for killing a 73-year-old man in a drinking bout, convicted of second degree murder in 1954, serving jail term.

Everett D. Green, indicted in 1953, for the arson death of an 83-year-old woman, two trials, freed on decision of the Supreme

Russell E. Carter, indicted in 1955, for killing a 15-year-old girl during a housebreak-ing case dismissed after the conviction was set aside, sent to St. Elizabeths on civil commitment in 1957.

Grover L. Isaac, indicted in 1955, for killing a 6-year-old boy after an argument with the boy's mother, two trials, found not guilty by reason of insanity in 1960.

Eugene Bailey, indicted in 1956 for killing his wife, one trial, verdict affirmed on appeal but commuted to life imprisonment by the President in 1958.

James J. Clark, indicted in 1957 for shooting a friend to death after an argument, two trials, third trial set for June 14, 1960.

Comer Blocker, indicted in 1957 for the shotgun slaying of a woman friend, two trials, case now before the court of appeals.

Malcolm E. Williams, indicted in 1957 for stabbing his 5-year-old daughter to death, jury verdict set aside by judge by reason of insanity in 1958.

Willie Jones, indicted in 1958 for killing a man who was visiting his estranged wife, one trial, case now before the court of appeals.

Frank B. Wilson, indicted in 1959 for shooting to death his former girl friend, two trials, found guilty of second degree murder in 1960.

The years these cases required is a contradiction of the Anglo-Saxon concept that justice be speedy, Gasch contends.

He also is disturbed because convictions are more difficult to obtain in each succeeding retrial. Witnesses die, disappear or forget details of what they saw. Juries are less moved by repeated accounts of offenses long past.

Gasch said killers frequently would plead guilty in return for a life sentence. But in the District, a guilty plea in a first-degree murder case is unacceptable because it would be tantamount to judicial suicide.

The trial of a patently guilty murderer thus becomes not a contest to determine guilt or innocence but a simple fight for life.

Death sentences are appealed automatically because a defendant has nothing to lose. But some killers would take life imprisonment without appealing, rather than risk a death sentence on a retrial.

In Great Britain, Gasch said, the law submits a man to only one trial for his life. Convictions are rarely overthrown on technicalities, but if an appeal is sustained, the defendant is freed. Otherwise, the executioner acts swiftly.

"I feel that expeditious disposition of criminal cases should be a major concern in our desire to afford the public the best possible protection from the criminal element," Gasch stated recently.

"By doing so, the law will become and remain a more effective means for deterring

[From the Washington Post, May 19, 1960] PUNISHMENT OF MURDER IN THE FIRST DE-GREE-IV; CONGRESS STUDIES BILLS TO END MANDATORY DEATH

(By Milton Viorst)

Committees in the House and Senate are studying bills to abolish the District's mandatory death penalty for first degree murder.

The principle is not seriously challenged. Few persons deny that the death penalty should be discretionary and not automatic. The District is the last jurisdiction in the land with mandatory execution for first degree murder.

A wide divergence of opinion exists, however, on the best judicial procedure to re-place it. Bills are under scrutiny now by House and Senate District subcommittees.

The House bill says the sentence for first degree murder will be life imprisonment unless the trial jury recommends death. If execution is recommended, the judge must hold a hearing and affirm the recommendation or remit the sentence to life.

This plan was recommended by a vote of 89 to 8 by the lawyers, prosecutors and judges of the District's Judicial Conference who deal in the everyday business of administering the law.

It was introduced in the House by Representative John L. McMillan, Democrat of South Carolina, chairman of the House District Committee, and received a hearing last week before a subcommittee headed by Representative Thomas G. ABERNETHY, Democrat of Mississippi.

A bill proposed by Senator Kennerh B. KEATING, Republican of New York, in the Senate provides that the penalty for first degree murder shall be execution unless the trial jury recommends life imprisonment. The judge can, however, override the jury and impose the death sentence.

The essential difference between the two is that in the Judicial Conference bill, either judge or jury can spare a man's life. In the Keating bill, only the jury can make this decision.

Another difference is that a convicted murderer could be considered for parole under the Keating bill after 15 years, and under the Judicial Conference bill after 20 years.

KEATING has indicated that he is not wedded to the language of his bill and would accept any reasonable measure that would do away with the mandatory provision.

The Senate District Subcommittee considering the bill favors the Judicial Conference version, which it also has examined. Senator Vance Hartke, Democrat, of Indiana, chairman, expects to report the substance of the House bill under Keating's name, by a 2 to 1 majority, in the near future.

No one is quite sure how either bill would

work in practice.

Some say the effects would be identical. Others say the psychology of either plan—one making an exception of the death penalty, the other of life imprisonment—would have a profound effect on jury deliberations.

Although the States have a wide variety of death penalty laws, experience does not show that any one of them would necessarily be the most suitable for the District of Columbia.

More than the usual concern about procedural technicalities is being shown because of the District's special position.

"Whatever is going to be made the law in the District of Columbia," ABERNETHY said at the hearing, "will be held out as an example and there will be a clamor for it in other jurisdictions."

ABERNETHY expressed some concern about empowering the judge to override the death penalty. In Mississippi, ABERNETHY'S home

State, the jury's word is final.

Gasch, who strongly favors the Judicial Conference bill, replies that the jury represents the conscience of the community, but the judge is the voice of experience who also would have access to background information the jury didn't.

A few oppose any technique which divides the responsibility for sentencing. Some favor giving the jury the job. Others—and Senator J. Allen Frear, Jr., Democrat, Delaware, a member of the District Committee, is believed among them—insist this is the judge's traditional role in Anglo-Saxon law.

Legal principles aside, some suggest the Judicial Conference bill leaves the way open to procedural appeals. A required hearing, they say, may be a source of countless legal errors. The bar association proposes making the hearing optional. Others would do away with it altogether.

Judge E. Barrett Prettyman, chief judge of the District Court of Appeals, has testified that in effect he can see no difference between the two principal bills. The important thing, he contends, is that a bill be passed.

Senator Dodd a Prophet

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. IRWIN. Mr. Speaker, a year ago when Russian Premier Khrushchev was invited to visit this country, Senator Thomas J. Dodd, of Connecticut, warned that Khrushchev would not allow our President to return the call, that the Soviet Premier could scarcely do so for it would dispel the false image of our

Nation's leader which has been drawn by communistic propagandists. While Khrushchev was touring our country with his soft selling, the Senator's warning seemed remote. Particularly after the Camp David conference did it seem unlikely that what the Senator envisioned was to become a reality. But now it has become a reality. And this was underscored when Khrushchev let us know that his decision to withdraw the invitation to our President to visit Russia was no abrupt change in intention but that even at Camp David the invitation was a mockery. Under permission previously granted, I include the following editorial from the Bridgeport Post which salutes Senator Dodd for his prophetic warning of last year:

[From the Bridgeport Post, May 18, 1960] SENATOR DODD A PROPHET

Last year when there was much talk about Premier Khrushchev's visit to the United States upon official White House invitation, Senator Thomas J. Dodo attacked the idea with some degree of violence.

The Connecticut Senator made a denunciatory speech on the floor of the Senate which appeared in virtually every newspaper in the United States. He could not see one single reason for the Communist ruler's visit, as a guest, actually, of the American people. He predicted then that Khrushchev would never permit a return visit by President Eisenhower.

This week in the Senate he repeated his earlier statement. He proved to be a prophet, having said Khrushchev knew that Ike's visit would threaten his control over people he holds under subjection. "He knew it would threaten as well, control over the millions of people he holds in confinement in the captive nations. He could never permit President Eisenhower with his frankness and his honesty and his captivating personality, the opportunity to talk to the Russian people who are held in thralldom by the evil dictatorship of the Soviet Union."

We agree fully with Senator Dopp, that the President should not feel in the least embarassed over withdrawal of the invitation.

Ike can come home to the American people and to his free friends in the world, the Senator continued, and we will receive him well. His only fault is that he trusted the evil man too much, but he did so with all good intentions for our country.

What disturbs Senator Dopp the most, at this time, is Khrushchev's sorry spectacle of trying to lecture Ike on morality. That he called "a new all-time low." He hopes, however, that it will awaken the American people to an understanding of what Khrushchev really is, "a bloody butcher lecturing a fine human being, President Eisenhower, whom every man and woman in the world recognizes to be such, on the subject of morality."

Statement by Former Democratic National Chairman James A. Farley on Adlai Stevenson's Speech on Summit Negotiations

EXTENSION OF REMARKS

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in

the Appendix of the Record the following full text of statement released by former Democratic Chairman Farley, New York, May 21, 1960, on Adlai Stevenson's speech attacking President Eisenhower's conduct of the summit negotiations.

There being no objection, the statement was ordered to be printed in the

RECORD, as follows:

STATEMENT OF FORMER DEMOCRATIC NATIONAL CHAIRMAN JAMES A. FARLEY ON ADLAI STEVENSON'S SPEECH ATTACKING PRESIDENT EISENHOWER'S CONDUCT OF THE SUMMIT NEGOTIATIONS

The unwarranted attack of Mr. Adlai E. Stevenson in Chicago on the President's conduct of the summit negotiations, in my opinion, in no way represents the thinking of the Democratic Party. For Mr. Stevenson to state that the administration gave the Soviet a "sledgehammer and a crowbar" wreck the summit conference indicates to me that Mr. Stevenson continues to be as misinformed on the facts as he is infatuated with his own writing style. It has been my experience that adroit phrasemaking does not necessarily indicate sound policymaking, a view which I find fortified by the rejection of Mr. Stevenson two occasions by the American electorate. It is a pity that the course of history cannot be reversed by a well turned phrase, in which case hundreds of millions of enslaved people and at least 13 captive countries, liberated by Mr. Stevenson's apt phrases would have occasion to thank profusely this overpolished literary combination of Don Quixote, Pagliacci, and Rip Van Winkle.

Mr. Stevenson is out of his field particularly in criticizing the Commander in Chief for calling a military alert at the time Mr. Khrushchev broke off negotiations. It will be recalled that immediately after the breaking off of negotiations with the Japanese Mission in Washington, Pearl Harbor followed. I feel that the most felicitous use of the language, even Mr. Stevenson's, would be totally inadequate to explain away the enormity of a magnified Pearl Harbor, in the event of a surprise Soviet attack. If Mr. Stevenson is suggesting that the Commander in Chief should refer all measures of defense to Mr. Stevenson before issuing orders to adequately protect the country, the idea is both impractical and unconstitutional.

The admission of Mr. Khrushchev himself refutes Mr. Stevenson's extravagant and unfair attack on the President. Mr. Khrushchev publicly confessed that he knew of the flights when he was with President Eisenhower at Camp David, but did not wish to disturb its so-called spirit. When it did suit his sinister purpose to wreck that so-called spirit and the summit conference he did so.

It seems to me also that Mr. Stevenson might well have called attention to American restraint in not embarrassing Mr. Khrushchev's visit here by the revelation of the incident of the interception of two of his Red spies at Springfield, Mass. Both, very significantly, had diplomatic status. Very apparently, Mr. Stevenson has no idea of the extent to which Soviet espionage has abused diplomatic privilege in all countries including ours.

This was clearly illuminated by an article in the New York Times of September 22, 1959. The New York Times' article in part follows:

"Adlai E. Stevenson said last night that the United States should cease leading 'the antiadmission lobby' against Red China at the United Nations." If Red China delegates were in the United Nations, Mr. Stevenson is quoted as saying that "they would have to answer almost daily for some of the things they have done of late that have provoked the indignation of the whole world."

It is part of Mr. Stevenson's appealing, if adolescent, naivete in international affairs

that it appears not to occur to him that the admission of Red China by the United Nations would establish another Red spy nest in New York City, under full diplomatic protection.

Of course, even consideration of the admission of Red China approaches a mortal mistake. I have just returned from the Far East, and I can state that the responsible heads of free governments in this vast area have insisted to me that the slightest wavering of U.S. policy on nonrecognition of Red China would result in a worldwide diplomatic disaster for the cause of freedom, not second to an ignominious surrender of Berlin.

I am impelled therefore in all honesty, and furtherance of national unity, to state that I do not believe that the administration furnished the Soviet with "a sledge hammer and a crowbar" to wreck the summit conference. On the contrary, it occurs to me that Mr. Stevenson is attempting to use the incident to "sledge hammer and crowbar" another disastrous nomination for himself as the apostle of appeasement out of the Democratic Party. As a national policy, unfortunately, the boom of Mr. Stevenson's breastbeating is not likely to cause the collapse of the Iron Curtain as Joshua's trumpets cause the fall of the walls of Jericho.

In his few remaining weeks as titular spokesman of the Democratic Party he has indicated every reason why the Democratic Party in convention should select a spokesman who speaks for it in fact. I can think of no more effective way of doing so than by a unanimous resolution of condemnation and repudiation of his absurb speech in Chicago as representing the views of the Democratic Party. As a former national chairman and as one who has been proud to be a Democrat for over 50 years, I shall call upon all Democrats to keep the symbol of our party the Democratic mule and not Mr. Stevenson's umbrella.

Pennsylvania Farmers Call for Greater Effort To Curtail School Costs by More Efficient Operation

EXTENSION OF REMARKS

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1960

Mr. MUMMA. Mr. Speaker, for the benefit of the membership of the House in view of the education bill being brought to the floor for debate, I want to call attention to the position of our Pennsylvania Farmers' Association that was expressed by Hollis Hatfield at a public hearing before the State task force on school finances of Governor Lawrence's committee on education.

He placed his group in opposition to further Federal aid and urged greater local effort including more efficient operation

The article follows:

[From the Lebanon Daily News, May 18, 1960]

PENNSYLVANIA FARMERS ASSOCIATION FAVORS
SALES TAX HIKE FOR SCHOOLS

HARRISBURG.—The Pennsylvania Farmers' Association favors an increase in the sales tax to 5 percent, including clothing, if more money is needed for the State public schools.

But there should be greater effort to curtail school costs by more efficient operation,

a spokesman for the association said Tues-

Hollis Hatfield, director of public affairs for the association, made the statements at a public hearing before the task force on school finances of Governor Lawrence's committee on education.

Hatfield joined with a spokesman for the State chamber of commerce in opposing further State-mandated salary increases for teachers. Both urged more local effort and merit increases for able teachers.

Hatfield also said his group opposes further Federal aid to public school education because "the Pennsylvania taxpayer's bill would be considerably larger than the benefits received for financing local schools."

Jobs for the Handicapped—Passports to Dignity

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. SPARKMAN. Mr. President, recently a young lady at Hueytown High School, Hueytown, Ala., wrote an essay entitled, "Jobs for the Handicapped." This is always an interesting subject and a subject to which we ought to pay more attention. She has written a very constructive and very thought-provoking paper. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

JOBS FOR THE HANDICAPPED—PASSPORTS TO DIGNITY

(By Sandra Jean Fairburn, Hueytown High School, Hueytown, Ala.)

Americans are a proud people. The relatively short history of this country has seen that fact proved repeatedly. Through many wars and countless tribulations, the fighting defenders of all that is hallowed to us have shown their pride in themselves and all that they defended. One characteristic noted by visitors from foreign countries is our ability to pick ourselves from the slough of despondency and resume the battle, whether it be a battle for freedom or a struggle against disease and poverty. This same pride has inspired Americans to help others and has strengthened many to help themselves. Countless persons in poverty and disaster have refused help, saying, "My neighbor needs help more than I," and "I neither need nor want charity." Yes, Americans are proud. They want to take care of themselves, to earn their bread, and not to depend on others for what they themselves can provide. They want freedom and will fight for it. We want not only political freedom, how-ever, but also a chance to gain economic freedom. All American citizens, if they are honest, truly loyal citizens, can acquire passports to leave this country to visit others. Not all American citizens can gain a passport to dignity, however, because of one stigmatic word that follows them like a guilty conscience. That word, "handicapped."

The word can and has been defined a number of ways, but the definition that most succinctly gives today's interpretation is given by the New York University School of Education which defines the handicapped as "those who by reason of a physical or men-

tal disability are prevented from realizing the fullest physical, mental, social, vocational, or economic usefulness of which they are capable." You and I know many handicapped persons according to this definition. There is the young woman who wanted desperately to become a nurse and would probably have been exceptional in that fieldexcept that she has very weak feet and legs and cannot stand or walk for long periods of time. One man, now middle ag would have been an outstanding Army officer if he had not suffered migraine headaches which made it impossible for him to concentrate on difficult problems. Perhaps you could have had a career in music had you had the talent or the time. You see, very few persons are completely free of handicaps. In fact, only about 1 percent of us are not physically handicapped for some jobs.

Of the approximately 170 million people in the United States, it is believed that 28 million have physical and mental roadblocks to a fruitful life. With the increasing knowledge of medicine it is entirely possible that many lives which would have been lost 20 years ago will now be saved, but a large mass of these will never become completely whole or healthy again. Increasingly powerful automobiles without a corresponding increase in commonsense will also result in many torn and disabled bodies. Do we have a responsibility to these persons? What is the responsibility? Is it not to help them find a place in which they can be of use to others?

Stop and consider the things a manager regards when interviewing a prospect for a position. Because the prospect has blue eyes or black hair or wears size seven shoes does not affect the decisions of the business man. He looks for skill, knowledge, aptitude, and adaptability. If a typist meets the basic requirements for a certain opening, a false foot or leg does not interfere with her ability and should not hinder her chances for a job. When I was very small I often went to a shoe shop in the town where I live to watch the shoe repairer's hands fly as he removed a run-down heel or half-soled a lady's pump, for his skill fascinated me. This man had no left leg, but he was very successful in his occupation, for he did not use his legs in his work. In another town there lives a young man who has been spastic from birth. He could never repair shoes for a living, for his fingers are often unsteady; he could not be an athlete, for one of his legs is shorter than the other and even walking is a great difficulty, but in his own work, preaching God's word, he is successful, for it is a work he is physically and mentally equipped for. Perhaps you have read of the blind switchboard operator, the deaf file clerk, or the pharmacist who is paralyzed from the waist down, the violinist that has only nubs for legs, the draftsman with bilateral arm prostheses, or artificial forearms. Their name is legion, but for each handicapped person who is able to return to a productive, confidence giving job, many more remain without jobs, dependent on family or the welfare agencies for existence.

Numerous public agencies, insurance companies such as Liberty Mutual Insurance Co., business groups such as National Association of Manufacturers, and the National Association of Mutual Casualty Companies, civic clubs, and community committees are making valuable contributions toward rehabilitation of the handicapped so that they can adjust to their sitution and proceed from there to learning a skill or skills that will enable them to be employable. Of all the handicapped, only a very tiny percentage are so totally handicapped that there is no place for them in the world of work. The vast majority can be placed in work and deeply yearn to support themselves, for all men have pride that makes them rebel at being helpless. Great strides are being

made for this majority, but the group that holds the real answer is that of the em-ployers. The handicapped should be employed because it is spiritually and morally right to give them a chance, but sound business theories also call for their utilization. Employers are not urged to hire the handicapped person. They are urged to hire the rehabilitated handicapped person. They are urged to be fair in evaluating the qualifications of all who apply for employment and to be free from prejudice when they review the applications of the handicapped, remembering that experience has shown the handicapped to be up to one-third safer than the unimpaired and much more conscientious about attendance. These people have had to struggle to get a job; they are not going to sacrifice it through carelessness, disloyalty, disregard for company rules, laziness, or indifference. The handicapped should be hired because they can do the job, because they are needed, and because "It's good business."

All businesses and industries that employ the physically handicapped report successes that seem unbelievable until one dwells on the reasons for the success of employed handicapped persons. Five years ago, Sears, Roebuck initiated a program of employing physically handicapped people in as many jobs as possible; during the first year, over 500 persons were hired under this program. In an evaluation survey of these people by their employers, 84 percent were rated good or very good in job performance, 14 percent were rated fair, and only 1 percent were classed as poor employees. Eastern Air Lines, perhaps the largest employer of handicapped, in numbers at least, has approximately 1,000 persons working for them who might find difficulty in being employed if Eastern's proper placement procedures were not followed. This program is due largely to the efforts of Capt. E. V. Rickenbacker, who strongly felt that the persons who had battled for this country in war should have the privilege of serving it in peace. A motto of Eastern is that they have no handicapped employees. This is true because this industry has faithfully and honestly tried to find the right places for the right people. These are only two examples of numerous industries and concerns which have successfully employed the handicapped. There are even companies founded by persons who are handicapped and who hire only handicapped workers.

If the Nation's employers do not see and believe these facts concerning the succes of employment of the handicapped, they will lose a valuable working force and the nonhandicapped will have to support the handi-capped with taxes. In the economic cycle, this will return to the employers, who must then shoulder the burden. When all the people do not share the Nation's burdens, the Nation suffers and so do the people. In 1 average year taxpayers spend \$395 million to support and assist the disabled. figure is at least three-fourths more than it should be, even allowing for children and total disability cases. We should and must realize that the price we pay for supporting these people is far greater than the one to be paid for rehabilitating them and returning them. ing them to the roles of useful citizens.

As we enter another decade, there is renewed hope for the world, but more important is the hope for the individual, for humans are individuals and not groups. We must provide hope for the individuals, and they find that hope in a chance to help themselves. All the individuals must have their own chance; and, as for the handicapped, they will make good their chance.

"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."—JESUS CHRIST. World Tensions Can Be Relaxed Only When the Cause of the Tensions Is Removed-The Cause Is the Unrelenting Communist Drive for World Domination-That Can Change Only When Communists Change or Are Compelled by Internal and External Forces To Abandon Communism-Our Task Is To Nourish and Strengthen Those Forces

> EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include a postmortem by Edgar Ansel Mowrer, on the ill-fated summit conference at Paris:

TENSIONS SHOULD HOLD FOR LONG TIME

(By Edgar Ansel Mowrer)

PARIS.—One thing stands out at this meeting: Nikita Khrushchev has no intention of relaxing international tensions at the price of giving up a propaganda ace.

Actually, he has demonstrated that the entire hope of relaxing tensions without changing the world situation is an illusion on the part of the West and a fraud on the part of the Soviets. Analyzed, it either has no meaning or it means a policy of stalling and waiting for something to turn up. It is on each side a gamble on the future. Mr. K., nourished on Communist doctrine, must believe that history will inevitably bring about the distintegration of the bourgeoisie and the triumph of the proletariat, meaning the self-seeking bosses of the Communist Party. So half the time he oozes peace guff while the other half he skillfully makes propaganda intended to hasten the inevitable disintegration of his opponents.

Britain and France also seek relaxation, meaning continual talks in an outwardly friendly atmosphere, though for somewhat different reasons. Prime Minister Macmillan has convinced himself that the United States lacks any stomach for a strong positive policy of out-arming and out-propagandizing the U.S.S.R. But he thinks that with time the Russian regime will soften up. What he means by relaxing tensions is simply preventing a war until time has made Russia less aggressive.

President de Gaulle of France, a true Frenchman, has a more complicated approach. His own complete dedication France's greatness fosters a belief that love of country is everywhere stronger than Communist ideology, a dubious assumption. Furthermore, Chancellor Adenauer convinced him that in time Russia, a white people, will feel menaced by the "yellow" Chinese giant and drift toward the West. Beyond these beliefs he has another reason for wanting to relax tensions just now. Relaxing tensions is a popular catch-phrase for gaining time. De Gaulle dearly needs time in which to perfect a few hydrogen bombs of his own or induce someone to give him some and to try further for a settlement of the Algerian rebellion.

Hence De Gaulle and Macmillan would welcome a whole series of summit conferences, each one accomplishing little but cackle yet laying an egg out of which another summit conference could hatch.

Chancellor Adenauer of Germany shares the feeling of a coming Russian-Chinese split—sometime. Meanwhile he wants to on to the present situation in the belief that any present change would be worse for Germany—which is likely, in view of the large number of weak-kneed westerners.
Relaxing tensions covers all these separate

aims. For, taken literally it is a Western illusion. Tensions do not arise spontaneously and cause dangerous situations. Critical situations arise or are provoked and cause tensions. The only way to produce a relaxation of tensions (short of somebody's surrender) is to change the situation. The present world tension is 95 percent provoked by Communist ambition to expand, meanwhile keeping its hold on unwilling victim peoples. Only the U.S.S.R. can relax it by renouncing that ambition and ceasing to provoke troubles. Until that happens-short of a Western surrender—tensions must re-main. They can be rendered less dangerous by nuclear disarmament-if any. They can be camouflaged under state visits and pretty words. But they cannot be ended until the situation changes. Only the Kremlin can do that. This is the lesson of the summit conference.

Rare Recognition Extended Max Rysdon

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 24, 1960

Mr. MUNDT. Mr. President, a rare demonstration of the constructive manner in which corporate industry can cooperate with the physically handicapped to the mutual advantage of all concerned has been provided by Max Rysdon of Sioux Falls, S. Dak., and the Sioux Steel Co. which he heads. It is a pleasure for me to bring this circumstance to the attention of the Congress and the country since it provides an example of enlightened public service which may well be followed by many other corporations in many other communities.

Recently, the Kiwanis Club of Sioux Falls arranged as part of its weekly program to have conferred upon Max Rysdon the employer's merit award provided by the President's Committee on Employment of the Physically Handicapped. The following news report of this significant ceremony provides some additional details and out of it all comes the clear cut lesson that by giving special consideration to the employment of the physically handicapped American industry and business not only benefits itself but the entire country as a whole. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MERIT AWARD PRESENTED TO SIOUX STEEL Sloux Steel Co. has received recognition for assisting the handicapped.

The President's Committee on Employment of the Physically Handicapped conferred the Employer's Merit Award to Max Bysdon, company president, this noon during the weekly meeting of Kiwanis Club. Presentation was made by supervisor of the Division of Special Education, Mr. Distad.

Participating in the presentation were Ed Moser, Division of Vocational Rehabilitation; L. E. Larson, president of the Sioux Chapter, Association of Retarded Children, and Bill Green, executive director of the South Dakota Association for Retarded Children.

Distad, serving his third 3-year term as a member of the President's Committee, was designated by Gov. Ralph Herseth to present the citation.

The award was made in recognition of Sioux Steel Co.'s efforts in connection with South Dakota's first sheltered workshop, established here in 1959. Subcontract work which Sioux Steel furnished the workshop permitted a sustained enrollment of 21 disabled persons. From January through August, last years, the company paid the Workshop \$12,684.43 for contract work completed at the workshop.

Pleted at the workshop.

The workshop has assisted 23 enrollees to achieve higher levels of work and social adjustment and to enjoy the dignity of being engaged in productive work. Progress made here has led to the start of similar workshop programs at Rapid City and Mitchell.

The Khrushchev Wrecking of the Summit Conference When He Found the West Had Not Succumbed to His Efforts To Divide and Deceive Has Changed Nothing Except To Shatter Our Dangerous Illusions—and That Can Be a Benefit

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following sane and sensible article by Mr. William S. White from the Washington Star of May 20, 1960:

A FRESH SENSE OF PURPOSE

A new maturity, a fresh sense of strong purpose, runs through Washington today in the afterlight of the inevitable collapse of summitry as a means of reconciling the irreconcilable.

So dies the dream—a 2-year dream that somehow by good will and by splendid Presidential travels here and there about the earth all could be put aright between imperialist communism and the free Western alliance.

It was a noble ideal. And in that sense it is a pity that it is now a broken ideal. But in a more important sense it is a good thing that the vision has vanished. For, however fine, it was always only a cloudy dream—and a quite irrational one which unduly lifted men's hopes and rejected the central lesson of this country.

This lesson is and has been that free peoples cannot negotiate with the totalitarians—no more with Mr. Khrushchev in the sixties than with Hitler in the thirties—unless they negotiate, not from hope and good intentions, but from honestly naked power.

Actually, we have for 2 years put ourselves in a false position. Our allies, and the most articulate of our people at home, endlessly

and at last successfully pressed this Government to take up a line of flexibility to replace what was pictured as a bad, sterile inflexibility. From the sound if admittedly negative position of trusting Mr. Khrushchev not an inch and keeping our powder dry we turned to trusting Mr. Khrushchev far too much while we let our arsenal run rather low.

Those who tried to question this new policy found the going hard and lonely. They were held to be at best stupidly insensitive; at worst to be the stooges of Wall Street and the munitions makers. And don't look for partisan scapegoats now; there are plenty and to spare in both parties.

Today, both parties and their leaders fully accept at last the facts of life—and this alone is an immense gain from the tragedy of the summit: Genuine settlements with the Soviet Union will be made if and when the West is on a rising and not a declining arc of power relative to that of the Soviet Union. Kleig-lit top-lovel diplomacy is an unrealistic device. There is no short and easy road to survival in this 6th decade of the 20th century.

So, the country can now confidently ex-

So, the country can now confidently expect these things: A concerted and full effort to improve our defense capacities, here and all over the world. A really quite decent attitude among the major politicans in both parties to get the country into shape before seeking partisan gain out of our troubles. A willingness to attempt new negotiations with Mr. Khrushchev—probably not until a new President has been inaugurated in January—but only after K. has shown he really wants a cold war easement. and only in far more disciplined circumstances than the recent fiasco in Paris.

Not even the shrillest critics of the famous incident of the unarmed spy plane over Russia can now seriously argue that, plane incident or no plane incident, Mr. Khrushchev would ever have allowed the summit conference to proceed. He reckoned that time was running with him—and up to this point, indeed, so it was.

The President is back in the White House, or shortly will be, where he belongs. He is free at last—and the next President will be even freer—of an unwise policy that he never really wanted but adopted because men's hopes and decent instincts outran their grasp of harsh reality.

The Communists used to tell the workers that they had nothing to lose but their chains. We can honestly tell ourselves this: We have lost nothing but our dangerous illusions.

An Inequity the Senate Must Remove

EXTENSION OF REMARKS

HON, KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24, 1960

Mr. KEATING. Mr. President, this morning's Washington Post contains an excellent and succinct editorial pointing up the importance of Senate passage of H.R. 11318, the bill to equalize the pay of certain retired members of the armed services. As an original cosponsor of S. 269, which sought the same objectives as H.R. 11318, I am delighted the House of Representatives has approved this proposal, and I hope Senate action will be forthcoming before long.

Certainly it is incumbent upon the Congress to act without further delay to remove this inequity from our statute books. Clearly, as the Washington Post editorial notes:

This country's military tradition supports uniform retirement benefits for all military personnel * * *.

This is one vital job the Senate must complete before the end of the session. Mr. President, I ask unanimous consent that the fine Washington Post editorial to which I have referred be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

[From the Washington Post, May 24, 1960]
RETIREMENT REMEDY

The House has rectified an inequity by passing legislation to increase the retirement pay for 114,000 officers and enlisted men who retired before the 1958 military pay bill went into effect. That bill broke a century-old tradition of relating retirement benefits to active duty pay by discriminating against those who retired before June 1, 1958. Happily, the House has approved the needed remedy and Senate passage ought to follow. This country's military tradition supports uniform retirement benefits for all military personnel, and Congress can find better ways of economizing than by letting old soldiers' benefits fade away.

Our Military Assistance Program

EXTENSION OF REMARKS

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. FORD. Mr. Speaker, under leave to extend my remarks I include an address delivered last evening by Under Secretary of State Douglas Dillon at the Second National Training Congerence of the National Defense Executive Reserve meeting in Washington. Secretary Dillon has presented in an excellent manner the case for our military assistance program, pointing out specifically the way in which our allies in the free world are contributing to our overall defense effort.

The address follows:

Address of Under Secretary of State Doug-LAS DILLON AT SECOND NATIONAL TRAINING CONFERENCE OF THE NATIONAL DEFENSE EX-ECUTIVE RESERVE, HOTEL SHERATON PARK, WASHINGTON, D.C., MONDAY, MAY 23, 1960

It is a privilege to take part in your deliberations at this critical stage in international affairs. There is no need for me to dwell on recent events—events which clearly demand that we intensify our efforts to strengthen the free world, militarily, economically, and spiritually. These events underscore our national need for the defense executive reserve.

Your organization grew out of the realization that so long as international tensions persist, the United States will require a ready civilian reserve to meet sudden emergencies—just as it requires a trained ready reserve for the Armed Forces. You are dedicated to the proposition that the United States must keep up its own defenses and those of its allies, so that no aggressor will be tempted to strike.

One of our dearest national dreams is a just and lasting peace for all the world. We

earnestly and tenaciously seek practicable ways of reducing armaments through internationally controlled agreements. Yet hind-aight enables us to see clearly that whenever the United States lets down its guard or disarms unilaterally, aggressors are tempted. If aggression should come to us or to our allies in such circumstances, we would in some measure have brought it upon ourselves.

We learned in two world wars and on the hills of Korea the terrible cost of halting aggression, and the enormous cost of restoring peace and rebuilding shattered economies. We should also have learned that the cost of maintaining peace by deterring aggression is infinitely less. We should have learned for all time that lowering our guard encourages aggression against both our allies and ourselves.

One would think that after the lessons of two global conflicts, and after our experience in Korea, there would be little risk of our making the same mistake all over again. Unfortunately, this is not the case. Today, we as a Nation are once more in danger of falling into the same tragic error.

We would be taking a giant step in this direction if, through indifference or apathy, we permitted the President's request for mutual security appropriations to be substantially reduced. Unfortunately, there are men of influence who have publicly served notice of their desire to slash the President's request drastically. The American people should know that if they allow this to happen, the possibilities of armed aggression in the years immediately ahead will be immeasurably increased.

The time has come to talk fully and frankly of this peril. We who have the facts would be derelict in our duty if we did not point out the danger which may be brought upon our people if they lack knowledge and understanding of the crucial importance of the mutual security program and of the necessity of maintaining it at adequate layers.

The President, on May 2, in a remarkable address here in Washington, pointed out the overall importance of mutual security, and warned of the assault that was being mounted against it—an attack which, if successful, would threaten the security of our country by undermining the capacity and the will of our allies to resist aggression.

Such action on our part at this time could only be construed by the Soviet leaders as a confession of weakness and as an open ended invitation to accelerate their aggressive designs. Copies of the President's message have been made available at this conference. I urge any of you who have not previously done so to read it carefully. I hope you will pass it on to your friends and associates. The time to widen public understanding is short. The Congress has once again completed action on legislation authorizing the continuation of the mutual security program substantially as recommended by the President. This session of the Congress is expected to end early in July, and action on the vital appropriation bill will be taken before then.

Those who support this program in the face of unremitting attack deserve encouragement. Those who are undecided need help in placing the national interest above local and parochial concerns. Those who are opposed need help in understanding that failure in this area must inevitably mean retreat and crisis for America. Every American can and should enlist in this great crusade.

Tonight I want to talk with you about two aspects of the program that are not well enough understood: the military assistance program and the increasing efforts of our friends and allies in the whole field of mutual security.

The military assistance program dates principally from the Korean war, when large

sums were appropriated for military aid to our friends and allies, both in NATO and elsewhere around the globe. In the summer of 1953, after the termination of hostilities, we found that we had \$6½ billion of military assistance funds appropriated and unspent. This is what has come to be known as the "military assistance pipeline." Obviously a careful and orderly program to build the military strength of our allies could not possibly use that much in a single year's time.

We could conceivably have canceled all or a substantial part of this unused appropriation and put ourselves immediately on an annual basis where outgo equaled appropriation. Instead, we chose to draw gradually on the unused funds in the pipeline to supplement annual appropriations that were deliberately kept at a level well below required expenditures. This course had the full approval of both the administration and the Congress.

As a result, the pipeline has now been drawn down to about \$2 billion, because for the past 7 years, we have been relying upon it to supplement our annual military assistance appropriations. Thanks to this pipeline, we have, ever since 1953, been appropriating each year some \$900 million less than what we actually needed and what we actually spent.

Unfortunately, this arrangement is no longer possible. We cannot further reduce the pipeline without sharply cutting our deliveries of military equipment. This is why we now need substantially increased appropriations for military assistance.

For the past 4 or 5 years, expenditures under our military assistance program have been stabilized at about two and a third billion dollars annually. While the size of the overall program has remained relatively constant, its direction has shifted significantly. In general, expenditures for our economically resurgent NATO allies—the United Kingdom, France, and Germany—have substantially declined as they have regained the capacity to carry their share of the common defense burden. Meanwhile, the costs of maintaining and strengthening allied forces in the Far East have increased.

Last year, we conducted a thorough and detailed review of the program. Our own efforts were supplemented by a bipartisan panel of outside experts under the direction of William H. Draper. The conclusions of the two studies were nearly identical: Both agreed that a minimum program of about \$2 billion annually would be required for some years to come. Bear in mind that this represented a reduction of nearly 15 percent below the level of previous years.

It is for this reduced program that we are asking \$2 billion for next year. It is true that this sum represents an increase of \$700 million over the current year's appropriation. But we must remember that this year, for the last time, we were able to draw down substantially from the pipeline, which is now reduced to the point where future deliveries must be fully covered by new appropriations.

Today, we have a clear choice: either we appropriate the \$2 billion required to maintain the free world's strength, or else we tell our allies that we are no longer willing to support the military forces that our Joint Chiefs of Staff have agreed are the minimum required in our own national interest.

The views of our military leaders are categoric and are on the record many times over. They consider mutual security to have a priority fully equal to any portion of our own defense program—of which it is part and parcel. All of our military leaders have said that they would not willingly accept additional funds for their own services if they were obtained at the expense of mutual security needs.

Those who would slash mutual security often decry what they describe as "waste" in its administration. They also stress allegations that the military services have in the past "overcharged" the mutual security program for certain items of equipment. Undoubtedly, there have been some overcharges and some individual cases of waste. But you do not sink the Navy, disband the Army, ground the Air Force, or close up your business because of errors. Instead, you strive to correct the errors. That is precisely what we are doing in administering the military assistance program—and with real success.

We Americans must not permit ourselves to be misled by reckless charges of "waste" and "maladministration," or distracted from the primary job of maintaining free world defenses. We must renew our determination to do the job and to do it as effectively as We must use the information possible. developed by continuing investigations to strengthen and improve the mutual security program-not to destroy it, and with it, the safety of our families and of our country. Certainly the very moment when the Soviet leaders are once again threatening rocket attacks is no time for us to tell our allies that the United States has lost the will to provide the assistance they need for the common defense against Communist aggres-

I have dwelt so heavily on military assistance because it is such an important part of our overall mutual security effort, and because it is utterly inconceivable to me that our people would knowingly let down their guard in the face of the recent Soviet threats.

The President originally asked for an appropriation of \$4,175 million for the whole program. Congressional action in approving the authorizing legislation has reduced that figure to \$4,086 million.

This is the sum we are now seeking. Last year we received \$860 million less than we are now requesting. Critics argue that we somehow managed to live with that amount. But they overlook come simple arithmetic. This year we require \$700 million more merely to continue the military assistance program as it has operated in the past, since we no longer have the pipeline to fall back upon.

The remaining difference between last year's appropriation and this year's request is accounted for by an increase of \$150 million for the Development Loan Fund—our primary national instrument in the battle to give hope to the hundreds of millions in the newly developing lands. With the exception of this modest increase in much-needed economic assistance, our contemplated program is no larger than last year's. The big difference is that at last the time has come when we must foot the bill on a pay-as-you-go basis, instead of depending upon unexpended funds originally appropriated during the Korean war.

I ask you and each and every one of you to explain to your friends and associates back home these simple facts about mutual security that so deeply affect our future as a free people. Once they are generally and fully understood, there can be no doubt whatsoever that the American people will respond affirmatively in meeting this important national need.

Now, to another matter which also is too little understood: I refer to the demonstrated willingness of our stronger friends and allies to assume a greater share of the common defense burden, and to play larger roles in helping the peoples of the newly developing lands in their epochal struggle against the evils of hunger, poverty, disease, and liliteracy.

There is a widespread illusion in our country—even among some who are otherwise well-informed—that only the American taxpayer is carrying a significant share of this expense. This is simply not true. The people of England, France, Canada, and Ger-

many are all making large and steadily increasing contributions. The people of Japan and Italy are also playing significant parts. In the case of both the United Kingdom and France, the share of national income devoted to military and economic assistance already approximates the portion of our own national income that we devote to these programs.

In addition, our NATO allies are steadily and substantially increasing their own defense expenditures. In each of the past 2 years, they have increased these expenditures by more than a billion dollars. Again, this year, they are spending substantially more than last, and there is every indication that 1961 will see a further increase.

Furthermore, except for a few prior commitments for specific military items, we are no longer furnishing military equipment on a grant basis to England, France, or Germany. These countries are now able and willing to purchase their own equipment.

In the field of economic assistance, the United Kingdom has, over the past 3 years, doubled the amount of ald she is providing. to newly developing countries. France for some years has poured very substantial amounts of economic help into the territories of the French community. These countries are now rapidly achieving independence, and France has volunteered to continue to provide them with assistance on the same scale after they become independent.

In speaking of England and France, we have no right whatsoever to ask: "When will they begin to do their share?" They are doing it today and give every indication of continuing to do it.

It is true that certain other countries have recently developed sufficient economic strength to join more fully in the developtask. West Germany and Italy, in Particular, come to mind. However, leaders of both these countries have publicly recognized their responsibilities and have signified their intention to develop programs that will assume a fair share of the overall effort.

I have been speaking of direct contributions to development needs by our stronger allies. On a wider scale, the whole free world is joining to form the new International Development Association. This is to be a billion dollar organization closely related to the World Bank. Of its total capital, other industrialized countries will contribute hearly \$3 for every \$2 that we put up.

As the President has so well said: "The very moment when other countries are recognizing their responsibilities is no time for

us to walk away from our own."

His admonition has been forthrightly seconded by one of our National Capital's leading newspapers, which said, in a recent editorial urging full support of the President during these trying times: "Not only are foreign economic and military assistance keystones of the Eisenhower program, they are also a means of demonstrating to the Soviet Union that this country and its allies cannot be divided by bluster and threat and that American purposes overseas are not the selfish or aggressive ones that Mr. Khrushchev says they are."

And a highly respected New York newspaper comments that Mutual Security
"means solidarity of the United States with our allies and friends of the free world, and a determination to do our best to preserve freedom and independence for all nations outside the Soviet orbit. * * against a military threat and a politico-economic offensive of increasing magnitude. A wholehearted vote for mutual security would be the one thing that could most surely and quickly strengthen the President's hand in the present crisis."

The other side of the coin is equally im-Portant: Any substantial cut would signify to the rest of the world that the United States States in this hour of uncertainty no longer has the will to do its share in defense of freedom. We must not, we cannot, let this happen. Future generations of Americans will look to see how their forebears met this crisis. I am certain that once the American people understand what is at stake, history will not find us wanting. Meanwhile, we can all do our country a great service by spreading the simple facts-facts which are too little known-facts which must be known if we are to make the right decisions.

Thank you.

In the Hearts of Men

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 24, 1960

Mr. MUNDT. Mr. President, recently before the Aberdeen (S. Dak.) Rotary Club, a 17-year-old senior, Jon Anderson, the son of Mr. and Mrs. Vern R. Anderson delivered a most impressive speech.

My good friend, Mr. Ulric M. Gwynn, Jr., manager of the Aberdeen Chamber of Commerce, heard this excellent talk and called it to my attention.

I think Mr. Gwynn's comments serve as an excellent preface to Jon Anderson's fine address

Mr. Gwynn writes:

It is so outstanding because of world conditions that I believe it should be brought to the attention of the entire U.S. Congress. * * * With this kind of philosophy from our young people, I am of the opin-ion we need have no fear of communism spreading to this country.

Mr. President, I ask permission to have printed in the Appendix of the RECORD the address by Jon Anderson.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IN THE HEARTS OF MEN (By Jon Anderson)

"Berlin Could Trigger World War Three." This was headline news a few months ago. It suggests a staggering possibility, one that everyone in his right mind will seek to avoid. That is the possibility of an all-out, fullscale world war.

We here in the United States are well aware of the probable consequences of a third world war. We live in one of the greatest nations of the world, both in size and in destructive potential. America does, and will figure prominently in all the decisions of the game of world politics. We must make sure that these decisions are the right ones.

We are aware of the tremendous power and might of such great nations of the world as Red China and the Soviet Union. We are also kept informed of the tremendous advances made in the development of our own country's war machine. And we read daily about the dozens of important issues which threaten to cause a break in the cold war, and a change in temperature.

In the event of an all-out nuclear war, it is highly possible, and even probable that the entire human race would be obliterated. For this reason, the question of world peace is the most deadly serious and important question facing the world today.

Our political leaders for the most part recognize this fact, and are making every effort to increase the harmony between our country and the other nations of the world. The exchange of visits between the Soviet and American leaders, the recent tour of Europe and Asia by our President, and the visits many of our top diplomats have made to Russia, all have shown one thing; no matter what the language, creed, or custom, the people of the world have one basic desire, the desire for peace and freedom.

Yes, the barriers of misunderstanding and prejudice are slowly being broken down, and today we are closer to our common goal of world peace than ever before. Closer, and yet a strong and lasting peace is still far off. There is something missing. The key to this missing force is not held by the leaders of the world. It is held by you and me. The key to lasting world peace is held

by every person in the world.

The greatest need in the world today is for a universal belief in, and acceptance of some unifying principle. This principle cannot be found in the nuclear bombs, or in the high-powered rockets. It is not to be found on the Moon or Mars or any other planet. It will not be discovered because of top-secret tests or expensive research. The reason is because this unifying principle does not lie in the realm of material things. It cannot be seen, or heard, or even touched; but it can be felt. It must be felt if we are to achieve our much desired goal.

Dr. W. H. Pickering, of the California Institute of Technology emphasizes the des-

perate need for such a principle:

We are sorely in need of some principle that will save mankind from mutual annihilation. I do not know just where we'll find it, but find it we must and I feel confident we will, not in the laboratories, but in the hearts and minds of men."

There is such a unifying principle which, if practiced, can lead us to conquer even the most perplexing problems. It is a principle so basic, and so convincing that it can be understood and accepted by all the peo-

ples of the world.

The principle is the belief that there is a supernatural, spiritual power in this universe which is both above us all, and within us all. Many of us choose to call this power

This God has been revealed to Christians through the life of Jesus of Nazareth, whose supreme teaching was: Love God with all your strength and love your fellow man as yourself.

A Universal Faith in God and the belief that there is a God within each of us! This is the principle upon which peace among all men can be achieved. We must believe that there is a divine spirit within each of us. for when we believe this we can do things we though were impossible. This is the belief upon which our Nation was founded, and this is the strength by which it can be preserved.

The idea of the spirit of God in man can be accepted by all people, regardless of their

religious faith.
Col. Abdel Nasser, President of the
United Arab Republic, one of the greatest Moslem nations of the world, said in a letter to the Reverend Mr. C. Roy Everett, Jr., of Richmond, Va.:

"Religion being deep-rooted in the culture of our people, they are all for peace and against aggression in all its forms. The Prophet says, "Thy faith in God would be incomplete till thou lovest thy brother as thou lovest thyself." Even the name "Islam" is derived from "Salam," meaning "peace."

Even the idol worshiping religions, Buddhist and Shintoist can accept this principle of a divine spirit within each of us. These religions all have their supreme being, such as Buddha, and these faiths are also founded on the principle of love for one another. Followers of these religions, too, pray for peace among men.

And in the Communist controlled countries, although the leaders don't like to think so, the people still cling strongly to their faith, be it Greek Orthodox as in Russia, or some other. The prayers of these oppressed peoples can be heard even above the rumblings of the Communist war machine and the atheistic teachings of the few who wield political power. The desire for peace and freedom is possibly even stronger in the countries where these things are not a reality.

So you see, this is not simply an idealistic idea, advocated by only a few. The knowledge of the power of prayer is universal, and the belief in the power of strong faith can be accepted by all people. But each of us must recognize this power, and realize the tremendous things which can be accomplished by those who use it. The key to this power is in our hands, and in our hearts.

One of our country's greatest presidents, Woodrow Wilson, once said, "Our civilization cannot survive materially unless it can be redeemed spiritually."

I challenge you to remember these words of a great humanitarian. Only by accepting this unifying principle can we hope to avoid a nuclear war, and only by accepting and believing in this principle will we ever achieve peace among men; a lasting peace for all the people of the world.

With earnest prayers and steadfast faith let us go out to build a better world, remembering that through God all things are yet possible.

Lincoln in New Hampshire

SPEECH

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1960

Mr. BASS of New Hampshire. Mr. Speaker, I am happy to join in this discussion led by my able friend and colleague from Iowa [Mr. Schwengel] and relate to you something about Lincoln in New Hampshire.

We owe our chief knowledge of this subject to Judge Elwin L. Page's book, "Lincoln in New Hampshire," published in 1929. The author in his preface states that upon reading Dr. William E. Barton's "Life of Lincoln he was struck by Barton's emphasizing the failure hitherto of Lincoln biographers giving adequate consideration to the effect of Lincoln's speeches during the latter's visit to New England in February and March 1860.

In the winter of 1860 Lincoln delivered his famous speech at Cooper Union—the speech that first brought him seriously to the attention of the East; that predisposed the anti-Seward faction in Lincoln's favor, and which consequently brought about the latter's nomination the following May in Chicago.

Lincoln spoke at Cooper Union on the evening of February 27, 1860. The following evening he spoke before a large audience in Railroad Hall, Providence. The next day, February 29, he was on his way to what must have seemed to him a far northern country indeed—the State of New Hampshire. On Thursday, March 1, he spoke at Concord in the afternoon, and at Manchester in the

evening. At Concord he was introduced by Gov. Frederick Smith, who presented him to his audience as "the next President of the United States." As Dr. Barton remarks, "Such an introduction was exceptional," and the author adds ironically that at Norwich, Conn., where Lincoln spoke later, the speaker who preceded Lincoln "went the full length of the general imagination and suggested Lincoln might be the next Vice President."

On Friday, March 2, Lincoln spoke at Dover, and finally, the next evening, at Exeter, spending Sunday with his son Robert, who was attending the famous preparatory school in the town. This speech in the little town on Saturday evening, March 3, 1860, marked the final appearance of Mr. Lincoln in the State.

In all, Lincoln spoke 11 times in New England. As Barton says, biographers of Lincoln have not considered adequately the effect of these New England speeches. Several of these biographers, for example, state that Robert Lincoln was at Harvard at the time of his father's tour of New England. On the contrary, having failed to pass his entrance examinations for that institution. he was at Phillips Exeter Academy, "boning up." Robert did not enter Harvard until 7 months later; one of his father's reasons for coming East was to look into his son's situation; had Robert been safely matriculated at Harvard in the winter of 1860 his father might not have delivered the Cooper Union speech, and the New England tour might not have been made.

Barton describes the situation in the following words—his book was published in 1925, the year before Robert Todd Lincoln's death:

Robert T. Lincoln is a very reticent man, and for the most part declines to speak for publication concerning his father; but one thing he modestly affirms, which is that he his father President. In the autumn of 1859, Robert went to Cambridge expecting to enter Harvard. He was required to submit to an entrance examination covering 16 subjects, and he failed in 15 of them. The Lincoln family wrote him not to return home, but to enter Phillips Academy at Exeter, N.H., and complete his preparation. This he did, and at the end of a year was able to enter Harvard and complete a regular course. But Mr. Lincoln was somewhat anxious about Robert's studies, and one of his reasons for being ready to visit New York and speak at Cooper Institute was to visit Robert and see how he was getting on at Exeter. Robert T. Lincoln believes that if he had failed in less than 15 studies his father might have been less solicitous, and might not have delivered the Cooper Union speech, or having delivered it, might have returned from New York direct to Springfield. As it was, he determined to visit Robert and make a few speeches in New

As to the Lincoln speeches themselves in New Hampshire, there are, alas, only two summaries in reportorial fashion—that is, in the third person. They, however appear to be fairly adequate, considering the lack of press facilities in little New England towns 100 years ago, and the probable lack of shorthand skill on the part of the reporters. The two summaries which have come down to us ap-

pear in the Manchester Daily American for March 2, 1860, and the Dover Inguirer for March 8.

The concluding portion of the Dover report is most certainly reliable, for it is, almost word for word, a literal transcription of the final exordium of the great Cooper Union address: indeed, it is quite possible that Lincoln read from proofs, or the morning issue of one of the several New York papers of February 28, which contained the full text of the address from the original manuscript Mr. Lincoln turned over to Horace Greeley's New York Tribune. Mr. Lincoln's last recorded words in New Hampshire, via the Dover Inquirer, were as follows:

To satisfy them [the slaveholding States] said Mr. Lincoln, is no easy task. We must not only cease to call slavery wrong, but we must join with them in calling it right. Silence will not be tolerated. Douglas' new sedition law must be enacted and enforced. We must arrest and return their fugitive slaves with greedy pleasure. We must pull down our free State constitutions. The whole atmosphere must be disinfected from the taint of opposition to slavery, before they will cease to believe that all their troubles proceed from us. Wrong as we believe slavery to be, we should let [it] alone in the States where it exists, because its extirpation would occasion greater wrongs, but we should not, while our votes can prevent it, allow it to spread over the national territories and overrun us in the free States. Neither should we be diverted by trick or stratagem, by s senseless clamor about "popular sovereignty. by any contrivances for groping for some middle ground between the right and the wrong—the "don't care" policy of Douglas— or Union appeals to true Union men to yield to the threats of dis-Unionists, which was reversing the divine rule, and calling, not the sinners but the righteous to repentancenone of these things should move or intimidate us; but having faith that right makes might, let us to the end, dare to do our duty.

To Judge Page's delightful and exceedingly valuable book "Abraham Lincoln in New Hampshire," which has rescued and preserved Lincoln's New England tour from obscurity, we owe the following charming account of Mr. Lincoln's last day in New Hampshire:

On that Sabbath just 1 year before his first inaugural, Abraham Lincoln shuffled off the thought of politics and gave himself to rest. Early in the morning he walked out Front Street and along the muddy road toward Kingston. Arriving at a fork some 2 miles out, he took the right hand, leaving Kingston road, and wandered on another mile. Then he heard the pleasant roar of 8 river a bit to the left. Following the sound, he bore off on a crossroad and came upon Pickpocket Bridge. There he found young William H. Belknap, an Exeter printer, hanging over the rail and watching the swollen stream tumble down the falls. Lincoln joined the youth in gazing at the fascinating spectacle. As seems usually to have been his custom when other human beings were near he engaged the youth in conversation. What was said was of little moment and was soon forgotten, but that chat with Abraham Lincoln was a lifelong satisfaction to the future townclerk of Exeter. The story that during his Exeter stay Lincoln saw a small boy fishing for eels near the Great Bridge and borrowed his rude alder pole to try his luck may be untrue, but is in keeping with the simple manner of Lincoln's casual contacts with the townspeople.

Lincoln worshiped that Sunday in the Second Church of the New Parish. The meetinghouse stood in the corner of the Academy yard near the present site of the public library on Front Street. The edifice was removed years after Lincoln's visit, and the parish has ceased to exist. The pew in which he sat has been preserved with great care and is now in the First Church. It was the property of Commodore John Collins Long and Mary Olivia Long, true representatives of the Exeter aristocracy of the day. The minister of the church at the time was the Reverend Orpheus T. Lanphear.

After the service Lincoln walked with Robert to the boy's lodgings in the Clarke (or Simeon Folsom) house on Hemlock Square, at the corner of High and Pleasant Streets, just over the Great Bridge. In their crossings of the river, however, the two usually took the rather shorter way over the lower bridge at the Island and thence out Pleasant Street. In the portion of the house fronting on this street, in the left-hand, second-story room, the Lincolns had their Sunday dinner.

During his days in Exeter, Lincoln was seen much in Robert's company. That is one point upon which the evidence is clear and full. The father entered with real zest into the boy's interests and his companionships with the other students. This was the Prime object of his trip into New England, and in spite of political calls he accomplished it. For these purely private pursuits he had Wednesday evening, Saturday after-noon, and all of Sunday afternoon and

evening.

Lincoln appears in these contacts with the boys and with the townspeople he ran across to have been ever simple and sociable, a man thoroughly enjoying his brief snatches of holiday. A story was told by Albert Blair of a little gathering of academy boys in Bob's room on Sunday evening. Into the chatter Lincoln entered with true boy-like spirit. Bob remarked that one of the party, Henry Cluskey, played the banjo. "Does he? said Lincoln in his high-pitched voice.
"Where is the banjo?" "In my room," replied Cluskey. "Can't you get it?" "Oh, I don't think you would care for it, Mr. Lin-coln," "Oh, yes. Go get it." And so the "Oh, yes. Go get it." And so the Owner of the banjo went and fetched it from his room several blocks away, and played upon it. Lincoln listened with unaffected pleasure. "Robert," he said, "you ought to have one." What the youngsters chiefly remembered about their friend's father was membered about their friend's father was that when he talked with Bob, or the boys gathered around, the deep seams of his face broke into a series of twinkling lines. Every boy was at once drawn to him, as he was to them

The holiday-

Writes Judge Page-

was all too short. At a few minutes before on Monday morning, March 5, 1860, Lincoln boarded the train at Exeter for Hartford, where he was to deliver a major address. Never again would he breathe the bracing air wafted down from the White Mountains, to meet and mingle with that from the caves of the misty Atlantic.

And thus-

Concludes Judge Page-

Abraham Lincoln passed from the sight of New Hampshire, but not from her memory.

Seaton Vice-Presidential Support Mounts

EXTENSION OF REMARKS

OF HON. PHIL WEAVER

OF NEERASKA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. WEAVER. Mr. Speaker, another strong midwestern voice has been added to the growing chorus of those supporting the candidacy of Hon. Fred A. Seaton, the Secretary of the Interior, for the Vice-Presidency of the United States. The Lincoln Journal of Lincoln, Nebr., in an editorial on May 16, 1960. notes the growing support Mr. Seaton is getting from all parts of the Nation. That editorial follows:

ROCKY OUT, SEATON MOVES UP

Gov. Nelson Rockefeller finally got the word through to the Republicans it's all or Party leaders over the Nation made it clear earlier in the year when Rockefeller was hitting the high road that he wasn't their man for 1960.

Rocky went home and sadly announced that he would not be a candidate. Many Rockefeller supporters were disappointed and the party leaders hoped to use his popularity to build the ticket by putting him in the second spot on the ticket.

He said he wasn't interested, but the thought was held that he could be coaxed. Nixon did some coaxing through the press, though there seemed to be little personal contact.

Now Rockefeller has made his position perfectly clear. He has announced that he will not attend the Republican national conven-tion "in any capacity" lest his mere attend-ance be misconstrued by delegates. This will leave him in a strong position for 1964 if Nixon should fail to win in 1960.

Rockefeller is to be commended for making his position clear well in advance of the convention. The Republicans now have ample time to search for the best possible man for Vice President and marshal delegate strength for such a man.

For this spot the party appears to have a man ideally suited in the person of Nebras-ka's Fred Seaton, present Secretary of Interior. Seaton has shown himself to be one of the ablest Administrator's in the Eisenhower Cabinet. In the myriad of assorted functions of his farflung department, he has won almost unanimous confidence of those with whom he has dealt.

Moreover, Seaton's midwestern background stamps him as a person most likely to understand the complex farm problem and attempt to work with both Congress and and the administration in solving it.

Already Seaton has attracted wide support from outside his own State. With Rockefeller apparently out of contention entirely, there is no reason for Seaton backers to delay a full-scale push for delegate backing at the convention.

The 1960 National Convention of Mothers of Men in Service (MOMS of America), Altoona, Pa., May 18-22

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. VAN ZANDT. Mr. Speaker, my hometown of Altoona, Pa., was the scene of the 1960 National Convention of the MOMS of America, an organization composed of mothers of men in service.

The host for the convention was the Hollidaysburg, (Pa.) Unit of the MOMS of America under the leadership of Mrs. Mary Ratchford, president. The convention was well attended by delegates from many States. It was my privilege to deliver the principal address at the annual banquet, which follows:

SPEECH BY JAMES E. VAN ZANDT, MEMBER OF OF CONGRESS, 20TH DISTRICT OF PENNSYL-VANIA, AT THE 1960 NATIONAL CONVENTION OF MOMS OF AMERICA, PENN-ALTO HOTEL, ALTOONA, PA., MAY 19, 1960

It is a distinct privilege to address you on the occasion of your 1960 national convention and to join in welcoming you to my hometown of Altoona, Pa.

The Hollidaysburg, Pa., unit of the MOMS of America under the able guidance of its president has developed into an organization in which we of Blair County are pardonably proud for the part it plays in community life

Not only has the Hollidaysburg MOMS of America maintained a lively interest in servicemen but it has also been very active in caring for the comfort and needs of veterans in the Altoona Veterans' Administration hospital.

In this connection the Hollidaysburg MOMS donated a tape recorder to the Altoona Veterans' Administration hosiptal and supplies the tape each year.

In addition patients are the recipients of gifts from the MOMS while an annual bingo party is one of the highlights of the MOMS hospital program.

At the community level the Hollidaysburg MOMS have an enviable record in support of local projects such as the public library, YMCA, Christmas baskets for the needy and

other praiseworthy programs.

Therefore, on this occasion it is a pleasure to pay tribute to Mrs. Mary Ratchford, president, and the members of the Hollidaysburg MOMS of America as they play host to the 1960 national convention and welcome their national president, Mrs. Marjorie Estes.

I join my fellow citizens of Blair County in wishing the MOMS of America a highly successful and truly enjoyable 1960 national convention.

I need not tell you of my deep personal interest in the servicemen and the veterans of America.

This interest likewise encompasses your organization which came into being in 1941.

Each war crisis our Nation has faced has brought American women further and further to the fore.

Words of tribute are inadequate, indeed, to express to the mothers of servicemen and veterans, the love and devotion and respect America holds for you.

Since the days of the first settlers the women of America have stood side by side with the men in the making of our Nation.

The ploneer women who ventured forth with their men in conquest of the American continent shouldered hardships, endured the perils, and won the victories of the frontier.

Throughout the years of our development—the hands that rocked the cradle—have been instrumental in laying the foundations upon which our Republic has been

Home and family are by no means the least of these foundations.

The family in this atomic age faces the same drastic changes that confront other American institutions, our industries, our governmental agencies, our Congress, our schools, and our churches.

Actually the changes that have occurred since World War II have brought as much complexity to the problems of home and family as to business and Government.

For many this theory may be difficult to

The home and the family are basic institutions that are expected to "be there" in spite of any existing tension or emergency.

These facts place a tremendous burden on the mothers of our Nation.

It is not my intent to offer sympathy to the MOMS of America because of the sacrifice you have already made or because of the

difficulties and uncertainties you face in the future.

I do not offer you sympathy.

Your actions indicate you accept our age as a challenger.

Your sacrifices have become elements of consecration rather than elements of surrender.

You utilize uncertainty as a tonic and existing difficulty becomes a rededication.

All of America could profitably follow this pattern and, as all mothers throughout the ages have done, set its face toward the future with confidence.

In the hurricane of our times, in this world of sudden revolutions, the family must remain a haven of sweet comfort and

security.

The beauty of this fact is that whether among Samoans in Polynesia-Pennsylvanians in America-or Londoners in Eng--the family is the center of human landaffections.

Beyond this, what the family teaches

makes our world.

Through the ages the foundations of the family have been moral—from the long preaching in a Navajo hut—to a New England mother's reading of the Bible to her children.

Right and wrong have come to sharp focus in the family through the years.

And at the core of the family is the joy, and innocence of the child-the protective love for him as he learns to trust-the understanding love as he learns to be inde-pendent—to adjust to the world—and to imagine and develop ideas.

Where the family goes, the world follows. So we can learn from the family some-

thing of mankind's direction.

Onrushing technology is reshaping the life pattern of millions.

But we cannot neglect to emphasize that onrushing technology is the direct result of individual thought.

And it is largely in the family-whether in the flamboyant green of a jungle or the vast impersonality of a city-that the iden-

tity of the individual takes form. Robert R. Brunn, American news editor of the Christian Science Monitor, has reminded us that "Globally the trend is toward the

Western family, now in the minority."
In centuries to come this could well be

the universal pattern.

In Islam's sweeping crescent from North Africa through the Middle East to Pakistan and Indonesia ancient family modes are fading before 20th century enlightenment. Slavery—the despotic father—the bargain-

ing away of brides-and the wearing of the veil are still present-but all are faltering. Young people demand change-and so do

the women.

Turkey is a striking example.

There the veil and exclusion of women were outlawed years ago.

It is fortunate that in European countries the marriage of convenience is fading.

Father domination holds on in many sec-

tions, however. It does appear though that a pattern of free individual choice and independence is

forcing its way in to unlock social shackles in many areas of old Europe. In Germany after the Nazi thrust for power which involved war occupation and the holding of tens of thousands of husbands and

fathers in Soviet camps for years, the family has emerged triumphant. Twenty long years of trials have strengthened the average German's devotion to family values.

Latin America's family patterns are in many ways closer to those of Europe and Asia than those of the United States and Canada.

But the pressure to change in South America comes from the north and in the Latin-American cities the American-type family is becoming plainly visible.

In all of the instances I have cited more education and more understanding is bringing more individual freedom, and in turn, an elevation of the influence of the family.

It is a gripping thought that dictatorship cannot accept loyalty to the family-loyalty to the mother or the father.

In the eyes of the dictator, loyalty to the

family weakens the grip of the state on the individual.

Following the Red Revolution, Communist doctrine preached that the family was an outmoded and useless device, as outworn

as private property.

In this belief the Soviets have gone against human nature, not to mention morality, taste, history, sociology, politics, and ex-

Currently we see evidence that the Soviet Union is trying desperately to convince the eyes of the world that family is important.

But thus far their love of family has by no means become an example for the rest of

the world.

There is not displayed in Russia a high regard for the individual.

The Soviet Union first and then the indi-vidual, that remains an integral part of their political philosophy.

In any national crisis our mothers-our homemakers—must first and foremost defend the homes of America.

For those who leave their homes for military service to defend the cause of freedom, the mothers of America have kept the home intact as a bright and shining institution.

Defense of the homefront should not be dropped from the docket, however, in times

of peace.

There are certain hallmarks of American homelife that further the learning of the ways of our Republic.

These I would like to mention.

(a) The home has as its primary object and central purpose the welfare of all in the household.

(b) There is equal opportunity for all rerdless of sex or age in a true American

(c) Our basic American liberties and the practices of these liberties are first started in the home.

(d) The economic, social, and political conditions of the home are maintained in order that all in the household may have enjoyment that is realized from these three factors.

(e) All in the home have the right to share and help determine the program and

policies to be pursued.

(f) The homes of America teach that every privilege entails a corresponding duty and responsibility to that particular individual who in turn is held responsible to the family as a whole.

(g) The home trains the individual to be efficient in citizenship.

(h) The home promotes loyalty and understanding.

(i) The home develops in each individual of that home the ability to solve prob-

lems. The MOMS of America and every American mother know better than I that the fine art

of living together in peace must be established in our homes. The past few decades have not been with-

out change in the American family.

The American family no longer tends to

determine careers, marriages, prestige, or a person's political position.

The American family has been freed to concentrate on personal relationships and moral evaluation to create an atmosphere of love and order devoted to the perfection of the family as individuals.

At a time when the freedoms of men and women are being efficiently and ruthlessly destroyed overnight the home in America stands as the fact and the symbol of individual freedom.

Not even our own Government can enter it without legal consent.

In how many places in the world is the home still inviolate?

This security of man in his own home, with his family, is one of the world's wonders, yet we Americans too frequently take it as a simple thing, natural to us.

You, as representative American mothers, preside over American homes which are equipped with the facilities for teaching our children during the precarious stages of growth.

Today we are deluged with gadgets, equipment, and devices for making homelife more efficient.

This is as it should be.

Modern technology has lessened the drudgery for our homemakers.

But the underwriter of the home continues to be the entirely reliable institution of motherhood.

The qualifications are those which call for the highest attributes of mind, person-

ality, and executive ability.

The American home will continue on its way to build for a better world so long as mothers say to their sons and daughters, "I promise to match your honesty with my honesty, your loyalty with my loyalty, and your fairness with my fairness."

But most of all I am firmly convinced

that the mothers of our Nation must create within our homes a fuller understanding of

our world.

I do not wish to leave with you pure sentiment and mere platitudes concerning home, family and mother.

But I wish to emphasize your job as a living, practical symbol in a world of un-

certainty.

It is your job to make home a place where we learn how to be free.

In the perfect home we stretch out on the floor, or cook hideous dishes in the kitchen at midnight, or bellow our favorite tunes in the shower.

But it is not enough to enjoy our freedom. We have duties.

The snow must be shoveled.

The dog must be trained not to dig up the flowers.

The leaky roof must be patched.

The floor scratched by the party must be waxed.

The hedge must be trimmed.

This is the unyielding routine.

This is the slow forming of a character geared to the real world. The homemaker who complains of drudg-

ery can, if she will, beat her shackles into bracelets and turn toll into play. In making her home beautiful, and her

family happy, she too makes herself beauti-

Finally, it is my belief that the mothers of our generation, and especially you who are dedicated to the high principles of the MOMS of America, wish for your children & future which will bring to the world a com-bination of peace and tolerance, a future where homes will turn self-interest and mechanics into a human civilization.

And now in conclusion let me summarize my remarks by simply saying that here in America our homes are the citadels of American freedom.

What Price Federal Aid to Education

EXTENSION OF REMARKS OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. MUMMA. Mr. Speaker, a timely article entitled "Who Pays Calls Tune in Education" appeared in the Harrisburg. Pa., newspaper Sunday Patriot-News of May 15, 1960. It will appear at the end of my remarks and I hope my colleagues will avail themselves of this article which attributes the authoritative statements it contains to some pretty responsible people who I would be inclined to say are a wide range of experts in this field.

The article, in addition to factual reporting of the amount of Federal participation already going on, cites the existence of Federal controls that are already tied to Federal aid-to-education

disbursement strings.

I was particularly intrigued by the statements like: "school superintendents and State education officials are finding out that he who pays the piper calls the tune" and "many local school boards now plan their programs in accordance with What money they can get from the State and Federal Governments by participating in their programs instead of on the basis of local needs."

Mr. Speaker, the newspaper article follows:

WHO PAYS CALLS TUNE IN EDUCATION

(By Edith Kermit Roosevelt)

Before Congress votes more Federal aid to education, the American people would do well to ponder the danger posed to their independent public schools by the more than 137 Federal support programs already in operation.

Dr. Clayton D. Hutchins, school finance specialist for the U.S. Office of Education, estimates Federal subsidies to education are currently costing taxpayers \$2.5 billion a

The list includes \$200 million a year spent through programs authorized by the National Defense Education Act of 1958; \$200 million a year under the school lunch pro-gram administered by the Department of Agriculture: \$37 million in vocational aid administered by the U.S. Office of Education; and millions more for school construction in federally affected areas, to support resident instruction at land-grant colleges and other programs.

year the National Science This fiscal Foundation alone is spending \$16.7 million for fellowships and other grants to support

scientific training.

PLAN PROGRAMS

Dr. John R. Miles, manager of the education department of the U.S. Chamber of Commerce, observes that many local school boards now plan their programs in accordance with what money they can get from the State and Federal Governments by participating in their programs instead of on

the basis of local needs.

Some proponents of Federal aid to education argue that localities can take this Federal money and still maintain their independ school system. But school superintendents and State education officials are finding out that he who pays the piper calls the tune.

Allen P. Burkhardt, superintendent of public schools at Norfolk, Nebr., testifies to his experience with Federal money in the fields of vocational agriculture and home economics.

"To get this money," says Burkhardt, "we have to accept and adopt the course of study outlined and specified by the Federal Government, through the State department of education. We have to permit inspection trips by State employees who receive part of their money from the Federal Government. We have to hire teachers whose qualifications are approved by these same groups. We have to send out teachers to conferences designated by these authorities. . . . "

CONTROLS CLAIMED

According to Burkhardt, the Federal Government exerts control in these fields by specifying:

1. The number of minutes in recitation periods.

2. The size of classrooms and shops,

3. What type of equipment to have and even the type of floor used.

4. How much money to spend per student. Furthermore, the Federal Government forbids the use of teachers in other fields, except home economics or agriculture, under pain of losing the subsidy.

"If this doesn't constitute control from Washington, then at least it's a reasonable facsimile," comments Burkhardt.

The National Defense Education Act of 1958 spells out 12 areas of control. Section 802 of this bill permits the U.S. commissioner of education to develop specialized material for use in language culture centers. This puts the Federal Government in the business of curriculum development.

CONDITIONS TO MEET

Mark W. Bills, superintendent of Peorla, Ill., public schools, lists some of the "ridiculous condition" which must be met when NDEA aid is sought. He says:

"In a neighboring school, a language laboratory equipped with NDEA and local funds can be used only for modern foreign lan-guages and stands idle when it could be used for speech, Latin, etc."

Like most school officials, Bills believes there is a need for education improvement. However, he suggests that representative laymen and carefully selected professional educators attempt to draft desirable standards for schools and teacher training free of Federal controls.

Labor and Management in the Southwestern Area of New York State Demonstrate the Fruits of Enlightened Statesmanship

> EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, May 24, 1960

Mr. KEATING. Mr. President, a most unique and important celebration is taking place today in Olean, N.Y., as the AFL-CIO Union building trades and ememployers representing contractors in the southwestern section of New York State join forces in celebrating 5 years of labor-management harmony and cooperation. This historic occasion is made doubly significant by the fact that there has neither been a work stoppage nor a strike during this period of time-as a direct result of close cooperation and openminded bargaining between these two units of our economy.

This unique record of industry-labor harmony is a matter of pride to all concerned and to all of us who are dedicated to the goal of joint cooperation as an essential means for promoting national welfare and progress. It is especially noteworthy that this feat has been accomplished in an industry where so many complex problems are a constant part of normal working conditions.

This is, indeed, as the Buffalo Evening News recently pointed out in an editorial, "an excellent example of the fruits of labor-management statesmanship." am delighted this unique record is being studied by leaders from other sections of the Nation, and my hat is off to the responsible leaders of labor and management who have molded this impressive record of accomplishment. I regret very much that my duties in the Senate prevent my joining these fine people on this momentous occasion, but I am delighted to have this opportunity to pay tribute to them and to wish them every success in carrying on with their outstanding work.

Mr. President, I ask unanimous consent to have the excellent editorial to which I have referred, printed in the

Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

SOUTH TIER LABOR PEACE

Hearty congratulations are in order for the southwest corner of New York State. On May 24 the region will celebrate 5 years of labor-management peace in the construction industry of Chautauqua, Cattaraugus, Allegany, and Steuben Counties.

The avoidance of any kind of work stoppage since 1955 is a tribute to the formula for harmony and mutual respect worked out by the Southern Tier Builders' Association and 15 building trades unions. The parties themselves pay special tribute to the guidance given them by Federal Mediator Clarence M. LaMotte of Buffalo. He acted as go-between in developing the program.

Described as unique in the State, the plan includes monthly meetings (over coffee and doughnuts) at which employers and union leaders discuss and undertake to resolve common problems. The arrangement has re-sulted in numerous benefits for the workers, the employers and the general public.

Both Senators Javits and Keating will be on hand to extend felicitations at the coming celebration. This is a measure of the notable character of the Southern Tier achievement. Other areas now are studying the Southern Tier plan. All areas should emulate at least the spirit of commonsense and responsibility that has made it work. Labor-management relations still operate too often by the law of the jungle. Here is an excellent example of the fruits of labor-management statesmanship.

Death Ends Distinguished Career of Dr. E. E. Witte

EXTENSION OF REMARKS OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, Wisconsin and the Nation lost a great man with the death of Edwin E. Witte, the pioneer in social security legislation. The Capital Times, Madison, Wis., pays tribute to the dedicated work of Dr. Witte in the following editorial, which I call to the attention of my colleagues:

DEATH ENDS DISTINGUISHED CAREER OF DR. E. E. WITTE

Death at 73 has ended the distinguished career of Edwin E. Witte, world-famed economist, humanitarian, and often called "the father of social security."

His was a life spent in public service and the contributions Professor Witte made to his State and Nation will serve as a memorial to this quiet, unassuming, soft-spoken public servant.

And, although he held more than 30 Government positions during his life, 9 of them full time, his greatest gift to society was his work as the creator of the Social Security Act of 1935. It has been said that this legislation is the greatest achievement of the Roosevelt New Deal, and much of the credit for the enactment of the law must go to Dr. Witte.

Wisconsin also takes pride in the role played by Arthur Altmeyer, former director of the Federal social security program, for his work on the monumental social welfare legislation. Altmeyer headed Social Security from its beginning in 1935 until 1953, and together with Dr. Witte helped draft the original laws.

None of the thousands of students who were privileged to sit in his classes will ever forget Dr. Witte. With rare ability, he was able to reduce abstract economic theories into understandable terms with human overtones.

Dr. Witte's career spanned the great years of social turmoil in which the progressive ideals of Robert M. La Follette, Sr., were translated into Federal laws to provide security and assistance to this country's citizens. Together with the late Prof. Selig Perlman and Prof. Emeritus Don Lescohier, Witte provided the last link to the "golden age" at the University of Wisconsin that was sparked by that tiny dynamo of greatness—John R. COMMONS.

Goodwill Worker of the Year

EXTENSION OF REMARKS

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. NELSEN. Mr. Speaker, on April 22, 1960, the Goodwill Industries of America, Inc., held their National Awards Dinner at the Sheraton-Carlton Hotel in Washington, D.C.

Goodwill Industries seeks to help handicapped people, and from this group each year, one outstanding person is selected as the Goodwill Worker of the Year, based on his or her accomplishments in whatever activity the worker chooses to participate.

It was our good fortune, Mrs. Nelsen's and mine, to be invited by Mr. P. J. Trevethan, executive vice president of Goodwill Industries of America, Inc., Washington, D.C., to attend this dinner.

Miss Marjorie Schulz of Cincinnati, Ohio, was named the Goodwill Worker of the Year and she was called upon to address the group. There is much we can learn from the philosophy expressed in her remarks, and reflected in her voice was enthusiasm, confidence and courage that we all could benefit by. I wish to offer my personal congratulations

Following are her remarks:

STATEMENT OF MISS MARJORIE SCHULZ, NA-TIONAL GOODWILL WORKER OF 1960, AT NA-TIONAL AWARDS DINNER, APRIL 22, 1960, GOODWILL INDUSTRIES OF AMERICA, INC.

There are so many people I would like to thank, I am afraid to begin for fear of leaving someone out. First of all, I would like to thank God for the many rich blessings he has bestowed upon me. I really think that all handicapped people are given an extra measure of the primary ingredient for a happy and fruitful life. Perhaps this just seems to be so because we call upon Him a little more often.

To say that I was surprised when Executive Vice President Trevethan called me from Washington is to put it very mildly. When I was called to the office of our director, Reverend Nichols, he said, "Marjorie, someone on the phone wants to talk to you."

I started to get up out of my wheelchair and he said, "You had better stay seated." Well, I couldn't understand why but I stayed seated.

I recognized the voice as Vice President Trevethan's. I have had the pleasure of knowing him for many years. When Mr Trevethan said, "Marjorie, do you have your seat belt fastened?"—well, you can imagine how I wondered what in the world had happened.

As he began to tell me the good news, I wasn't exactly nervous but for some reason the telephone began to shake and my voice got very wobbly. I sure was glad I had stayed seated. And I should have had a seat belt because I could feel myself beginning to float up on cloud 9.

Since that time, so many nice things have happened to me that I am flabbergasted. In fact, you might call this a flabbergasted response.

At this moment I am thinking about all the 38,000 handicapped persons served by all the Goodwills throughout America last year. I feel that this honor tonight is not just for me individually. I feel that all these fine Goodwill workers are being honored and that each one is actually a "Goodwill Worker of the Year." Without them and without their diligence, perseverance, and determination, there would be no proof that all in the world they ask is a chance—not charity.

For the past 13 years, Goodwill has been my life. I must admit that when my nursing career was interrupted, there were moments of misunderstanding and wonderment. I shall never forget what Reverend Nichols said on that day when the future seemed darkest, He said, "Marjorie, would you like to come to Goodwill?"

"But you just heard what the doctors said.
You would be taking a chance," I answered.
It was his reply that still rings in my ears,
"We would not be taking a chance. Goodwill's business is giving a chance."

That is the way it has been ever since I started at the Ohio Valley Goodwill in Cincinnati—just once chance after another.

And that's the way it is with every Goodwill in America today. A chance to learn and a chance to earn. Nearly \$20 million in wages to handicapped persons last year.

I am so glad to be a part of a national organization that reaches into 123 communities in our land and says to handicapped people, "No one can do everything—everyone can do something."

We are proving something every day at our Goodwill in Cincinnati. Every day is V-day for someone. Last year over 3,700 handicapped persons found new hope, renewed strength, and increased determination to prove the truth of the statement so well said by Dr. Howard A. Rusk, "You cannot disable faith and courage."

Constant encouragement by our friends and families is an important factor and I am so happy my mother is here tonight. So much of our achievements depend upon understanding families.

This new lease on life for so many could not possibly be achieved in Cincinnati or in any other Goodwill without the help of dedicated administrators, sincere staff specialists, progressive board members and a vast public of interested people who help make rehabilitation a reality through their contributions of gifts and materials. No one understands better than a Goodwill worker that "discards mean timecards."

On behalf of all Goodwill workers I want to thank the good American public for its material contributions from homemakers and industrial subcontracts in making it possible for the average percentage of selfsupport for all Goodwill Industries to reach 91 percent in 1959.

Since it has been my privilege and pleasure to work closely with our director for 13 years, I am very cognizant of the important part our Government has played in helping Goodwill Industries to expand its rehabilitation services to meet the everincreasing needs of the ever-increasing number of handicapped persons. I am aware that our President and our Congress are concerned and have made funds available for expansion of facilities and rehabilitation services. I know that Goodwill Industries has devoted friends in the Department of Health, Education, and Welfare. For all Goodwill workers, I want to thank them for this devotion to human needs.

I would be ungrateful if I did not also express my gratitude to the Ohio Bureau of Vocational Rehabilitation for making my secretarial training possible when I entered Goodwill in 1947. These great agencies in all our States are serving thousands of disabled people without much fanfare or acclaim. They just go on and on helping people who are in need. I consider myself a BVR girl as well as a Goodwill gal. For all Goodwill workers throughout America who have been sponsored by their State bureau of vocational rehabilitation, I wish to say "thank you."

With Mr. Sullivan, the president of our board of trustees of the Ohio Valley Goodwill program present tonight I am also reminded to say "Thank you" to all Goodwill board members and concerned citizens who give of their money and time and energies that handicapped persons might be helped.

In closing, I want to express my sense of rededication to the Goodwill cause of helping the handicapped help themselves. I feel that as a symbol of all Goodwill workers, I have a new responsibility in making this great program of rehabilitation a success that exceeds our fondest hopes.

To all my fellow Goodwill workers across America, I want to issue a challenge that each of us join together in renewed strength and determination to make 1960 the best year in production of materials and rehabilitation services for people in our history.

Thank you again and when you are in Cincinnati, be sure to visit us. As associate in public relations department I think I would be permitted to say, "There you will find rehabilitation at its finest offering treatment, training and employment in one of the finest buildings designed for handicapped in the world, working through 5 branches and serving those who are handicapped in 25 counties in the sections of the 3 States of Indiana, Kentucky, and Ohio. There I hope I will be privileged to help others help themselves for a long long time.

The American People Are Not Being Fooled by Monday Morning Quarterbacks Because They Are Determined There Must Never Be Another Pearl

> EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. VAN ZANDT. Mr. Speaker, the American people are witnesssing a sordid performance by Monday morning quarterbacks with the political gleam in their eyes as they enjoy a field day among themselves in their ill-concealed attempt to belittle President Eisenhower over the so-called rocket downing by the Soviets of an American U-2 plane that had penetrated deeply into the heart of Russia. These misguided Americans have scorned the crying need for national unity in the crisis that has developed between their Nation and the "Butchers of Budapest."

Every thoughtful American resents their unwarranted attack on the integrity, military prowess and overall ability of one of America's greatest wartime generals, President Dwight D. Eisenhower. To compare the military stature of President Eisenhower with his detractors is like comparing a giant with a

pygmy edition of mankind.

As pointed out in the following editorial which appeared in the May 21 issue of the Altoona (Pa.) Mirror titled, "People Not Fooled," the American people want no repetition of the sneak attack on Pearl Harbor. In the same edition of the Altoona Mirror there appeared a letter to the editor from a subscriber in which the writer revives memories of the Roosevelt-Truman regimes When the late President Roosevelt bowed to the ungodly Stalin while his successor, Harry S. Truman, described the former madman of the Kremlin as "Good Old Joe" and then proceeded to allow the Russians to enter Germany and grab everything in sight including machinery and scientists. Now says the writer, 'Russia Even Stirs Up Castro."

The editorial and the letter referred to follow:

PEOPLE NOT FOOLED

Any good lawyer will tell you that it is almost impossible to build a good case around a lie. We do not believe that any intelligent person in any part of the world believed Khrushchev's story of downing the American U-2 with a rocket. If such had been the case it is obvious that neither the plane nor the pilot would have survived the explosion.

The presence of the U-2 plane deep in Russia must naturally have caused the Russlan people to ask the defense measures of the Soviet leaders. They have endured many years of hardship in order to expand their rocket and sputnik programs and we believe that Khrushchev is in for a very hard time of it when he gets back home.

Most Americans, we feel sure, regret the necessity of keeping the U-2's in the air. However, the very lies such as the one told about the grounding of the plane make such a course necessary. A surprise attack such as the one launched at Pearl Harbor could prove very disastrous, to not only this Nation, but also to the entire free world, and the treachery employed in putting down the Hungarian bid for freedom is not easily forgotten.

We do not believe that the American people care too much for the Monday morning quarterbacks who are now saying that the whole affair was handled badly by our own administration. They imply, of course, that they could have handled this situation so much better. We believe that of all the prospective Democratic candidates for President, Lyndon Johnson had made the best statements about the incident and has strengthened his position with the public. We predict that those who would appease the 1960 model of Hitler and Mussolini will get little support from their fellow countrymen.

The harsh realities of the cold war are somewhat difficult to conceive. It is particularly hard for a peace-loving people to comprehend the necessities of a world situation in which peace is maintained only by the fact that the retaliatory powers of the free world are great enough to practi-

cally destroy any aggressor.

Intelligence reports are based on the old adage that forewarned is forearmed. Modern intelligence calls for the use of every conceivable device that will give the Nation adequate warning for an impending attack. America must never forget Pearl Harbor. To do so in this atomic and hydrogen age would be national suicide.

The Russians should be the last people on earth to complain about it. Even at a time when they were our allies they were busy spying upon us, attempting to steal our se Our memories are not so short that we do not vividly remember the atomic spies, nor have we forgotten the country for which

they were spying.

The big welcome given President Eisenhower by the people of Portugal is only one indication of the way the world as a whole regards the American leader who has worked so hard for peace. His refusal to meet the threats of Khrushchev with counter threats clearly illustrated for the world jury the true measure of the man who seeks peace. The harsh fact that we must at all times be prepared to defend ourselves against surprise attacks is not lost on thinking people of all

We would be very much surprised indeed if the British and French intelligence services were not as hard at work as our own in keeping their leaders advised as to every move that is made within the Iron Curtain countries. As a matter of record, British intelligence sources are reputed to be among the best in the world. The use of a plane or a fleet of planes to keep their respective nations advised would not shock them in the least.

In his spectacular at Paris, Khrushchev implied that he has known about the planes since before his visit to this Nation. is also hard to believe, for if he had known about them he would have lodged a vigorous protest long ago.

The insults heaped upon our President have reacted adversely on Khrushchev, Neither the French nor the British were unaware of the implied insults against own leaders. We, as individual citizens, should let President Eisenhower know that he has the solid backing of his own people in this latest episode of the cold war. and cards are perhaps the best way of letting

We should also make it very clear to the Monday morning quarterbacks that we have little time for their ill-concealed attempts to lower the prestige of an old warrior who has served his country well in both war and

It is not too long since they were attacking him for his lack of good preparation for

the defense of this Nation. Now they want to downgrade him because he has taken steps to prevent the possibility of another Pearl Harbor. Their very wordiness proves their lack of understanding of international affairs and of military preparedness. What woeful leadership they would provide for the country.

MISTAKES WERE MADE

To the EDITOR OF THE ALTOONA MIRROR:

Since listening to and reading the news about the plane downed by the Russians and the criticisms, let the public go back to a former administration when Roosevelt bowed to rabble-rouser Stalin. That was the begin-ning of all our trouble. Also, how many people recall Truman's "Good Old Joe" reference. Ordering the soldiers back from Germany to let the Russians enter first was the gravest error of all times. Russia went in and grabbed everything, machinery, our scientists. Now Russia even stirs up Castro.

Mrs. L.

A Tribute to an Outstanding American

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. IRWIN. Mr. Speaker, one of the most enlightened men of our time was, in my humble opinion, the late U.S. Senator Brien McMahon of my home State of Connecticut.

His record as a public servant and his reputation as a man were both outstandingly brilliant. When he passed on, this Nation lost a remarkable citizen

But over this past weekend in his home town of Norwalk, Conn., where I am also privileged to reside, a fitting tribute was paid to the memory of Senator McMahon with the cornerstone laying for a new \$4,500,000 high school bearing his name.

Present to honor the late and distinguished Senator McMahon was Gov. Abraham Ribicoff of the great State of Connecticut. In his remarks, Governor Ribicoff hailed the ideals of Senator McMahon.

I would like, Mr. Speaker, to insert in the RECORD at this time an article from the Bridgeport (Conn.) Post containing Ribicoff's remarks. Governor article:

RIBICOFF HAILS McMahon IDEALS IN NORWALK TALK

NORWALK, May 23 .- Governor Riblcoff yesterday upheld the ideals of the late U.S. Senator Brien McMahon as the only means of stopping worldwide nuclear war threats.

SPOKE AT TWO SCHOOLS

The Governor was the principal speaker at the cornerstone laying of the new \$4,-500,000 high school off Highland Avenue which is slated for opening in September, and later addressed a gathering in the auditorium of the Cranbury elementary school off Grumman Avenue which was dedicated yesterday.

At the cornerstone laying exercises which were attended by Mrs. William H. McMahon, mother of the late Senator, and other members of his immediate family, the Governor declared that the world can no longer wait for centuries to pass to recognize the wisdom of this great man if it is to avoid extinction through atomic and hydrogen bombs.

Senator McMahon, while chairman of the Joint Congressional Atomic Energy Committee, had proposed that all nations agree to commit three-quarters of the funds they appropriate for armaments for development of peaceful uses of atomic power and make the results of these developments available to friend and foe alike.

In 1950 when the McMahon proposal was made to the U.S. Senate, governments, news media, and other disseminators of information paid little heed to the warning Senator McMahon gave, the Governor asserted.

NO BETTER SOLUTION

Over the past 10 years, Governor Ribicoff said, he has heard nothing from the great minds throughout the world that offers a better solution for permanent peace than the pronouncements of the late Senator.

The Governor added: "Senator McMahon foresaw the need for a worldwide agreement on the controls of atomic energy without which the threat of ultimate destruction of mankind would always be present."

The Senator's intimate knowledge of the force of atomic energy and its threat to mankind prompted him to attempt any means or method, no matter how unorthodox it seemed, to impress the world on the importance of worldwide agreement on the peaceful uses of atomic energy, Governor Ribicoff stated. He said that history has shown that it has taken centuries for the world to recognize the wisdom of the great men of the past and the world will someday come to the realization that peace can only be attained by adopting the ideals of the late Senator, He added: "The world of today cannot wait for a century and may not have another 10 years to wake up."

The Nightly Radio Program: "Today in Congress"

> EXTENSION OF REMARKS OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. NORBLAD. Mr. Speaker, I would like to compliment the nightly radio program "Today in Congress" for devoting the entire time segment last Friday night to the complete and unedited remarks made by President Eisenhower upon his arrival from Portugal.

This has always been a valuable and unique program; the only one aired which is devoted exclusively to the hap-

penings here on Capitol Hill.

Its sponsors, the Independent Airlines Association, and its editor, Joseph Mc-Caffrey, combine to give the listening public a "Congressional Record of the Air." This program not only has a great listening audience among Members of the House and Senate, but also among staff members on the Hill and administrators and key personnel in the executive branch.

Last Friday night, the entire format of the program was revamped so that Mr. Eisenhower's own personal report on the summit could be given wider coverage.

This, I think, is a tribute to the feeling of public responsibility of the association and of Mr. McCaffrey.

American Legion Advocates the March 3 Open Market Operations for Agriculture: Manned Aircraft Program

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. VAN ZANDT. Mr. Speaker, the national executive committee, the governing body of the American Legion, between national conventions while assembled in Washington, May 4-5, adopted a very important resolution concerning the national security of the Nation.

The resolution which follows and is self-explanatory relates to high-per-formance aircraft of the B-70 type and calls to the attention of Congress the necessity of further developing this weapon as part of our national defense.

The resolution follows:

RESOLUTION No. 31-NATIONAL EXECUTIVE COMMITTEE MEETING OF THE AMERICAN LEGION HELD MAY 4-5, 1960, INDIANAPOLIS,

Committee: National Security Commission. Subject: Mach 3 manned aircraft program.

Whereas the security of the United States and its allies requires that we maintain a balanced, flexible strategic force of both missiles and manned aircraft; and the U.S. aerospace industry possesses the capability of developing and producing these weapons;

Whereas the very high performance, manned aircraft is necessary to carry observers to assess target damage after missile attack and to direct attacks on targets that have not been destroyed; and the necessity exists that we have high performance aircraft capable of reaching these targets at speeds beyond the mach 3 range; and

Whereas the inherent characteristics of manned weapon systems are necessary to permit this Nation to continue a policy of noninitiation of armed conflict; and

Whereas the advancement of technology in aeronautics is essential to enhance the prestige of this Nation and to maintain a dominant military capability; and

Whereas the very high performance, manned aircraft is necessary in a whole range of military situations, from the show of force to a possible ultimate conflict; and

Whereas a mach 3, or higher, manned aircraft with its versatile striking characteristics, including its utilization as a highly mobile platform for launching missiles, tremendously increases the enemy's defensive problems, both from a military and economic standpoint; and

Whereas experience has shown there is a long leadtime required in the development of the finished article as a weapons system, it is imperative that development be implemented immediately on this type manned aircraft for we cannot afford to further extend this leadtime in today's scientific revolution: Now, therefore, be it

Resolved by the National Executive Committee of the American Legion assembled in Indianapolis, Ind., May 4-5, 1960, That the decision which virtually halts development and production of the mach 3 aircraft of the type, with its combat components, be rescinded, and that sufficient funds be made immediately available for the expeditious development and production of this latest weapons system.

A New Approach to the Farm Problem

EXTENSION OF REMARKS OF

HON, R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. RIEHLMAN. Mr. Speaker, in our quest for a solution to the agricultural problems confronting our Nation, it behooves us all to keep our minds receptive to new ideas. I am including in the RECORD today a proposed solution to the farm problem developed by Assistant Dean Donald C. Lelong of the College of Business Administration, Syracuse University, Syracuse, N.Y. There is food for thought in this proposal and, though I do not necessarily agree with the approach, I think it important that it be made available for consideration by my colleagues.

OPEN MARKET OPERATIONS FOR AGRICULTURE: A NEW APPROACH TO THE FARM PROBLEM

(By Donald C. Lelong, assistant dean, College of Business Administration, Syracuse University)

WHAT MUST A GOOD FARM POLICY DO?

What does the U.S. taxpayer want, and what can he reasonably expect to get from a good Federal farm policy? First and fore-most he wants an acceptable standard of living for the Nation's rural citizens. The public, and as a result the Congress, has already made the decision to maintain the income of the American farm family at a reasonable level. Neither Republicans nor Democrats will permit the farmer to become a poor relation who is embarrassing to our national pride or hurtful to our conscience.

Secondly, the taxpayer is demanding a less costly method of dealing with agriculture's While few of us would agree to sacplight. rifice the welfare of the farm family on the chopping block of economy, both substantial saving of tax dollars and future farm prosperity depend almost inevitably upon a more permanent and final solution to over-

production on the land. The third objective of a good policy for agriculture is closely related to lower dollar cost. No program can claim much lasting value if it does not encourage efficient use of the Nation's productive resources by avoiding misdirected production, Real economy in U.S. agriculture necessarily implies a flow of farm commodities that is adequate to meet the Nation's needs. It does not imply the growing of so much corn, wheat, and cotton that uncounted hours of human effort are dedicated only to the filling of federally constructed storage bins. less Federal farm policy succeeds ultimately in coordinating the supply and demand for farm produce at a reasonable price level, and without subsidy, it cannot claim to be an adequate policy for a free market econ-

Finally, a sound program must preserve independence and freedom of the individual farmer. He must be free to produce more or less of the crops he chooses as it becomes efficient and profitable for him to do so. Americans are steeped in an evolving tradition of free enterprise which renders production controls and industrial subsidies provisionally acceptable but extremely unpopular. The tenets of our system dictate that good and efficient producers have the freedom to grow and prosper, but also that inefficient producers in an industry have the freedom to move out of it. If agriculture is to remain a part of private enterprise, then this basic economic freedom for the individual farmer must be reinstated and preserved.

How can a single Federal program serve all of these masters simultaneously? Can a single program yield: (1) an acceptable standard of living for America's rural families; (2) a lower cost agricultural program for America's taxpayers; (3) efficient allocation of the Nation's agricultural resources; and (4) freedom and independence for the individual farmer, which will permit him to make his own production decisions?

One approach to simultaneous solution of all these objectives lies in a program which controls aggregate farm production or aggregate farm marketings without controlling the production or marketings of an individual grower. This approach to the farm dilemma deserves careful study; it appears to hold great promise, and to date it represents an untried alternative.

OPEN MARKET OPERATIONS FOR AGRICULTURE

Open market operations comprise just what the term implies—purchase and sale in an open market. The purpose of these operations when carried on by the Federal Government is deliberate and purposeful manipulation of the price and the volume of sales in a market. The Board of Governors of the Federal Reserve System has employed open. open market operations for some years now in controlling the prevailing interest rates of the Nation. U.S. Government securities are bought or sold on the open market in such quantities that the market price of these securities rises or falls respectively. Since the contractual dollar interest on these securitles is fixed, the actual interest yield varies inversely with changes in the market price. Because the Federal Reserve is typically in a position to buy or sell in tremendous quantity, it succeeds in setting the market without directly controlling the negotiations of individual buyers and sellers.

An open-market-operations plan for agriculture can be administered in a similar way. Each farmer growing a designated crop is assigned either an acreage allotment or a marketing quota which permits him to grow a specific acreage or market a speamount of that particular crop anhually, as long as he doesn't sell his assigned allotment or quota. (Open-market operations can be employed with either acreage allotments or marketing quotas.) Marketing quotas will be employed here in describing these operations.) Under this scheme open-market operations deal with marketing quotas which take on many of characteristics of shares of common stock. They consist of negotiable pieces of paper expressing small, common units. entitle the owner to market a specific amount of some crop each year as long as he retains ownership of the certificates. volume purchase and sale of these marketing rights by the U.S. Department of Agriculture give the Federal Government a means of long-term control over marketings of the crop in question.

Administration of an open-market plan depends upon an initial once-and-for-all allocation of marketing quotas by the Department of Agriculture. During the implementation phase of the plan, farmers producing a particular crop are assigned marketing quotas on the basis of their respective marketings or production of the crop during some historical "base period." Selection of the "base period" is not of critical importance to the success of the plan, except that farmers must be satisfied that it is fair. Therefore, the initial setting of quotas should be presumed quite generous. Qualified producers receive market-

ing rights free of charge during the implementation period, but after a stipulated date those wishing additional quotas and those wishing to enter the industry must purchase quotas in the open market. These rights differ from the traditional franchise in that quotas may be purchased by anyone willing to pay the going price. The Department of Agriculture, acting as the single qualified broker under the scheme, keeps records of ownership of all quotas outstanding. Under a plan utilizing marketing rather than production quotas, actual production and on-the-farm use of a crop is not controlled. Sale of the commodity in primary markets, however, must be accompanied by ownership of sufficient marketing rights.

After the marketing quotas for a crop are completely allocated (according to some specific "base-period" formula), aggregate an-nual marketings of the crop are then controlled through the purchase or sale of these rights by the Government. If the expected annual marketings of wheat, for example, are in excess of the Nation's needs, then the Government buys up marketing quotas in wheat, thereby raising the going price of these quotas. At the same time the market price for wheat futures is likely to be somewhat depressed. This combination of events encourages marginal wheat growers to sell off their quotas to the Government and abandon the production of wheat either temporarily permanently. Manipulating aggregate marketings thus makes possible an eventual coordination of annual supply and demand at a reasonable price level. (The plan should not be construed as a means of seasonal or short-term control.) Because the initial allocation of marketing quotas is presumed to be generous (and therefore in excess of the Nation's needs), the Department of Agriculture would probably be compelled to buy back a significant fraction of the marketing rights originally assigned free of charge to the growers.

The process of purchasing quotas reduces total marketings in a most selective and advantageous manner. Marginal producers can be expected to constitute the first sellers because their costs are generally high in relation to the prices they receive for their produce. Ordinarily they have most to gain and least to lose by sale of their marketing quotas. Purchase of these quotas represents a subsidy for the exit of these resources from the market. Windfall revenues from the sale of marketing rights are designed to provide incentive to accelerate the exit of inefficient and part-time farmers from an industry which has bypassed their land and their production methods.

AGGREGATE CONTROL BUT INDIVIDUAL FREEDOM

Control of aggregate marketings by means of Government purchase and sale of quotas leaves the individual farm enterprise free to make production decisions based only on the traditional considerations employed in maximizing net return on investment. Since quotas are freely negotiable, any proinvestment. ducer interested in entering production or expanding his acreage and marketings of a particular crop is free to do so provided only that he is willing to pay the going price for the necessary quotas. Open market operations represent an attempt to aline de-cisions and actions that are profitable to the individual producer with resulting collective actions that are desirable for the industry and the economy. To date, farmers have generally been at odds with the market in times of overproduction. Instead of selling marketing rights during these periods (not possible under present regulations), they have tended to increase their plantings in an attempt to maintain their cash incomes. This type of action naturally intensifies a downward pressure on farm prices and income.

Under the proposed plan, negotiable marketing quotas give the individual grower a monetary incentive to curtail his marketings when quota prices are rising relative to prices of the crop in question. Marketing rights become a capital investment similar in many ways to a tractor or an additional silo. As such, they give the farmer some financial flexibility and a form of insurance that he can understand and appreciate. Ownership of quotas insures the disposal of his crop in a market devoid of price-depressing surplus production, while sale of quotas represents a better means of adjusting to reduced production than is open to the farmer at the present time. Open market operations are not designed to reduce marketings effectively after a crop is ready for harvest but rather to alter growers' plans for future production.

If the incentive to sell quotas is not sufficient to reduce future supplies of certain crops, an additional monetary incentive might be provided by an accompanying longterm soil conservation program. When marketing rights are sold, the farmer might enter a long-term contract of 10 to 20 years with the Department of Agriculture to put his land into a soil bank. The proposed soil bank differs from the program presently in force in that the proposal calls for a longterm contract yielding high annual payments initially, but payments which gradually diminish to zero over 10 years or so. In this way the farmer is persuaded by two monetary measures to reduce or abandon production: payment for selling his quotas and payment for conserving and restoring his land. Neither approach condones permanent subsidization. Unlike marketing quotas, soil bank contracts must be tied to the land, and land buyers must assume the obligations of soil bank contracts which are tied to the land they purchase.

Control of aggregate farm marketings through Government purchase and sale of quotas exhibits the significant advantage of providing incentive for either expansion or contraction as the situation demands. Its capacity for two-way control provides a relatively permanent policy for modern agriculture's dilemma of instability. In times of threatening crop scarcity the Department of Agriculture by unloading its supply of marketing rights forces the price of these rights down at a time when crop prices are relatively high. This combination of prices en-courages additional farmers into the market and prompts farmers already in the market to expand production. Increased production again reflects individual decisions founded upon the agricultural outlook. In an expanding market, however, farmers' decisions are supported by purchases rather than sales of marketing quotas.

PAST, PRESENT, AND FUTURE POLICY

Obviously a simple concept called "open market operations" cannot be expected to cure all the accumulated ills of 30 years of farm mechanization and governmental control. Historically, the competition of successful and efficient sellers in a free market was thought to be the best way of forcing marginally efficient resources out of production when their produce was no longer needed. Since the 1930's, however, economic policymakers have been compelled to admit that the free-riding laissez faire method in severely competitive areas like agriculture may cause much human hardship and suffiering. In the long run a survival-of-the-fittest market synchronizes the forces of supply and demand, but in the words of the famous economist Lord Keynes, "In the long run we are all dead." In the shorter run, farmers and their families may cling tenaciously to a progressively declining standard of living because of the absence of any obviously better alternative.

Abandonment of the laws of the free market, during New Deal days, has helped to maintain the living standard of our rural citizens, but it also gave birth to "the farm problem" as we know it today. Three-fourths of the Nation's farm enterprises contribute less than one-fifth of its marketed crops, and this three-fourths receives only a small fraction of farm subsidies. The original and present intent of agricultural legislation is not to support the capable, efficient, and prosperous grower. By every tradition of free enterprise he is expected to support himself, and he wants to. Yet under present programs most of the funds expended for Federal crop loans and purchases accrue to the man who needs them least, while his marginal neighbor, eking a meager existence out of barren hillsides, picks up precious few Federal dollars for his labor.

Past and present farm legislation has not succeeded in juggling satisfactorily the instability of a severely competitive industry and the great increases in productivity brought about by mechanization. It has surrendered sporadically to reminiscent declarations of praise for the independent and self-sufficient family farm as the backbone of the Nation. While these declarations elicit a response from all of us who remember happy childhood days in the country, this view of agriculture is but a sentimental myth cherished most by those who are more fond of recollecting where we have been than of looking forward to where we are going. The plea to move unneeded human and material resources off our marginal land sounds trite only because it rings so true.

In amending current farm policy, an openmarket-operations program seeks to coordinate, in a simple and advantageous way, the basic economic and social forces of the past and the future. The scheme cannot claim to solve one problem perfectly but seeks to solve reasonably well a number of interre-lated problems. It encourages an optimum allocation of output among available productive resources, because it makes possible the gravitation of marketing quotas to efficient producers who can profit most from their ownership. It offers a means of regulating aggregate supply without the necessity of awkward and inefficient regulation of the individual farm operation. It seeks to avoid the high costs associated with permanent subsidization. It recognizes the benefits of a free market as well as the impossibility of permitting the free market to rule severely competitive industry like agriculture. Finally, the plan encourages aline-ment of individual actions to the needs of the market; and it offers an avenue of escape for the marginal grower whose standard of living is of real concern to Congress and the

Any new approach to the problems of American agriculture must necessarily undergo a baptism by fire in an atmosphere of seasoned pessimism. Most Americans, especially farmers, have long been disillusioned by the absence of any easy cure-all for agriculture's affliction. Few new proposals can expect to find wholesale and enthusiastic support; yet political leaders of both parties appear determined to improve upon legislation as it presently exists. In this dilemma a system of open market operations for agriculture has much to offer. Its basic simplicity and multifarious avenues of application commend it as a nucleus for permanent public policy. At a time when new methods for attacking an old problem are so urgently needed, open market operations provide an interesting possibility. technique has long been employed in central banking, but is still untried in our oldest industry.

Governor Rockefeller Calls for a Frank Discussion on the Summit Failure

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. ANFUSO. Mr. Speaker, in this morning's New York Times there is published the text of a statement issued on Monday by Gov. Nelson Rockefeller of New York in which he called for a full-scale discussion on the failure of the summit conference in Paris last week. He urged that the debate be conducted with a frankness and a responsibility transcending the conventional restraints and formulas of partisan behavior.

I have read many political statements in my time, but to the best of my recollection I do not remember reading one as nonpartisan and more constructive than the statement made yesterday by the Governor of my own State of New York.

Governor Rockefeller does not ask either party to shun its responsibility. As a matter of fact he invites the opposition party, the Democratic Party, to which I have the honor to belong, to investigate all the facts regarding the recent summit meeting which ended so abruptly and unexpectedly. He reasonably and intelligently expresses the hope-which is the hope of all Americans—that the Democratic Party, in its proper desire to get at the facts, will not engage in any shallow partisan effort to assign all error to its adversaries, all wisdom to itself. He similarly emphasizes the hope that Republicans will not try to disguise the present situation for equally partisan reasons.

Both Democrats and Republicans have, from time to time, admitted that our foreign policy has been found wanting in imagination, in perspective, in well-planned policies, and in leadership. In a crisis such as the present one, our country stands to benefit from a constructive and nonpartisan consideration of our foreign policy, where we made mistakes, how we can correct them, how we can avoid them in the future. This is important not only in the interests of our own security, but also in the interests of world peace.

Mr. Speaker, in the same nonpartisan spirit in which a leading Republican, the Governor of the Empire State of New York, has invited this national debate on foreign policy, in that same spirit do I, as a Democrat, offer it to my colleagues in Congress and to all Americans as a splendid example of statesmanship and responsible leadership in our times. Under leave to extend my remarks, I wish to insert Governor Rockefeller's statement in the Record, which is as follows:

TEXT OF ROCKEFELLER STATEMENT

I stated 5 months ago my intent to speak plainly on national issues of serious moment. Such an issue now stands before us.

It is the clear and compelling need to face the facts concerning the failure of the summit conference at Paris—and to examine these facts with reason and courage and candor.

This need is equally binding on citizens generally and on our two political parties particularly.

particularly.

We, Republicans and Democrats alike, dare not and must not, at, such a time as this, flee from the open and honest exercise of reason in favor of partisan preferences and postures. The facts—and the debate upon them—must be neither exploited nor evaded.

The people need to know what went wrong, where we are, and where we are going.

CALLED TWO-PARTY TEST

Such an issue as this tests the very integrity and vitality of our two-party system. We shall fall this test if extremes of either passion or timidity make our voices shrill—or silent.

I believe so serious a test compels all of us to try to speak and to act with a frankness and a responsibility transcending the conventional constraints and formulas of partisan behavior.

I shall, therefore, be candid and explicit. I fervently hope that the Democratic Party, in its proper desire to get at the facts, will not engage in any shallow partisan effort to assign all error to its adversaries, all wisdom to itself. For it can hardly affect such a pose—since it neither questioned any of the general illusions leading to the summit conference nor, in any memorable manner, ventured any specific alternatives to recent diplomatic procedures.

I hope, no less fervently for being a Republican, that Republicans will not try to disguise the present situation for equally partisan reasons. For it would be false and frivolous—and ultimately damaging to both Nation and party—to dismiss sober criticism of specific American conduct as a peril to national unity.

UNITY THROUGH DEBATE

We must be clear about the proper meaning of national unity—and what it does not mean.

. It does not mean that debate threatens unity or that dissent suggests disloyalty for true and honest unity only issues from honorable debate.

It does not mean that a free people should suspend or suppress its own self-examination for fear that the exercise be distorted by our enemies—for this would recklessly surrender to our enemies the power to distort the very processes of free government.

It does not mean that self-criticism must be self-damaging—for only as we are ration ally critical of ourselves can we be rationally unafraid of the criticism of others.

A democracy must deal with facts. If it starts dealings with fictions, it is merely trying to deceive others. And it will succeed only in deceiving itself.

I believe personally that a few facts essential to serious analysis are, already, clear

enough.

1. The failure of the Paris Conference—
in the wake of the implacable aggressiveness
of the Soviet Premier and in spite of the
admirable dignity of the President—places
in serious question some of the illusions, as
well as the procedures, that led to the sum—
mit itself.

The crudity of Soviet conduct gives neither reason nor excuse for denying that some aspects of American conduct, immediately prior to the conference, demand examination of their purpose and prudence.

3. We know that the cost of recent events will be borne not only by ourselves and the Soviet Union but also by our allies throughout the world, now sure to suffer harsher Soviet pressure, hence now more than ever anxious to see us display honest sense of proportion and calm sense of purpose.

WOULD MEET QUESTION

We should, therefore, ask ourselves: Are We-the many voices in both our political parties-going to be respected for speaking responsibly, as our voices are heard around the world?

Serious national debate must begin by accepting-not evading-these facts and these

questions.

I personally do not believe that the facts known to date add up to a fatal debacle, any more than they suggest a shining victory.

The struggle to save freedom in the world must proceed on a steady plane of calm and creative purpose. It is not a thing of peaks and valleys, crises and pauses. We were not approaching (as some thought) a great peak a fortnight ago. We are not lost (as others may think) in desperate depths today. Our national responses to such events cannot come in fits and starts, alternating complacency and panic. Our basic policies and our national actions are matters too profound to be dictated by the facial expressions of Soviet leaders.

We, both citizens and parties, have an immediate chance, and an immediate obligation, to do something creative, as we strive to forge our decisions today. It is this: to make the act of national self-examination—and the proper debate between our political parties—an act of realism, an act. of renewed and reasoned dedication.

The discussion and debate upon these matters must not degenerate into a clash of absurd partisan absolutes. It must not be allowed to become a thing of glib cliches or irresponsible invective or bitter slogans. It must be a thing of sense and substance.

CALLS FOR SELF-EXAMINATION

We know we have reason to be proud of our basic principles of policy in the world.

We know we have reason to be proud of the dignity and the integrity of the President in personifying these principles.

The special and powerful faculty of the democratic process, however, is not self-congratulation but self-examination.

We owe our friends in the world—and our own consciences—something more significant than an American proclamation of national perfection.

We owe them and ourselves an examplea powerful example—of a people who are morally and intellectually competent to pursue reasoned review and criticism of their own actions.

The future is what matters.

This defines the test for both political parties: to give positive proof that we can make a difficult and stressful time a thoughtful and creative time.

Let our reasoning be rigorous, our speech fair, our judgments honest. There is no other way to discover truth or to define

This is the way, and the only way, for a free people to act their age—and for their

A Brief Analysis of U-2 Flights

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. OSTERTAG. Mr. Speaker, in talking about the reconnaissance flights of our U-2 airplanes, we must maintain the proper perspective on these flights. The Rochester Democrat and Chronicle has published a brief editorial to help keep things straight, and I ask unanimous consent to have published in the CONGRESSIONAL RECORD this editorial of May 18, 1960:

JUST A SENTENCE ON THE SUMMIT

None of the tens of thousands of words of analysis and opinion written by scores of observers at the sour summit conference vesterday made more sense to us than one local letter to the editor.

Here it is, one sentence long, written by Frank W. Kinsman, of 149 Pleasant Way,

Penfield:

"In judging our national intelligence efforts we should not forget that Russia flew 4½ tons of absolutely undisclosed instru-mentation over Rochester at 4:17 a.m. yesterday."

Capital Punishment Is on the Way Out

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Daniel M. Berman as it appeared in the Progressive magazine, April 1960 issue.

Mr. Berman is assistant professor of political science at Washington College, and was recently awarded a congressional fellowship by the American Political Science Association.

The article follows:

CAPITAL PUNISHMENT IS ON THE WAY OUT (By Daniel M. Berman)

Several States, notably California as a consequence of the celebrated Chessman case, have reviewed the old controversy over the abolition of retention of capital punishment.

Until last year, there were only six States-Maine, Michigan, Minnesota, North Dakota, Rhode Island, and Wisconsin-which did not provide for the death penalty. These States have now been joined by Delaware, while the admission of Alaska and Hawaii to the Union adds two more to the ranks. New Jersey and New York are giving the problem serious attention. And there are strong reform movements in several States besides California-Connecticut, Illinois, Pennsylvania, and Ten-

Despite the widespread prevalence of capital punishment on the statute books, it is a curious fact that, in practice, the death penalty in many States has been gradually curtailed almost to the point of abolition, In 1958, for example, there were fewer executions than in any other year for which Federal statistics were compiled. The decrease has been sharp. In the 1930's, the average year saw 150 criminals pay the extreme pen-alty; by 1956 and 1957, the number had fallen to 65, and in 1959 to 49.

If courts have demonstrated increasing reluctance to impose death sentences, State legislatures have shown no similar qualm. In some jurisdictions, lawmakers have actually enlarged the list of capital crimes. As a consequence, there are at present on the books 24 offenses which in theory could be punished by death but which in practice never have been—including dueling, teaching a woman how to perform an abortion, and homicide while committing criminal syndicalism. And not every sovereignty which

can impose the death penalty chooses to do so. Thus, only 16 of the 43 jurisdictions retaining capital punishment actually used it in 1959, and half the executions took place in four States-California, Arkansas, Florida, and Georgia.

Although theory still lags behind practice, the trend seems clear: capital punishment is on the way out. Perhaps the principal reason for its demise is the modern shift in emphasis from retribution to rehabilitation as the goal of penology. The present tendency is to attempt, first and foremost, to remove the conditions in which crime tends to breed. When a crime is committed. its perpetrator becomes a logical subject for study to determine whether he can be made fit for reinstatement in free society. Viewed in this light, the death penalty is an anachronistic relic of retributive justice.

There is, however, an even more compelling reason why capital punishment has been losing ground. It has failed as a deterrent of crime. The death penalty as a weapon against major one as a common sense—the greater the crime, the common sense—the greater to deter it. This weapon against major offenses seems good greater the threat required to deter it. seemingly commonsense theory, however, has broken down in the light of experience.

As the number of executions falls, the murder rate might be expected to increase, if the deterrent theory is valid. Yet it has gone steadily down. In 1933, for example, when 160 executions were carried out in the United States the murder rate was 9.47 per 100,000; by 1957, the number of executions had sunk to 65, but the murder rate had dropped, also-to 5.1 per 100,000. When proponents of capital punishment claim that the decline in the murder rate would have been even more rapid if there had been more executions, they exchange the solid ground of provable fact for the wild blue yonder of speculation.

States which have eliminated capital punishment have lower murder rates than those retaining it. The abolitionist States, Maine and Rhode Island, have a lower rate than does New England as a whole; Michigan and Wisconsin fare better than the East North Central States generally; and Minnesota and North Dakota are well below the average for the West North Central States. In striking contrast, the States with the largest number of executions continue to be afflicted with a disproportionately large share of the murders.

States and nations which have scrapped the death penalty have generally seen no increase in the incidence of murder. A British Royal Commission, after a 4-year study of the problem, concluded: "There is no clear evidence in any of the figures we have examined that abolition of capital punishment has led to an increase of the homicide rate, or that its reintroduction has led to a fall."

It is difficult to study facts like these without concluding that apparently capital punishment is totally ineffective as a deterrent of murder. Perhaps the explanation is simply that fear of punishment will often dissuade people from committing minor crimes for which the motive may be trivial, but not from major crimes, for which the motive is often overwhelming. Certainly knowledge of consequences does not enter into the thinking of a psychopath. Neither can it stay the hand of the man who kills in a wild fit of rage. The only class of mur-derers for whom capital punishment could have much deterrent value is the professional gunman—and we have perversely robbed the death penalty of precisely the quality which might make it somewhat effective with this group: certainty that it will be imposed on the malefactor.

Only about 1 percent of those convicted intentional homicide are obliged to walk the last mile. With odds of more than one hundred-to-one in his favor, why should the professional criminal hestitate?

In addition, we have made the deterrent even less effective by painstakingly attempting to make executions more "humane." Surely we are guilty of the epitome of inconsistency in retaining the death penalty because of its deterrent threat while searching for swifter and more painless methods of administering it.

of administering it.

Thus the statistics, buttressed by logic, indicate the futility of capital punishment as a deterrent. But there is an additional, tragically ironical possibility to consider: the existence of the death penalty may actually tend to boost the murder rate. A disturbing indication of this was furnished by the British, who began an 18-month suspension of the death penalty at the end of 1955. During the moratorium, the Home Office reports, the number of murders was almost 10 percent below what it had been during the preceding year and a half. And, during the 18 months after the hangman's vacation ended, the number of murders jumped more than 25 percent. The experience of most other abolitionist countries and States also indicates that there may be a perverse contagion between executions and capital crimes.

The reasons are by no means clear. Capital punishment, by diminishing respect for human life and by glorifying the killer and his deed, may actually break down formidable barriers to murder. How else can one interpret the common phenomenon of innocent men confessing to murders? The researches of Dr. William F. Graves of California are even more disturbing. Dr. Graves' study of homicides and executions in three California counties over a ten-year period led to this startling discovery: the number of murders was inordinately high for every day on which an execution took place.

If explanations for this possible correlation between capital punishment and murder are difficult, there is nothing obscure about another fact concerning the death penalty: it is used far more frequently against Negroes than against whites. From 1930 to 1958, with whites composing 90 percent of the population, more than half the executions in the United States were of Negroes, according to official statistics of the Federal Bureau of Prisons. The figures are specially horrifying with regard to executions for rape. Seven Southern States which doomed 78 Negroes for the offense have never put a white man to death for rape although many have been convicted.

The use of capital punishment as an instrument of race hatred is only part of a larger problem. Clarence Darrow put his finger on it when he predicted that no rich man would ever be executed. Warden Lewis E. Lawes of Sing Sing, who led 150 men to the electric chair, testified that the forecast was accurate. "All were poor and most of them were friendless," he reported. None could afford a good lawyer.

But the class implications of capital punishment are something of a peripheral issue. There are other, even more relevant, arguments which are helping the abolitionist cause:

The wrong man is sometimes convicted. Gov. Edmund S. Muskie of Maine has cited the hanging of an entirely innocent man as the principal reason for his State's abolition of capital punishment in 1887. Rhode Island abolished it under similar circumstances in 1852. It is, of course, only natural that mistakes are occasionally made. But when the victim is still alive, some sort of restitution can be attempted.

In States where death is the punishment for crimes like kidnapping and armed robbery, the offender has nothing to lose by committing murder in order to liquidate the witnesses.

Capital punishment makes jury selection difficult, since many prospective jurymen do not sanction the death penalty.

As knowledge of the facts spreads, the cause of abolition advances. On a piece-meal, State-by-State basis, this country appears to be joining the 33 nations which have concluded that the death penalty should be discarded.

Two Views on Shoe Labeling Legislation:
The American Medical Association and
the National Farmers Union

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. PORTER. Mr. Speaker, my persistent and tenacious constituent, Wilbur L. Gardner of Medford, Oreg., has been crusading for shoe labeling legislation for many years. His efforts have culminated in my bill H.R. 1320. The American Medical Association says that the subject matter of this bill or similar legislation does not come within the sphere of its activities. The National Farmers Union has put itself on record as firmly in favor of the bill.

I feel sure, Mr. Speaker, that the American Medical Association will continue to insist on a complete list of the ingredients of a drug on a container's label. Certainly the shoes that a person wears, especially if that person is a child, are in a sense a prescription for his feet. It would seem that an accurate label on shoes is also of importance.

Under a previous consent I am including the text of letters to Mr. Gardner from the AMA and the NFU, as well as a copy of a letter from the NFU to the Honorable Oren Harris, chairman of the House Committee on Interstate and Foreign Commerce:

American Medical Association, Chicago, Ill., August 3, 1959. Mr. Wilbur L. Gardner,

Gardner's Shoe Service, Medford, Oreg.

DEAR MR. GARDNER: Your letter to Dr. Bolton concerning H.R. 1320, 86th Congress, a bill to protect consumers from misbranding and imitation materials in shoes, has been referred to the Council on Legislative Activities.

The Council does not feel that it should consider this bill or any similar legislation since the subject matter does not come within its sphere of activities.

Very truly yours,

C. JOSEPH STETLER.

NATIONAL FARMERS UNION, Washington, D.C., April 20, 1960.

Mr. Wilbur L. Gardner, The Man With a Sole, Gardner's Shoe Service, Medical Orea

Medford, Oreg.

DEAR MR. GARDNER: Enclosed herewith is a copy of our letter to Congressman OREN HARRIS, chairman of the House Interstate and Foreign Commerce Committee. We appreciate you calling our attention to the shoe labeling bill, H.R. 1820. The enclosed

letter for your information and use puts us firmly on record in favor of the bill.

We are glad that you have noted our support for the Forand bill to provide a health insurance plan for the aged. We are continuing to do our very best to see that this worthy legislation is enacted by the Congress.

Sincerely,

JOHN A. BAKER, Director.

APRIL 21, 1960.

Hon. OREN HARRIS, Chairman, House Committee on Interstate and Foreign Commerce, House Office

Building, Washington, D.C.

Dear Congressman Harris: As consumers of shoes and as producers of materials from which shoes are made, farmers have an interest in H.R. 1320 to require the labeling of material from which shoes are manufactured. Therefore, we urge you, as Chairman of the Interstate and Foreign Commerce Committee to hold public hearings in order that the need for such legislation can be fully aired before the Congress.

Such legislation is needed to protect consumers from misbranding and the use of substitute and imitation material in shoes, the presence of which, in certain instances result in the perpetration of fraud on the buying public. As farmers and cattlemen we quite naturally would like to see more of our byproducts such as leather used in the manufacturing of shoes and related products. We believe that labeling as proposed by H.R. 1320 would result in greater use of leather. In this connection, we are disappointed that the Department of Agriculture did not see fit to report favorably on H.R. 1320.

We urge your favorable consideration of our request for public hearings and we stand ready to present further testimony in support of a shoe labeling bill.

Sincerely,

JOHN A. BAKER, Director.

Mr. W. K. Ulerich, Prominent Newspaper Publisher in Central Pennsylvania, Honored With Distinguished Service Award by Pennsylvania Press Conference

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. VAN ZANDT. Mr. Speaker, recently one of Pennsylvania's prominent newspaper publishers, Mr. William K. Ulerich, Clearfield, Pa., received additional honors in the profession of the Fourth Estate when he and Mr. Richard A. Swank, Duncannon, Pa., were the two Pennsylvania publishers selected for the annual Distinguished Service Awards of the Pennsylvania press conference.

Bill Ulerich who resides in my congressional district in Pennsylvania has been active in newspaper circles for over 30 years and has been honored by serving as president of the Pennsylvania Newpaper Publishers Association and also as president of the Pennsylvania Associated Press. At the present time Bill is publisher of two newspapers in

my congressional district, the Clearfield Progress, a daily publication and the Centre Democrat, published weekly at Bellefonte, Pa. He is also publisher of the daily newspaper, the Danville Record.

In extending congratulations to Bill Ulerich on the additional honor he received, I am incorporating in my remarks the following article which appeared in the May 21, 1960, issue of the Centre Daily Times, State College, Pa.:

WILLIAM K. ULERICH, R. A. SWANK HONORED BY NEWSPAPERS IN STATE

Two Pennsylvania publishers were acclaimed last night as 1960 recipients of the Pennsylvania Press Conference's annual Distinguished Service Awards.

These awards, inaugurated in the 1930's to recognize outstanding professional and civic achievement, were conferred on William K. Ulerich of Clearfield, formerly of State College, president or publisher of three county newspapers, and Richard A. Swank, editor and publisher of the weekly Dun-cannon Record.

The citations were conferred by H. Eugene Goodwin, director of the university's school of journalism, which each year joins the Pennsylvania Newspaper Publishers Association, the Pennsylvania Society of Newspa-Per Editors, and the Pennsylvania Women's Press Association in sponsorship.

Mr. Ulerich, who began his career as editor of the undergraduate newspaper at the university, has been actively associated with the newspaper industry for 30 years. He currently is president or publisher of the Clear-field Progress and Danville News, both dailies, and the weekly Centre Democrat of Bellefonte.

A native of Latrobe, his first job took him to the Huntingdon Daily News and he left that post to become first editor and eventually associate publisher of The Centre Daily Times. He maintained contact with his alma mater throughout these years as a part-time instructor and adviser and currently is chairman of the PNPA's Advisory Committee to the School of Journalism.

Active in politics and community life in State College and now in Clearfield, he Served in 1951-52 as president of the Pennsylvania Newspaper Publishers Association, and also is a past president of the Pennsylvania Associated Press. Active in radio, he and associates have built or purchased radio stations in State College, Clearfield, Latrobe, Indiana, Barnesboro, and Sebring, Fla.

A native of Perry County, Mr. Swank began as a high school student to contribute articles to the Duncannon Record, left the profession briefly to become cashier of his hometown bank and, later, owner of a con-struction business. Upon his return from Army service, he negotiated purchase of the Record and has been its editor and publisher for the last 14 years.

Winner of many State and national editorial awards, and active in community and church affairs, Mr. Swank for the last 10 years has served as secretary-treasurer of the Pennsylvania Newspaper Publishers Association. He presently is chairman of the initia-tion committee of the central Pennsylvania chapter of Sigma Delta Chi.

Jobs After 40

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. HOSMER. Mr. Speaker, the Commonwealth of Pennsylvania has

published an excellent booklet entitled "Breaking Through the Age Barrier." It aims at educating employers and workers alike as to the advantages to be gained from elimination of job discrimination against workers over 40. Contained in the booklet are typical remarks and suggested replies on the subject. This enlightening portion of the booklet reads as follows:

JOBS AFTER 40: TYPICAL REMARKS AND SUGGESTED REPLIES

BY EMPLOYERS

- 1. Older workers cannot meet our physical requirements: Chronological age is not a true measure of physical ability. A better way to determine whether a prospective new employee is able to meet the physical requirements of a job is to require a physical examination.
- 2. Older workers are too slow: Many individual older workers are faster than the average younger worker. Therefore, employers who set an arbitrary age limit are ruling out their chances of employing workers who can produce faster than the average. Some workers often make up in reliability and accuracy for what they lack in speed.
- 3. Older workers are more prone to accidents: Studies indicate that older workers have fewer accidents than younger workers. They tend to lose more time per accident, thus balancing the fact that they have fewer accidents. The accident factor cannot properly be used either for or against hiring older
- 4. Older workers looking for jobs tend to be drifters: Just the opposite is true. An outstanding quality of older jobseekers is their dependability. They are not job hop-pers. They are less inclined to change jobs than younger workers.
- 5. It doesn't pay to invest in training older workers because they will only work for a few more years (see No. 4 above): Work histories show longer job tenure for the older group. The employer who invests in the training of an older worker will, on the average, get more years of service in return from the older worker than he will from a younger worker.
- 6. Older workers do not mix well with younger workers: Some employers report that just the opposite is true. They are a steadying influence on the younger workers. Their seriousness and concentration on the job is transmitted to other workers in the
- 7. Older workers can't adjust to new job conditions: Younger workers have difficulty adjusting to new jobs, as witness the higher turnover rate. The fact that old workers have a more serious attitude toward jobs would lead to the conclusion that they would make a much more marked effort to adjust to a new job.
- 8. The provisions of our pension plan make it necessary for us to exclude new older workers from the plan. If we hired them under a waiver, we would be subject to criticism for letting them go without a pension later on: Most workers are now eligible for OASI benefits on reaching age 65 (or 62), and therefore an employer who let an employee go without a pension can be assured the employee will not be destitute. Employers contribute to community welfare by hiring older workers and could not fairly be subject to criticism for doing so.
- 9 Older workers are hard to supervise. They won't take directions from younger men. They insist on doing things their own way: Chronological age is a poor way to measure a worker's adjustment. Younger workers are frequently hard to supervise. Employers have a right to discipline employees who won't take directions properly, without regard to age.
- 10. Older workers increase the costs of fringe benefits. Pension costs go up, group

life insurance goes up, workmen's compensation costs go up, etc.: See full discussion in chapter 3 above.

11. Older workers tend to get sick and be absent from work: All surveys show that older workers are absent from the job less than younger workers.

12. It is difficult for us to hire older workers because so few of them have experience in our line of work: The chances are that younger workers won't have experience and need training (see No. 4 above). Older workers stay on the job longer. It pays to invest in their training.

13. We believe in compulsory retirement. It's too difficult to decide whether a worker should retire on the basis of a physical examination or on a subjective determination of his ability to do the job: Management is always making a subjective determination of a worker's ability to do the job, regardless of his age. When a younger worker is not producing satisfactorily, he is either transferred to another job or dismissed. Why should it be more difficult to make such a determination for an older worker? A compulsory retirement policy denies management the right to make the kind of decisions which will produce the most effective labor force.

14. We believe in hiring young and promoting from within. Older workers would interfere with our promotion policies: All company policies should be designed to produce efficient results. If there would no unfairness to a young worker who deserves promotion, and if an older jobseeker is clearly more qualified for a job than other young applicants, it is clearly to the best interest of the company to employ the older jobseeker. What is important is that the decision should be reached on the basis of fairness, ability and the company's best interests; not on arbitrary age limitations.

15. Our job is to run our company profit-

ably. We shouldn't be expected to solve the social problems connected with an aging population. A sound policy on hiring older workers can contribute to profitable operations, because such a policy will let the company take the best advantage of the available work force.

BY OLDER WORKERS

1. Employers don't want old fogies like me. I'll never get a job. Certainly not with an attitude like that. Employers are interested in making profits. A jobsecker who can convince an employer that it will be profitable to hire him will generally get the job despite his age. Make a list of all the things you can do well and make sure

2. I've never had to look for a job. I don't know how to go about it: Get professional help. Your local office of employment security has the know-how when it comes to getting jobs. They'll get leads for you and help you make the best possible presentation of your abilities. If you have special problems, they'll give you special counseling service.

3. My skills are out of date, and I'm too old to start learning a new trade: Chances are your skills can be put to work in a different occupation, but even if you have to learn a new trade, you're never too old to learn. Talk over your problem with your employment service counselor.

4. If I take this job, I'll never get a chance for promotion because of seniority provisions. You can't get promoted when you aren't working either.

- 5. I'm still just as strong and as fast as I ever was. They have no right offering me a less important job. Sometimes when people grow old their physical abilities diminish. When there's a doubt, go to your own physician and have him examine you. There's nothing to be ashamed of if you have slowed down, but it's better to adjust one's ambition to his abilities.
- 6. I found a job, but it's too far from where I live: It's approximately twice as

hard for an older worker to find employment than it is for a younger worker. The older worker who is out of a job has had a tough break. He should be sensible and make the best of it. When he insists on everything to his complete satisfaction, he may end up worse off than before.

Wall Street Journal-Federal Aid for School Construction

EXTENSION OF REMARKS

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. MADDEN. Mr. Speaker, last Thursday the Rules Committee reported favorably on a rule for debate of the Federal school construction bill. As a member of the Rules Committee, I outlined the critical classroom situation as it exists in the industrial Calumet region of Indiana.

The following article from the Wall Street Journal of May 20, 1960 reveals the critical schoolroom situation in other areas in the Nation:

STRUGGLING SCHOOLS: MONEY PINCH TIGHT-ENS AS MANY STATES CURB RISE IN AID PAYMENTS-LEGISLATURES BALK AT BOOSTS IN TAXES: PRESSURE GROWS FOR MORE FED-ERAL HELP-CLOSE-UP OF ALABAMA'S WOES

(By Daniel M. Burnham)

MONTGOMERY, ALA.—Rain leaking through school roofs. Spring breezes blowing through busted classroom windows. Teachers dismissed; others quitting. New construction halted. Bus purchases canceled.

These are the outward signs of a deepening financial crisis gripping the 114 public school systems and 9 State-supported col-leges here in Alabama. So pinched for funds were the schools this spring that some scheduled summer closings a month earlier than usual; local officials kept the schools open in several areas by charging high school stu-dents special fees, diverting funds from such other purposes as roadbuilding and obtaining emergency loans from local bankers.

Alabama's school problems stem in part from unusual circumstances. For example, the lengthy nationwide steel strike cut sharply into State tax revenues from the Birmingham steel-producing area, so projected school expenditures had to be whacked. But more critical-and a trend that's clearly evident in many other States around the land-is a mounting reluctance by State legislators here and elsewhere to levy new or heavier taxes to pay for continually rising school costs. There's evidence that tax-payers, burdened since World War II by steadily rising levies for schools, are puting more pressure on lawmakers to slow or halt the tax uptrend.

NO SUPPORT FOR HIKES

"There is no support in this State for further tax hikes," flatly states Alabama's Gov. John D. Patterson. "Alabama is just going to have to wait until it grows industrially before it can pay out more to its schools."

This theme, or slight variations on it, is echoed by State and school authorities around the land. They cite lofty State debts, already heavy tax burdens, and the lack of new sources for additional taxes as support for their stepped-up efforts to obtain in-creased school aid from the Federal Govern-

"There's no question it's getting harder and harder to get money from State legislatures," declares Milton Raver, secretary of Maryland's State Teachers Association. During a 30-day session last winter, the Maryland Legislature slashed an association proposed \$13.7 million pay-increase package to \$4.3 million. As a result, he says, fewer than half the State's teachers will get pay increases next year."

AID IS LEVELING OFF

"State financial aid to local schools rose gradually from around 1925 on, but now it's leveling off," says Dr. Edgar Fuller, executive secretary of the Council of Chief State School Officers, in Washington, D.C. The council is made up of State superintendents and other top school officials in each State and U.S. territory. A major reason for the leveling-off of State aid, Dr. Fuller says, is the sharp rise in the State debt since the end of World War II.

Even in such States as New York, Kentucky, and Mississippi, where legislators have recently voted substantial sums for teacher pay raises and school maintenance, authorities report growing difficulties in their quest for new funds.

"This year's fight was the toughest we've ever been in," says Jack Tubbs, State superintendent of schools in Mississippi. For 5 months, adds Mr. Tubbs, education lobbyists had been skirmishing to obtain \$30 million for pay boosts and maintenance costs over the next two school sessions, but finally had to settle for \$17 million. "We had a Gover-nor who ran on a promise not to raise taxes," comments Mr. Tubbs.

Here in Alabama, where the school pinch is perhaps tighter than in most States, local officials are getting a stiff lesson in school financing. Visit for a moment with elderly Clem Carpenter, recently elected school superintendent of Crenshaw County, at the new courthouse in Luverne, 50 miles south of Montgomery. This is a rural county, poorer than most U.S. counties but nevertheless proud of its two textile plants, its stub-snouted hogs, and the flowers that bloom profusely alongside almost every home. Because of a cutback in State aid, home. its 3,804 Negro and white children came close to getting out of school a month early.

"SKIN OF OUR TEETH"

"I don't know what we'll be using for cash next September," Mr. Carpenter frets, "but I think we're going to make it through closing time on June 5 by the skin of our teeth.

Last month local bankers, after lending the system \$247,000 over the past few years, refused to lend more. Bills for school repairs and bus maintenance hadn't been paid since February 15. Local parent-teacher associations had financed the purchase of chalk and other supplies, and had paid utility bills in each district. There was just enough cash around to pay teachers through Then-almost at the last momentthe State board of education came to the rescue with \$50,000 in cash to tide the system over for the rest of the year.

To shave costs, Mr. Carpenter says 17 of the system's 164 teachers will be released when the schools close down next month. "It's going to cause a ruckus among the teachers, but it will save us between \$50,000 and \$60,000 next year," he says.

Local school administrators in Alabama lean harder on the State government than do school officials in most States. The National Education Association in Washington, D.C., reports its latest figures show that 72.5 percent of the total revenues received by Alabama's schools were supplied by the State in the 1957-58 school year. That compares with a national average of 40.8 percent for that year.

Most of the school money that local governments themselves provide comes from

property taxes. And local officials share the State legislators' aversion to proposing tax boosts. Even when they do propose boosts, they may not be able to put them through. In Alabama, a local property tax increase first must be approved by the State legislature, then by a statewide referendum then by the local community's voters them-

BIGGEST INCREASE EVER

Ironically, Alabama's school crisis developed shortly after the legislature had authorized the largest increase ever in school appropriations. Last summer, under pressure from the Alabama Education Association. lawmakers voted a school appropriation of \$143.5 million for the fiscal year ending next September 30, an increase of \$28 million over the previous year. They also approved the sale of \$100 million in bonds over the next few years for school construction.

To finance the appropriations increase, the legislature extended sales taxes to a wide variety of items-Sunday newspapers and automobiles, to name two. It also put new levies on purchases of heavy machinery, and hiked taxes on tobacco and personal income.

But shortly after the bill became law, revenues from several taxes began to run well below expectations, partly as a result of a decline in farmers' income and partly as the aftermath of the steel strike, which cut purchases and revenues from sales taxes in the Birmingham area.

The upshot: Late last February, Governor Patterson had to order a cutback in monthly allotments to the school systems to offset a loss of some \$13.5 million in anticipated tax revenues earmarked for schools.

To carry out the cutback, Governor Patterson recommended that the promised 15-percent increase in teachers' pay be chopped to only 5 percent. But protests from teachers rocked the State board of education. It finally decided to provide funds for the full 15-percent boost, but reduced funds available for maintenance outlays and other school spending. In Alabama and elsewhere, teachers' salaries generally are set by local school boards, but in recent years State legislatures in many cases have, in effect, raised salaries by providing funds to supplement local revenues.

The shortage of cash to maintain schools has sent school officials scurrying to a va-

riety of new sources for funds.

In Cherokee County in northeastern Alabama, a supplemental fee of \$8 a month has been levied on high school students. Junior high pupils are billed \$7 a month. Charges on elementary school students are forbidden by law, so county officials are asking a donation of \$2 per pupil per month.

On Alabama's western border, Green County commissioners quietly took a \$12,000 surplus from road-construction funds and handed it to the 23-school county system as a gift. Superintendent Clyde A. Pruitt, of Macon County, east of Montgomery, got a Federal loan of \$54,000 under a law which permits Uncle Sam to assist schools near Federal projects. The county has a Veterans' Administration hospital near Tuskegee.

large majority of the school systems headed for the local banks. Loans ranged as high as \$100,000. "It's too early to know how many systems went into debt this spring," says Frank R. Stewart, secretary of the State board of education. "But at the end of last year there were 22 county and 10 city systems in debt to the banks to the tune of about \$1.6 million. There's no question the number and amount will climb sharply this year."

Alone with the search for cash, the cutback has brought a rash of moves to reduce expenses. "We've got a list as long as your arm of projects we've dropped," says W. P. business manager of the 8,500-stu-Ingram. dent, State-supported Auburn University in eastern Alabama. Included in the list: A

\$9,000 point job for the rusting Reserve Officers' Training Corps building, an overhaul of the gym, and repair of a couple of roofs.

There are school roofs leaking all over Alabama today," sadly says Frank L. Harwell, superintendent of schools at Talladega, about 60 miles east of Birmingham.

POSTPONING BUSES

In many systems, school bus purchases have been definitely put off. Woodrow Burke, superintendent of the 17-school system of Lawrence County along the northern State line, reports: "We didn't buy any buses this year; we should have purchased eight to keep up with our obsolescence program.'

Hanging over school officials and politicians alike is a fear that the financial insecurity of the schools may start a mass movement of teachers to other States; many already have gone. "Alabama teachers are going to Florida by the carloads hunting for Jobs," says William Burl, Russell County school principal.

Teachers' pay in Alabama now averages \$3,645 annually. Florida, beckoning with sunny beaches, offers an average salary of \$4,980 for teachers.

Governor Patterson insists the problem is One for local communities. The administration and the legislature have done about all they are going to do, he says. A special session to consider tax revenues is out, he vows.

We raised taxes last year to support new funds for the schools and it may cost me my political life," he explains. "The sales tax (4 percent), the income tax, and the tobacco tax are all too high now," he adds. "There is no public sentiment for further increases."

Area Development Legislation Is Still Possible

EXTENSION OF REMARKS OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. SAYLOR. Mr. Speaker, in the President's veto message on the area redevelopment bill, he stated:

S. 722, the area redevelopment bill.

For 5 consecutive years I have urged the Congress to enact sound area assistance legislation. On repeated occasions I have clearly outlined standards for the kind of program that is needed and that I would gladly approve.

In 1958 I vetoed a bill because it departed greatly from those standards. In 1959, despite my renewed urging, no area assistance bill was passed by the Congress.

Now in 1960, another election year, a new bill is before me that contains certain features which I find even more objectionable than those I found unacceptable in the 1958

The people of the relatively few communities of chronic unemployment—who want to share in the general prosperity—are, after 5 years, properly becoming increasingly impatient and are rightfully desirous of constructive action. The need is for truly sound and helpful legislation on which the Congress and the executive can agree. There is still time and I willingly pledge once again my wholehearted cooperation in obtaining such a law.

After listing his objections to this bill, he again called upon the Congress to present legislation that would meet the approval of both the Congress and the Executive, as follows:

Again, I strongly urge the Congress to enact new legislation at this session-but without those features of S. 722 that I find objectionable. I would, however, accept the eligibility criteria set forth in the bill that first passed the Senate even though these criteria are broader than those contained in the administration bill.

Moreover, during the process of developing a new bill, I would hope that in other areas of past differences solutions could be found satisfactory to both the Congress and the Executive.

My profound hope is that sound, new legislation will be promptly enacted. If it is, our communities of chronic unemployment will be only the immediate beneficiaries. tone will have been set that would hold forth, for the remainder of the session, the hope of sound and rewarding legislation in other vital areas-mutual security, wheat, sugar, minimum wage, interest rates, revenue measures, medical care for the aged and aid to education to mention but a few.

Only this result can truly serve the finest

and best interests of all our people.

It is time for the Congress and Executive to give serious attention to the enactment of an area redevelopment bill. I call upon the leadership of the House to bring forth a measure that can be enacted into law. This must be and can be done now. The President has asked for a moderate bill-let us, therefore, give him one that will meet with the administration's approval and get this program going at once.

I, along with my colleagues Mr. VAN ZANDT and Mr. FENTON, have introduced measures in the House which represent a good compromise, and one that can become law during this session of Con-

As part of my remarks, I include an editorial from the Johnstown Tribune-Democrat of May 14, 1960:

AREA DEVELOPMENT BILL STILL POSSIBLE

President Eisenhower's veto of the area development bill can hardly be called unexpected. It had been forecast in debate on the bill in both House and Senate. The bill was much the same as the one the President vetoed in 1958, though somewhat lower in amount, and no effort had been made by the bill's sponsors to meet the President's objections in other respects or to seek a compromise.

There is, however, one major difference between the veto this year, and the veto in That was a pocket-veto after Congress had adjourned, since the measure had been passed in the closing days of the session. This time the veto message was sent to Congress in sufficient time to permit passage of a more moderate measure such as Mr. Eisenhower has asked for years—if the Democratic Congress really wants area development legislation.

The veto, on the basis of the narrow margin by which the bill was approved in the House and Senate, cannot be overridden. But a compromise bill could be whipped through Congress on quick order; and if it is not, the political purpose of the original bill will become apparent. There is good evidence that its principal sponsors wanted an issue for the coming campaign, instead of a law.

If Congress does not pass a bill which would set this activity in motion promptly. the evidence will be conclusive that the original measure was simply designed to play politics with human hopes and human

Like the President, this newspaper believes and has said that the vetoed bill was far too broad for an experimental effort of this kind, for which there had been no experiences on a national scale. A series of articles on this page has pointed out the sharp disagreements in Congress itself on several phases of the bill that Congress passed. It had to be altered on the floor of the House, for that matter, up to the last minute, though the subject has been under active consideration in Congress for more

We do not know how effectively a Federal area development program would work-nor does anyone else. There is one basic con-flict within the plan itself. It seeks to help depressed areas attract new industry, but it also professes to avoid drawing such industry from other more prosperous areas. State and local activities for depressed areas do not contain such internal contradictions, since they are frankly competitive.

Certainly there is reason to approach such a Federal program cautiously, and this is what the administration wants to do. The amount of money is a far less serious matter; and, if the plan works, additional money would be forthcoming swiftly. Meanwhile, if those who have made such an outcry for this legisation are sincere, they will try now for a moderate start.

This newspaper is as anxious as anyone could be for a program which will help the area it serves, and the State of Pennsylvania. We do not, however, want legislation which would raise hopes, only to dash them later. We believe that the administration plan offers a sound approach to the problem of depressed areas. And we trust that those who have been calling upon Mr. Eisenhower to sign a bill he does not believe sound, will now be equally vociferous in calling upon Congress to pass a bill which can become law within a few weeks.

Are Farmers Unimportant?

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. ULLMAN. Mr. Speaker, I want to call the attention of my colleagues to the following editorial from the East Oregonian, in Pendleton, Oreg. It points out that the importance of farm folk extends far beyond their numbers. I would call particular attention to the editorial's concluding point. The farmer certainly cannot solve the farm problem alone. We must give him the necessary legislative tools to do the job:

[From the East Oregonian, May 12, 1960] ARE FARMERS UNIMPORTANT?

In this election year the Eisenhower administration is demanding that something be done about the farm problem and leaders in the Congress are saying that something must be done about it. Every presidential candidate has a solution or is searching for

Farming is of much concern to the politicians in election years. It always has been. But there's something different about it this year. It isn't the farm vote that the politicians have their eyes on. They are looking at the vote of the consumer who is demanding that something be done about the farm problem.

Are the politicians deluding themselves in thinking that the farm vote no longer is important? Is this one of several myths that have grown up around farming during the years that Ezra Taft Benson has served as Secretary of Agriculture?

We think so. So does one of the best-

informed men in agriculture.

Carroll P. Streeter, editor of the Farm Journal, recently spoke at Iowa State University about "Eight Myths About the Farm Situation." Myth No. 8, according to Mr. Streeter, is, "Farmers aren't a very important group any more-there are too few of them." Of this Mr. Streeter said:

"It's true that fewer than one out of eight of our population now lives on a farm. But let's consider a few facts, too often over-looked, about the place of farm families in

our scheme of things.

"Obviously, farmers provide us all with our daily bread, as well as cotton and wool for clothing. Rather important, but what else?

"Well, every 10 years they send to the cities some 1.9 million fine young people-completely reared, educated, ready to work. These children are trained in self-reliance, in responsibility, in habits of work, in our finest family traditions. Not only do they make excellent citizens, but a great many of them turn into leaders.

This is a tremendous social contribution." "But have we considered how much of a financial contribution it is? Not to the individual taxpayer personally, but to the Nation. What would you say—\$20,000 per child? I saw that statistic from Kansas State University the other day as being the cost of rearing a child from birth to age 18. At that figure the total would come to \$3.8 billion per year—a considerable offset to the \$6 billion agriculture budget mentioned earlier.

"Well, how else are farmers important to Farming is our biggest single industry. measured by almost any standard, and a major customer of other industries. And it is getting bigger, not smaller. It's a real growth industry if there ever was one. But do we realize how big it really is?

"In 1959 farmers' gross income was \$46.3 billion. That's a big hunk of money. It was 9.7 percent of our gross national prod-

uct for that year.

"With that money farmers buy 61/4 million tons of steel a year—half as much as the automotive industry uses. They buy more petroleum than any other single industrymore than one-eighth of all the petroleum produced in the country. They use more electric power than Baltimore, Boston, Chicago, Detroit and Houston combined. It takes \$6 billion worth of containers and packing materials to pack the food U.S. farmers raise in a year.

"Then let's not forget the jobs that farming creates in food processing and distribution, in the manufacture and distribution of farm machinery and supplies. All these jobs are part of the agricultural complex,

"So the 'no longer important' myth holds no water at all. Citizens with a \$46 billion income and \$208 billion in assets, who buy from nearly everybody and sell to everybody, can't be dismissed as nobodies."

We wish it were possible to reprint all of Mr. Streeter's address. Unfortunately, there are too many people in this region which depends to such a great extent upon agriculture that don't know the truth about the

farm problem.

They will hear much about it in this election year. But not because the politicians are "bleeding" for the poor farmer. Of course there is a farm problem. It is big and complex. But it is not a problem that the farmer created nor is it one that he can

Distressed Areas

EXTENSION OF REMARKS OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. SAYLOR. Mr. Speaker, Members of Congress who represent distressed labor areas in the United States have been making a plea for the relief of their constituents-good American citizensfor the last six sessions of Congress. Twice Congress has passed and twice the President has vetoed bills that would have granted these areas some relief.

Members from areas that are not so affected are prone to believe that we who represent such areas paint too drab and

unrealistic a picture.

Allen (Hoot) Croyle who lives in St. Michael, Pa., has seen the only industry in his town close down. He knows what it is like to live in such a community where he and his buddies have been without work for 21/2 years-where all they ask is a chance to earn a living for themselves and their families.

While Mr. Croyle talks about his own hometown, it is equally true of many other communities not only in my district but in every depressed area in the United States of America. Mr. Croyle's

story follows:

COALTOWN DRAMA: MINING MEN CAST IN TRAGIC ROLES

(By Allen (Hoot) Croyle)

The sound of the mine whistle which used to summon a bustle of activity has long since passed into silence.

A walk through a mine yard brings one to

a scene of utter desolation

The mine tipple, the cleaning plant, and other buildings are passing through the tragic stage of deterioration that idleness

All that is metal is going to rust. All that

was labor is turning to dust.

The unused empty mine cars that used to haul the rich, soft coal from the mine are now upended. They are stacked one against the other, stored in neat, orderly rows, like tombstones-each marking the grave of a job.

SILENT GOODBYE

Above all, the empty smokestacks lift their blackened fingers to the sky-a silent goodby to an industry.

The lights are guttering low in the coalfields and, as a consequence, many of the younger men have lifted their packs, departing from friend and family.

These men fought a war in the belief that victory would permit them to raise a family

in dignity and with decency.

But democracy's promise has not come home even to limping fulfillment.

And so, for the second time, circumstances tear away the younger miners. Reunion with family comes on a too-infrequent weekend.

There is absolutely nothing for them in this blighted area. But they are fearful of making the complete, final break which moving from this area would bring.

CLING TO ANCHOR

There are strong family ties of friendship and tradition. And there is little incentive to move from a low rent area into a high one, since they lack the assurance that city employment will be permanent.

They are without seniority that brings job security. They are caught on both horns of the dilemma. Their employment keeps of the dilemma. Their employment keeps them from their family. Daily the heart-break goes on. So much for the younger men.

On the other hand, the majority of the idle miners are rooted to the area. Their age is against them being hired elsewhere since industry is reluctant to retrain older workers.

Many of them could not pass a physical examination because their lungs are filled with the impurities inherent in the mining industry.

CAREERS CUT SHORT

They found out too late that all their hopes for happiness were tied too tightly in a bag of coal. They are orphans of a mine that fell in the grim battle of competitive throatcutting.

Too young for retirement and too old to get hired-the forgotten men that modern industrial society consigned to the limbo.

The political leaders who could do so much toward alleviating the problem only provide

lipservice to their cause. . The exhaustion of their unemployment benefits has driven them to the galling wall of public assistance. No matter how well intended, this aid is piteously inadequate and is accepted with a subconscious feeling of shame.

The unemployed are finding that povertythe unseen guest of the household-makes for bad company. The wife has an unending struggle trying to make ends meet.

It's a hard job trying to explain to youngsters why they can't have a much needed dress or pair of shoes.

PERSONAL SIDE EFFECTS

The little characteristic traits which used to be viewed with tolerance are now a constant source of irritation. The men are finding out that a worried wife becomes a nagging one. And so the unemployed miner ends up in the nearest saloon or club where a man is still man-preeminently. their problem becomes less distressing because it is shared by others. And here there is always the chance that the proverbial 'live one" will arrive.

The favorite topics of discussion are unemployment, foreign aid (which they bitterly oppose), and mostly the President whom they have placed in a special niche alongside Herbert Hoover.

The favor "jobs for Joes" but not for

Janes

The miner always considered his calloused hands as a badge of honor. He is not ready to trade them in for dishpan hands.

HOPES STILL FLICKER

Always there is the lingering hope that the mine will reopen again. But hope so long deferred maketh the heart sick.

So more and more people are beginning to realize that some form of an industrial re-development project will have to be inaugurated to create new industry and jobs in this area.

Redevelopment has to have its start on & local level-we know that. But the eradication of chronic local unemployment problem that can best be solved by the State

and Federal Governments.

Cambria County has been classified as a substantial labor surplus area for many years. It is confronted with grave financial problems that limit the capacity for self-

GOOD TRY

Many of the area communities have made valiant "bootstrap" efforts to attract new industry. However laudable their efforts, the rewards have been little. Therefore the immediate job is to enlist public support to have a distressed areas bill passed in this session of Congress, and to have the President sign it.

The unemployed in St. Michael will agree with William F. Schnitzler, secretary-treas-urer of the AFL-CIO, who stated while testifying in support of a depressed areas bill:

"We seek neither charity nor a raid on the public treasury in behalf of America's distressed communities. On the contrary, our object is to help people help themselves by assisting the jobless to find work again and by helping whole communities to become productive and self-reliant.

"And as success flows from this effort, many of our citizens will move off the relief rolls and on to tax rolls. The public treasury will be well recompensed for the limited investment in human welfare we now ask.

The Selma-Gold Beach Road: Endorsement by Josephine County Pomona Grange No. 20

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

Mr. PORTER. Mr. Speaker, the need for a road from Selma, Oreg., to Gold Beach, Oreg., is well established. Such a road would open immense timber resources, great mining possibilities and a wonderful recreation area.

Along with State Senator Robert Straub, Speaker Robert Duncan of the Oregon House of Representatives and others I made a horseback trip over this territory last summer and am looking forward to making a similar trip late in

July of this year. It is my hope that the Oregon State Highway Commission will see fit in the hear future to add this proposed road to the Federal forest highway system and to request that the Bureau of Public Roads make a survey as soon as possible. The facts will speak for themselves and this road will be built to the

great advantage of the area, the State, and the Nation. Under a previous consent I am includ-

ing here a resolution by the Josephine County Pomona Grange No. 20 setting forth their endorsement of this road and

the reasons therefor:

Whereas an association has been organized and has been active in gathering information and investigating the advantages of a road connecting Selma and Gold Beach,

Oreg.; and

Whereas it has been determined that funds for this project can be secured from (1) Federal service road money, since the road penetrates through the Siskiyou National Forest, and (2) O. & C. controverted funds set aside for building roads into Federal forest timberlands. It should be noted that 10 miles of this road is completed at this time and 2 more miles are under construction from the Gold Beach end, financed from the above funds; and

Whereas this through road and its tributary roads at favorable points would make available vast areas of fir, pine, Port Orford cedar, yew and spruce timber, and much of this timber is past its prime and should be

harvested; and

Where as there are unlimited opportunities to make available to the traveling and vacationing public, attractive spots for fishing, camping, hunting etc., including opportunities for private enterprises such as filling stations, motels, resorts, camps, etc.; and

Whereas unlimited and unestimated natural resources in the form of deposits of gold, chrome, copper, asbestos, iron, silver, nickel and platinum are known to be there, but cannot be reached or developed under the present circumstances; and

Whereas there is no deepwater port for foreign or coastwise shipping between Portland, Oreg., and San Francisco, Calif., and at this time Gold Beach has Federal appropriations available and construction has already started on a breakwater and deep port facilities, and this would serve as an outlet for export of all products from southern Oregon and northern California and would have to be served by truck transportation exclusively,

Whereas this is the final link in a vast transcontinental highway system and would expedite movement of defense materials, shipment of supplies, and serve as an alternate port of embarkation, and be also an emergency route for civil defense: Now, therefore, be it.

Resolved, That the Pomona Grange of Josephine County, in regular session assembled this 30th day of April, 1980, fully endorse this project and cooperate with the efforts of all organizations interested in it, and that a copy of this resolution be sent to the Oregon State Grange, Oregon State Highway Commission, Forestry Division of the U.S. Department of Agriculture, U.S. Congressmen from Oregon, Governor of Oregon, members of the State Legislature from Curry, Josephine and Jackson Counties, Selma and Gold Beach Road Association, Chambers of Commerce of Cave Junction, Gold Beach, Medford and Grants Pass, Pomona Granges of Jackson and Curry Countles, and the County Courts of Jackson, Curry and Josephine Counties.

JOSEPHINE COUNTY POMONA GRANGE No. 20, WAYNE JOHNSON, Master. LENA FOSTER, Secretary.

The Old Nixon Is Back

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF TLLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial entitled "The Old Nixon Is Back," which appeared in the May 20, 1960, issue of the St. Louis (Mo.) Globe-Dispatch:

THE OLD NIXON IS BACK

Vice President Nixon is courting serious political trouble in trying to convert the spy plane and summit failures to his political advantage. Yet that appears to be what he was attempting to do in his press conference in Syracuse, N.Y.

The Democrats, he said, could investigate the intelligence gap if they believed the President should have apologized to Premier Khrushchev. This distorted way of phras-ing the issue is pure "old Nixon." Then he disclosed that the United States had found that two Russian U.N. employes were spying in Springfield, Mass., last fall but did not make an issue of the case during Khrushchev's visit.

No leading Democrat, as far as we know, is suggesting that the President apologize to Khrushchev. Beyond reasonable criticism of the handling of the U-2 spy plane incident, most Democrats have exhibited unusual restraint in an effort to weld national unity on policy toward Russia. Senators Johnson and Fulbright, Speaker Rayburn and Adlat E. Stevenson even took the extreme step of cabling President Eisenhower at Paris to uphold his hand in his controversy with Khrushchev. Is Mr. Nixon now challenging the opposition to be more irresponsible than he has been?

It is irresponsible to reveal official information on a hitherto secret spy case, perhaps by using FBI files, for personal political advantage. And it is no contribution to advantage. And it is no contribution or rational debate to equate the U-2 incursion over foreign territory with a spy case so minor that one of the spies remains in this country

Senator Gore, of Tennessee, asks whether this is the new Nixon or the old Nixon speak-That is an inevitable question. old Nixon relied heavily on partisan distortion of issues like this. The new Nixon, according to the cultivated image, was to avoid McCarthy techniques and be an apostle of peace. He did not shun credit for arranging the Khrushchev visit or for the improvement in relations with Russia which have now turned sour.

Has Mr. Nixon now reversed his image again? If so, partisan Democratic hostility is not all that he risks. The voting public may wonder which of the various images of Mr. Nixon to take at face value.

Juvenile Delinquency

EXTENSION OF REMARKS OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the AFL-CIO Joint Council Meeting on Juvenile Delinquency, New York, N.Y., on May

RESPONSIBILITY IN JUVENILE DELINQUENCY

12, 1960.

It is a pleasure to be here with you today, and I welcome this opportunity to share with you my thoughts on juvenile delin-

quency.

As a Member of your Congress and chairman of the Appropriations Committee for health, education, and welfare funds, I have been fighting for new programs and legislation to help reduce juvenile delinquency. I know you are just as concerned with this as I am. And so, what I have to say to you will be a reminder of our shared responsibility for meeting and dealing with this serious prob-

Moreover, I shall point out some of the ways by which we can more strongly attack and deal with the growing menace of juvenile delinquency. The situation is not hopeless. Far from it. But there are things we need to do that we are not doing—and the need to do that we are not doing—and the time for action is now. So, what I shall say will show the gloomy side—the staggering statistics of juvenile delinquency. But it will also reveal the hopeful side—the opportunities for positive programs and action,

Juvenile delinquency is reaching epidemic proportion in our society. It is causing grave concern not only to you and to me, but to every American concerned about the present and future welfare of our country.

The statistics are shocking. The number of delinquency cases disposed of by juvenile courts in the United States nearly tripled between 1948 and 1958. During this period the child population of delinquency age increased by about a third, while the delinquency rate per thousand children in this age group doubled. Cause for further alarm is the fact that acts of violence against persons are increasing more rapidly than almost any other form of juvenile delinquency. The cost of delinquency in dollars and cents is also staggering. FBI estimates indicate that juvenile delinquency currently represents a drain on our national economy of \$4 billion each year.

But the problem is even more serious than the surface facts make it appear. It is reliably estimated that one boy in five in this country now has a delinquency record by the time he is 18 years old. Though it is true that many of the offenses that are counted in establishing this figure are relatively minor, it is also true that the statistics on delinquency are limited to cases known to law enforcement agencies and courts. For every child who becomes a juvenile court statistic there are two or three who are dealt with informally by the police, even though they may have committed similar offenses. About half of all arrests for burglary and larcency and almost two-thirds of the arrests for auto theft involve persons under 18 years Yet in these three categories, slightly less than one offense in four results in an arrest.

It is obvious then that the figures on delinquency represent only the surface portion of a menacing iceberg—an iceberg in which we should include all of the thousands of youngsters with delinquent behavior patterns. These young people must also be seen as people, not merely as statistics. They are the citizens, the workers, the parents of the next generation. They are individuals with productive potential—and many of them have the basic abilities to make important creative contributions to our society. We simply cannot afford this kind of waste of our productive youth. No country, not even ours, is rich enough or ever will be rich enough to afford it.

The child population of delinquency age will increase by about 50 percent in the next two decades. On top of this, in the next 2 decades many more of our people will be living in or near big cities. At present, the big city delinquency rates are three to four times the rural and small town rates, and adult crime rates also increase with the size of the city. It seems very likely, therefore, that as we become a more urban nation our delinquency and adult crime rates will continue to rise, with more delinquents in the juvenile age bracket and more and more of them moving into adult crime as they grow older.

For the last 13 of my 19 years in the Congress, I have been active-either as a ranking member or chairman—on the House committee responsible for levels of programs that include the field of delinquency. subcommittee which I head has become increasingly alarmed at the national juvenile delinquency problem. Accordingly, last year our committee asked the Department of Health, Education, and Welfare to coordinate a special effort and give leadership to persuade more of our scientists to turn their attention to study in the behavioral sciences. Such studies, we felt, should include inquiry into the psychological, emotional, and environmental factors leading to deviant factors leading to deviant behavior in youth.

From such knowledge we could hope to find a way of preventing juvenile delinquency. Let me quote from our report: "In the Department of Health, Education, and Welfare we have the Children's Bureau and the National Institute of Mental Health, both with interest, experience, and resources in the fields of child behavior, child welfare, and child psychology. It would seem that a collaborative effort by these two agencies, one oriented to research in behavioral, psychological, and psychiatric sciences, and the other oriented to research in sociological science with emphasis on child welfare, could lead to methods for helping reduce the tragic social burden that juvenile delinquency represents."

We asked the National Institute of Mental Health and the Children's Bureau to undertake a most careful and thoughtful study of what can and should be done in future years in the field of juvenile delinquency prevention.

The joint report of the National Institute of Mental Health and the Children's Bureau has now been received. Its contents indicate that, though we do not now have any final answers regarding the nature of delinquency and the most effective ways of treating different types of delinquents, we do have a good deal of useful knowledge resulting from scientific studies and from the experience of people working in the field of de-

We are not completely ignorant and helpless before this crisis. We can identify the problem, we can plot its course, at least crudely, and we can take preventive measures. It is not enough to be against delinquency—it is our responsibility to develop a major national blueprint for the control of this epidemic. Fortunately, it is not too late for prevention and control if we are willing to take bold, expensive, and large-scale action, to conduct field experiments and demonstrations, to train needed personnel, and to do more research.

Our committee is recommending such action and is also recommending an appropriation of \$1 million to the National Institute of Mental Health and \$60,000 to the Children's Bureau in the coming fiscal year to inaugurate the first steps for such a program. We recognized, of course, that substantially larger sums will be needed in the succeeding years as demonstration, research, and training projects get underway, and as State and local governments begin to apply the findings from these projects.

But while Federal leadership and help are needed in attacking the problem, it must be clearly recognized that this effort requires the active teamwork of responsible private organizations such as the community service organizations of AFL-CIO, social and health agencies, schools, churches, and many other civic and community organizations. Such teamwork of public and private resources is required not only because the problem is reaching epidemic proportions but also because delinquency is so deeply interwoven into the fabric of our society.

Since it is obviously impossible to completely remake our society, it is appropriate to concentrate on a few strategic factors which people who have worked extensively with delinquents consider to be crucial.

There are numerous families with inadequate incomes in the deteriorated areas of our big cities. Many such families are unable to do an adequate job of child-rearing because of physical health and mental health problems, and because of lack of meaningful ties with religious, social, educational, and health agencies in the community. Health, counseling, remedial education, recreation, welfare, and voactional guidance services must be provided to these families, where needed, on an individual basis. Also, the basic structure of health, education, and welfare services for the entire community must be strengthened to prevent the spread of delinquency and other social contagion

from these malfunctioning families. By focusing on such families and the services which they and their neighbors need, it is possible to launch an attack on delinquency now, even though we cannot deal with all the myriad factors associated with delinquency at once. The rationale for such an approach is derived from an examination of certain dominant trends in the American way of life today.

In our huge, complex, industrialized and mechanized urban society, we no longer have the informal social controls that characterized the rural way of life in America during the 19th century. For those who would achieve a rewarding position in legitimate society, a long educational preparation is required. Besides, there are widespread pressures which prevent youth from holding jobs or even learning jobs before they are 18 or older. At the same time, our society becomes increasingly complex and keeps changing so rapidly that it is more and more difficult for youth to establish a meaningful way of life and select a suitable career.

The child of today, unlike his counterpart 100 years ago, or even 50 years ago, does not have a sense of belonging, of never questioning his place in the community, in the economy, and in the world at large. medium-sized and larger cities there are many children in the low-income areas who are faced with the fact that neither they. their parents, their neighbors nor their friends feel that they belong to the community or have a responsible role to fulfill. Particularly if they are part of a minority group, they constantly feel rejected or at least ignored by the bulk of the population. When the urban low-income child starts school he is likely to find that his previous life experiences have not prepared him for this setting, and that school represents preparation for a way of life that appears to have no place for him except in the most menial and lowest paid occupations.

Unless an understanding parent, teacher, neighbor, clergyman, or social worker can help him, through a continuing relationship, to understand this educated world better and see a meaningful role in it for himself, he is unlikely to develop the feeling that he belongs to this complex education-ridden society. This process of alienation from productive society can start very early indeed in the case of a child whose home is extremely deprived in human relationships and material needs.

Unfortunately, the major social trends of our time that accompany urbanization tend to create more and more of these rootless, alienated, and finally rebellious children. These trends include industrialization, increasing technology, larger and larger organizations, and the overall continuing expansion of our economy.

It is apparent that there are not going to be any easy answers to the problem of delinquency. It is equally apparent, also, that we cannot expect to make any real inroads against delinquency unless we simultaneously launch a broad campaign in the whole field of child welfare.

We need more and better professional services for children and families before problems arise. And in our programs designed to treat the juvenile delinquent, we need more emphasis on coordinating and strengthening all of the basic local social services for children. Such a program is impossible without broad citizen support at every level.

As chairman of the committee in Congress that has supported research programs to a very great degree of success in the medical and biological sciences, I believe it is possible to attack the juvenile delinquency problem through similar programs. I believe the Federal Government must support research, demonstrations, and training to provide the

necessary scientific knowledge and personnel. The State and local governments do not have the resources for all that is needed of this kind of activity. On the other hand, the actual services to children and their families must be provided in the individual community, with the help of the State and local governments.

This will be done, but only if people everywhere want it strongly enough. Citizens and citizen groups, including such outstanding leadership groups as the AFL-CIO Community Services program, must indicate that they are willing to support Federal and State tax levels sufficient to maintain adequate child welfare research, training, and service programs. They must take the initiative in insisting that local governments, agencies, and civic groups mobilize to improve social services—and that careful and thoughtful planning is done before any action is initiated.

A careful blueprint is also needed in order to attack delinquency adequately. The Federal Government has a substantial role in this program and has already begun to take action through some of its agencies. For example, the National Institute of Mental Health is now conducting a substantial program of research focused on basic processes involved in social problems, development of effective preventive and treatment methods, and methods of training personnel to do work connected with these social problems. The Institute is attempting to acquire more scientific knowledge about the many processes involved in producing delinquents.

The major effort, however, is concentrated on effective application of current knowledge and skills. and skills. The consensus of experienced professionals in the field is that serious delinquency usually involves a long-term social and psychological process. In many delinquents the first symptoms appear in early childhood, with onset varying between ages 2 and 10. There is evidence that the process can be reversed or at least arrested, but early intervention and continuing attention are required. In this respect delinquency roughly resembles diabetes, which physicians are able to control if they spot the illness early enough and provide continuing care for an indefinite period. With delinquency, however, such control methods are less reliable, though promising.

Preventive care needs to continue at least through the adolescent years, perhaps beyond. In mild cases, such care may involve no more than an initial diagnostic study, followed by periodic contact with a trained probation officer or other experienced person, plus occasional provision of necessary health, counseling, remedial education, recreational, and vocational guidance services. In more serious cases, a continuing and intensive rehabilitative process is required, involving a concentration of coordinated services.

An essential counterpart to such individual and family care is an attempt to modify the spirit of the community in high-delinquency areas so that adults in these areas will show a more accepting, helping, and nurturing attitude toward all children in the area, including delinquents, and will participate in mobilizing and improving all community services for youth.

Since many experienced delinquency workers feel that they could do a much better job if they had adequate resources, the Institute of Mental Health is supporting three research and service groups who are testing out special delinquency control approaches. In order to provide these and similar groups with more effective tools to carry out control programs, support is also being provided for projects focused on early identification of delinquents and predelinquents, special methods of treating such children and their families, and methods of evaluating the ef-

fectiveness of preventive and treatment programs.

One of the three special projects at the University of Michigan is being carried out in a city of about 200,000 population. Thus far it has involved an intensive study of the social and psychological characteristics of delinquents in the community as compared with children whose behavior is exemplary and outstanding. There has also been extensive study of community services and of social and institutional factors involved in delinquency.

The next phase will be to transmit results of the study in appropriate form to a group of leaders in community services for youth, as well as to the community at large. This feedback process should mobilize a ground-swell of community interest and concern which will insure total community support for a carefully planned delinquency control program. If community resources are insufficient to provide services needed in such an all-out control program, they will be supplemented in order to carry out the program at an effective level for an adequate demonstration period.

Another special project, set up in a middlesized city in Massachusetts, is attempting to devise methods for classifying a sample of all delinquents coming to the court so that they can be referred for appropriate treatment. This effort is based on the observation that most communities lack resources and techniques needed for adequate diagnosis and disposition of delinquents. These diagnostic instruments have now been developed and are being applied to a sample of all delinquents coming to the court. The next phase will include a tryout of the recommended dispositions or treatments, with local services for this purpose being augmented as needed.

The largest project undertaken thus far is that of mobilization for youth, on the Lower East Side of New York City. This project, still in its formative stages, is expected to include both preventive and treatment services for predelinquents, delinquents, and their families, plus a broad program aimed at modifying community attitudes toward youth and at reorganizing and augmenting services designed to help youth move into productive adult-lives.

Mr. James McCarthy, who is here today, can tell you more about this project, since he is the director of its action program. All three of the special projects being supported by the National Institute of Mental Health are of the type that need extensive participation by community service programs such as your own.

Aside from general support for such programs, there are a number of special ways in which organizations concerned with community health and welfare, and in particular your organization, can help attack the problem of juvenile delinquency. Let us first consider the problem of youth employment.

Early in this century child labor laws were introduced to prevent the exploitation of children and youth in unhealthful work situations. At the same time public education was expanded on a compulsory basis so as to permit all children to complete high school. We are now finding that many children have such serious difficulties with education that they are ready to leave school by the time they reach their teens. Many of them now do leave school by age 14 on a formal basis, or informally by very frequent truanting and by being inattentive and disruptive in class.

The great bulk of delinquents are recruited from this group. Over half of all delinquents are educationally retarded and a large proportion of school dropouts become involved in delinquent acts. However, automation and the shorter work week have made it extremely difficult to bring younger teenagers into the labor force, and organized

labor has legitimately been concerned about attempts to lower the working age.

Yet some means must be developed for gradually preparing the school-rejected and school-rejecting teenagers for a useful work career. In some European countries such youth serve as apprentices in a wide variety of occupations and are thus gradually introduced into the adult labor force. I offer no solutions to you at this time, but would suggest that this is a problem which merits the special concern of your organizations.

The advent of the shorter workweek brings increased concern for constructive use of leisure time. It is within their leisure time that many of our teenagers get into difficulty. Certainly the opportunities for constructive use of leisure time are extremely limited in some of the deteriorated areas of our large cities. There is a great need for hobby programs, recreation programs of all kinds, and for the help of a large number of responsible citizens in developing such programs. These programs must be adequately planned and supervised.

Here in New York City there are a variety of such programs. For example, some schools are open all day and also during the evening, providing supervised hobby and recreation programs as well as programs throughout the summer months. Other agencies, including schools, are carrying on activities which help new migrants from Puerto Rico or from rural areas of the South to become acquainted with the customs, services, and opportunities of the big city.

Experienced workers in the field of delinquency recognize the importance of citizen and voluntary organization participation in carrying out prevention and treatment programs. The actual or potential delinquent and his family in a low-income area may require a variety of remedial education, health, counseling, recreation, and vocational guidance services. If such services are to be provided in a way that meets local needs in a coordinated fashion, a large number of responsible local citizens must serve on boards, in planning agencies, and as volunteers. Such support is needed not only for agencies serving delinquents but for all agencies concerned with the welfare of the child and his family.

Although public interest in a problem like delinquency is aroused when an epidemic of vandalism, theft, or violence occurs, such interest is apt to subside as other pressing problems arise. Besides, delinquents have no lobby, as do, for example, the physically handicapped and mentally retarded children. Parents of delinquents do not organize as do the parents of these other handicapped children.

Therefore there must be continuing support from responsible organizations like yours for constructive legislation and for community efforts in the field.

Finally, and perhaps most important of all, much help is needed in spreading community concern for every child of the community, in setting standards, and in sharing these standards with parents of children in our most deprived areas. Because we are living in what has been called an affluent society, we are too apt to assume that prosperity has filtered around all of the corners in our economy. We are too apt to assume that significant portions of our society who do not share the comforts and opportunities on which middle-class values are predicated will nevertheless owe full allegiance to such values.

Delinquency is a growing, threatening epidemic in our national life, and only a portion of it is visible. National leadership and help is required to cope with this problem. And a larger part of that leadership must come from the teamwork of many public-spirited orgalizations, one of the more important of which is the community services program of the AFL-CIO.

In Line at Wake of Small Business

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I submit herewith a letter from my constituent, Mr. Frederic S. Leon, owner of the Pacific Aquarium Manufacturing Co., in my district.

You will note that Mr. Leon, a small businessman, is being penalized for his efforts to take a young man and his family off the relief rolls and provide employment by which this family could earn a decent living.

The Labor Department seems to be straining at a gnat while swallowing a camel. I suppose the Department can justifiably claim that its agents are enforcing the law. But laws, if intelligently enforced, are administered in accordance with their spirit. Certainly the spirit of the law did not intend that a young, prospective father should remain on relief rolls when an employer granted his request to work enough hours to support his family.

The irony of this situation is that if Mr. Leon had paid the 16-year-old expectant father \$1 per hour for the first 40 hours and \$1.50 per hour for overtime he would have complied with the law. But because he paid \$1.85 straight time he is subjected to investigation by the Labor Department. And what is even more drastic the Labor Department will furnish the lawyers to represent the men he has helped in a case against him.

This type of harassment, this type of regulation is, I suggest, one of the reasons small business is finding each day that it cannot compete with large corporations. It seems a shame that our law and our Labor Department is No. 1 in line at the wake of small business.

The letter follows:

PACIFIC AQUARIUM MANUFACTURING Co., Los Altos, Calif., May 16, 1960.

Hon. CHARLES B. GUBSER, House Office Building, Washington, D.C.

DEAR SIR: On the advice of Lisle L. Berkshire, district manager of the National Federation of Independent Business who will contact you under separate mail, I herewith submit a tragic case, that is serious enough to demand attention because it threatens

my business existence and morale.

For 10 years I am the owner of Pacific Aquarium Mfg. Co., a small business dealing principally with California schools and colleges.

At the end of February 1959 Merc Moran, the reemployment officer of the welfare department of the county of Santa Clara contacted me in regards to employment of a bright 16-year-old boy of Mexican descent who had quit high school, was married to an even younger bride and expected a child. He was on relief and so were his parents. Attempting to get a job as head of his family, he was repeatedly turned down and his best offer was \$1 per hour in a nursery.

Moran pointed out that help was needed to break the relief tradition and I put Henry Lopez to work at \$1.50 per hour. This was

matrick a second

subsequently raised to \$1.85 per hour. The boy's work was very satisfactory but 40 hours per week do not add up to a sufficient income. Henry Lopez asked for permission to work longer hours which I granted and his take-home pay on light work then came to about \$70 per week and the man was completely self-supporting.

To help out further I hired his illiterate

To help out further I hired his illiterate father at \$1.50 per hour and one more family became self-supporting. A third man was hired under similar circumstances.

Then came the storm. Earl T. Baker, official representative of the U.S. Department of Labor, descended on us May 3, scattering Federal bulletins landing like a swarm of locust and causing equal devastation. He asked first about shipments over the State line. We do occasionally ship to Oregon but this is a minor factor representing far less than 5 percent of our business. This small fraction put us under interstate commerce in his opinion. To enlist my 4-day cooperation he stated that his mission is educational.

From Tuesday morning, May 3, to Friday, May 6, Baker plowed through all our books, orders, checks; interviewed all employees, telephoned ex-employees and verified information with our bookkeeper. I lost 4 days coperating with courtesy as acknowledged in letter of May 11, U.S. Department of Labor.

Then came the judgment, a summary of unpaid wages 2 years back, a \$1,388 verdict of death to a small business.

We have always paid all our wage bills, this amount represents overtime at 1½ normal rate. Reluctantly, I accepted the summary and mentioned that of course in America any man has his day in court, or at least a hearing. Baker then resented my hope to get a more impartial hearing and made it clear that he was the Department of Labor. Should I fail to comply with his command, all ex-employees would be notified that his Department would present their cases free of charge and I would have to deposit twice the \$1,388 to question his findings.

Under Baker's findings \$462 overtime is due Anton Schmidt, 2 years back on the payroll. This man, an ex-Nazi and later black-market operator was refused admission to the United States because of his unsavory past. He later arrived, with the help of his aunt, as a refugee under Catholic auspices (he is a Protestant).

He and his wife and friend worked for us and stole us blind to establish his own business in competition with us.

The Department of Employment ruled in his disfavor when he was fired for cause and now I am asked to further contribute to his brazen delinquency.

Very truly yours,

FREDERIC S. LEON,
Pacific Aquarium Manufacturing Co.

Senior Citizens and the Problem of Housing

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. PORTER. Mr. Speaker, Dr. John J. Kane, head of the Department of Sociology at the University of Notre Dame has written a timely article concerning housing for senior citizens for the May 29, 1960, issue of Our Sunday Visitor. Appropriately, it is titled "Housing for Senior Citizens."

Dr. Kane points up a number of pros and cons for our senior citizens and their sons and daughters to consider. Under leave to extend my remarks in the Record, I include his article:

[From Our Sunday Visitor, May 29, 1960] HOUSING FOR SENIOR CITIZENS

(By John J. Kane)

About 30 years ago a motion picture. "Over the Hill to the Poor House," told the story of an aged mother, rejected by her children, going to the poorhouse. It was a sticky, maudlin, tear jerker, but unfortunately had almost as much truth as sentiment in it. This was the period in which America was becoming urban and families flocked to the city. Apartments, houses and some people's hearts were becoming too small to accommodate the aging. The huge farmhouse had both an abundance of space and work for the elderly. The city dwelling did not. While conditions have changed, they have not kept pace with need. Today, there is only a fraction of the adequate housing required for persons 65 and over.

Perhaps it is ironic, but one problem of housing results from the fact that 68 percent of nonfarm families in which the head is 65 or over own their homes. A man's home is his fortress and there is an undeniable sentimental attachment to the house in which one has lived most of his life. But this same house may have little but emotional value for the aged, and may even be

a hazard to them.

First, it is likely to be large, to have two stories and a basement with the peril that stairs present to those in their late sixties and seventies. The care of such a home and its yard it too taxing for some oldsters. Not infrequently it is located in an area which has now become marginal and is hemmed in by taverns, hot dog stands, rooming houses and smothered by the noise and fumes of heavy traffic. In about two-thirds of the cases this large place has one or at most two occupants. Despite these limitations, however, if one or both occupants are ambulatory, the housing may be satisfactory. But what happens if they become seminal

One solution is to move in with their children. Sometimes this works out quite satisfactorily. Other times it does not. Newer housing in comparison to older housing is apt to be smaller. Bedroom and bathroom facilities are taxed, tempers become short and the aged have a sense of imposing on their children and a not entirely unfounded

notion that they are unwanted.

Some older persons prefer to enter a convalescent home or an institution for the aged such as those maintained by communities of Catholic nuns, fraternal organizations or if necessary the State. Standards in private convalescent homes are spotty. Some are admittedly fire traps, many are relatively expensive and few will accept the bedridden. Church and fraternal organization homes are apt to be better than many of the private establishments and frequently offer good recreational and medical facilities They generally provide for both married couples, single, widows, and widowers. But some have been critical and medical facilities. some have been criticized for their failure to segregate the senile from those not mentally ill. It is a daily depressant for older persons to see those suffering from senility and to fear that tomorrow they may also be victims. As more and more States move to enact legis lation on the standards for such homes, conditions should improve.

But many older persons even though alone in the world would like to maintain a home of their own. Scandinavia, Germany, and Holland have done a great deal in housing for the aged. Units for couples and single persons have been built eliminating stairs or providing elevators and safeguards, such as bath tub bars and nonskid floors. The United States through the Housing Act of 1956 has facilitated the purchase of housing by older persons, the financing of rental projects designed particularly for the aged and by making public low-cost rentals more available to them. For instance, it is now Possible for persons 60 or over to purchase a home with a 30-year mortgage if because of age, financial or physical condition they cannot otherwise qualify by having a third party sign with them.

Another provision makes it possible for church, fraternal or labor groups to secure FHA mortgage insurance for construction of eight units or more specifically designed for the aged. The FHA also allows full cost for such items as central dining room facilities, recreation rooms, infirmaries and similar accommodations essential to elderly people. To date relatively few organizations have taken advantage of this provision probably because of their inability to underwrite the cost, but hopefully more will do so in the future.

Low cost public housing on a rental basis is also available to oldsters, and in New York 10 percent of all State-financed public housing is set aside for them. Current statistics indicate that admissions of such tenants is on the increase. But even today less than half of the States have such housing projects

despite the need of them.

A rather interesting development in housing for the aged his been attempted in Arizona, Florida and some other Southern States. Entire towns have been erected with individual homes or apartments exclusively for the elderly. The trailer camp is another location to which the American oldsters have moved. Some camps are designed solely for them, while others reserve a specific section. Some couples move to a southern camp for the winter months, then come north to be near their children during the summer. Others have their trailers set up permanently in one place.

But certain questions must be raised by the advisability of present developments. Is there a danger that senior citizens will find they are segregated? Is it entirely wise to exclude younger persons from some of these towns in which their parents have decided to live? At present this may be the result of a dearth of housing for the aged but association with children and grandchildren should not be denied. Older persons considering a move to such locations will have to give careful consideration to this possibility.

One of the new looks in housing for the elderly is the change of location. Formerly, it was common to locate homes in rural areas. Inexpensive land was undoubtedly a factor but more than one oldster has remarked that it made him feel he was turned out to pasture. Today there is a tendency to erect housing in or near the center of the city so that older persons may walk to church, theaters, clubs, museums and such, or at least have access to public transportation. This likewise makes feasible day visits to their children and friends in the same city. Medical and hospital facilities are readily accessible.

Suppose you are 65 or over and trying to determine just what kind of housing is best suited for you, what should be the basis of your decision? Your physical condition is a major factor. If you like your present home, can take care of it adequately and it presents no particular hazard by reasons of location or layout, remain there for the present, if you wish, but give some consideration to the fact that ultimately you may have to change.

If your present living setup is not satisfactory, should you move in with children? This depends on their attitudes and yours,

but it merits most careful thought. If it is possible for them to provide separate but connected living quarters, chances of getting along well together are better. If you do move in with them, remember their ways are not your ways. Be prepared to make numerous adjustments. The same is true if they move in with you.

If physically you find it difficult to get about or you suffer a chronic illness which makes it inadvisable for you to be alone, by all means consider a home. While, as pointed out above, some are by no means suitable, the connotation of a home for the aged has changed. Generally, you will be free to come and go, to participate in the group life and to enjoy the company of your peers. In a Catholic home provisions for religious life and spiritual care will be close at hand. Medical attention is also likely to be quickly available. But select your home with care and foreknowledge and try not to make a permanent commitment until you have tried it out.

Trailer life may sound adventurous but it is still for those fairly hardy. It offers the opportunity of travel, meeting many new people and seeing different places. Some oldsters simply love it and have a regular itinerary finding old friends in each new trailer park. But it is a different kind of life

and all do not adjust to it easily.

Finally, what about taking up residence in some of the towns for the aged in the South or in any southern community? In some cases health may indicate such a choice but unless you make friends readily and are not too tied to old places, things, and associations, experiment with it before plunging in fully. Be certain of the costs, religious, medical and hospital facilities. The place may be somewhat less attractive than it appears on smooth paper folders.

Your choice of where and how you will live after retirement is defined in part by your income, your health, and your personality. But within such limits, you are relatively free. It may be a lot of fun to experiment with any or all of them but keep one foot in your old hometown or your old house. There is a marvelous feeling of security in knowing that you can pretty much do what you want and go where you will but also that you can return when you want if you so will.

Must We Make a Mystery of Murder?

EXTENSION OF REMARKS

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1960

Mr. CRAMER. Mr. Speaker, I have a number of anticrime bills now before the House, including H.R. 7129, a bill to punish the use of interstate commerce in furtherance of conspiracies to commit terroristic crimes and activities-thus allowing the Federal Bureau of Investigation to more fully and effectively aid State and local law enforcement bodies, at least upon request, in the quelling of crime, and H.R. 11889, a bill to amend section 1073, title 18, United States Code, the Fugitive Felon Act, to include all felonies and offenses punishable by more than a year in prison, which has met favorable subcommittee action and now is before the House Judiciary Committee.

My other anticrime bills would encourage testimony against racketeers by giving immunity against prosecution for witnesses—H.R. 7392—prevent shipment of gambling devices across State lines—H.R. 7393—deny persons engaged in illegal activities the benefits of tax deductions allowed legitimate businesses—H.R. 7394—and prevent, through criminal sanctions, the use of interstate or foreign commerce communication facilities for gambling purposes—H.R. 11890.

I already have called the attention of the Members of Congress to the need for strong anticrime legislation nationally as well as in the Florida First District where there only this month occurred another brutal gangland-style murder. This killing, like 22 others—10 of them in the past 8 years—also may be destined to go unsolved unless prompt action from all law enforcement facilities are united

in its investigation.

I respectfully wish to call to the attention of the Members of the House an article, "Must We Make a Mystery of Murder," written by C. A. James Abbott in his column, "I Don't Believe It," which appeared in the Friday, May 20, 1960, issue of the English-Spanish language newspaper, La Gaceta, published in Tampa, Fla., which contains an excellent analysis of the national crime loopholes which to some extent would be corrected by passage of my anticrime bills. The full text of Mr. Abbott's article is as follows:

[From Tampa (Fla.) La Gaceta, May 20, 1960]

I Don't Believe It (By C. A. James Abbott)

MUST WE MAKE A MYSTERY OF MURDER

Within the past 30 years Tampa has piled up 22 unsolved murders. This is an average of 1 every 16 months. Blood has been mysteriously spilled from the bodies of Italians, Spaniards, Anglo Saxons, and Negroes. Neither nationality, race or color has been a deterent factor in apparently wiping out a human obstacle to someone's more opportune future. Avarice, fear, and sheer unmitigated guts have undoubtedly been the goading spirit of those barbarians who have swung a cudgel or pulled a trigger, and sent some living soul through the gates of hell.

And the peaceful, puzzled, and concerned

And the peaceful, puzzled, and concerned citizenry of Tampa keeps asking the same old question: Why cannot the combined law enforcements of Tampa and Hillsboro County blaze a trail to the killer's door?

Yet Tampans need not be overly disturbed because Tampa's file of unsolved murders is small compared to those in other equal, and larger citles throughout the Nation.

While Chicago, for instance, has slowed down in its rampart gunning among hood-lums, I know well of the early thirties when, in a short space of 17 months, 94 gangsters and racketeers were shot down like clay pigeons at a skeet meet—and the police "solved" only 5.

Before the late Roger Toughy got 28 years for the alleged kidnaping of John Factor, I spent 4 hours in jail with him. He had just beaten another kidnaping rap in St. Paul, Minn. While I am thankful to Toughy for giving me a scoop for Paramount News, I was not impressed by his ultra braggadocio, and his glorious lies. The only impression I got from him was that he, and his kind, were out for a fast buck. And he would pluck it any place with total disregard to human hurts and lives—plus a total disregard for the law.

But Toughey, according to his own words, was given official immunity to arrest when he started bumping off the Capone gang—most of the previously mentioned 94 murders were Al's boys. Here is his story:

At the time Anton Cermak was on the

At the time Anton Cermak was on the Cook County Commission, but he wanted to become Chicago's Mayor. The only political plank he could come up with was a "rid Chicago of the Capone mob," and the plank was real hard wood. Cermak knew Toughy on a fairly good social basis because Toughy sent Cermak's club all the beer it wanted.

Getting rid of the Capone gang was to be a tough job, and Cermak knew it from the beginning. After being elected mayor he called Toughy into his office and, as Toughy told it to a nationally known educator whom I will not name, told him he had a free reign to erase the Capone herd off the map of Chicago. Toughy did such a good job that the Capone gang either had to get Toughy, or Cermak, out of the way. They did both. Toughy was railroaded, so he said, for the Factor kidnapping, and Cermak got bumped off in Miami while visiting with the late President Roosevelt. With this almost unbelievable conspiracy out of the way the Capone boys—what were left of them—continued to bask in the fast buck and the honest sweat of those who either shelled out or got their arm twisted.

Now I am positive there is no deal between the law in these parts and any of the gangsters who blew the heads off of some of our well known Tampans. But I am telling you this because the same motives that caused Chicago's earlier blood bath have caused our unsolved murders here. But this is mere deduction. There could have been some alliance between the former Chicago mayor and Reger Toughy; Cermak's police force probably thought the idea was a good one. It saved the taxpayers a lot of money and tracked down the hoodlums in a burry.

But I maintain that it should make no difference whether a murdered man was a gentleman or a hoodlum, it is still murder, and as such the murder should be solved.

It is a sad note indeed that we in Tampa must sensibly realize that our law enforcement agencies have simply reached a deadend in their patient search for clues. Even Sherlock Holmes had to have a few threads of evidence from which to make his brilliant deductions, and the Tampa police have some smart boys on the force. But this failure to find even a hair trace of something tangible from which to pursue the killers can mean that outside gunners were brought in for the job.

the job.

Outside killers brought to Tampa are safer than a hometown killer would be; their cars are unknown, their weapons unseen, their voices and physical mannerisms are strange to any who might briefly see them. And they work with planning, precision, and ac-

Now you don't just thumb through the yellow sections in the telephone book to find a killer to knock off somebody you don't like. If you wanted to blow out a few brains in Tampa, you would first have to have a social rubbing with some very evil thinking people. These, in turn, would have to know someone somewhere else who has a reputation for doing nasty, bloody things without squirming or squelching. In turn, this human fiend would have to know he could get systematic protection from the masterminds, organized protection.

This speaks of organized crime at its highest level, such as the maffia or its counterpart.

In the past there have been expressions of freedom from the maffia in Tampa. This deduction I would roll around in my cheek. I believe the tentacles of the maffia, or a

similar dastardly group, reach over the Nation into every town the size of Tampa, or bigger. The unsolved killings here are definitely marked with the branding irons of organized crime. Tampa is too small a metropolis to give such organized criminals the cover they need, so they have to be imported. I believe Tampa has long had within its borders shadows of one or more national crime syndicates, that is, shadows that do the job even if the motive still lies within our own city limits. The big work is to prove it.

Our law enforcement agencies have not been able to prove it. They have not been able to bring the killers—maffia or not—to justice. Their tireless efforts in every direction of crime solving have brought up nothing more than a goose egg.

That is why I believe that our law enforcement agencies should welcome, with open arms the entry of the Federal FBI into the Tampa unsolved crime picture. There is no need for our police to be red faced or ashamed Our own police forces must, by necessity, be good in all phases of crime detection, and in every facet of every phase, but they do not have the years of experience of practically living with the ilk of the maffia and other organized crime syndicates as have the FBI. It is a case of seeking the help of the Nation's top specialists in criminal apprehension among a mixed nationality of people we, here in Tampa, could not possibly know so well as does the Federal agency, knowledge of a highly intangible and deductive nature.

Thus I believe Congressman William C. Cramer's suggestion inviting the FBI to visit with our local law enforcements is a truly excellent suggestion.

Organized crims societies like the Touhy and Capone gang, and the maffia, are born of those who possess a spirit of hostility to legal restraint and the law. They come into being because the native-born hood-lums don't think the world's courts of justice mete out enough punishment for those committing offenses against their own kind and certainly they can't take a lot of their own cases to any court. At the turn of the century punishment among such ruffians was comparatively mild, but time hardened the hoodlum and made him a gangster and totally evaporated his sense of reason.

If these downright undesirables would keep to themselves, and plunder and kill only among themselves, the story that could be told, while still bloody, would not be half as hard to assimilate and accept. But the boys with the iron fist and the sawed-off shotguns couldn't make enough dough among their own scummy relations, so the world has become their target.

While the world grows so will crime in many of its aspects, but we must work our hardest in crime prevention and apprehension against those who wantonly mow down an adversary for the sheer joy of getting him out of the way. Every man has a right to live, even if he must live in prison all his natural life for being an abuse to society.

It would be interesting to learn if our own law enforcement groups have done all that is humanly possible to search out the killers of our pile of mystery murderers. With the approving nod of the FBI, after an intensive investigation of the unsolved file, we can at least feel even more assured that our cops are the best, and charge one killing about every 16 months up to normal procedure in a growing metropolis.

But we make an eternal mystery of Tampa's past unsolved murders. I'm not a detective, but I believe we can still solve

Role of the U-2 and Past Efforts of President Eisenhower To Win Approval of His "Open Skies" Inspection Plan

EXTENSION OF REMARKS

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BROOMFIELD. Mr. Speaker, a few years ago, a handful of men here in the House of Representatives made a fateful decision. The decision was to approve funds for the design and construction of the U-2 reconnaissance plane, the aircraft which has been receiving so much publicity in every corner of the world recently.

Besides Chairman Clarence Cannon of

Besides Chairman CLARENCE CANNON of the House Appropriations Committee, one of the gentlemen 'in the know' about the flights of our observation planes over the Soviet Union was my good friend and colleague, the Honorable Jerry Ford, of Michigan.

Recently Congressman Ford explained the role of the U-2 and the past efforts by President Eisenhower to win approval for his "open skies" inspection plan as a safeguard to world peace in a newsletter to his constituents.

Because of the excellence of his presentation and the good sense of Congressman Ford's remarks, I am placing them in the Record for the perusal of my colleagues:

The mission of Francis Powers may well be one of the most significant events in 1960. Reams of copy have been written on this event and its implications, and millions of words have been spoken about it. In all of this, certain basic considerations must be established and emphasized:

1. It is the highest and most serious responsibility of the U.S. Government (the President, Congress, and Judiciary) to protect the lives and property of all its people. In the year 1060 this means protection from any surprise attack by missiles or manned aircraft of the Soviet Union.

2. To carry out successfully this responsibility, certain agencies of the Federal Government must obtain sufficient essential information about the intentions and capabilities of the Soviet Union in order that our Government can provide an adequate defense program. To do less would amount to criminal negligence and could border on treason.

3. International spying as a diplomatic of military operation is as old as recorded history. The fact that the spies bring back excellent photographs of military installations rather than a "branch with one cluster of grapes" (Numbers 13: 23) does not change the nature of the business.

4. Because this business inevitably involves deceit, misrepresentation, falsehood, intrigue, and every devious avenue of approach, public officials may not jeopardize the national security by publicizing the true facts about the business. This in no way reflects upon their personal integrity nor upon the broader aspects of public morality. But when a given situation (no matter how embarrassing) becomes public knowledge, we commend a frank and honest disclosure.

5. As long as the cold war continues it is absolutely imperative that our Government continue to obtain essential information about the Soviet military potential. Aerial photography from high-altitude planes is a practical and effective method of getting this information. There is no good reason to eliminate this practice as long as there exists the possibility of a surprise attack upon the United States.

6. This event can help to assure the American people of our advancements in aeronautics and aerial photography, and in our ability to penetrate the Iron Curtain with manned and armed aircraft if that becomes

necessary.

7. The overall direction and control of our intelligence program is in the hands of competent men, highly responsible, knowledgeable, and experienced. While the President approved the program, it is not expected that he must have personal knowledge of any given operation or of each specific plane flight.

8. The House of Representatives, through a special subcommittee of the Committee on Appropriations, has not only authorized the espionage program but has specifically supplied the funds necessary to carry it out. According to Representative Cannon, Democrat, of Missouri, chairman of the House Committee on Appropriations, the Central Intelligance Agency was under specific instructions from the elected Representatives of the people to make sure that we have no more Pearl Harbors nor any recurrence of the sudden Chinese Communist attack experienced in Korea in 1950.

9. The establishment and use of over 250 oversea military bases is an integral part of our national defense effort. We expect to keep these bases and to protect the sovereignty of all free nations, including their right to participate in a mutual security

program.

All of this is not to say that we have no regrets concerning the incident. The downing of one of our U-2 planes 1,300 miles inside the boundaries of Russia while on an espionage mission and the apparent capture of its American pilot is indeed regrettable.

1. We regret the existence of a cold war which makes this sort of business necessary.

2. We regret that the event occurred so close to the date of a summit meeting.

3. We regret the temporary propaganda advantage presented to Mr. Khrushchev.

4. We regret that the incident may result in cancellation of the visit to the Soviet Union of President Eisenhower, America's greatest ambassador of good will whose person-to-person appeal to the Russian people would be a mollifying influence in the cold war.

5. Most assuredly, we regret what appears to be the capture of Francis Powers, the pllot of the plane, on this vital national

defense mission.

However, we must point out that there are workable alternatives to cold war and esplonage, and that out of this incident overall benefits may be derived.

1. At Geneva in 1955 President Eisenhower proposed that the major powers give to each other a complete blueprint of our military establishments. He suggested that each nation provide within our countries facilities for aerial photography to the other country. Regrettably this open skies plan was rejected by the Soviets. The United States is prepared to offer this plan at the summit meeting this month. Its acceptance by Russia will eliminate further need of U-2 flights.

2. President Eisenhower also said in 1955 that we were ready to consider a reliable system of inspections and reporting in an effort to reduce all armaments. Good faith on the part of the Communists at the dis-

armament conference at Geneva would help to ease world tensions, A safe disarmament program must be our ultimate goal. 3. We trust that the demonstrated suc-

3. We trust that the demonstrated success of our aircraft flights over Russia during the past 4 years will have a salutary effect on the Kremlin. The masters there must know that we are as sincere and effective in playing according to their rules as we are urging a change in the rules for the benefit of all mankind.

In closing, your Congressman highly compliments the Democratic chairman of my committee, Representative Cannon, who in a dramatic speech on the floor of the House of Representatives, fully endorsed U.S. policy in protecting our citizens and our cherished land. Mr. Cannon, a 38-year veteran in the House reemphasized there must be no more Pearl Harbors or Koreas. I concur without qualification or hesitation.

Hail From the Chief

EXTENSION OF REMARKS

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. CANFIELD. Mr. Speaker, I have long been an advocate of home rule in our Nation's Capital.

My father-in-law and my mother-inlaw were born in Washington and lived here most of their lives. About 12 years ago they moved to my home city of Paterson, N.J., and you will never know the thrill they experienced in being permitted for the first time to vote for President and Vice President, for their sonin-law to be their Congressman, and for State and local officers.

It is difficult to explain to Americans elsewhere why the franchise is denied to so many fellow Americans just because they are domiciled in the District of

Columbia.

I admire my good friend and able colleague, Congressman Widnall, for his leadership in the fight for home rule and it was pleasing this morning to note in the Washington Post the following lead editorial capitioned "Hail From the Chief":

HAIL FROM THE CHIEF

Home rule has received a welcome and powerful push from the President. Representative Widnall, of New Jersey, wrote to Mr. Eisenhower asking for "renewed support and further guidance" on what he quite properly referred to as "your bill providing home rule for our Nation's Capital." The President provided the support unequivocally, although he was characteristically wary about the guidance.

Recalling that both parties favored home rule for the District in their platforms of 1952 and 1956 and that he himself has recommended it to Congress every year since 1953, he observed that it would be "inappropriate for me to urge any particular procedure upon the Congress." But "whatever procedure upon the congress." But "whatever procedure is used," he concluded, "I earnestly hope that the administration's home-rule proposal will be enacted by the Congress at its current session." The obstructionism of southern Democrats in keeping the home rule bill in committee has made the signing of the discharge petition the only procedure possible.

There now can be no doubt about President Eisenhower's position. He has expressed it in the best tradition of presidential leadership. If a handful of Republican Members of the House will follow that leadership—adding their names to those of Democrats who have preceded them—the home-rule bill can be brought to the floor of the House of Representatives for a vote. That will be a day of vindication for democracy.

V. E. Fuchs Praises the Performance of Tucker Sno-Cats

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 6, 1960

Mr. PORTER. Mr. Speaker, last week in the snows around Crater Lake in Oregon's incomparable Cascade Mountains I had the pleasure of driving a Tucker Sno-Cat. Its performance exceeded my expectations and my expectations have been very high because I knew that the vehicle I was driving was one of four Sno-Cats to go across the South Pole last year.

This vehicle scrambles up inclines you would have thought impossible for any earthbound method of transportation. It goes over steep hillocks that appear almost certain to cause any vehicle to tip over or to be hung up helplessly at the

crest.

My companions for the day included Speaker Robert Duncan, of the Oregon House of Representatives; Mayor John Snider, of Medford, Editor Eric Allen, of the Medford Mail-Tribune, and others who were like myself longtime friends of Tucker Sno-Cat but who until that day had never had an opportunity to appreciate the really remarkable merits of this incredible vehicle which was sired and produced by Mr. J. M. Tucker and his sons just outside of Medford, Oreg.

Under a previous unanimous consent I am including the text of a letter from V. E. Fuchs, written May 3, 1960, on the letterhead of the Trans-Antarctic Expedition:

THE TRANS-ANTARCTIC EXPEDITION, London, S.W.I., May 3, 1960.

MR. J. M. TUCKER, Tucker Sno-Cat Corp., Medford, Oreg., U.S.A.

DEAR MR. TUCKEE: I have pleasure in writing to you concerning the performance of the Tucker Sno-Cats that we used on the Trans-Antarctic Expedition. The fact that the four Sno-Cats included in our transport were the four vehicles which completed the crossing speaks for itself. But I should add that they were very severely tested by the great variety of snow and ice conditions encountered—bad crevasse country, sastrugiup to 4 and 5 feet high, deep soft snow and bare glacier ice.

It may also be of interest that they were operated in temperatures ranging from $+30^{\circ}$ F. to -60° F, the general range being -15° F, to -40° F, during the actual crossing of Antarctica.

Although we were meticulous in carrying out the necessary maintenance, we did ask the Sno-Cats to tow loads of 4 to 6 tons,

besides carrying 1 ton inside the vehicle. Even with this excessive demand they proved entirely satisfactory and the expedition owed much to the performance of your vehicles.

Yours very sincerely,

V. E. FUCHS.

Dumping Industrial Wastes in Ocean Called Possible Peril to Marine Life

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 23, 1960

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks to include extraneous matter, I wish to put in the Record an article that appeared in the Washington (D.C.) Post on Sunday, May 8, written by Kennedy Ludlam, one of the outstanding fish and game writers in the country. This article pertains to a speech on atomic waste disposal made by our colleague, the Honorable George P. Miller of California, before the Washington Chapter of the Izaak Walton League.

Mr. Miller is chairman of the Subcommittee on Oceanography of the House Committee on Merchant Marine and Fisheries. He was speaking from knowledge acquired by him in that capacity. His subcommittee held extensive hearings on the matter of disposal of atomic waste in the Atlantic Ocean and the Gulf of Mexico and apparently he is properly concerned over the enormous potential damage such a practice could cause.

My good friend, George Miller, also serves on the Subcommittee on Fish and Wildlife with me. I know that he not only has a keen awareness of the rights of sportsmen but he is a devoted conservationist.

The article follows:

UP THE STREAM—DUMPING INDUSTRIAL WASTES IN OCEAN CALLED POSSIBLE PERIL TO MARINE LIFE

(By Kennedy Ludlam)

Representative George P. Miller, Democrat of California, opposes using the ocean as a vast dumping ground for the world's industrial wastes.

This, he insists, could imperil countless fishing resources and possibly the health of millions of the earth's inhabitants.

Speaking to the Washington Chapter of the Izaak Walton League of America, Miller declared that there is a vast ignorance of the biology of the sea. Much money has been spent to learn more about the oceans, but most of it has gone into studies of the physical aspects of oceanography.

Science doesn't yet know, he said, the effect on marine life of the various kinds of waste presently being dumped offshore.

He cited the case of surplus mustard gas from World War I stored until the containers deteriorated and then thrown overboard in the ocean. Some people claim, he said, that when the containers deteriorate sufficiently to release the gas, its effect will be dissipated in the water; others visualize a huge bubble of the deadly vapor rising to the surface and bursting, possibly at the very minute a vessel is passing over it.

Atomic waste so far dumped into the sea is negligible, said Miller, since most if its activity has been exhausted. But, as the cost of storing atomic waste approaches that of surplus grain storage, the dumping of low-level atomic waste may be used as a fulcrum for the similer disposal of dangerous high-level waste, with unpredictable results.

Drainage of cooling water from atomic waste into the Columbia River, he reported, has raised its temperature 2 degrees. The effect of this warming of the river's fish life, if any has not yet been nippointed.

If any, has not yet been pinpointed.

Miller referred to his bill (H.R. 11410) to provide for the issuance of a Federal fishing stamp to serve under certain conditions as a sort of Nationwide sport-fishing license. His plan he declared may produce more revenue for participating States than they now receive from the annual sale of non-resident fishing licenses.

This has been and continues to be one of the main objections to MILLER's plan from many State officials.

Miller expressed confidence that agreement could be reached. Further action awaits a report from the Interior Department.

R. B. Reid: Outstanding Jefferson County Labor Leader

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1960

Mr. HUDDLESTON. Mr. Speaker, I have just received indication that Mr. R. B. Reid, an outstanding labor leader in my district, is not going to offer himself for reelection this year as president of Local 1013 of the United Steel Workers of America. His decision, which I personally feel is unfortunate though understandable, was announced in the most recent issue of the newsletter which the local union regularly sends to its membership.

"Tater" Reid has given the very best of himself to his union as an organization and to the individual members of it, during the 6 years he has served as president, and his best has been very good. He is a man of strong Christian character, of dedication to the cause of democratic, organized labor, and of forthright action. These characteristics, through him and his leadership, have become evident in the membership of local 1013 and have contributed to the building up of a truly constructive labor organization.

Mr. Reid has outlined, in that newsletter in which he makes known his decision to retire as president to take a needed rest, some of the accomplishments of United Steel Workers Local 1013 under his guidance. I am pleased to call the attention of my colleagues to the outstanding service of this constituent. The newsletter is inserted herewith:

LOCAL 1013 NEWS REPORT

To the members of local 1013, I am grateful. I must take this opportunity to thank each and every one of you for the fine, friendly, cooperative spirit that has existed in being able to accomplish so much in a few short years that I have been privileged to serve you. We have been successful in our efforts for many reasons. I think most im-

portant is because of faithfulness and unselfishness. We have all made mistakes,
honest mistakes, not intentional. We know
that we must profit by our experiences. The
person who does not make mistakes is the
person who never does anything. It is the
nature of human beings to love friends and
I love my true friends. We have friends to
come and go because their ideas differ from
our own. Everyone has a right to think and
to express his thoughts, but he should not
fall out with the other person because he has
that same right. We have made many, many
decisions together in the past, all of which
were for the best interest of the local and
the membership. I sincerely hope and pray
that our acts and decisions in the future
will be for the same purpose.

I feel that I would be derelict in my duty if I did not call to your attention a few of the many accomplishments in the past few years. At no time in the history of the local has there been any more peace and har-mony, which must exist, to progress. We have better conduct in Local 1013 than any local union anywhere. The drinking and profane language is at the lowest point ever. thanks to everyone who has had any part in bringing this about. Without a doubt the local has been aggressive and progressed more in the past 6 years than at any time in the history of the local. The local is recognized locally, statewide, and nationally. The functions, activities of the local, and the committee members have furnished the membership the best and most service and information ever. Even though there is quite an expense that must be incurred with these committee functions, the local has a sizable amount of money and war bonds in our treasury. The local has paid for one of the finest union halls in the country, which is completely air conditioned for your comfort. The furnishings and equipment is second to none in the Nation.
There is to be additional improvements soon, such as more air conditioned office space, & large conference room, a fine printing room, well equipped. This will be paid for when completed, with money left in the treasury. We could go on and on mentioning many more assets, improvements, and accomplishments during the past 6 years.

I have given the best and most of my time and efforts for local 1013 and its members, which I was very happy and pleased to do. We must be honest with God first, then we will be honest with ourselves and our fellowman. There are those who must learn a lesson of how difficult it is to accomplish any task without the help of God and his fellowman. I feel that for the best interest of the local and my health, I must step aside for a needed rest. I sincerely hope that I have not, and will not, create any enemies by making the choice that I have-It is not my intent to inconvenience any one of you, who have been working so closely with me, in any respect, in the past. I hope that each of you will understand my posi-tion and my decision. I say again that I deeply appreciate everyone's efforts and co-operation in making local 1013 what it is today.

Sincerely yours,

R. B. REID.

Most Important Product

EXTENSION OF REMARKS

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial from the Exeter News-Letter, Exeter, N.H., of May 19, 1960, entitled "Most Important Product":

MOST IMPORTANT PRODUCT

While there is widespread consternation over the apparent collapse of the summit meetings, it is difficult to see where the United States and the West lost face as a result of the brief but tense exchange at Paris.

It becomes apparent that the Russians did not want a summit meeting under any circumstances, otherwise the mere shooting down of a reconnaissance plane would not deter them from making an effort to relieve some of the world tension. This can only be done at the conference table.

It is apparent that relieving world tensions is not a part of the Communist plan. Khrushchev's bombastic delivery was merely an encore of the defiance so aptly portrayed by Molotov, Gromyko, Mikoyan, and others in the long line of meetings that have chronicled our relations with the Soviet.

Khrushchev actually appeared afraid to meet Eisenhower face to face, and this gives rise to the question of whether he is in truth the ruling power in the Kremlin, or if he is frantically trying to extricate himself from a trend of events that is not to the liking of those who really call the Moscow shots. It looked, as President Eisenhower said, that he came all the way from Moscow just to sabotage the meeting.

Nobody expected much from the summit meeting, but the lesson learned at Paris is that the United States should keep its guard up. The business of defense should continue to be our most important product.

Do We Need the Bracero Program? Will Americans Accept Agricultural Employ-

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. GUBSER. Mr. Speaker, once again the Gilroy Evening Dispatch, in the heart of the agricultural area of California, has printed a news story which shows that while jobs in agriculture go begging, there are continuing as well as new claims for unemployment insurance.

This article clearly shows that domestic workers cannot or will not work on farms in harvesting crops. To prevent wastage of agricultural commodities, it is obvious that we need the bracero program and should extend Public Law

The news story under date of May 13, 1960, follows:

BERRYPICKERS ARE STILL NEEDED

There is still a need for men and women to pick strawberries, Arnold Hamilton, local State department of employment manager, announced today.

Growers will appreciate the help of students in harvesting the strawberry crops over the weekend, Hamilton said. Any students interested should contact either the growers or the local employment office.

Men and women are needed to hoe and weed sugar beets and to pick peas. In about 10 days' time the cherry season should start, depending on weather conditions.

During the past week, 546 continued week claims and 116 initial claims were filed. Forty-seven agricultural and five other placements were made in the same period, according to Hamilton.

Soviet Espionage

EXTENSION OF REMARKS OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mrs. DWYER. Mr. Speaker, it is important, I believe, that we see the recent U-2 incident in the full perspective of international espionage. As a contribu-tion in this direction, the Legislative Reference Service of the Library of Congress has prepared a partial list of the more significant cases in which Soviet agents are known to have been engaged in espionage directed against the United States or its allied Western Powers.

Under leave to extend my remarks, I include the following Library of Congress list:

May 1, 1946: Allan Nunn May, a British scientist who worked on atomic energy in Canada, was sentenced to 10 years in prison by a British court. May was part of the Soviet espionage ring in Canada which was exposed by Igor Gouzenko, a code clerk in the Soviet Embassy in Ottawa, who broke with the Russians and sought political asylum. Seventeen Soviet Embassy officials charged with espionage have been expelled from Canada. Eight Canadian citizens, including a Member of Parliament, were convicted of espionage and given various jail sentences.

June 30, 1949: Judith Coplon was convicted of taking Justice Department secrets and using them to aid Russia. She was sentenced to from 40 months to 10 years in prison. On January 28, 1952, the U.S. Supreme Court ruled that she was entitled to a new trial because the Government used illegal wiretap evidence. She was never retried on this charge.

October 31, 1949 (diplomatic): Dr. Erwin Munk and a clerk named Horvat of the Czech Embassy in Washington were declared

persona non grata.

January 25, 1950: Alger Hiss was found guilty of lying to a grand jury in 1948 when he declared that he had never given any secret State Department documents to Whittaker Chambers, who then passed them on to the Soviet Union. He was sentenced to 5 years in prison.

March 1, 1950: Klaus Fuchs was sentenced by a British court to 14 years imprisonment after pleading guilty to giving atomic secrets

to Russia.

March 9, 1950: Judith Coplon, in her second trial, was found guilty of conspiracy to commit espionage and was sentenced to 15 years in prison. On December 5, 1950, the U.S. Court of Appeals reversed the conviction on the grounds of illegal arrest and use of illegal wiretap evidence. The Supreme Court refused to review the case on January 28, 1952.

March 9, 1950 (diplomatic): Valetin A. Gubitchev, a U.N. employee, was found guilty as Judith Coplon's codefendent. He was sentenced to 15 years imprisonment but the sentence was suspended on condition he leave the United States. Gubitchev sailed for Poland on March 20.

April 15, 1950: Air Force Cpl. Gustav Mueller was convicted of attempting to give U.S. military secrets to Russia. He was sentenced to 5 years at hard labor.

September 22, 1950: Alfred D. Slack pleaded guilty to giving samples of a secret explosive to Harry Gold and was sentenced to 15 years in prison.

November 22, 1950: Abraham Brothman was convicted of conspiring to mislead a grand jury (which was investigating espionage) and of influencing Harry Gold to give false statements to the jury. He was sentenced to 7 years imprisonment and fined \$15,000. In July 1951, the U.S. Circuit Court of Appeals upheld the 2-year sentence and \$10,000 fine for misleading a grand jury, but reversed the 5-year sentence and \$5,000 fine for influencing Gold.

November 22, 1950: Miriam Moskowitz was convicted (together with A. Brothman) of conspiring to mislead a grand jury and was sentenced to 2 years in prison and fined

December 9, 1950: Harry Gold pleaded guilty to transmitting atomic secrets to the Russians and received a 30-year prison sen-

April 5, 1951: Julius and Ethel Rosenberg were sentenced to death for procuring and transmitting U.S. atom bomb secrets to Russia during and after the Second World War. They were both executed on June 19, 1953.

April 5, 1951: Morton Sobell was sentenced to 30 years in prison for giving nonatomic defense secrets to the Fuchs-Gold spy ring.

April 6, 1951: David Greenglass admitted to giving atomic data to the Fuchs-Gold ring while working as an Army technician at Los Alamos, N. Mex., and was sentenced to 15 years imprisonment.

September 26, 1951 (diplomatic): Nicholal P. Orlov, the assistant naval secretary of the Soviet Embassy in Stockholm, was ordered to leave Sweden immediately in connection with the Andersson espionage case.

November 14, 1951: Ernest Hilding Anders-son, a petty officer in the Swedish Navy, was sentenced to life imprisonment after being found guilty of gross espionage for the Soviet Union. Andersson admitted supplying the Russians with secret data on the Swedish Navy, coastal defense installations, and suitable invasion areas along the coast of northern Sweden. He named N. P. Orlov, Konstantin Vinogradov, a Soviet Embassy secretary, and Tass correspondent Victor Anissimov as his accomplices.

October 1952: Nikolai Skvartsov, a political officer in the United Nations Department of Security Council Affairs, was discharged after the State Department notified the U.N. that he had violated a U.S. law.

February 4, 1953: William Remington was found guilty of perjuring himself at his first trial in 1951 when he said he never gave any secret material of the War Production Board to Elizabeth Bentley, a former Communist spy who testified for the FBI. He was sen-

tenced to 3 years in prison.

February 25, 1953: Lev C. Pissarev, Tass correspondent, was deported from the Netherlands for spying after being arrested on December 23 in the act of receiving secret documents from a Dutch official who was cooperating with the police.

1953 (diplomatic): Christache May 30, Zambeti, first secretary of the Rumanian legation in Washington, was declared persona non grata for attempting to blackmail a U.S. citizen into espionage acts.

June 5, 1953: William Perl was sentenced

to 5 years in prison for perjury for having told a grand jury in 1950 that he did not know atom spies Julius Rosenberg and Morton Sobell.

June 8, 1953: Air Force S. Sgt. Giusseppe Cascio was convicted by court martial Taegu, Korea, of conspiracy to give jet plane secrets to the Communists. He was given a 20-year jail sentence and a dishonorable

June 8, 1953: Kurt Ponger and Otto Verber were convicted of conspiracy to procure and

transmit Army, Air Force, and aircraft plant data to the Soviet Union. They were sentenced to 5 to 15 years and $3\frac{1}{2}$ to 10 years

in prison, respectively.

June 8, 1953 (diplomatic): Yuri Novikov, Second Secretary of the Soviet Embassy, was named as a coconspirator in the Verber-Ponger indictment. He was then declared persona non grata by the U.S. Government and returned to the Soviet Union.

October 31, 1953: Pvt. Robert W. Dorey was sentenced to 15 years in prison after pleading guilty to fleeing to East Germany, then twice returning to the U.S. zone with Soviet agents whom he guided around U.S. military installations.

February 3, 1954 (diplomatic): Igor A. Amosov, assistant naval attaché at the Soviet Embassy in Washington, was declared persona non grata and expelled for engaging in

espionage.

February 3, 1954 (diplomatic): Alexander P. Kovalev, second secretary to the Soviet delegation to the United Nations was declared persona aon grata and expelled for espionage activities.

May 29, 1954 (diplomatic): Leonid E. Pivnev, assistant air attaché in the Soviet Embassy in Washington, was declared persona non grata and expelled for engaging in

espionage.

August 28, 1954: Nobunori Higurashi, a Japanese foreign office official, committed suicide after he had confessed to giving secret information to a Soviet spy ring. The central figure in the ring was Yuri A. Rastvorov, former member of the Soviet mission in Tokyo, who has been granted political asylum in the United States. Two other foreign office officials have also been implicated.

December 22, 1954 (diplomatic): Maj. Ludvik Sochor, Czech military attaché in Geneva, and two of his assistants were expelled from Switzerland for espionage.

September 14, 1955: An Australian Royal Commission on Soviet Espionage released its report. The commission, created after vliadimir Petrov, third secretary of the Soviet Embassy, sought asylum from the Russians on April 13, 1954, declared that two Soviet spy apparatuses had been functioning in Australia since 1943. At least 120 Australians, all of whom were Communists, assisted the Soviet spy rings but because of the Australian law on espionage and the admissibility of evidence no prosecutions were undertaken.

March 1, 1956 (diplomatic): Maj. Anatoli Kuznetsov, assistant military attaché of the Soviet Embassy in Teheran was expelled from Iran after being arrested with Iranian Air Force WO Hussein Rejaei Tehrani who con-

fessed to espionage.

June 14, 1956 (diplomatic): Col. Ivan A. Bubchikov, assistant military attaché of the Soviet Embassy in Washington, was declared persona non grata for "activities incompatible to his continued presence in this country."

July 13, 1956 (diplomatic): Gennadi Popov, the Soviet second secretary, was ex-

pelled from Canada for spying.

August 24, 1956 (diplomatic): Victor I. Petrov, a translator in the languages section on the U.N. Secretariat, was discharged from the United Nations after the U.S. delegation issued a statement saying that Petrov had sought to get "information vital to the security and defense of the United States."

August 29, 1956 (diplomatic): Rostislav Shapovalov, second secretary of the Soviet Mission to the U.N., was requested to leave the United States after it was discovered that he exerted pressure on a Russian refugee in the United States to become a Soviet agent.

September 5, 1956 (diplomatic): Sweden expelled Peter Mirosnikov for receiving secret data from Anatole Ericson and sent a

formal protest to Moscow about its spy activities in that country.

October 5, 1956: Anatole Ericson, a radar instrument maker, was convicted to giving military secrets to Russia by a Swedish court and sentenced to 12 years at hard labor.

October 5, 1956: Jean Joseph Philip, a code clerk at the Budapest legation in Paris, and Roger Dubois, legation press attaché, were convicted in France of spying for the Hungarian secret service and were sentenced to imprisonment.

December 18, 1956 (diplomatic): Mate Vegh, former Hungarian second secretary, was expelled from Switzerland for spying.

January 14, 1957 (diplomatic): Maj. Yuri P. Krylov, assistant military attaché of the Soviet Embassy in Washington, was declared persona non grata for purchasing classified electronic equipment and attempting to purchase secret military information. January 28, 1957 (diplomatic): Vassili M.

January 28, 1957 (diplomatic): Vassili M. Molev, a clerk attached to the Soviet Embassy in Washington, was declared persona non grata by the State Department. He was later named as a coconspirator in the in-

dictment of the Sobles' spy ring.

February 27, 1957 (diplomatic): The Danish Government expelled Soviet Lt. Comdr. Mikhail Ruditchev, assistant naval attaché of the Soviet Embassy, on the grounds that he was attempting to obtain secret military information.

March 12, 1957: A Swedish court sentenced Bedros Zartaryan, a Turkish engineer employed by a firm which was building Swedish naval and air bases, to 10 years at hard labor for grand espionage for the Soviet Union.

March 16, 1957 (diplomatic): Jiri Stejskal, third secretary of the Czechoslovak legation in Vienna, was expelled from Austria for attempting to bribe a police official to carry

out espionage work.

April 24, 1957: Robert Folke Damstedt, assistant secretary of the Swedish Atomic Energy Commission, was convicted of stealing secret papers, and was sentenced to 5 years in prison.

May 7, 1957: Three men were sentenced to death in Greece after being convicted of treason and espionage for the Soviet Union. Another man was given a life sentence, and five other persons were given lesser terms.

July 23, 1957: West German security offi-

July 23, 1957: West German security officials broke a Communist spy ring headquartered in a Bonn hotel.

August 9, 1957: Myra Soble, wife of Jack Soble, was sentenced to 5½ years in prison

after pleading gulity to charges of espionage. August 9, 1957: Jacob Albam was sentenced to 5½ years in prison after pleading gulity to espionage in behalf of the Soviet Union as a member of the Soble spy ring.

September 5, 1957: A former Japanese foreign office official was fined and sentenced to prison for selling secrets to a Soviet agent.

September 20, 1957: U.S. Air Force Capt. George French was convicted and sentenced to life imprisonment for attempting to sell military secrets to the Soviet Union.

September 25, 1957: An Austrian Customs Service official was arrested for espionage and confessed that he turned information over to Czech Communist agents.

October 8, 1957: Jack Soble was sentenced to 7 years in prison after pleading guilty to heading a spy ring for the Soviet Union.

November 1957: German officials reveal that a former first lieutenant in the West German Air Force has been convicted of esplonage.

November 15, 1957: Col. Rudolf I. Abel, a Soviet intelligence officer, was sentenced to 30 years in prison and fined \$3,000 for passing U.S. defense and atomic secrets to Russia.

February 21, 1958: M. Sgt. Roy A. Rhodes was convicted by a U.S. Army court-martial of conspiring to deliver U.S. secrets to the Soviet Union and was sentenced to 5 years'

imprisonment at hard labor and was dishonorably discharged.

May 19, 1958 (diplomatic): Aleksandr Solovyev, assistant military attaché of the Soviet Embassy in Rome, after being detained on charges of espionage was asked to leave Italy.

June 7, 1958 (diplomatic): Nikolai L Kurochkin, third secretary of the Soviet Embassy in Washington, was declared persona non grata for the improper procurement of U.S. Army manuals and other materials.

July 18, 1958: Brian Linney, an engineer, was sentenced to 14 years imprisonment by a British court for selling secret information to Col. Oldrich Pribyl, a former Czech military attaché in England.

November 20, 1958: Mark Zborowski was convicted of perjury in denying to a Federal grand jury investigating espionage that he had known Jack Soble. He was sentenced to 5 years in prison.

November 20, 1958: Lt. Hans Berli was sentenced by a Swiss military court to 4 years hard labor for glving classified military secrets to Czech agents.

February 21, 1959: Elnar Bleckinberg, a former Danish diplomat, was sentenced in Copenhagen to 8 years in prison for spying on behalf of Communist Poland.

January 30, 1960: Horst Ludwig and Frits Briesemeister were sentenced by a West German court to 4 and 5 years at hard labor, respectively, for treason. Two other defendants, Werner Jaeger and his wife, Hannl, were sentenced to 3 years and 18 months.

April 1, 1960: Anthony M. Wraight, a former Royal Air Force officer, was found guilty in London of having given military information to Russia and was sentenced to 3 years

in prison.

May 11, 1960 (diplomatic): The Swiss Government arrested and expelled two Soviet Embassy officials for attempting to collect secret information on Swiss Army installations and U.S. rocket bases in West Germany.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports of documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

Appendix

A Tribute to Jane Addams

EXTENSION OF REMARKS OF

HON, PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. DOUGLAS. Mr. President, on April 29 I had the honor of participating in a series of meetings held at Rockford College, to commemorate the 100th anniversary of the birth of Jane Addams. I ask unanimous consent that the address which I delivered on that occasion be printed in the Appendix of the REC-

There being no objection, the address Was ordered to be printed in the RECORD. as follows:

A TRIBUTE TO JANE ADDAMS (Delivered at Rockford College, Apr. 20, 1960,

by Senator Paul H. Douglas) Of all the American men and women of

the last century the two, who to my mind most closely approached sainthood, have been Abraham Lincoln and Jane Addams. And we of Illinois can take a proper degree of local pride in the fact that both of these supreme characters developed within the texture of the life of our State.

When Jane Addams died a quarter of a century ago she was loved by many, respected my multitudes but bitterly reviled and hated by most of the so-called leading citizens and formers of public opinion. Now with the passage of time, her nobility is more fully appreciated while the traducers have either died off, been converted, or have decided that since Miss Addams is no longer living they can afford to allow her to be praised.

So all over this country at this centennial of her birth proper tribute is being offered for her life and works. And since the dead lend themselves very readily to reconciliation we probably should not scrutinize too closely the credentials of those who else-

Where join to pay her honor. Like most true saints, Jane Addams was a robust character who lived in no ivory tower but moved instead at the very center of the stresses and tensions of life. There was symmetry and nobility in every phase of her development from her girlhood in the Quaker home beside the mill in Cedarville, on through the years of illness, study and travel both here and abroad and then to her busy life on Halsted Street as the helpful friend of the poor, the weak, the confused, the unfortunate, the exploited and the friendless. And then by her awareness of the "solidarity of the human race" she became first a mighty force for good in Chicago and in Illinois, then a national figure almost as commending in her way as was Lincoln in his, and finally to deserved honor and then to death and simple burial on the hillside slope in Cedarville from whence she sprang.

The mere contemplation of such a career is in itself life enhancing and hence is ample justification for the services which are being conducted both here and else-

But Miss Addams was always a most modest person who was almost exclusively interested in the good which she could accomplish both for her generation and for those which were to follow and not in retrospective praise for her past achievements. So if her spirit watches these proceedings (as I hope it does) she would welcome any impetus which our tributes might give to help lessen the burdens, the dangers and the anxieties which the men and women of today and tomorrow will inevitably experience. I hope you will pardon me if in a few brief minutes I try to sketch some of the general lessons which her life seems to me to impart, leaving for the discussion period the questions as to what her attitude would be as regards current questions and problems.

The first lesson which I would draw from Miss Addams' life is the esthetic beauty and practical ability of intelligent and energized compassion. This is a brittle and hard-boiled era in which commitment to causes and a desire to help people is not regarded as "good form." But Miss Addams' whole life was devoted to those purposes from the time that she and Ellen Starr moved into the big house on Halstead Street and began to nurse the sick, to offer counsel and recreation to those who sadly needed both, on through the days when she fought for laws and institutions which would protect women and children from being broken by excessive toil, starvation wages and insidious temptations, and then on to being a pilgrim for peace involved in the fate of mankind, who pled with the lowly and mighty alike that they might abandon the institution of war and devote their energies to the arts of peace. No person in our times has done so much for people.

And in thus devoting herself to others, Miss Addams became an ever more noble and more attractive woman. There was indeed never a better example of the truth of Jesus saying that "he who loses his life for My sake shall find it."

The second lesson which I would draw from her life is that in general it is better to begin where one lives, to be helpful there, and then follow life outward, upward, and I may say, inward as well. Miss Addams started on Halsted Street. She was the su-premely good neighbor without being in the slightest sense a busy body or the proverbial lady bountiful. Just because she was a good neighbor, she took on the job of garbage collector and gradually excavated the loathesome piles which covered the streets and alleys of the bloody 20th ward. Then as a result of trying to help boys and girls out of trouble, she founded the Juvenile Protective Association, helped to create the juvenile court, and became a reforming member of the school board. She not only cared for individual immigrants, but set up the Immigrants Protective League to do the same job on a broader scale, with her doughty associates Julia Lathrop, of this very city of Rockford, Florence Kelly, and Alice Hamilton, Jessie Binford and the two Abbotts she crusaded for and obtained much-needed legislation to protect the women and children not only of Halsted Street but also of Illinois and the Nation. She was not afraid to defend the Pullman strikers of 1894 and the clothing workers in the great strike of 1910 and she helped to lay the basis for the model labor-management relations which have existed in the latter industry for the last 50 years. But since she was rooted in Halsted Street and always lived on intimate terms with her neighbors her advocacies were based in reality while her testimony had a vivid and living pith to it which the abstract statements of experts commonly lack. If we can take another moral from her life it is, "Begin where you are but do not be afraid to follow where truth and the pure spirit of the inner light may lead you."

Finally Miss Addams combined culture with character. There are too many of us who specialize on one of these attributes to the virtual exclusion of the other. But Miss Addams through her wide travels had sympathetic communion with the people of many lands; from her wide reading the whole great world of literature was part of her life as were the breathless creations of beauty in were the breathess treathes to be painting, sculpture, and music. She encouraged all this in her neighbors with her industrial museum, her Little Theater, and the classes in the arts, and in music which she and Miss Starr fostered. And this was reflected in the moving and prescient books which she wrote such as "Twenty Years at Hull House," "Democracy and Social Ethics," The Spirit of Youth and the City Streets," "The Long Road of Woman's Memory," "Peace and Bread in Time of War," and the "Second 20 Years at Hull House."

What a legacy she has left us and what an inspiration her life still is. And in the words of a victorian poet whom Miss Addams loved:

"Through such solus only God stooping Shows sufficient of His light For us in the dark to rise by."

Perhaps I should stop here but this last week as I reread Bernard Shaw's "Saint Joan," I thought of the similarities between Joan of Arc who after five centuries was made Saint Joan, and our citizen of Illinois and of the world whom we may reverently term "Saint Jane." Saint Joan was burned at the stake for heresy in believing that God's voice told her to liberate France. The body of our brave saint was not burned at the stake but her spirit was scarred and indeed nailed upon the figurative cross of public passion and opinion.

And in the epilogue of Shaw's play you will remember how Joan's shining apparition appeared a quarter of a century after her execution to those who had put her to death and to the friends who had failed her in the death agony. And in repentance they all praised her, confessed their sins and vowed to do better. But when Joan announced her intention of returning to earth, one by one they all scurried away with the last to leave being the hulky and sensual soldier who had held up a cross before her dying

And I thought would that we could have this experience of our Saint Jane returning to us on this spring day a full quarter of a century after her death. Would our praise turn to abandonment if she or someone like her were to sound clear notes on the trumpet of probity.

It is quite probable, and I am frank to confess that knowing something of the nature of tyranny of the police states, I could not follow her in rejection of all forms of force. But I do say that if we could have more who would live as she did in the spirit which takes away the occasion for all the necessity for the use of force would be greatly reduced.

And I think we would all echo the last plea which Shaw made Joan utter, "O God, that madest this beautiful earth, when will it be ready to receive thy saints? How long, O Lord, how long?"

Space Act Revision-Well Done

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

BROOKS of Louisiana. Mr. Mr. Speaker, the Committee on Science and Astronautics has approved H.R. 12049, a bill revising the National Aeronautics and Space Act of 1958. This measure will shortly be brought before the House for its consideration.

Missiles and Rockets magazine includes in its issue of May 23, 1960, an editorial on the bill entitled, "Space Act Revision-Well Done," which I wish to bring to the attention of my colleagues. Under leave to extend my remarks, I insert the editorial in the RECORD.

The editorial follows:

SPACE ACT REVISION-WELL DONE (By Clarke Newlon)

Two years ago, in an atmosphere of startled concern over Russian achievements in space, Congress passed the National Space Act. It was hastily drawn legislation and not the best.

The House Space Committee has now reorted out a reorganizational bill (H.R. 12049). It is an excellent measure. It corrects the major faults of the original. It deserves to pass the House and to be sent to the Senate Space Committee without deviation so that final action can be accomplished at this session of Congress.

The new measure eliminates many of the undesirable features of the old bill, adds certain necessary clauses and clarifies roles and missions in the space field. Specifically,

Relieves the President of a rather ridiculous role as project officer for space projects. Abolishes the President's National Space Council and substitutes a DOD-NASA board

cochairmaned by NASA's Deputy Adminis-trator and DOD's Director of Research and Engineering.

Eliminates the Civilian-Military Liaison Committee.

Gives the military a positive role in space. Strengthens NASA's peaceful role in space. Pulls NASA's patent authority into line

with that of the military.

Provides machinery to indemnify contractors against unsually hazardous risks.

The first three listed changes are purely administrative. Making the President personally responsible for planning and surveying the Nation's space needs had placed upon him an impracticable burden, which will now be removed. Elimination of the Space Council follows logically; its chief function was to advise the President on the detailed work he is no longer responsible for-and really never did anyhow.

The Civilian-Military Liaison Committee

never functioned, either, for a number of reasons. The new measure insures coordination and cooperation between NASA and

DOD at all levels.

Giving the military a positive role in space was a much-needed step. We pursue peaceful exploration of space with the very best

intentions, but it is easy to foresee that a time may come when we shall have to fight to be allowed to conduct this exploration. Certainly the military must be prepared to see that no other nation denies us the right to operate in space.

The role of NASA is strengthened by giving the agency a clear responsibility for planning and directing civilian space activitles for peaceful purposes. Thus it gives the duties heretofore incumbent upon the President. If there is a dispute between NASA and the services, then the President must arbitrate.

As previous Congresses have done, the subcommittee concluded that the interests of the Government and national economy are best served by allowing a contractor to retain the rights to a scientific invention. The reason is, of course, primarily incentive—specifically because many space research programs generate commercial appli-Without patent protection the manufacturer has little incentive to develop for the commercial market. Under the revised law, the Government has rights to the invention for its own use but permits the inventor to retain commercial rights.

The addition of indemnification is just commonsense. In dealing with potentially hazardous space powerplants, no contractor can be or should be exposed to the enormous financial risks which might incur through an accident-risks so large that it is impossible to obtain insurance against them. new bill provides protection.

Few would claim that H.R. 12049 is the perfect solution. But it certainly is a great improvement over its predecessor, and it appears to provide a workable law. We urge appears to provide a workable law. fastest possible action in both Houses of Congress on this imperative piece of legislation.

Religion and Politics

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. HUMPHREY. Mr. President. Father Joseph A. Hughes, contributing editor of the Duluth (Minn.) Register, in a recent column recommended to his readers study of my recent address before the American Society of Newspaper Editors as sound teaching on religion in politics. I am deeply grateful to Father Hughes for his sympathetic understanding of my efforts to see that a so-called religious issue was not injected into the primary campaign.

I ask unanimous consent that Father Hughes' comments on "Religion and Politics" from the Duluth Register of May 13, 1960, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

RELIGION AND POLITICS

This column is dedicated to opinion and comment. It is not a news column pri-marily. News, as such, is a primary con-cern of other departments of this paper.

We make this explanation to those who have inquired why we did not give prom-inence to Senator Humphrey's references to religion in politics, in his talk to the American Society of Newspaper Publishers. We

were under the impression that the religiouspolitical views of both HUMPHREY and KEN-NEDY were quite thoroughly reported and analyzed for the public by newspapers, radio, and television.

Senator HUMPHREY has the proper attitude toward religion in politics as far as we know. He has not been a part to any attempt to employ religious preference for votes or to use religious prejudice to hurt his political opponents.

HUMPHREY'S views on this subject were made frankly and clearly to the newspaper publishers. His remarks are more or less self explanatory. They cover the subject adequately.

The Senator said, for example:

"I would not want to pursue this campaign if it were to create deep and dangerous divisions among Americans on the issue

of religion.
"I would not want to be President if it meant that my own party might be torn apart on this extraneous issue.

"I would not want to receive the vote of any American because my opponent worships in a particular church, whatever that church may be.

"Nor would I want to receive the vote of any American simply because he is of the same faith as I.

"It is alien to our American traditions for any man's qualifications for public office be judged on the basis of his religious affiliation."

In another reference to this subject HUMPHREY explained that:

"Misuses of religion grievously offend Judaic-Christian and democratic principles.

"The only tests that may properly be applied to any condidate are those relating to integrity, ability, experience, judgment, and dedication to democratic institutions and constitutional government.

"No one should maintain, I believe, that any candidate be nominated simply because he would obtain the support of voters of his own faith, nor should he be denied nomination because people of other faiths might vote against him. Both of these intrusions of denominational preference into politics threaten the very fabric which binds our Nation together."

This political manifesto echoes sound theological teaching on religion in politics. We recommend it for study. When this creed becomes a practical axiom of American civic life, the political arena can be purified of odorous practices in both Catholic and anti-Catholic camps.

Harrington Park (N.J.) Post Office Dedication

EXTENSION OF REMARKS OF

HON, FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. OSMERS. Mr. Speaker, despite the fact that my district lies almost in the shadow of the skyscrapers of the city of New York, a surprising number of the municipalities I represent have been able to preserve, through careful planning and zoning, good local government and old-fashioned public spirit, most of the fine qualities that we associate with the typical small American town. One such place is the borough of Harrington Park, N.J.

In the past few years several hundred more fine homes have been built in Harrington Park. The additional population resulting placed such a strain on the small post office there that the mayor and council, and other local groups and individuals, initiated action to obtain adequate postal facilities. These efforts brought about the construction of a fine new post office of colonial design in Harrington Park.

The elected and appointed officials of Harrington Park and similar New Jersey suburban communities are, for the most part, men and women who give generously of their spare time for the betterment of their hometown and fellow citizens.

The former mayor of Harrington Park, Hon. Ensign J. H. Cowell, a well-known architect and engineer, and the present mayor, Hon. Edward T. Baczewski, a prominent New York City advertising executive, are fine examples of this type of citizenship at its best. Both of these men and the borough councilmen serving with them were active in the movement for better postal facilities.

It has now been determined by the Post Office Department that Harrington Park meets the requirements for carrier service. Such service will shortly be instituted, made possible by the space available in the new post office building.

Throughout all of our efforts to improve service in Harrington Park, the prompt and intelligent action by the Post Office Department was never lacking. In particular, Anthony A. Vertelis, the regional real estate office, deserves credit for his help.

Mr. Vertelis made the dedication address at the ceremonies on April 30. His remarks apply to postal service everywhere. Therefore, I am asking unanimous consent to include his speech in the Appendix of the RECORD, as well as the program of dedication:

Postal Dedication Address, Harring Park, N.J., by Anthony A. Vertelis HARRINGTON

Mr. Chairman, members of the clergy, distinguished guests, my colleagues in the postal service and friends, I am very happy to be here in Harrington Park, N.J., today to participate in the dedication ceremonies of your new post office. As a representative your Post Office Department, I share your pride and satisfaction in this achievement.

I also bring you the sincere greetings of Postmaster General Summerfield, the man whose long-range planning is manifested in the completion of this wonderful new postal facility.

Although it is customary on such an occasion as this to dwell on the facts and figures pertinent to the immediate reason we have gathered, I would ask your indulgence while I talk a little of the broader scope of your postal operations and tell you why your Post Office Department has a feeling of pride in the nationwide modernization program of Which this facility is an important component.

I would tell you how you will benefit from the many improvements made in mail handling in our major post offices and how our program of mechanization will make possinext-day delivery of a letter anywhere in the United States.

I would tell you the story behind programs of research and engineering, unheard of 10 years ago, which are producing methods and machines to handle a mail volume which is expected to double within the next 25 years.

I would tell you in detail of the accelerated building program now underway for the construction of 12,000 new post offices to replace obsolete facilities during the next few years, with 1,400 new post offices to be built in every part of the Nation during fiscal year 1960 alone.

These facilities are being constructed to our specifications under the Department's commerical lease program without capital expenditures from the Federal Government. Under this unique lease program, the lessor pays local real estate taxes as does any property owner.

I would be remiss at this time if I did not pay tribute to the loyal half million postal employees who have been giving you tremendous service while under these substandard working conditions for so many

The history of the Post Office Department is one of the most glorious of any branch of our Government. Each era has brought improved mail service whether by pony express and stagecoach or river packet, in train, plane, or by today's 707 jet service.

The past is full of the deeds of men of wisdom and valor and dedication to the postal service. The tradition that the mail must go through applied then as it does

Postal leaders are to be listed among the great men of our country. Your Post Office Department is the busiest enterprise in the world. It will handle in excess of 62 billion pieces of mail and parcel post this year. It employs well over a half million people in more than 35,000 post offices to process more than two-thirds of the world's mail volume. It operates a fleet of 85,000 vehicles and proudly displays the 1959 Safety Award for leading all Federal agencies in safe driving.

It reaches into every part of the world, extending its services to the smallest villages or the most isolated homes, no matter the climate or mode of travel.

It pursues our wandering Army, Navy, and Air Force personnel, even weathermen and explorers into the Arctic and Antarctic, just as it delivers your hometown newspaper to

your favorite vacation land. It is a truly great experience to be part of a team under the leadership of Postmaster General Summerfield that has just one, vitally important goal: Better mail service

for the American public. He has dedicated his existence to that service.

New methods and procedures were installed and modern accounting practices introduced, administrative responsibilities were decentralized, overlapping operations were liquidated, waste and incompetence reduced.

With this phase of reorganization achieved, the Postmaster General then inaugurated a crash program of physical modernization, encompassing mechanization, automation, new facilities and equipment and the installation of the Post Office Department's first Office of Research and Engineering complete with its own laboratory.

This program has been progressing at a rate beyond our hopes. Many of its achievements are incorporated in the thoroughly modernized Washington, D.C., Post Office, now the world's most mechanized mail-handling facility. Other major post offices throughout the country are being similarly brought up to date as rapidly as appropriated funds are made available.

You undoubtedly know of our plans to build experimental post offices in Providence, R.I., and Oakland, Calif., designed as laboratories in which to test methods and machines under high-volume operations.

The first American-built letter sorter capable of processing 43,000 letters an hour is now in production.

We have in operation high-speed facingcanceling machines which process mail so fast it is almost impossible for the eye to follow the course of a single letter.

Under development is a completely automatic machine which scans and sorts machine-addressed mail. Apparently, this machine will not read handwriting.

Semiautomatic electronic parcel sorting equipment is being installed where needed. There are customer-operated vending ma-

chines that sell stamps, envelopes, paper, money orders and return the proper change.

There is a customer-operated parcel post acceptance unit which weighs and computes the mailing cost to any zone, adds in the prescribed amount of insurance, indicates total charges, accepts money, stamps the packages, returns correct change and automatically removes the parcel from the machine into the mail system via a conveyor belt to the rear.

Under development are plans for customeroperated post offices, designed to provide unattended around-the-clock service in suburban and rural communities.

While all of these items are being rushed into production our Office of Research and Engineering, operating under a modest budget provided by a responsive Congress, has been investigating hundreds of other suggestions for expediting and more efficiently handling our ever-increasing mail volume.

One of the most important areas involves mail movement between post offices, whether they be near or far. The prime and sole objectives: Better mail service at less cost.

In the past, evolutionary improvements in this area resulted from speedier transportation via plane and train, more efficient use of motor transport, and the introduction of the metro system for intracity mail.

We are now on the threshold of what we firmly believe is the first revolutionary improvement in mail handling since airmail was inaugurated three decades ago. It involves the facsimile transmission of mail using video signals over a microwave link. The Post Office Department aptly calls it "minute mail." Much more will be heard of facsimile mail in the immediate future.

So you see why I am proud of the new look

of the Post Office Department.

Those of us present today must share this spirit of achievement because it is a local enterprise, coupled with the initiative of your postmaster, Peter T. Grea; the lessor, John Trebino; former Mayor Ensign Cowell; Mayor Edward Baczewski, and the cooperation your regional postal authorities, which have made possible this modern facility.

And this new post office, with its thoroughmodern equipment, is but one of 12,000 such post offices either already built, in the process, or planned to be built under the Postmaster General's modernization program.

And all of the many improvements I have briefly discussed here today have but a single objective of improvement: next-day delivery of letter mail anywhere in the United States.

Your new post office, over which will proudly fly the flag of our country, is a vital part and pertinent parcel of the entire projection of faith your Federal Government has in the future growth and prosperity of this community.

The Post Office Department is proud and thankful to have been able to play a part in bringing this new facility to you. It is now bringing this new facility to you. It is now my high honor and privilege to declare this new building formally dedicated to the service of all mankind.

In closing, I want to say "Thank you" for the invitation to participate in this patriotic and civic program. Your thoughtfulness is deeply appreciated.

HARRINGTON PARK (N.J.) POST OFFICE DEDICA-TION, SATURDAY, APRIL 30, 1960, 2 P.M.

Welcome, Mayor Edward T. Baczewski. Invocation, Rev. Anthony J. Connell. Introductions, Fred H. Quantmeyer, Sr., dedication chairman.

Address, Congressman Frank C. Osmers,

Remarks, A. A. Vertelis, post office regional real estate officer.

Presentation of flag, Postmaster Peter T. Grea.

Ode to flag, William Gurtner. National anthem, Dorothy C. Nelson. Benediction, Rev. Charles A. Mosby.

Tribute to Dr. Elbert E. Gates, Jr.

EXTENSION OF REMARKS

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. WILLIAMS of New Jersey. Mr. President, last year the citizens of Westfield, N.J., had to say goodbye to a very valuable member of the community, when Dr. Elbert E. Gates, Jr., left the First Baptist Church there, to serve in a different way abroad. Westfield happens to be my hometown, so I was among those who knew of Dr. Gates' work there.

An article in the New York Times of May 22 tells of his deeds since he has left Westfield. The article makes it clear that Dr. Gates is offering new ideas in a very essential cause; his innate creativity is finding new expression.

The work of Dr. Gates, the World Church Service, and the Young Women's Christian Association, is of interest to all who believe that there is work to be done for others.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JERSEY MINISTER HELPS HONG KONG-REV. ELBERT GATES AND WIFE WORKING FOR REFUGEES-SPUR NEW PROGRAMS

Hong Kong, May 13 .- A Westfield, N.J., minister has brought a fresh approach to the problem of Hong Kong's refugees from Communist China.

He is the Reverend Elbert E. Gates, Jr., who resigned as pastor of the First Baptist Church, Westfield, last year to take the position of director in Hong Kong of the Church World Service, a welfare agency of the National Council of Churches of Christ in America.

In a few months he has given a new direction to the work of the Church World Service here, setting it on a course designed not only to bring immediate relief to the refugees but also to provide them with a future.

"It is one thing to keep the refugees alive," Dr. Gates said. "But where do they go from there? They are not satisfied to remain forever on a food line. They want to regain their dignity.

"We are trying to help them to get some conomic independence by developing selfhelp projects."

As a first step in this direction Dr. Gates and his wife, June, are giving support and assistance to a group of orphan girls who are expert knitters. He believes that a market can be found for their work in the United States.

PRICES MUCH LOWER

Four of the girls are blind, two are crippled and another has only one arm, but each member of the group can turn out handknitted wear of top quality.

Although the girls earn more than their counterparts in industry here, they can turn out a knitted dress for about \$40 as against

\$200 for a similar article made in New York.
"There are a number of other possibilities," Dr. Gates stated. "But we don't want any-thing of a curio nature; nor do we want to play on people's sentiment and emphasize the refugee factor.

"Any items the refugees make must be able to hold their own in a commercial

The Church World Service, which is one of the largest of the voluntary agencies operating among the million refugees that have fled to Hong Kong from Communist China, coordinates the U.S. Protestant effort here. Its primary work at present is the distribution of food and clothing.

MILK FED TO NEEDY

The service has 10 milk stations where powdered milk is mixed with boiling water and doled out together with a special-

formula biscuit to deserving cases.

Below a Kowloon hillside scarred by a refugee shanty town stands one of the servmost heart-warming projects. Here children of the refugees living on the hill are cared for in a nursery staffed by YWCA workers and financed by the Church World Service.

are numerous other projects in which the Church World Service has a hand, and Dr. and Mrs. Gates lead a more demanding life than they ever did in Westfield. But the life is of their own choice, and although they and their three children miss their friends and old flock, they find their reward in the grateful faces of their new congregation.

"We saw Hong Kong on a trip to Australia and we could not get it out of our minds," Dr. Gates said.

When the post was offered to him he took it and a one-third cut in salary.

"In Westfield our work was with the 'haves'," Dr. Gates said, reflecting on the change in his life. "Here it is with the 'have nots'."

Remarks by Gen. George H. Decker at Armed Forces Day Celebration in Berlin, May 21, 1960

> EXTENSION OF REMARKS OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. BRAY. Mr. Speaker, the remarks of Gen. George H. Decker, Vice Chief of Staff, U.S. Army, on the occasion of the Armed Forces Day celebration in Berlin, Germany on Saturday, May 21, 1960 are especially significant at this time. Under unanimous consent, I include these remarks in the Appendix of the Congres-SIONAL RECORD, as follows:

General Osborne, distinguished guests, officers and men of allied commands in Berlin, ladies and gentlemen, Berlinerinnen und Berliner, Armed Forces Day is an annual event on which members of the U.S. military establishments give a joint report to the American public on the Nation's defense program. This special day which is observed throughout the United States and in all areas of the free world where American military units are stationed, also serves to reaffirm our close working relationships with

On this occasion, we honor the men and women who serve in our Armed Forces. These men and women dedicated to peace a peace that we hope to preserve by the maintenance of the military strength of our country so that the United States may provide its share of the common defense of the free world. While dedicated to the cause of peace, we emphasize on Armed Forces Day that this peace must be a peace with honor and justice. The sacrifice made by our people to ensure military preparedness and our presence in Berlin demonstrates our devotion to a just peace.

I am honored to be here today. American would be proud to represent his country in Berlin at this moment of history.

Here in Berlin, in this vital outpost of the free world. Armed Forces Day assumes a particular importance. Here the troops the United States, France, and the United Kingdom stand side by side with the courageous citizens of Berlin in the prolonged struggle to preserve hard-won liberties. high spirit the citizens of Berlin have maintained, despite the many and diverse pressures to which they have been subjected, has been a source of inspiration to the defenders of freedom everywhere. Your forti-tude has radiated hope and encouragement to your less fortunate brothers who have been deprived of their liberty. West Berlin shines as a "city of light."

Your Mayor, Herr Willy Brandt, deserves our special thanks and applause today for his leadership and statesmarship in these trying times.

It might be well, on this occasion, to recall President Eisenhower's remarks when he spoke to the American people on 16 March 1959 about Berlin. The President declared:

"We cannot try to purchase peace by forsaking 2 million free people of Berlin * "We cannot agree to any permanent and compulsory division of the German nation

which would leave Central Europe a per-petual powder keg * * *."

We cannot recognize the asserted right of any nation to dishonor its international agreements whenever it chooses * * *.

"We must not, by weakness of irresolution, increase the risk of war."

"Finally, we cannot accept any agreement which would undermine the security of the United States and its allies * * *."

In Washington, our President and Chancellor Adenauer recently reaffirmed their determination to continue their efforts to achieve the reunification of Germany in peace and freedom. They further agreed that the preservation of the freedom of the people of West Berlin and their right to selfdetermination, must be the foundation of our policy for Berlin.

I can think of no time nor place more appropriate to recall these pledges than here. and on this occasion. I know we are all disappointed at what has happened in Paris. I cannot do better than quote the statement of President Eisenhower as he left Paris the day before yesterday when he said:

"I share the disappointment of my colleagues that because of our inability to convene the summit conference we could make no progress for easing the tension that so plagues mankind. But I equally share their confidence that because of this setback, we of the Western allies are joined, even closer than before, in determined pursuit of peace with justice in the world."

To the American troops stationed here, I wish to say: Your devotion to duty and the capable manner in which you perform your assignment reflect great credit upon our country and the Armed Forces of the United

I salute our French and British allies, and the citizens of West Berlin, at whose side we

stand proudly today.

Den West-Berlinern, die immer unseren Soldaten eine freundschaftliche Hand gereicht haben, maechte ich meinen achtung und dank ausdrucken. (To the people of West Berlin who have always extended the hand of friendship to the men of our Armed Forces I would like to pay my respects and express my thanks.)

Together, forming a bond that cannot be dissolved, we will carry out our dedicated mission—the defense of the free world

ideals-here in Berlin.

Wildlife Faces Gloomy Outlook

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. WILEY. Mr. President, over the years the expansion of our Nation-populationwise, industrially, agriculturally, and in other ways—has served to infringe more and more upon the natural out-ofdoor heritage.

To a great many folks, the preservation of these havens of nature is only of secondary, or lesser consideration, in relation to the problems of practical day-

to-day progress.

As a fast expanding country, however, more and more of our great out-of-doors is being wiped out. I believe we must become increasingly concerned with the heed for preserving such areas-in accordance with our policies and practices

of economic progress.

Over the years, a number of conservation-minded, civic-oriented organizations, have made constructive, creative efforts to preserve the natural out-ofdoors for this country. These include the Isaac Walton League, Rod-and-Gun Clubs, the Audubon Society, Wildlife Federations, Federation of Women's Federations, Federation of Clubs, and other interested organizations Which have undertaken constructive, creative programs to preserve this aspect of American life.

However, the efforts of these fine organizations must be supplemented, I believe, with a greater civic consciousness among all our people for the need of preserving this significant feature of our

heritage.

Recently, the New York Times published an article entitled "Wildlife Faces Gloomy Outlook." Reflecting upon some of the problems in this field, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article Was ordered to be printed in the RECORD,

as follows:

WILDLIPE FACES GLOOMY OUTLOOK-50 NORTH AMERICAN SPECIES REDUCED TO SUCH EXTENT EXTINCTION IS FEARED

Fifty species of North American wildlife are in danger of being as unknown to future generations of Americans as the dinosaur

and mastodon are to people of today, according to Science Service.

This does not mean that they are definitely doomed to extinction. What it does mean, however, is that their numbers have been reduced to such extent as to cause serious concern over their chances of survival.

Perhaps the most publicized species threatened with extinction is the whooping crane. These magnificent birds, nearly as tall as a man and with a wing-spread of almost 7 feet, possibly may not have exceeded 1,400 at the time America was discovered.

By 1938, only 14 remained because they could not cope with the draining of prairie potholes, plowing under of the grasslands and excessive shooting along their migration

The population of whooping cranes is now about 38, including six held in zoos. This comeback is largely due to public concern for their existence, which led to creation of the Arkansas National Wildlife Refuge in Texas on their hereditary wintering grounds.

Other birds whose numbers are dangerously low are the Everglade kite, California condor and the nene. The once-common California condor, our largest soaring land bird, ranged from Lower California to the Columbia River. Today not more than 60 birds remain. The nene, or Hawaiian goose, probably numbers not more than 50 wild birds now.

Nor are bird species the only ones threatened with extinction. Many mammals, fish,

and reptiles are also in danger.

The most well known of the mammals, perhaps, is the grizzly bear. There appear to be fewer than 800 grizzlies still remaining in the United States (excluding Alaska), about one-fourth of which are found within the boundaries of the national parks.

Other endangered mammals include the ea otter, tule elk, black-footed ferret, kit fox, manatee (sea cow), Key deer, and Carib-

bean monk seal.

Two North American reptiles are also in peril—the green turtle and the American crocodile. Among rapidly disappearing fish species are the lake sturgeon, grayling, Great Lakes whitefish, and lake trout.

With some notable exceptions, however, few of today's endangered species are considered to have already gone the way of the heath hen, Carolina paroquet, great auk, Labrador duck, sea mink, passenger pigeon, and Merriam elk, all of which became extinct during the past century.

PASSENGER PIGEON CITED

The passenger pigeon, a particularly tasty game bird, is an especially sad case. The most numerous bird in the country around 1800, it has not been seen since 1914. Passenger pigeons were particularly easy to kill because they congregated in huge flocks.

Two birds believed extinct but not yet generally referred to as such, are the Eskimo curlew and the ivory-billed woodpecker. The latter, North America's largest woodpecker, has not been reported seen since 1952.

Fortunately, several species are apparently making decided comebacks. The trumpeter swan, the world's largest waterfowl and wood

duck are two of these.

At the turn of the century, many believed the trumpeter to be already extinct in this country. Records of the Hudson's Bay Fur Co. show that more than 17,000 swan skins were sold between 1853 and 1877, the bulk of which were supposed to have been those of the trumpeter.

But by 1958, the trumpeter's number had increased to more than 700. Its recovery is a fine example of conservation in actioncomplete protection from shooting and from intrusion of men and cattle on its nesting

The bird of the Nation's national emblem. the bald eagle, once ranged over most of

North America. Now the species, estimated at a total population of about 1,000, is concentrated in Florida and Alaska, the extremes of its original homeland.

Though protected by Federal law, "Old Baldy's" size makes it an enticing target. Too often young eagles have been mistaken

for hawks and shot.

A million Attwater's prairie chickens are thought to have ranged over the coastal prairies of Louisiana and Texas at one time. Today, as a result of pollution from oil drilling, rice farming that destroys their grasslands, and drought, only a few thousand

Other feathered species that must be considered on the endangered list are the Mississippi kite, swallow-tailed kite, white-tailed kite, Hudsonian godwit, Florida sandhill crane, Laysan teal, Aleutian tern, Florida burrowing owl, peregrine falcon, red-bellied hawk, Kirtland's warbler, and Cape Sable seaside sparrow.

In addition, there are the limpkin, flamingo, woodcock, reddish egret, American egret, snowy egret, roseate spoonbill, and great white heron. The great white heron is the largest and rarest of the herons. Its present population, confined almost entirely to Florida Bay and the Florida Keys, numbers about 2.000.

To the endangered mammals already mentioned must be added the Sierra bighorn sheep, desert mountain sheep, woodland caribou, gray wolf, red wolf, walrus, wolverine, and coyote.

Soil Stewardship Week

EXTENSION OF REMARKS

HON. WILLIAM H. MEYER

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. MEYER. Mr. Speaker, this is Soil Stewardship Week and a time for each of us to reexamine the great need for the proper conservation of our soil. For 25 years our Nation has been developing a program of soil and water conservation-and they have been years of progess. This I know, because I was personally and actively associated with it for some 14 years: in the early days of the Soil Erosion Service, and on the staff of the first soil conservation district in Vermont which started in 1940. I have watched this soil and water policy grow and expand from its inception to its present status with 2,861 soil conservation districts including more than 90 percent of the Nation's farmland and with the cooperation of some 1.8 million farmers. I have witnessed the manner in which the owners of the land grasped the significance of wise use and, through their local districts, have worked to conserve this basic resource in one of the most successful of Federal partnerships with people and local governments. have had the privilege of participating in this great endeavor, and I wish to use this occasion to congratulate the people of our Nation for their foresight.

Much greater effort is needed, of course, because of the demands of a constantly growing population with its attendant complexities. There is a vital need for a comprehensive soil and water policy geared to the future. But, judging by our past accomplishments, we may hope to continue the task with a true sense of stewardship.

Africa on the Move

EXTENSION OF REMARKS

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 25, 1960

Mr. MUSKIE. Mr. President, on March 17, Mrs. May Craig reported from Johannesburg the life which is lived by those who work in the great mines in that land.

On March 18, Mrs. Craig offered the thinking of South African officials on the apartheid policy, and their bitter criticism of American attitudes.

On March 19, Mrs. Craig treated her readers to a trip to the famous Kruger Park where 8,000 square miles had been given over to the original native Africa with its wild animals and great natural beauty.

I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[Mar. 17, 1930]

AFRICA ON THE MOVE-LOCKED IN WITH \$1 MILLION IN GOLD

(By May Craig)

JOHANNESBURG.—A million dollars in gold bars in one room of a mine of the Anglo-American company 200 miles from Johannesburg. About 90 percent pure, it will be refined to be 9909;00 percent. It was a big one-story building with furnaces in a row, 1,800° heat inside, from coal. We were locked inside; only whites in here, though natives do the mining. Each bar weighed 60 pounds. I could barely lift one, because small, like a big loaf of bread. Each bar worth about \$22,000. Most of the world's gold is mined here in South Africa. This mine was 4,800 feet deep, but some run to 15,000 and they have the problem of heat, methane gas (explosive), and flooding by water from fissures.

This mine was modern, 12 years old. They have twin shafts that go down, one updraft, one downdraft, with elevators for the men in tiers. The profit is a pretty 8,080,000 British pounds per month-yes, month. over this area are mountains of the residue from the ore, which is crushed into successively small bits until it is like powder. Representatives of the government Chamber of Mines and the company took us there by plane to the town of Welkom, meaning welcome, absolutely modern—the street signals. the traffic is flowed by circles and low curbs and center planting. There are nice houses for the white employees; the native laborers live in one-story concrete dormitories near the mine, 12 to a room, in 6 two-tier bunks, These are called hostels, since the word "compound" has a bad name. The men are recruited from tribes all around, some quite far; they are contracted for 18 months. They may leave before that time if they want to, but if they do they cannot come back for a long time, and they want to come, to take

the money back home and be a big shot. They are furnished work clothes, and get work boots and other clothes at low rate.

They live behind a wall, but that is to keep trespassers out, since they can go in and out as they please-there is no searching for pilfering of gold, as workers are searched at the diamond mines, where they are actually Xrayed when they go out at night. Three percent, by law, can have their families, in little company houses, and they are worthy workers. I asked how they picked them out. Our guide said there is a long waiting list for families, so no newcomers can bring familles, and by the time they get to the top of the list in time, the company knows whether they are worthy. There are indumas, petty chiefs, who serve as company police in uniform, and the men will obey them happily.

After we came out of the finished gold room, our Chamber of Mines escort said they would give a bar to anyone who could lift it with one hand—but he didn't tell us 'til after we came out.

They get the men from subtropical areas south of the equator so they stand the heat better, they speak 22 languages, so they use a sort of bastard lingo of English, Zulu, and Dutch. When they go home they are taxed by their tribe on their earnings. After a time, 18 months or so, they can come back and many do, but they must go home at the end of their period. They get time and a half for overtime, and bonus for efficiency.

Being without women, there is some homosexuality, which is not natural to them at home; they can go to town but there are few women available. On Sunday they have tribal dances in a small stadium within the walls, and often get good pay from tourists. The whole area inside the walls is landscaped. We went into the most modern of kitchens; and they have a cafeteria, bare but clean, which can feed 3,000. Some older mines let them take food to their housing, but that is messy. They break them into the mine work gradually in training periods of 2 to 3 weeks.

They get fish twice a week, meat three times, lots of vegetables, and a very nutritious porridge of kafircorn meal, make a kind of light beer of kafircorn, in vats on the floor above the kitchens, 2 percent alcohol, and this is rationed strictly to them. They have a European dietitian, with 29 native assistants. Well-fed workers produce better and are peaceable, the escort They have "ablution blocs" for use when they come out of the mines and sanitary latrines. Many of them take time to learn cleanliness—also to wear boots in the mine. Most of them wear polyglot European clothes. They get about 50 cents a day clear, paid once a month, plus whatever else they There is a constant check on each earn. man, single file, in and out by card number, so they know where each man is, and nobody is left in the mine. They are X-rayed each 6 months for dust, but updraft and air conditioning in some mines, and ventilation keeps this down.

The water pumped out is saline and they cannot turn it into the river or the farms so, a huge desalinization plant; still slightly salty, good in heat, where people sweat a good deal. This is the largest such plant in the world. There are enormous numbers of birds hereabouts, flamingoes, egrets, even gulls come 900 miles to the lake of pumpedup salt water. They pipe out the methane gas, but once lightning struck the gas as it came from the pipe and it burned a month.

The company provides one of the most modern hospitals I ever saw; the accident rate is low; they have physiotherapy modeled after the United States. There is no polio here. The hospital corridors are very wide, so they can handle emergency—as they did with cutbreak of Asian flu. The nurses are

nuns whose home is in Philadelphia, with a branch in Holland, so the nurses here are Dutch nuns.

[March 18, 1960]

Africa on the Move—Union Resents U.S. Criticism of Apartheid

(By May Craig)

Johannesburg.—"South Africa has few friends," said one Afrikaan (Dutch ancestry) rather bitterly. This is because of the policy of apartheid, the absolute separation of the races, European and non-European. They feel bitterly because the United States criticizes the Union for its racial policy. On the very day when I read of the round-the-clock fillbuster in the U.S. Senate on civil rights, I was briefed rather intensively by several South Africans who support the Nationalist Party, in the great majority now, and bigger each election, which holds to the apartheid policy.

Briefly, they hold to the principle of separation of the races. The Dutch came early to South Africa, in 1652, though some Portuguese had been there earlier. This area was almost empty, except for a few wandering bushmen. The Dutch developed this country, they feel it is theirs; now the blacks from the northern part of the area are moving down and the great trend in all Africa "Africa for the blacks" is fermenting here. I was told, even by Americans, that Communists are under most of the ferment. In this Union of South Africa, it is treason to advocate the overthrow of the government by force and violence. (I think we might well adopt some of this severity ourselves against those who would overthrow our Government by force and violence.) There are some trials now going on, for treason, for Communist activity.

In the United States where we held imported black men in slavery for so long; where New Englanders built ships for the slave trade, and sold the black people into slavery to the South, we might well be willing to allow South Africa the right to self-determination, whether or not they are on the road of the future. They believe in the purity of black and white races, by separation. Intermarriage between races is illegal, so is sexual intercourse between the races. They want to keep the Union white; they are training adjacent tribes for self-government, the nearby Bantu territory had its independence celebration last May in which white and black officials spoke.

In most of the world today the trend is toward integration, as in the United States. To the north of here, in Guinea, in Ghana, the Congo, the pattern is black supremacy in the government, with the whites leaving or staying in a minority, on sufferance; here the desired majority pattern is completely separate white and black development. This is a principle which these people are entitled to have if they want it, and can hold it. General opinion is that they cannot hold it. They are talking of leaving the (British) Commonwealth of Nations and becoming a completely independent republic.

At the University of Pretoria, which is in one of the two capitals of the Union of South Africa, Dr. Chris Prinsloo, chief information officer for the Government of Bantu administration and development in South Africa, gave us a good picture of the Nationalist Party principle and policy. He said frankly that the Dutch, who lost the Boer War, would rather die than give up what they call their own African country, or become a bastard nation of people. Many of British descent feel the same way. Asked his opinion of British Prime Minister MacMillan's recent speech here in which he said "the winds of change are blowing" all over the world, Dr. Prinsloo said "Mr. MacMillan is speaking for his country (the United Kingdom) not for

One of the most wonderful monuments in the world is the great bronze statue of the Boer mother and children, at the Wagon Wheel monument, along the line of the Boer Great Trek to the Transvaal. Nowhere in the Hall of Fame in the U.S. Capitol is there any statue to the pioneer women of the United States.

Pretoria is the administrative capital of the Union; the political capital where the Parliament meets, is in Capetown, and every 6 months the whole Government picks up and moves. Dr. Prinsloo gave us a favorable story of the way they are training the tribes self-government, with education-and civil and political service; he said it is an integral part of apartheid that the natives shall have their own lands, and their own government—he said that in the Bantu Territory in the east of the Union, every postmaster and postal employee, for instance, is Bantu.

Much is made of the strict regimentation of the blacks, on whose back, as principal source of labor, the white union is built. They have a strict pass system, and the rural blacks who have flocked into cities for Work must carry identification and go out of the city to locations at night. This is defended as a protection to everybody. The natives are leaving the farms and coming to the towns, creating slums and unemployment for the people already here. "If we did not have the pass system, there would be chaos," one informed American admitted because there are 11 million non-Europeans in the Union. He pointed to the horror of Harlem in New York as failure of our hitor-miss system. Also that integration will eventually lead to fading of the comparatively few blocks into the white population of the United States with the individuality of the American Negro lost also. A thought ful Afrikaan said the blacks need time to learn the know-how of the white man's civilization before they can take independent place in the family of nations—that under the Nationalist Party they will have a national identity. Guinea, Ghana, Congo, and others feel they will have it too, by absorbing the whites. "There can be abuse of freedom," said Dr. Prinsloo.

[Mar. 19, 1960]

AFRICA ON THE MOVE-VISIT TO KRUGER PARK IS HUMBLING, JOYFUL EXPERIENCE

(By May Craig)

JOHANNESBURG.—No nation lives alone in the modern world so closely linked by speed of transport and communication. apartheid racial policy here may make trouble for the United States in an odd way. Sticking strictly to European and non-European separation, the Union government lumps colored (part white) and Indians and Chinese coolies Chinese with blacks. Many Chinese coolies came here years ago, so did workers from India. These Chinese are not Communist Chinese, they are from the days before the Communists took China mainland. You might say the Communists took China mainland. might say they belong to the Nationalist, Chiang Kai-shek government-in-extle on Pormosa regime, that is the Republic of Chiang Region of the United China, our ally and a member of the United Nations Security Council.

To follow through on strict non-European segregation, the government is going to move all the Chinese out of Pretoria, for instance, into locations outside, like the blacks. These Chinese are for the most part, now, merchants and solid citizens and this will cause no end of trouble for us, as well as the treatment of the Indian, about which Nehru is

always complaining to us and the United Nations

We asked what about prominent non-Europeans traveling here, and our vice consul in Pretoria, Paul Eckel, who gave us an excellent and frank off-the-record briefing, said that Bill Gordon, an eminent Negro journalist of Atlanta, Ga., came, was escorted by American diplomatic personnel, was allowed to visit locations and almost any place he wanted, "behaved most dis-creetly," but this was because he was here as "an American citizen."

Wild animals are dying out almost all over the world. Here in the Union of South Africa, where they have such strange types as elephants, giraffes, hippotami, rhinoceroses, lions, etc. there are several big game refuges where they are protected from extinction, though the natives do poach, to get meat and ivory. We went to the Kruger National Park nearly 300 miles from here left Johannesburg at dawn, slept in a hostel near the gates and got up at 4:15 in the black starry dark of the next morning to be at the gates by dawn. There are huts in the park, some of them very comfortable,

but not enough for our party.

The park includes 8,000 square miles of mountain forest, plains, grassland, rivers, dry creeks which swell to torrents in the sudden downpours. The park is a network of gravel roads, with firebreaks, because of lightning and the careless cigarette of the tourist. We rode three to a car, so each of us had a window, and a driver guide. Ours, Jim O'Rouke, has been escorting hereabouts since 1921 and was a mine of sympathetic lore of the animals. Each of us watched out a window because the animals are hard to see, sometimes. In our car we did not see any llons, only one car did; they hunt mostly at night, and only in the day if they have not made a kill at night. We came across the huge smoking dung heaps left by elephants who must have crossed the road just before us, but we could not find any until almost time for us to leave the park when suddenly we came across five feeding on trees not far away. Many of us are camera fiends and got wonderful pictures; one of a baboon sitting scratching himself, on one of the park trail signboards. We went down to a river where the hippos were standing or kneeling on shallow water sandbanks, just heads out, occasionally heaving up and opening their cavernous jaws. They come ashore at night to eat grass and leaves and then the lions try to pounce on them. The hippo makes for the water and the lion has to scramble madly for the bank because he does not like water. There are no rhinos in this park.

We saw many different kinds of deer, the lovely leaping impala, the kudu, the wildebeeste; the horribly ugly wart hog; the elegant jackal, the hideous hyena; innumerable monkeys chattering in the trees, a cobra slithering across the road in front of You never get out of the car except at certain spots where the guide takes you.

Then, after we had seen isolated small groups of the tall graceful giraffes, suddenly we came on a herd of them, several stalked haughtily across the road in front of our stopped car, some behind, they stared at us calmly with their large round brown eyes with long eyelash fringes. This being close to wild animals in their natural habitat is something that must be felt. It is a humbling and joyful experience, with the slight bitter taste of danger in the mouth. The zebras are the gaudy ones-a general pattern of stripes, but every one different, like hu-man fingerprints. The elephants knock down big trees to get at the bark of the roots-that is one way you know they are near-trees newly down.

Agribusiness: Mushroom or Toadstool?

EXTENSION OF REMARKS

OF

HON. GEORGE E. SHIPLEY

OF TLLINOIS IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. SHIPLEY. Mr. Speaker, a constituent of mine, Mr. C. F. Marley is an agricultural writer-photographer of Nokomis, Ill. His monthly column known as "Frontiers in Farming" always contains information of value and interest but his most recent column entitled, "Agribusiness: Mushroom or Toadstool?" is exceptionally well written. contains important factual information and should be read by all who are connected with farming which includes all of us to some degree. This fine article

AGRIBUSINESS: MUSHROOM OR TOADSTOOL?

It is a fact that quite a few people are dead today because they couldn't tell a mushroom from a toadstool.

And it is also a fact that now, while farmers are fighting for an independent family income, they are being offered a new economic ideology that is being plumped by some as the mushroom which will save family farming.

Any number of people who have studied the matter, however, and I'm one of them, think it is a toadstool. Let's see what you

follows:

We are referring to "Agribusiness," and we refer to the industry-sponsored type. Briefly, agribusiness is the idea that we have to think of agriculture and business as a single business. It can be operated from the top down, that is, feed companies and processors and others, will contract with farmers for various kinds of production. Or, it can be operated from the bottom up with farmers working through co-ops banding together to produce on specification and quantity for a given market.

Up to that point, we do not attempt to characterize it, maybe it is a mushroom.

So, let's probe deeper. Agribusiness as a theory was developed at Harvard University. and a book concerning the findings and advancing theories was authored by John H. Davis and Ray Goldberg. It was published in 1957.

Now, over the past few years we have heard more and more of the word, agribusiness, and most of us came to view it as an acceptable thing. Among the first who took exception to the theories, however, was Mr. L. A. Schaefer, a farmer, farm supplier and hatcheryman of Springfield.

Schaefer has charged, among other things, that the feed manufacturers, food processors. and other big business interests, intend to control farmers and allot production. Now these charges are substantiated in plans proposed for Sangamon County. It's a plan to broilerize family farming.

Mr. Schaefer relates that he discovered the true meaning of agribusiness a few years back. His hatching business went into a slump and thinking his advertising and merchandising methods were to blame, sent a man into the country for 30 days to talk to independent farmers and find out what was the matter with sales. What he discovered was that the incessant pounding—get bigger or get out—was taking hold. The truth was that while his customers were getting out there was a corresponding shift in poultry from our area to the South.

Down South some of the backers of the agribusiness were contracting production with farmers.

Now, one of the claims made for agribusiness is that it will be the salvation of family farms. When there are complaints from our farmers, business maintained it was "helping" poor southern farmers. What could be more noble than that? If we got hurt up here it was our own fault, we "should be-

come more efficient," we were told. But, what about the "happy, efficient" farmers in the South. One Illinois farm adviser tells me that the decision as to whom will feed broilers in one southern area is made by a big feed company and a grocery chain in St. Louis.

The agribusiness pattern goes something like this: Farmers are told they need only to be financed in a building and equipment, the feed company will furnish the chickens and the feed. But the key to the thing, the friendly feedman says, is efficiency—"Be sure to have enough volume."

What happens in fact, I do not say by design, is that the farmer goes into debt for a large amount, a debt that will take something like 20 years to pay. The "friend-ly feedman" makes contracts for a much shorter period of time. Meantime, the friendly feedman gets other farmers interested in the bonanza. Then, when he goes back to make a new contract with the first farmer, he is sorry, but he cannot offer as much as he did in the first contract. The farmer complains, but what can he do—he has his debt to pay. He has to continue producing at a lower return.

I have heard of a case where a farmer took this bait. He finally lost his farm to the company, and now works for the company on what used to be his farm.

Agribusiness, say its backers, will help the family farmer compete. Isn't that a likely story?

We spoke earlier of the experience of Mr. Schafer. He has got so he can smell agri-(industry sponsored) a mile But, while agribusiness has been off in the shadows of the South, lately it has come to live with him.

Robert O. Harvey, professor of finance, college of commerce, University of Iowa, has prepared "an economic base and potential study of Springfield and Sangamon County," in which he encourages business sponsored agribusiness.

Here are some of the points taken at random from Harvey's report:

"Proponents of the family farm need not worry that agribusiness means the end of a cherished rural way of life. In fact, it may be the economic salvation of many small units which would otherwise have to go out of existence."

"The development of agribusiness must start with the business community."

"Contract production can be applied to various lines of farming * * * The broiler industry offers an excellent case study in what can be accomplished through integration and planning."

"The type of arrangement is ideally suited to Sangamon County."

"The techniques of agribusiness could also be applied to pork production."

"A meat processor could parallel the plan for the broiler industry. He could furnish baby pigs to a farmer along with feed and medical supplies and pay the farmer a flat rate per pound. By furnishing the pigs from a pig hatchery, the production of marketable hogs can be stabilized over any time period. This will enable the meat packer to control the flow of dressed hogs to market."

"The farmer who signs a contract to produce broilers, hogs, eggs, or vegetables does surrender much of his independence." MUST FIGHT BACK

This kind of talk is fighting words to Mr. Schafer, and that goes double for me, too.

Undoubtably he means well, and I do not question the sincerity of Mr. Harvey, and in correspondence with him have told him so. But I also gave him my opinion in these

"I will make just one point, however: We cannot 'plug' the matter (agribusiness) as we would a watermelon and decide if it is good or bad rather, we have to watch the progression of its growth. If farmers are to become dependent upon the tactics and vacillations of the feed-food people they will have be-come pawns of big business, and because their position becomes progressively worse, soonor or later they will have no choice but to sell out to those business giants.

While this industry-sponsored vertical integration might appear a mushroom, it is in

fact, a toadstool."

Farmers, with this kind of agribusiness talk going on, coming from some of our State supported college people, your time is running out. This isn't a plan confined to Sangamon County, rather it is part of a plan for the whole of agriculture.

As of now, you have lost broilers, are losing laying hens, and the agribusiness boys have their sights on hogs, dairy cows, beef, and

more.

You have to have an income. You have to have a margin over costs. You can get it honorably by collective bargaining, by price support, or by controlling the processing and marketing of your own products.

Or, are you going to allow feed companies, processors and retailers to control your business and investments and labor by doling

out contracts?

Whatever your choice, the time has come to make it.

But, a word of caution is in order. While we must oppose industry-sponsored agribusiness we must not accuse just everyone of malicious intent. Many people, even some of the prime movers, are unaware of the implications.

Agricultural Research

EXTENSION OF REMARKS

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. POFF. Mr. Speaker, America can take justifiable pride in the progress made in our agricultural research effort in recent years.

This is one of those vitally important programs so often overlooked in the continuing debate on farm policies. It is just one of many activities of our Department of Agriculture that deserves recognition and commendation.

I am pleased to note that two distinguished Members of the other body have seen fit to pay tribute to Secretary Benson for his work in the field of research and I should like to insert in the Record an editorial from the May 2 issue of the Richmond Times-Dispatch;

UNEXPECTED TRIBUTES TO BENSON

Secretary of Agriculture Ezra Taft Benson has been the target of bipartisan vilification almost from the moment he assumed office 7 years ago.

It was he, personally, who was lambasted for "the plight of the farmer" by farm bloc Members of Congress. They ignored the fact that Congress, not Benson, has been responsible for farm parity laws intended to

repeal the law of supply and demand.

The other day two of his severest critics, Senators Russell and Olin D. Johnston, paid personal tributes to Mr. Eisenhower's favorite Secretary.
"I want the record to show that, in my

judgment, no Secretary of Agriculture has done as much for farm research as you,"

said RUSSELL.

South Carolina's Senator Johnston echoed the Georgian's sentiments, adding that half of the agricultural spending recommended by Benson benefited the entire public.

The laudatory comment from such unexpected sources came during a Senate Agricultural Committee's hearings on the department's proposed budget of nearly 6 billions for the fiscal year beginning July 1.

That would explain the farm Senators' eagerness to let bygones be bygones-for the time being-in the interest of money spent for their constituents' welfare.

Medical Care for the Aged

EXTENSION OF REMARKS

HON. PAUL H. DOUGLAS

OF HAINOIS

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. DOUGLAS. Mr. President, Dr. J. Douglas Brown, dean of the faculty of Princeton University, is one of the most competent, careful, and public-spirited students of social security and old age and unemployment insurance in the country. He served on President Hoover's Emergency Committee for Employment in 1930-41. He also served on the staff of the Committee on Economic Security, which in 1934-35 developed the Social Security Act; and he was particularly concerned with the planning of the old-age insurance provisions.

In 1938-39, Dr. Brown was chairman of the Advisory Council on Social Security, which recommended to Congress the essential features of the present oldage, survivors and disability insurance program. Incidentally, I had the honor of serving as a member of that advisory council with him, and I grew to respect and admire Dr. Brown very much.

Dr. Brown also served on the advisory councils appointed under congressional mandate in 1948-49 and in 1958-59, in each case as a member of the steering committees. He is, therefore, probably the best informed man in the United States on problems of old age. In addition, for 30 years he was director of the industrial relations section of Princeton University. As I have said, he has been dean of the faculty, and I believe provost at times, since 1946. He has made a very thorough study of medical care for the aged population.

I ask unanimous consent that the statement of Dr. Brown be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY J. DOUGLAS BROWN, DEAN OF THE FACULTY AND PROFESSOR OF ECONOMICS, PRINCETON UNIVERSITY

Long and thorough economic analysis of the pressing problem of assuring adequate medical care for the aged population of this country has led me to the firm conviction that the old-age, survivors, and disability insurance program should be extended to provide a basic floor of medical care for aged beneficiaries. This analysis may be summarized as follows:

1. The proportion of the aged to the work-

ing population will continue to rise.

2. The costs of living for the aged, and particularly the necessary costs of health care, will continue to rise.

3. Since it is clear from experience that the current income of most superannuated persons will be inadequate to meet these rising medical costs, the excess of current costs over current income will need be provided by one or more of the following means:

(a) Sayings accumulated by the individual

or spouse during working life;
(b) The appropriations by Government of funds derived from general taxation to provide greatly extended medical care for the aged on a modified needs-test basis;

(c) The loading, under voluntary, private health insurance programs, of the premiums paid by persons of working age by an amount sufficient to meet the higher medical costs of the aged beneficiaries of such plans;

(d) The subsidization of private insurance Carriers by Government from general taxation in order to permit them to provide health insurance benefits to aged persons at less than true cost;

(e) An increase in the level of cash old-age insurance benefits sufficient, on average, to meet the variable and uncertain costs of illness in old age;

(f) The inclusion of basic medical benefits for aged beneficiaries as "insurance within insurance" under the OASDI program, with costs averaged over the whole working life of all participants.

These six means of meeting the deficit between rising medical costs and declining income which millions of our older people will face can be analyzed briefly.

A. SAVINGS ACCUMULATED BY THE INDIVIDUAL OR SPOUSE DURING WORKING LIFE

For the individual, not only is the span of life after retirement uncertain, but the incidence and costs of illness in old age are doubly uncertain. It can be estimated that, on average, these costs will be approximately three times higher per year in old age than in working life. The costs of medical care in old age may well continue to rise faster than than other costs of living, both in price per service and in the elaboration of services, between the time of saving and the time of need. It is therefore very difficult for most Wage earners to accumulate and distribute a savings fund throughout their life and that of their wife in a way which will afford reasonable security against the uncertain costs of medical care. Serious contingencies may dissipate savings long before the eventual death of the surviving spouse. For all but the most fortunate, the most effective mechanism for protection is not savings, but insurance.

B. THE APPROPRIATION BY GOVERNMENT OF PUNDS DERIVED FROM GENERAL TAXATION TO PROVIDE GREATLY EXTENDED MEDICAL CARE FOR THE AGED ON A MODIFIED NEEDS-TEST BASIS

The public provision of medical care has been steadily extended in the last quartercentury. This has been a necessary development in areas of costly treatment, such as mental health, or in the protection of underprivileged persons. The extension of public provision of medical care to the aged may prove increasingly necessary if we do not develop other means of meeting the problem. To put normally self-reliant persons under

the pressure to declare themselves indigent, is not an attractive solution. A needs test for medical care distinct from a needs test for general assistance would involve serious administrative difficulties. We have made great progress in preventing dependency and the fear of dependency through social insurance. It would be a disheartening setback if rising costs of medical care cause a retrogression to poor relief methods for the protection of our older citizens.

C. THE LOADING, UNDER VOLUNTARY, PRIVATE HEALTH INSURANCE PROGRAMS, OF THE PRE-MIUMS PAID BY PERSONS OF WORKING AGE BY AN AMOUNT SUFFICIENT TO MEET THE HIGHER MEDICAL COSTS OF THE AGED BENEFICIARIES OF SUCH PLANS

The use of the insurance mechanism in meeting the risks to individuals of the cost of medical care is an important forward step. The averaging and sharing of the costs of illness among currently employed persons is an effective economic device. It is essentially an assessment form of insurance. In a given age segment, without adverse selection, contributions and benefits can be brought to relatively close balance, subject to frequent revision, however, as costs of care or frequency of care rise. But the continuance of older, retired persons under a voluntary health insurance program creates serious problems. Not only do benefit costs for the aged rise sharply, but their ability to pay premiums declines.

The inclusion of the aged under voluntary health care insurance introduces a life-risk factor and the possibility of serious adverse selection. This has brough disaster to assessment schemes of insurance, time out of mind. Younger contributors drop out if contribution rates rise because of the burden of older beneficiaries. Older beneficiaries drop out if they are charged differential rates higher than they can afford to pay. If benefits to the old are reduced, even though such reduction is neatly camouflaged in the fine print, the old are left insecure.

It is my earnest conviction that private, voluntary insurance programs cannot meet the basic problem of rising medical costs in old age. If they attempt to do so by loading the premiums paid by younger individuals, they will impair their usefulness in their proper field of service.

D. THE SUBSIDIZATION BY GOVERNMENT FROM GENERAL TAXATION OF PRIVATE INSURANCE CARRIERS IN ORDER TO PERMIT THEM TO PRO-VIDE HEALTH INSURANCE BENEFITS TO AGED PERSONS AT LESS THAN TRUE COST

This is, at best, a clumsy, hybrid arrangement, involving overwhelming administrative difficulties and excessive costs. It impairs the freedom of both the Government and the private carriers to do their proper tasks well. To safeguard public funds, the private carriers would, of necessity, be subject to close regulation and inspection concerning costs, benefits, actuarial evaluations, overhead expenses, services, and reserves. For the Government and the beneficiary, the economies and convenience of a large and uniform system of protection would be lost. A wide variety of competing private carriers would properly seek to safeguard their own interests as institutions and those of all their policyholders, old and young. The determination of a fair subsidy under diverse and changing conditions would, I am convinced, lead to endless bickering. Meanwhile the Government would pay more, the beneficiaries would get less, and the private carriers would trade freedom for little profit and thankless regulation.

When the old-age insurance system was inaugurated in 1935, the insurance carriers thought for the brief time that they wanted a hybrid plan of "contracting out." Under clean-cut separation of government basic protection and private supplementary protection, both approaches have so reinforced each other that "contracting out" has long been a forgotten word.

E. AN INCREASE IN THE LEVEL OF CASH OLD-AGE INSURANCE BENEFITS SUFFICIENT, ON AVERAGE, TO MEET THE VARIABLE AND UNCERTAIN COSTS OF ILLNESS IN OLD AGE

Except for the effects of inflation, most of the expenses of the aged are more stable from year to year than those of the working population. The costs of illnesses are the great exception, in both incidence and amount. Illness in old age is likely to be more frequent, but still highly unpredictable as between individuals. It is likely to be more costly when it comes. Most difficult to meet from level amounts of benefits are the costs of final illness. A level amount of benefits that would protect one individual might fall far short for another. To raise the level of benefits to meet this risk would be a costly and yet ineffective means of protecting the aged. This requires surance within insurance."

F. THE INCLUSION OF BASIC MEDICAL BENEFITS FOR AGED BENEFICIARIES - AS "INSURANCE WITHIN INSURANCE" UNDER THE OASDI PRO-GRAM, WITH COSTS AVERAGED OVER THE WHOLE WORKING LIFE OF ALL PARTICIPANTS

The old age insurance system will soon be a quarter of a century old. It has served our people well. It has not undermined free enterprise nor introduced socialism. It is a practical and economical means of protecting our citizens from dependency, with dignity and as a matter of right. It provides a service which only the Government can provide, because the Government can assure itself of continuing contributions, can avoid adverse selection, can widely average costs, and has the capacity to adjust income and outgo as the welfare of the people de-

The costs of illness in old age are a properly insurable risk. But they are a life risk, since their high incidence and amount are directly related to a stage of life which, like death itself, can come but once to each of us. Therefore, as a people, we should insure against these costs during our productive years, as a part of our insurance against all other causes of dependency during old age. But because of their great impact and uncertain incidence within the period of old age, these particular costs, at least in basic part, should be met by "insurance within insurance."

Whatever limits may be necessary, to be truly effective, such "insurance within insurance" should be measured in terms of the medical care required, and not in dollar There are many ways in the Government can arrange for the provision of such care, once the funds are available. To say that the financing of any product or service by Government payments is socialization, is to consign that meaningless term to a large segment of American industry, American education, and American health services in which executives, professional men, and wage earners are contributing to the welfare of their fellowmen with freedom and dignity.

After 25 years of evolution, the old age

insurance system of this country is a tested and effective mechanism for the provision of basic protection of our aged citizens against the costs of illness. No other means or mechanism can perform this necessary function with as much economy in cost, or with as much respect for the needs, rights, and

dignity of all concerned.

Public Works Appropriation Bill, 1961

SPEECH

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12326) making appropriations for civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority, and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes.

Mr. THOMPSON of Texas. Mr. Chairman, I would like to invite the attention of the Committee to the report accompanying bill, H.R. 12326, the public works appropriations bill for 1961. On page 19, under the heading: "Freeport Harbor, Tex.," I note that the Appropriations Committee recommended deletion of \$899,000 budgeted for improvement of that harbor. The report states that the benefits from it are uniquely local in character and the Corps of Engineers has testified that it is likely that the beneficiaries would dredge the harbor themselves if the Federal Government does not do it.

I invite the attention of the Appropriations Committee to the seriously crippling effect of this deletion. The project is not uniquely local any more than are the ports of Texas City, Galveston, Houston, Port Arthur, Brownsville, or Corpus Christi; and to require the citizens of that community to pay for improvements which traditionally have been made by the Federal Government is

exceedingly unfair.

I have read the testimony before the committee, and I can understand the committee's conclusion that perhaps local interests would furnish the money if the Federal Government did not. However, I have checked with the witness who gave that impression and he has assured me that he intended no such conclusion to be drawn from his remarks. He points out that the Government has kept competing ports on a competitive basis. It has done so in the cases which I have just mentioned.

Traditionally, the Appropriations Committee has looked with favor on community enterprises in which the local interests do spend some of their own I invite to your attention the fact that the navigation district which is concerned with the Freeport Harbor has, in recent years, invested \$4 million in dredging the turning basin and in constructing two large docks and transit sheds and in purchasing the necessary equipment to operate them. They did not ask for one cent of Federal aid and now they ask only that they not be penalized in their relationship to competing ports.

This port, incidentally, handled in 1959, 88 foreign and 41 American large cargo ships. Just as is the case in the port of Houston, or Texas City, or Port Arthur, there is a considerable tonnage

of oil which is moved in tankers. These vessels have, in recent years, been built larger and with greater draft.

Should the other body see fit to include this budgeted item in the Senate version of the bill now under consideration. I trust that the conference committee will take a careful look at facts which can be furnished to refute the committee's previous conclusions as evidenced by the paragraph on Freeport Harbor in the report.

Senator Frank Church-Young Voice of the Democratic Party

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. HUMPHREY. Mr. President, I am most pleased and happy that our colleague, the distinguished junior Senator from Idaho [Mr. Church], will be the keynote speaker at the Democratic National Convention.

Anyone who has ever heard FRANK CHURCH, in his consistently brilliant and eloquent fashion, discuss the great issues of our day knows how fully qualified for this assignment he is. Our good friend and colleague is typical of the dynamic. talented, young leadership in which our great Democratic Party is so rich.

I ask unanimous consent that a profile of our colleague which appeared in the New York Times this morning be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, May 25, 1960] Young Voice of the Party: Frank Church

The keynote speaker at the forthcoming Democratic National Convention has forged his political career with an eloquent tongue

and a blazing smile. Frank Church began speaking in public as a boy. At 16, he won a nationwide American Legion oratory contest that brought him a \$4,000 scholarship. The topic was "Our Way of Life." In 1952, at the age of 28, he was the keynote speaker at the Idaho State Democratic Convention. As a young lawyer, he taught public speaking at Boise State College for several years prior to his election

to the Senate in 1956.

His speaking talents have also been recognized by the political opposition. Vice President Nixon picked the young Idahoan to read Washington's Farewell Address in the annual ceremony before the Senate on February 21, 1958, the eve of Washington's birthday.

Visiting Warsaw in 1959, Senator Church won the notice of Poles and resident Americans by his eloquence in speaking of the United States. One correspondent described him as "a sort of advertisement for zest."

Born in Boise on July 25, 1924, the future Senator was named Frank Forrester Church, Jr. Now he normally does not use his middle name or "Jr."

ENLISTED AS FRESHMAN

After winning the American Legion scholarship in his junior year at high school, he elected to go to Stanford University. The

attack on Pearl Harbor occurred during his first semester, and he enlisted immediately in the infantry. He was commissioned a 2d lieutenant on his 20th birthday and served in the China-Burma-India theater as a combat intelligence officer.

At the end of the war, he returned to Stanford. He was graduated in 1947, a member of Phi Beta Kappa and married soon after receiving his diploma. After studying for a time at Harvard Law School, he returned to Stanford and took his law degree there in

Brought up in a Republican family, Senator Church says he talked himself into joining the Democratic Party in the course of discussions with his father, a sporting goods dealer. He also married into a family long prominent in Democratic politics in Idaho. His wife, Bethine, is a daughter of Chase A. Clark, a Federal judge and former Governor. She is the niece of another former Governor and a cousin of the late Senator D. Worth Clark.

After losing a bid for the Idaho Legislature in 1952, the young lawyer entered the Democratic Senate race in 1956. His opponent in the primary was Glen H. Taylor, a former Senator and Henry A. Wallace's Vice-Presi-dential running mate on the Progressive

Party ticket in 1948.

After a hard campaign, he won the primary by just 170 votes. In the general election, however, he defeated Senator Herman Welker handily, by some 50,000 of a total 250,000 votes, and became, at 32, the Senate's youngest Member. He estimates that he shook 75,000 hands in the course of the campaign

Senator Church campaigned for Federal development of power resources, a position he has maintained in the Senate. He has attacked the creeping concealment of public

information.

Those who try to describe the Senator use such expressions, as "blazing smile," "mat-inee idol looks" and "pink-cheeked youth."

Six feet tall and a trim 165 pounds, Senator Church has black hair and brown eyes. He looks 10 years younger than he is-35. During his early days in Washington he was so often mistaken for a page boy by guards and fellow Senators that he gave up wearing navy-blue suits and switched to brown.

The Churches have two sons, Forrester, 11. and Clark, 2. The Senator concentrates on work to the exclusion of hobbies but devotes such spare time as he has to the boys, playing ball or taking Forrester sightseeing.

Porter Hedge

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. GATHINGS. Mr. Speaker, the farmer has lost a good and true friend. Members who knew Porter Hedge will share with farmers everywhere the loss of one of agriculture's most articulate and well-informed voices.

Many of us knew of his ill health, but we were poorly prepared to learn of his passing Saturday last in the Arlington, Va., hospital.

Porter Hedge, who was a native of Iowa, was graduated in agricultural journalism and achieved a notable career in newspaper work in Iowa and in Texas. He was the author of the widely read book on agriculture, "The Fifth Plate."

At the time of his passing, Porter Hedge was associate editor of the Washington Farmletter, reviewing the field of farming and the activities of Federal agencies. His knowledge of agriculture and the laws pertaining to farming was remarkable. His able pen put into layman's language the intricate rules and administrative directives issued from Washington. His analysis of commodity programs assisted farmers of the Nation to plan their planting programs to best stabilize their business operations.

While Porter Hedge wrote on all aspects of agriculture, soybean growers will perhaps miss him most, for he was widely acquainted throughout the soybean industry and his columns on the soybean situation reached most of the commercial soybean growers of the belt.

But, Porter Hedge will be remembered most because of his integrity and his pleasant approach to all matters. He was a fine man and a devoted friend to agriculture. In a time when farmers need friends who can tell their story, they have lost one of the very best.

Miss Althea Heimbach

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, May 25, 1960

Mr. WILEY. Mr. President, the history of our country is star studded with lives of people who have given of themselves to help their fellow men and in this way leave an indelible mark upon our Nation and its progress.

At this time, I would like to pay particular tribute to Miss Althea Heimbach, of Milwaukee, Wis. For 41 years she has been director of the physical education department of Milwaukee-Downer College.

During this long distinguished service, she left a significant impression on many of the individuals who passed through the doors of learning of this fine college.

With a perspective extending beyond her own field, Miss Heimbach has not only contributed to greater physical fitness for the students of Milwaukee-Downer College, but she has also passed along to them a bright, optimistic, positive outlook—reflecting her own philosophy of life.

Representing the kind of dedicated service most urgently needed in the education institutions of America, I ask unanimous consent to have an article from the Milwaukee Journal, by Marilyn Gardner, reviewing the career of Miss Heimbach, printed in the Appendix of the Broopp

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, May 20, 1960]
AFTER 41 YEARS, SHE WON'T PLAN AHEAD—
ALTHEA HEIMBACH RETIRES NEXT MONTH AS
DOWNER PHYSICAL EDUCATION DIRECTOR

(By Marilyn Gardner)

At the moment, Miss Althea Heimbach can think of "nothing more wonderful than to have no plans at all" after June 5.

That's the date of commencement exercises at Milwaukee-Downer College. It also marks Miss Heimbach's retirement as director of the college's physical education department, a job she has held for 41 years.

"Oh, I'll have dozens of things to do," she added hastily, "but, really, my plans at the moment are nothing. Isn't that glorious?" Miss Heimbach, 1560 North Prospect Ave-

Miss Heimbach, 1560 North Prospect Avenue, doesn't fit the traditional caricature of a physical education teacher, a brusque, muscled creature who strides about barking orders to one and all.

Instead, she's a soft spoken woman with a modest manner. She is short and rather slight—"wiry" is the adjective she used to describe herself.

Her fluffy white hair is combed back smoothly from her lightly tanned face and curled in a simple roll. And she said, "I love housework, and I love to cook. I guess I'm an old hausfrau at heart."

BELIEVES WHAT SHE TEACHES

Miss Heimbach is, however, a firm believer in her profession. "Physical education should be part of everyone's education," she said stanchly, "and physical activity should be part of anyone's life."

Undoubtedly, there are cases which seem to disprove this, she added. "Some famous persons have been completely sedentary, yet they have contributed tremendously to the world. But the average person will be able to function better in every way if he gets some exercise. After all, our body is primarily muscle."

When she first entered the field, exercise was regarded as a way of achieving good health. "Now we know that exercise won't make you healthy, but it will help keep you healthy—and I'm using the word 'healthy' to include mental as well as physical health. Being active is part of being human."

"CRUSH" ON CAREER

She decided to take physical education in college because of a "crush" she developed on a girl friend of her sister's. The friend, who was majoring in physical education at Oberlin (Ohio) College, came to visit the Heimbach family in Coldwater, Mich., "and I was simply enthralled with her," Miss Heimbach remembered with a smile. "I was about a sophomore in high school, but I decided then and there that was what I was going to do, too."

Her parents were a bit dubious about her ambition, but when it came time for her to go away to school, they decided she could try it if she wished. She went to Oberlin, began taking physical education classes, "and I utterly loved it. I never stopped liking it all through college or ever since, I guess."

BEGAN WITH BEGINNING

She did, however, have some difficulties. "I had never had a basketball in my hands until I went to college. Oh, I was an active child. I hung by my toes from the rafters in grandfather's barn and all that, but I knew very few real games or sports."

Consequently, she had to enroll in the beginning sports classes. "It was beginning tennis, beginning basketball, beginning hockey, beginning everything. But I had to do it this way; I had no background in sports."

The main emphasis in those days was not on sports, however. "Gymnastics were the thing, and I did well in those, luckily."

She was graduated in 1918 and went to teach at the YWCA in Gloversville, N.Y. A year later, she came to Downer as head of the physical education department.

She still remembers her fright at finding herself a member of a college faculty. "I was greener than green, and my assistant was even greener than me. I can remember thinking, 'Oh, if I could only grow old fast.'"

LEARNED AS SHE TAUGHT

Many of the sports now included in the physical education classes at Downer weren't even known when Miss Heimbach started teaching.

"Badminton came in during the thirties," she said, "and we had to learn to play it, I remember buying a racket for myself, one as a Christmas gift for a colleague, and two others. Whenever we could find two other people, we would play badminton."

She learned to play golf in much the same way. "A bunch of physical education teachers in Milwaukee learned together. We got a pro to help us and we just worked at it until we could teach it."

Her training has made it easy for her to learn new sports in a hurry, Miss Heimbach believes. "You learn how to analyze the movements, and that makes it easier. I also taught kinesiology, the science of movement, to our occupational therapy students, and that has taught me to be very analytical of coordination and muscle movement."

LUCK OF COMMUNICATING

Teaching is a very demanding but satisfying job, she feels. "I think that often getting through to your students is a matter of luck.

"Anyone who has taught for many years and got satisfaction from it knows this, I think. But it's funny. You never really know when you're influencing a student." Sometimes, she added thoughtfully, you

Sometimes, she added thoughtfully, you learn that you helped a girl years after she has left school. Other times, you can see the results immediately.

Innovations aplenty have come during Miss Heimbach's years at the college. The emphasis in teaching physical education swung away from rigorous calisthenics toward more scientific work in posture and sports.

One of the classes she likes best is simply called freshman fundamentals, she said. "We work on any of the movements of everyday life—standing, sitting, walking, lifting, pushing. We try to make the girls see that smooth, rhythmic movements of the body are attractive. Some girls need this kind of work very badly, others already know it."

Gym costumes have also changed radically, going from middy blouses, bulky black bloomers and long stockings to today's trim looking suits.

"Now those old customes look foolish, but they didn't then," Miss Heimbach said. "We accepted them. I remember, though, in the twenties. We got some circular flannel bloomers which were more fitted around the waist. My, we thought we looked chic."

waist. My, we thought we looked chic."
"Oh, and tap dancing," Miss Heimback
laughted heartily. "How we did tap dance
for a while."

COACHES ROWING

In 1933, Miss Heimbach began to coach rowing, probably Downer's most famous and popular sport. "The girls were rowing when I came here," she said. "We can't even find records of when Downer girls first started rowing, but we do know they held their first regatta in 1902."

The teams were coached by "an outside man," she added, a former member of a rowing team at the University of Wisconsin. "I used to go down occasionally and row with the girls. Then, finally, I went to the University of Wisconsin and was taught by their rowing coach, so I could take over here."

Field hockey has always been one of her favorite sports—and one in which she was most skillful.

She has done a lot of umpiring field hockey games and even won a national A rating for umpires.

"Oh, and I used to play a lot of tennis," she said, "and I loved badminton and golf." An auto accident 6 years ago and a knee injury put a severe damper on her own sports activity, "but I'm sure I'd still be playing golf if I could. I just loved it, and I was getting good enough to get some satisfaction

When she first came to Downer, Miss Heimbach was astonished to learn that her predecessor had been there for 6 years. "Six years,' I thought, 'Oh, I'll never stay that long.' She pauesd a moment and laughed heartily.

"You know, my life seems to be full of famous last words. I always said I was never going to teach and I was going to marry early. I've learned not to make any rash statements."

It is possible that her comments about having no plans for her retirement fit into this category of "famous last words." For, as Miss Heimbach talked, it turned out that she did indeed have plans—not specific plans, to be sure, but enough outside interests tookeep her going for some time.

Photography is one of her hobbics; so is travel "and there are lots of places I want to

Study has become practically a habit during her life, for she has taken summer classes at Columbia University, Cornell, and the Universities of Wisconsin and Michigan. She had also taken every class in Spanish given at Downer, "and maybe now, I'll have a chance to put it to some practical use."

There also will be time for reading, television watching, entertaining friends at her apartment, "and for just looking at the lake," she added with a smile. "My apartment has a lake view, and a friend of mine who comes to vist always says, "If I lived here, I wouldn't do anything but sit and look at the lake."

Khrushchev's Paris Press Conference

EXTENSION OF REMARKS

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. WIER. Mr. Speaker, the subject on every tongue today appears still to be the summit collapse. Regardless of the individual's viewpoint on who is to blame, or who bungled, or how far we should or should not have gone to appease Khrushchev, the challenge of this cold war is more apparent and imminent than ever. Each Congressman's mail will reveal this, and much thought and attention continues to be focused on the subject.

Under leave, therefore, to extend my remarks in the Record, I am pleased to insert a copy of the letter addressed to our State Department by my good friend

and constituent, Mr. M. M. Perry, of Minneapolis:

U.S. STATE DEPARTMENT, Washington, D.C.

GENTLEMEN: Thousands of people of the world, particularly Americans, have watched, listened, and read about the Soviet Premier's Paris press conference.

Are his remarks, insults, and accusations to go unanswered?

The publicity departments of both the President's Office and the Secretary of State's Office should stage a campaign for the press wherever free press and free speech are available. Let the people of the free world know about the Russian acts, and attempted acts. of espionage in the United States and its allied countries. Answer the Premier's remarks about "no good" agreements by listing strongly and frequently the Soviet broken promises. Get on the offensive as regards aggression, Hungary, etc. Play up his broken word in respect to free elections in his satellite countries. Remind the people of their obstinate position in all U.N. matters. Remind us also that Americans could have a 6-year low tax program if we would accept their standard of living (more automobiles and tractors in one State than they have in the entire Soviet Union), same for refrig-erators, telephones, etc. Tell the Americans how much money we have given them since the war. How much they owe us and how they are paying for it.

We and our allies are back in a cold war in a big way—one that could trigger a hot war—why not stop pussyfooting and keep the people of the free world informed and thereby prepared for the worst?

Get your publicity departments in high gear now, and pour it on.

Sincerely,

M. M. PERRY, President, Plews Oiler, Inc.

First Empire State Award for Excellence in Medical Reporting Presented

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 25, 1960

Mr. KEATING. Mr. President, I am happy to call attention today to an award initiated and sponsored by the Medical Society of the State of New York which is to be presented annually to the reporter who contributes most to the understanding of health and medicine in New York State. The first such award was presented yesterday to Miss Cathy Covert, science writer for the Syracuse Herald-Journal, for a series of articles on infant mortality.

Mr. President, I am very much impressed by the active interest here evidenced in the need to provide all Americans with an understanding of the challenges facing medical science and of the great progress which has been made to date in the conquest of disease and in the furtherance of public health measures.

I am certain that Miss Covert's articles and the work of the several reporters who received honorable mention certificates have been of great benefit to the people of New York State. My hat is off to each of them for their contributions to the welfare of my State.

Mr. President, I ask unanimous consent that a release put out by the New York State Department of Health concerning the first Empire State Award for Excellence in Medical Reporting be printed in the Appendix of the Record.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

NEW YORK STATE DEPARTMENT OF HEALTH, HERMAN E. HILLEBOE, M.D., COMMISSIONER

New York City, May 24.—Miss Cathy Covert, science writer for the Syracuse Herald-Journal and the Syracuse Herald-American, was named today as the winner of the first Empire State Award for Excellence in Medical Reporting.

Miss Covert received the \$500 award from Dr. Norman S. Moore, President of the Medical Society of the State of New York, at the first general session of the 56th Annual Health Conference at the Manhattan Center.

The annual award is sponsored by the Medical Society of the State of New York and Annual Health Conference Inc., on behalf of the New York State Health Department. It has been established to encourage the further development of sound medical reporting in New York State and to recognize the significant contributions to public knowledge and understanding of health and medicine that are made by reporters and newspapers.

Certificates of Honorable Mention were awarded John Maguire, Albany Times-Union; Miss Mildred Spencer, Buffalo Evening News; Mrs. Lois O'Connor, Ithaca Journal; Miss Kitty Hanson, New York Daily News, and Edward Swietnick!, Albany Knickerbocker News. In addition, the Rochester Times-Union received a special public service award for a series of articles on "A Question for the Doctor."

Nominations were considered at a meeting of an waards jury in April. The judges were Prof. Hillier Krieghbaum, Chairman, Department of Journalism, New York University, representing the National Association of Science Writers; Mr. David H. Beetle, Editor, Albany Knickerbocker News, representing the New York State Association of Newspaper Editors; Dr. William Hammond, Associate Editor of the New York State Journal of Medicine, representing the Medical Society of the State of New York; Dr. Granville W. Larimore, Deputy Commissioner, New York State Health Department, representing the State Health Department, representing the State Health Department, and Dr. James J. Quinlivan, Assistant Secretary, Annual Health Conference, representing Annual Health Conference, Inc.

The judges commended the general accuracy of the material provided by nominees for the award and said there were only three questions concerning the validity of medical statements in the more than 300 stories which were reviewed.

The judges evaluated each nomination from the standpoints of accuracy, initiative, and readability. While reporters were nominated for a specific article, or series of articles, the judges also considered the general medical and health stories written by each nominee during the year.

Miss Covert was nominated for a series of articles probing the reasons for an increase in the infant death rate in the State and Nation, and stories concerning a study linking radioactive rock with the birth of malformed infants.

She received her bachelor of arts degree in journalism from the State University of Iowa in 1945 and since then has worked as a reporter for the Des Moines (Iowa) Register and publicity director of Coe College, Cedar Rapids, Iowa. She became medical writer for the Syracuse Herald-Journal and Syracuse Herald-American in 1951.

In 1953, Miss Covert received the Albert and Mary Lasker Award for Excellence in Medical Writing, and the following year she received the Howard Blakeslee Award of the American Heart Association for writing on heart disease. Earlier this year she was presented a citation by the Associated Press for her series on congenital malformations and radioactive rock.

Miss Covert is a member of Phi Beta Kappa, Theta Sigma Phi, honorary journalism sorority, and the National Association of Science Writers.

In private life she is Mrs. Frank N. Stepahek, Jr., and has two children, Carolyn, 5, and Frank III, 2.

Nominations for the annual award can be made by the newspaper employing the reporter, the county medical society in the area served by the nominee's newspaper, or the county, city or district health officer in the area served by the nominee's newspaper.

Public Works Appropriation Bill, 1981

SPEECH

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12326) making appropriations for civil functions administered by the Department of the Army, Certain agencies of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority, and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes.

Mr. HAGEN. Mr. Chairman, I am grateful for the opportunity to appear to urge appropriations for multipurpose irrigation and reclamation projects located in my congressional district in California.

I sincerely appreciate the cooperation which has been accorded me by the Appropriations Committee in past years and I appreciate the action taken by them this year.

The purpose of my appearance is to urge favorable House action on the following appropriations:

Terminus Dam on the Kaweah

River, Tulare County, Calif... \$6,300,000 Success Dam on the Tule River,

Tulare County, Calif_ Stone Corral Irrigation District_ 2.588.000 1,045,181

Tea Pot Dome Water District distribution system_____ 925, 427

East side unit, proposed exten-sion of the Central Valley

project, continued planning ... 566, 257 Callente Creek stream group, Kern County, Calif., comple-

tion of planning 15,000 Pine Flat Reservoir, Kings River. 500,000

All of the above mentioned items are recommended in the President's budget in the amount which I have specified except the Caliente Creek stream group and this also has received the approval of Mr. Cannon's splendid committee.

I am sure that the Members of this Congress are well acquainted with the Terminus and Success projects and the urgency which dictated the appropriation of funds which have been expended thus far. The two dams are imperative to impound runoff waters from the Sierra Nevada Mountains which have caused an inestimable amount of damage in floods most recently in 1952, 1955,

Both of these projects are currently under construction and, in fact, are rapidly nearing completion. The \$2,-588,000 recommended for Success Dam would be the final increment toward completion of the complete works at a total cost of \$14,200,000. The appropriation of the recommended amount would permit this dam to be finished on the scheduled date of June 30, 1961.

The \$6,300,000 contained in the bill for Terminus Dam would bring the project to a point of more than 80 percent completed and would leave \$3,-782,000 still to be appropriated.

I respectfully urge this House to appropriate adequate funds to permit these flood control projects to be completed as scheduled.

I will now comment on the request for funds for the Stone Corral Irrigation District and the Tea Pot Dome Water District, both located in Tulare County. In both instances irrigation distribution systems are in the process of construction by the Bureau of Reclamation under repayment contracts.

The estimated total cost of each project is \$1,888,000. The \$1,045,181 for Stone Corral would leave an additional \$450,000 to be funded.

The \$925,427 for Tea Pot Dome would complete the appropriations for this

project.

With respect to the proposed east side project, feasibility studies have been underway for several years to ascertain ways and means of developing an additional water supply for the east side of the Southern San Joaquin Valley. The plans involve a proposed canal which would convey water from northern California along the east side of the valley into the water-deficient areas of Kern County and Tulare County.

I can assure you that there is a dire need for water in this area and that the situation worsens each year. \$566,257 which would be expended for planning surveys would be a continuation to extensive prior planning. Failure to continue such planning would nullify previous expenditures for this useful purpose.

Regarding the Caliente Creek Stream Group request, it is my understanding that estimates by the Corps of Army Engineers place the total cost of the remaining survey work at \$30,000. I further understand that the Engineers have a capability of performing half of this work during fiscal year 1961 and the remainder during fiscal year 1962.

In view of this fact, I would respectfully urge concurrence in the committee's approving the sum of \$15,000 for this undertaking.

Now I turn my attention to the \$500,000 appropriation recommended for Pine Flat Dam and Reservoir on the Kings River. As the Committee is aware, the physical features of this dam have been completed for several years. Since that time, the construction of downstream channel and levee improvements has been delayed pending observation of changes in the streamflow as a result of the impoundment.

The channel clearance and levee work was authorized as a part of the project and I urge that the appropriation be approved in order that the work may be completed by 1962, as scheduled by the Corps of Army Engineers.

The Communist Seizure of Czechoslovakia

EXTENSION OF REMARKS

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. DOUGLAS. Mr. President, the squeals of the Communist puppets in Czechoslovakia against the recent reference by our Secretary of State, Christian Herter, to their forceful seizure of the Czechoslovak state were authoritatively answered by a leading Czech patriot, Dr. Petr Zenkl, in a letter written by him to the New York Times, and published in its issue of May 22, 1960. Dr. Zenkl of course is also well known as the chairman of the Assembly of Captive European Nations, and is working unceasingly for their freedom.

Dr. Zenkl's letter makes it quite elear that the demand of the Czech Communists for an apology from Secretary of State Herter is another ludicrous attempt to rewrite history.

I ask unanimous consent to have Dr. Zenkl's well documented letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD. as follows:

COUP IN CZECHOSLOVAKIA-COMMUNIST DOC-UMENTS QUOTED IN SUPPORT OF HERTER

(The writer of the following letter, now living in exile, was formerly lord mayor of Prague and later Vice Premier of Czechoslovakia.)

To the EDITOR OF THE NEW YORK TIMES:

The Times reported on May 19 that the Czechoslovak Government demanded an apology from Secretary of State Herter for a remark made recently to the effect that the Czechoslovak Communists in February 1948 seized power in that country by force.

The history of the Communist seizure of power, based on thorough research and documents, and available both from diplomatic and Communist sources, is by now well known. Let me here quote exclusively from documents published recently by historians of the Communist Party which in themselves amply support the correctness of Mr. Her-ter's statement concerning Czechoslovak Communists' seizure of power.

Commemorating the February 1948 events, Radio Bratislay stated on February 23, 1960:

"The manner in which the people's democratic power was realized in Czechoslovakia [in February 1948], as well as the entire development of the Republic between 1945 and February 1948, represents a tremendous object lesson for the entire progressive movement in the world. It is a lesson and a great hope. It shows how the proletariat can, under certain circumstances, insure for itself the leadership of the nation, how together with its allies it can seize leading positions in the power machinery of the state and step by step undermine the economic, political, and ideological positions of the bourgeoisie" (i.e., that of the lawfully elected government).

POLITICAL LINE

In a research study published by the Historical Institute of the Communist Party of Czechoslovakia (Prague, March 1958) the following authoritative statements appear: "Efforts to create an anti-Communist bloc were broken up by Communists in a number of places by separating the rank-and-file members of the other parties from their leadership * * *. [This] political line had to be coupled with caution lest people needed as supporters be alarmed; they were to be won over by practical politics and not by statements of final aims of the political program of the party which might dissuade them from cooperation with the Communists. * * * Our policy * * * was Jone of] securing positions already held and of pushing the enemy into a defensive position * * *.

"[In Slovakia] the Board of Commissioners, hitherto controlled by the Democratic Party, was forced to resign. In the new Board of Commissioners the Democratic Party lost its majority without regard to the results of the 1946 elections. * * *"

Radio Prague, reminiscing on the February 1948 events, declared on February 25,

"Then came the decisive moment. The order was to destroy reactionaries in the Government, to stage a people's attack under the leadership of the [Communist]

party * * *."

Czechoslovak Communist sources which deal with the 1948 coup repeatedly stress one point consistent with the basic teaching of Leninism—namely, that power in a state cannot be shared with anybody, however democratically elected; that the dictatorship of the party is the final aim of any Communist party anywhere; and that this power must be attained by all available means, the choice of which may be dictated by the international situation and domestic

The case of Communist seizure of Czechoslovakia in 1948, even according to Communist documentation, is no exception to the rule.

PETR ZENKL.

NEW YORK, May 19, 1960.

conditions.

Summit Conference

EXTENSION OF REMARKS

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to submit an inspiring resolution, duly passed by the Common Council of the City of Poughkeepsie, N.Y., on May 16, express-

ing bipartisan support of our President at Paris in upholding the united desires of our Western allies. I am sure that all real Americans will approve of this outstanding action by the city fathers:

Resolved, That the Common Council of the City of Poughkeepsie, composed of both Republicans and Democrats, duly elected to such office, hereby wish to go on record as endorsing the firm stand taken by our President, Dwight D. Eisenhower, at Paris during the current summit conference in upholding the united desires of our Western allies, and we express the wish that all public bodies take a similar position in order that the Soviet people be made aware by such spontaneous action that we support our Commander in Chief in his efforts to maintain peace in the world.

Howard H. Gibbs. City Chamberlain.

Bold Action Needed To Help Save Our City

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Wednesday, May 25, 1960

Mr. KEATING. Mr. President, sometimes I think we Americans are plagued by a split-level mentality with regard to the fate of our great urban centers. Our homes are geared for the present. Our cities are geared for the past.

There is no greater challenge to our internal welfare today that the decay of our metropolitan areas. The fault for the plight of our cities cannot be traced to any one factor or any one source. It is, however, a matter which must concern every American, regardless of where he lives, because so much of the welfare and progress of our Nation depends on the good health of our cities.

Mr. President, we shall not find answers to this challenge in timid, half-hearted responses. We must take bold, decisive action, action attuned to the realities of present day living and mid-20th century problems.

The city fathers and various city groups must play their part in this great effort. On the Federal level, we must act by establishing a Department of Urbiculture, such as I have proposed in S. 2397.

I believe the creation of such a Cabinet-level Department would provide the coordination and cohesion which is now lacking in Federal programs to aid our cities. It would provide the national spearhead to attack this national problem and help provide the national solution. This attack cannot be sporadic, nor on a regional, State, or local level alone. It must be total. It must be of grand design. It must be given the stature and direction of Cabinet responsibility.

Mr. President, I have been gratified by the great interest which is being taken by individuals and organizations all over the country in the proposal to establish a Federal department to deal with urban problems. An article in the April 1960 issue of the Retail Clerks International Advocate, entitled "Bold Planning Is Needed To Save Our Neglected Cities" discusses this whole problem in interesting fashion. I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOLD PLANNING IS NEEDED TO SAVE OUR NEGLECTED CITIES

RCIA members, who are primarily city dwellers, share with their fellow citizens the pressure of frustrations created by congested roads, vanishing parking places, rising crime rates, smog, galloping slums, and the deterioration of the central city. These problems are not mere personal irritations; they are in fact symptoms of urban erosion which is a major nationwide problem.

It is, moreover, a problem which cries out for our boldest and most imaginative solutions. What is needed is nothing less than a revolutionary change in our whole concept

of looking at our way of life.

A few statistics will indicate the historical development of the present mess. The 1890 census, taken 2 years after the founding of the RCIA, showed that more than two-thirds of the citizens lived in rural areas at the time. By contrast, at the time of the last census in 1950, 85.5 million Americans lived in 174 standard metropolitan areas. This represented a complete reversal of the original situation; by 1950 more than two-thirds of the Nation's people lived in cities. This was a 22-percent increase over the number recorded in 1940.

Flocking to the cities has increased at an accelerated rate in the last 10 years, and it is now estimated that 85 percent of the citizens of the United States live in urban areas. These centers produce about 70 percent of the wealth of the Nation. There is no doubt that the present trend to urban civilization will continue throughout this century. By 1975, it is estimated that the urban areas will occupy twice the territory they do today. By the year 2000, we are told, some 235 million persons will be living in the metropolitan areas of the United States.

The meaning of all these figures, though

The meaning of all these figures, though often overlooked, is inescapable: Citles, which once served as service areas for the countryside, now dominate the landscape

and our civilization.

The central cities, together with their sprawling suburban peripheries have given rise to a new designation: the metropolitan area concept. For example, Greater New York City embraces an area of 22 counties in three states.

As the suburban areas push farther away from the central city, the boundaries of neighbors tend to become obliterated. Today, there is scarcely any undeveloped land between New York City and Norfolk, and in the years ahead it is likely that a solid urban strip will develop, stretching all the way from New York to Atlanta. Other major urban strips are in the process of formation in other parts of the country. As these trends continue, it is not unlikely that cities will become more important than states.

Because this is a national problem it calls for a national solution. The attack cannot be sporadic, or on the regional, State, or local level. Although many things are being done to cope with specific problems, such as urban renewal, highways, flood control, water, and land management, school construction, law enforcement, and economic aid, there is a sad lack of coordination among these programs. What's more, many cities aren't even aware of what help is

available or how to get it, and no thought is being given to how work in one area affects other problem areas. A highway linking two major cities has in itself impact on commercial and residential growth, on relocation of residents, even on crime rates.

Urban renewal is related to transportation, to water supplies, to sanitation facilities, to law enforcement. All are tied into the expanding economy of the nation. All are part of the defense system of supplying the goods and getting them delivered.

Statesmen who have concerned themselves with the problem are calling for a new cabinet post to promote the welfare of the overwhelming majority of citizens who live

In the cities.

A bill to establish a "Department of Urblculture" has been submitted by Senator KENNETH B. KEATING. He visualizes the department as being able to perform the fol-

lowing functions:

"This projected department could center attention on the many unique city and sub-urban problems of national scope and importance. It would allow the coordination of numerous existing Federal programs directed at the metropolitan areas of the country. It would promote consideration of the interests of the nation's city-dweller at

the highest levels of government.
"I look to a Department of Urbiculture as a means of assuring that the cities get a fair share of the substantial Federal funds now being spent on housing, highways and similar programs. In close cooperation with State and local governments, it could develop national programs for combating smog, slums, and traffic snarls just as the Department of Agriculture has developed programs to combat drought, soil erosion and depressed farm income.

"I should like to emphasize that this department would not seek out new means for Federal interference in urban affairs. Its prime and constant function would be the task of providing guidelines, advice, pro-graming and planning assistance, and g and planning assistance, and cooperation and coordination in-Overall ' tended to assist our cities and localities in

Solving their own problems."

Senator Vance Harrke, of Indiana, who formerly was mayor of Evansville, is another statesman with a deep grasp of the problems resulting from the Jack-and-the-Beanstalk growth of our cities. But Hartke beanstalk growth of our cities. But have is not dismayed. He believes that through proper planning and diligent and skillful efforts the problems can be solved. His them. thoughts on the subject include the fol-lowing: "Our cities are rich. Rich in material things. Rich in human resources.

They are themselves important resources.

"Our cities are our latest frontier. Unless onter space can be substituted for green space and parking space, the cities may be

our last frontier.

"Like earlier frontiers, our cities have been settled, exploited, and somewhat eroded. Continuing this pattern means degrading the lives of millions. Yet, our goal should be continuous, raising of human dignity.
This is impossible in the midst of urban erosion.

"Rising crime rates, social diseases, juvenile delinquency, segregation, filthy living conditions flourish partly because of uncon-trolled or poorly controlled urban growth and population management.

"Out in the countryside our rural residents learned some of these lessons long ago. They found out conservation is essential to growth.

"Soil conservation, for instance, is widespread and national in scope. Yet there is almost no urban conservation program.

"If we can work to save and restore the resources that God had given us, surely we

ought to be able to do the same with resources that have been largely of our own making. The spectacle of urban growth, then, requires anticipating needs of citizens for applying technological achievements to make life better through them. It requires stopping erosion and restoring its effects."

Jobs for Youth

EXTENSION OF REMARKS

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. SANTANGELO. Mr. Speaker, during my study of the subject of juvenile delinquency, one of the greatest complaints against industry and government in connection with the prevention of juvenile delinquency was the failure to provide employment for the youth of our country. After high school and before induction into military service, employers have been reluctant to hire a young man because of the uncertainty of continuity of employment. As a result, young men who do not preoccupy their time in college find themselves unable to obtain employment to provide for their miscellaneous needs and to prepare for a future. The gloomy out-look is either a draft in the service or enlistment.

Some organizations have recognized the desideratum or need during this critical period and have embarked upon a program of obtaining jobs for youth. One of these organizations is the "Jobs for Youth," a nonprofit organization which has attempted to fill the needs of the employers and to help the youth of the community. The organizer and moving spirit of this group is Mr. Anthony Sorvillo of 68 East 97th Street, New York City. The organization Jobs for Youth is located at 400 East 83d Street, New York, N.Y. It has endeavored to obtain employment for young men as stock boys, messengers, packers and delivery boys.

A brochure issued by this enterprising organization Jobs for Youth sets forth its purpose and the scope of its activities. If more agencies or organizations carried out a similar program, boys would be occupied and less likely to become juvenile delinquents. The bro-chure reads as follows and I commend it to the readers' attention:

Jobs for Youth is a free employment bureau and guidance service for young people. It serves youth 16 to 21 years old with special emphasis on boys. Younger boys are cial emphasis on boys. also given counseling and referred for after-

school and summer work.

Boys who are intimidated by large downtown employment offices eagerly seek the advice of a friendly neighborhood counselor. In addition to the regular staff there is a part-time worker assigned from the New York State Employment Office who does counselling and job referral.

We know that a boy at work is less likely to become a delinquent or get into trouble. North Dakotan Finds Real Demand for Durum in Europe

> EXTENSION OF REMARKS OF

HON. NORMAN BRUNSDALE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. BRUNSDALE. Mr. President. representatives of the North Dakota Wheat Commission, an agency established by the State to promote the sale of North Dakota wheat, recently completed a tour of some of the wheat importing countries of Europe. gained considerable information which will be of assistance to their program in North Dakota. Likewise, the informa-tion secured will, I believe, be helpful to any exporters of wheat regardless of where that wheat is raised.

Mr. President, I ask unanimous consent that the article, "North Dakotan Finds Real Demand for Durum in Europe" by Harold M. Johnson appearing in the Farmer dated April 16, 1960, and published by the West Publishing Co. of St. Paul, Minn., be printed in the Appendix of the RECORD. In this article Mr. Otis Tossett, chairman of the North Dakota Wheat Commission, summarizes the information gathered in the wheat importing countries in Europe.

There being no objection, the article was ordered to be printed in the RECORD.

as follows:

NOETH DAKOTAN FINDS REAL DEMAND FOR DURUM IN EUROPE-TWO EUROPEAN MILLERS SAY THEY'D BE WILLING TO BUY QUALITY DURUM AT A GOOD PREMIUM

(By Harold M. Johnson)

A North Dakota wheat farmer, just back from 6 weeks in Europe, has received firsthand assurance from several European durum millers that they are definitely interested in buying North Dakota durum.

Otis Tossett, wheat grower, buyer, and seller from Bottineau County, and director of the North Dakota State Wheat Commission, found durum, particularly that from North Dakota, a bright spot in the outlook picture for sale of domestic wheat abroad.

Two European millers with whom Mr. Tossett visited both indicated their desire for North Dakota durum with statements to the effect that "we'd be willing to buy your durum at almost any price, if we could get

Can North Dakota farmers, who produce the bulk of the annual durum crop grown in the United States, capitalize on this favorable demand situation? "I'm convinced we can, if we will concentrate on growing the durum needed to do the job. Right now, there is concern that not enough additional durum may be planted this spring to meet increased demands at home, however," answers Mr. Tossett. "Meeting this demand, which is far ahead of present supply because of a short crop last year, will require twice as many durum acres as were planted in 1959," he told the Farmer in a special interview shortly after his return from Europe.

SHIFT CROPPING PLANS

He believes this domestic demand, coupled with the added potential for sizable markets abroad, makes this one crop wheat farmers in the durum belt of the Dakotas and Minnesota won't want to overlook in making last-minute cropping plans this

spring.

Mr. Tossett's European trip was sponsored by the foreign agricultural service of the U.S. Department of Agriculture. All of his travel expenses, and those of his traveling companion, W. W. Gerber, director of the Kansas State Wheat Commission, were paid for in foreign currency under Public Law 480.

Mr. Tossett found durum processing to be a fast-growing business in Europe. Compared to seven durum millers in the United States, there are several times that many in Europe. Germany alone, for example, has

22 durum millers.

"In their search for quality durum, major European millers had teams traveling Turkey and even Russia last summer to encourage production of durum. European millers weren't so fussy about bread, but they insist that spaghetti and macaroni products be

perfect," said Mr. Tossett.

Persons he talked with seemed to "warm up" and speak more freely, once they discovered he wasn't a politician but a wheat farmer, and a spokesman for North Dakota's wheat farmers who voluntarily contribute a fee, deducted from each bushel of wheat sold (\$2 per thousand bushels) for promoting their own quality product.

Here are some opinions from millers, bakers, grain brokers, port authorities, and wheat farmers in the 11 European countries Mr. Tossett visited, together with ideas as to what is right or wrong with U.S. wheat being

shipped to Europe:

One of the biggest headaches of foreign importers who deal in U.S. wheat has been the "flagship" clause which entitles U.S. ships to carry a large percentage of subsidized grain which we export. "This regulation poses a hardship in that U.S. ships aren't always available. Several foreign firms complained bitterly about not being able to maintain steady production at times because of shipping delays resulting from this flagship clause," said Mr. Tossett.

WANT TOP QUALITY

He also noted considerable concern for quality wheat. Most local government regulations in the countries he visited require that 60 to 80 percent of their millers' total grind be home-grown. Being allowed such scant admixtures, millers are insisting that the 20 to 40 percent outside wheat they can buy is of top quality.

Mr. Tossett said there is general dissatis-faction with U.S. wheat in Austria. Most wheat they have been getting has been low

in baking quality, compared with other wheat, such as from Canada.

"Austrian officials seem to think the trouble with U.S. wheat is that it has been in storage too long. And they had good evidence to substantiate their claims," accord-

ing to Mr. Tossett.

"Their 1956-58 shipments of U.S. wheat, reported as U.S. Hard Red Spring No. was loaded out of stocks at Baltimore, Albany, N.Y., and other eastern and southern ports. They obviously received old, blended wheat from our mothball fleet. In 1959, however, they did receive what they considered to be very satisfactory wheat from the United States. Much of it was loaded in Superior, Wis., which would make it Midwest grown and new-crop wheat," he pointed

Austria is one of the countries where millers are required to use home-grown wheat for 80 percent of their total grind. Being allowed only 20 percent outside wheat, they have little choice but to deal with the foreign market that offers the best assurance of providing quality wheat.

This situation, plus their request that they be allowed to order U.S. wheat by point of origin (region grown) and year grown, was passed along by Mr. Tossett to high-ranking officials in the USDA in Washington with whom he met immediately upon his return from Europe.

He also called attention to the glaring loophole in the law which regulates Canadian imports of wheat into the United States.

The consequences of this loophole is seriously hampering our competitive position abroad," he stated. "We are taking much of Canada's lower quality wheat. She, in turn, is able to concentrate on sending only her best wheat abroad."

The loophole to which he refers was created under the President's proclamation of May 28, 1941. It specified that "wheat unfit for human consumption" could come in from Canada over and above the regular import

quota to the United States.

Asked by the Farmer if he thought this three-State commission had made progress toward further development of European wheat markets, Mr. Tossett feit they had. "For one thing, they have been able to secure substantial Public Law 480 funds to aid their promotional efforts. This is one of their major, mutual benefits from banding together. About the only way Public Law 480 funds would be available to North Dakota would be to join with groups who have preceded us in this field of wheat promotion," Mr. Tossett pointed out.

Agiculture Department Report on the Cancer Clause in the Food Additives Law and Color Additives Legislation

EXTENSION OF REMARKS

OF

HON, JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. BARR. Mr. Speaker, one of the important and complex issues which must be resolved at this session of Congress concerns proper Federal regulation to assure the safety of chemicals and other additives used in growing and processing the Nation's food supply.

The broad objective is clear: We want to fully safeguard the public health without needlessly stifling scientific research and technological progress which bring so many benefits to farmers and consumers alike. This objective often requires the exercise of very careful scientific judgment in individual cases.

In recent weeks a growing number of eminent authorities have stated that the soundest public policy is for Congress to leave such judgments to the scientists in the regulatory agencies, such as the Food and Drug Administration, rather than attempt arbitrary or inflexible mandates by law. These authorities. therefore, have recommended modification of the rigid cancer clause in the existing food additives law and in the pending color additives legislation. The amendment flatly prohibits use of any substance which can be made to induce cancer in laboratory animals, even if the dosage in animals is thousands of times greater than in the intended use for man, and if other laboratory conditions are altogether unrelated to the actual intended use of the substance.

Modification of this amendment, to permit greater discretion for scientific judgment, has been recommended by the great majority of a scientific panel which testified before the House Committee on Interstate and Foreign Commerce. Since the hearings were concluded, further support for modification was voiced by a group of scientific advisors to the White House, headed by Dr. George B. Kistiakowsky.

More recently, the Agriculture Department has sent a letter to the Commerce Committee which summarizes very effectively the case for modification of this legislation, asserting that these cancer clauses as they stand now "are flat prohibitions against the exercise of scientific and professional judgment in the determination of safety." I am certain, Mr. Speaker, that all of these authorities are objectively and completely dedicated to the public health.

The Agriculture Department letter, dated May 16, has received little attention and, since the hearings have now been closed, many Members of Congress may not be familiar with its contents. I believe every Member of the House should carefully consider this letter and I ask that it be printed in the RECORD at

this point:

DEPARTMENT OF AGRICULTURE. Washington, D.C., May 16, 1960.

Hon, OREN HARRIS.

Chairman, Committee on Interstate and Foreign Commerce, House of Representa-

DEAR CONGRESSMAN HARRIS: This is in further reference to the Department's statement of March 11, before your committee on H.R. 7624 and S. 2197, bills which would amend the Federal Food, Drug, and Cosmetic Act relating to color additives. We indicated to the committee at that time that the Department would prefer to delay making any recommendation with reference to the so-called anticancer clause until there had been opportunity to consider the matter further.

We now understand from consultations with representatives of the Department of Health, Education, and Welfare that your the committee may wish to consider also feasibility of amendments to the Food Additives Amendment of 1958, which we understand are being sent to the committee by that Department. Accordingly, we are also commenting on these amendments in this letter.

In the passage of the original Meat Inspection and Food and Drug Acts, the Congress provided for the surveillance of all foods in interstate and foreign commerce.

In the case of meat, a comprehensive inspection system was established with provisions for preclearance in the form of inspection of all carcasses, meats, and meat-food products, including approval or rejection of chemicals and other additives. This is done under regulations issued by the Secretary of Agriculture as circumstances and the advance of knowledge require, to assure that the products marked "Inspected and Passed" are sound, healthful, wholesome, fit for human food, and truthfully labeled.

In regard to other foods, covered under the original Food and Drug Act, authority was not given for preclearance, but broad authority was established for action against foods found in interstate or foreign commerce to be in any way adulterated or mis-

In recent years, the trend in the Congress has been toward more preclearance in order to serve two purposes: (1) to give greater assurance of safety to the consumer; and (2) to give producers, processors, and distributors more precise guidelines for their operations

in order to assure the safety of foods to consumers. Five congressional enactments are in point:

(a) The "new drugs" provisions of the Food, Drug, and Cosmetic Act of 1938 provided for the preclearance of drugs not generally recognized among experts qualified by scientific training and experience as safe for use under the conditions recommended.

(b) The Federal Insecticide, Fungicide, and Rodenticide Act of 1947 provided for USDA preexamination of economic poisons including labeling to insure safety and effectiveness in use.

(c) The Miller amendment to the Food, Drug, and Cosmetic Act in 1954 provided more workable procedures for HEW preclearance of pesticide chemicals in or on raw agricultural commodities by authorizing the establishment of tolerances when heeded-legal levels-of such chemicals in these products. The directions for use on labels registered by USDA for pesticides are gaged to meet such tolerances in or on the raw agricultural commodities.

(d) The Poultry Products Inspection Act of 1957 provided for extension of the meat inspection type of preclearance to poultry prod-

ucts by USDA.

(e) The food additives amendment of 1958 to the Food, Drug, and Cosmetic Act provided for preclearance of chemicals and other additives to foods.

In each case the Congress provided the mechanism which permits the exercise of scientific and professional judgment in arriving at determinations of safety of use and Wholesomeness of the products. These are good provisions. This Department fully supports them. The legislative histories show the necessity for the exercise of such judgment to cope with the complexity of the Problems and the rapidly advancing state of knowledge concerning them.

The anticancer clauses contained in the food additives amendment of 1958 and in H.R. 7624 on page 10, lines 11 through 22, are flat prohibitions against the exercise of scientific and professional judgment in the determination of safety. That such a flat prohibition may present problems is well exemplified in the case of selenium, a known carcinogen. Normal amounts (0.1 p.p.m.) in the diet appear to have no measurable effect upon animal health. Sheep on diets with subnormal amounts (0.05 p.p.m. or less) are not thrifty and show abnormalities of the muscular and internal organs. Excessive amounts (5 p.p.m. and above) in the diet produce poisoning. Here we have a chem-ical ical, a carcinogen, a toxicant, which in proper amount is essential to animal health. The law should not prevent proper use of

such a chemical as an additive or otherwise. In view of the above and since we understand that the Secretary of Health, Education, and Welfare has adequate authority to withhold from use any additive that he is unable to find would be safe in regard to cancer as well as in regard to toxicity and other factors, it is our opinion that the anticancer provisions in lines 11 through 22 on page 10 of H.R. 7624 are unnecessary. This is equally true of the anticancer provisions in the food additives amendment of We fully agree that the Secretary of Health, Education, and Welfare should withhold from use any additive which in his Judgment would be unsafe, but we urge that the decision on safety be left to him rather than being determined by law.

In the event the committee should desire to retain an anticancer clause in the color additive legislation, the following lan-Suage is submitted for its consideration:

In H.R. 7624 on page 10 at the end of line 22. before the period, insert the following proviso: "Provided, That this subsection share shall not apply with respect to the use of an additive, if the Secretary finds, upon the

basis of evaluation by experts qualified by scientific training and experience, that, under the proposed conditions of use, reasonably certain to be followed in practice, there is no reasonable basis to conclude that such use of the additive will involve a hazard of causing cancer in or resulting in harm to man or animal."

Similar language should be provided for the anticancer clause in the food additives amendment.

We are attaching a copy of the report of the President's Science Advisory Committee released on May 14, 1960, which supports our position on this matter.

If the above proviso is not acceptable and the committee wishes to retain an anticancer clause in H.R. 7624, it is recommended that the following proviso, which is being suggested by the Secretary of Health, Education, and Welfare, be included before the period at the end of section 706(b)(5)(B) (p. 10, line 22, of H.R. 7624):

"Provided, That clause (i) of this subparagraph (B) shall not apply with respect to the use of a color additive as an ingredient of feed for animals which are raised for food production, if the Secretary finds that, under the conditions of use and feeding specified in proposed labeling and reasonably certain to be followed in practice, such additive will not adversely affect the animals for which such feed is intended, and that no residue of the additive will be found (by methods of examination prescribed or approved by the Secretary by regulations, which regulations shall not be subject to subsection (d)) in any edible portion of such animals after slaughter or in any food yielded by or derived from the living animal."

This proviso contemplates that the Secretary of Health, Education, and Welfare will prescribe or approve methods of examination that would determine whether significant residues of additives remain in any edible portion of slaughtered animals that have consumed such feed or in any food yielded by or derived from the living animal.

Similar language should then be added to the anticancer clause contained in the food additives amendment.

In addition, the Department of Health, Education, and Welfare is proposing a modification of the prior sanction (grandfather) clause contained in section 201(s) of the Food, Drug, and Cosmetic Act as follows:

The last numbered clause of section 201(s) of the Federal Food, Drug, and Cosmetic Act (which clause is redesignated as clause (4) by sec. 101(a) of this act) is amended by inserting in such clause, before the period, a colon and the following:

"Provided, That, with respect to any sanction or approval granted pursuant to this act, this clause shall be inapplicable, and the provisions of this act (other than this clause) relating to food additives shall apply, to any such previously sanctioned or proved use of a substance if, on the basis of the information then available, the Secretary finds that, for the reasons set forth by him, there is reasonable doubt as to its safety. Except when the Secretary finds that there is an imminent hazard to public health, he shall take such action only in conformity with section 4 of the Administrative Procedure Act if such prior sanction or approval had been made public, and only after sending reasonable notice of his proposed action and the reasons therefor to any person on whose application such prior sanction or approval had been granted and any other person who had been officially advised thereof unless such personal notice is impracticable."

We have no objection to this proposal since it deals only with sanctions or ap-provals granted by the Secretary of Health, Education, and Welfare under the Food, Drug, and Cosmetic Act and would not affect the authority of this Department or the impact of actions taken by it under programs which it administers.

The Bureau of the Budget advises that there is no objection to the submission of eport.
Sincerely yours,
TRUE D. Morse, this report.

Acting Secretary.

Address by Dr. Max Tishler, Eminent American Scientist

EXTENSION OF REMARKS

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Wednesday, May 25, 1960

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech delivered by Dr. Max Tishler, president of Merck Sharp & Dohme Research Laboratories, which are located in New Jersey, at an affair sponsored by the New Jersey Chapter of the American Institute of Chemists in Newark, N.J., on April 20.

Dr. Tishler is an eminent American scientist whose many accomplishments have earned him a number of scientific honors, including election to the National Academy of Sciences in 1953. A former research associate and instructor in chemistry at Harvard University, his research work in industry has resulted in major contributions to the chemical development of many of the vitamins, the amino acids, the development of sulfa drugs and several antibiotics, including streptomycin and penicillin, and the development of the steroid hormones. These activities have resulted in numerous scientific publications.

In the light of the attention given to the role of American research scientists in the pharmaceutical industry by recent congressional hearings. I do believe that the statement made by Dr. Tishler is worthy of thorough consideration as the view of an outstanding American scientist.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

In accepting the honor scroll this evening, I feel deeply honored and, at the same time, grateful to the officers of the New Jersey Chapter of the American Institute of Chemists. I accept the scroll as a high distinc-tion, with the knowledge that there are many others in this group worthy of this same recognition for their contributions to the profession and to the science of chemistry. In expressing my profound appreciation for the scroll, I want to pay tribute to the many men and women of the Merck, scientific community who, during the past 22 years, have given me stimulation and happiness by their dedication and achievements. I also want to proclaim on this occasion my sincere thanks to Mr. John T. Connor whose enthusiastic support and deep understanding of research and the scientific professions have made him an acknowledged leader in the pharmaceutical industry.

Up to a few days ago, it has been my intention to talk to you about the chemist in

medical research. I had planned to describe the important role of the chemist in the research team devoted to the search for new methods of controlling disease, and to illustrate his activities by some of the medical accomplishments of the past 25 years. Events of the past week have compelled me to change my subject.

You are all aware of the preoccupation of the Kefauver committee in Washington with the pharmaceutical companies, initially to investigate something called administered pricing and subsequently expanded into charges of collusion, price gouging, unfair advertising, and other abuses. hearing has been given widespread press cov-When this investigation was scheduled, most of the pharmaceutical companies accepted it as responsible citizens. We believed we had an honorable story to tell Congress and the people and that our contributions to the health and welfare of our Nation far outnumbered our deficiencies. We were prepared for a fair investigation recognizing that our very rapidly growing industry was reaching maturity and that some of the features characteristic of our adolescence needed to be corrected. We were a proud group, since we believed that through the American free-enterprise system we had helped to build in the United States over a space of 25 years the greatest health team that the world has ever seen. Achievements in medicinal chemistry, brought about largely through industry's rechemistry, search, had given us in the industry an almost religious confidence in our ability to tackle and solve through research some of the most baffling, unsolved diseases which plague mankind. We had the conviction that our pharmaceutical industry with its research and development know-how was one of the country's greatest assets, particularly in this period when the international image of our scientific superiority is being seriously questioned.

THE COST OF RESEARCH

It is not my purpose this evening to comment on the Kefauver charges of exorbitant prices of drugs to the public. I leave this question to those experts in economics and the business leaders of the industry. However, there is one part in the industry's story to Congress on drug costs which directly concerns research; namely, the cost of doing research and the quality of industry's research.

Research and development expenditures in the drug industry were reported to be about \$190 million during 1959 and are estimated to exceed \$200 million during 1960. This research and development cost must be paid out of income, for industry has no endowment, no endless cornucopia of wealth. This simple fact of economics is not a serious issue of the Kefauver committee, but during its hearings charges have been made on a number of occasions that research done by our pharmaceutical industry is negligible and tainted. Allegations also have been made by some witnesses that most of the important discoveries in medicinals were made in foreign countries or in non-industrial laboratories and not in the laboratories of the American pharmaceutical companies. Far from leading in drug research, it leged that the American pharmaceutical industry has usually followed and often only after a definite lag. The critics claim that much of the laboratory work done by the pharmaceutical companies is centered on exploiting and marketing of foreign discoveries.

These charges have been demoralizing to those of us who have devoted our lives to research in the pharmaceutical industry. Suddenly, our scientific dedication and motives are challenged. We are dismissed in a manner that makes us appear as charlatans;

OUR ETHICS ARE IMPUGNED

I am not a person who is easily led to a point of indignation but at this time I am

moved to that emotion, and I believe rightfully so. I am indignant because of the unfair criticism of people whom I know to be dedicated, sincere scientists whose motives are actuated by the impelling desire to help mankind. When our ethics, purpose and accomplishments are impugned, then I, as a man of science, have not only the right but the responsibility to speak out for the facts. This duty transcends all commercialism. As a member of the Nation's scientific community and as a spokesman for the scientists in the pharmaceutical industry, I must vigorously protest against the irresponsible and degrading criticisms leveled at us.

In making my protest, I speak from my own experience with scientific people in my own company who are earnestly looking for new and better ways to treat maladies and not to create markets. Our scientific people recognize that our research is supported from the income we make and yet they have come to our laboratories from the universities with the conviction that our methods of "objective research" provide the best opportunities for the conquest of diseases through drug therapy. Basically, within Merck & Co., Inc., with which I am most familiar, our research programs are selected by our research people. The manner in which we prosecute our research and the decisions needed in its operations rest essentially within the research organization. Although our programs of research are approved annually by top management, I can say with complete honesty that never has a research proposal of any magnitude sponsored by our research organization been significantly altered or refused by management or by marketing considerations. It is the people in Merck's research—the chemist, the biologist, the pharmacologist, and the physician in charge of clinical researchwho are responsible for new drugs; who determine through objective experimentation whether a drug is effective and safe; who decide whether a drug is a worthwhile contribution to the armamentarium of the physician; who conclude whether it is medically suitable for marketing; who judge when it is ready for marketing consideration and who dictate what can be said to the practicing physician. These are the responsibilities given to the research division by our top management. If a drug does not measure up to the high standards of good medicine, we in research must take the blame entirely.

Actually, during the 10-year period from 1949 to 1959, the Merck Sharp & Dohme Research Laboratories spent \$111 million for research. There were years in this period when we did not offer to our marketing organization a single new basic compound for distribution. This was our situation in spite of the number of promising compounds that were being studied in the clinics after long periods of research in the laboratories. When the clinical data for these promising compounds were examined by our medical research people, we concluded that none of these met our standards and concepts of a drug with distinction.

A REVIEW OF ACCOMPLISHMENTS

Let us now review some of the accomplishments of the past 25 years and remind our critics to count their blessings. First, let me quote from a paper which appeared in the Journal of the American Medical Association during 1956, written by Dr. L. H. Mc-Daniel, then Chairman of the Section of General Practice of the American Medical Association. In reviewing his 33 years of medical practice, Dr. McDaniel stated: "I remember the reluctance with which I viewed the approaching winter, for I knew that before spring 15 patients, including several close friends, would die from pneumonia. Then we felt helpless, but today, we can walk into the sickroom with confidence, knowing that often a little ampule or vial the size of one's thumb contains drugs that

can conquer diseases formerly thought hopeless."

It was not so long ago that the many infectious diseases in addition to pneumonis struck mortal fear within us. Some of us can remember when tuberculosis meant a lingering doom; when septic peritonitis was common and fatal; when bacterial endocarditis was certain death, and when all forms of bacterial meningitis and septicemias were spoken of with fervent prayers. It wasn't so long ago that our knowledge of nutrition was very meager; when pellagra was not uncommon in our country; when perniclous anemia was a killer, when the terms beri, beri, scurvy and rickets were part of the layman's vocabulary. Today, our medical students learn of most of these deficiency diseases not from the clinics but only from textbooks.

Prior to the early thirties, the American pharmaceutical companies were enlarged apothecary shops which, in contrast to their European counterparts, did little of what we now call research. In fact, most of the important drugs used in America up to 1935 were the result of research in foreign laboratories. Today, the situation is significantly reversed. The productivity of our research laboratories has profoundly affected medicine in every country. In world affairs, the American pharmaceutical industry has become one of our greatest resources of good will.

Modern research in the American pharmaceutical industry really began in the decade commencing with 1930. During this period Parke Davis, Merck, Lilly, Abbott and Squibb established research organizations with new concepts and dimensions. They brought together under a single roof scientists of many disciplines, all needed to carry out programs of research from the conceptual stage through clinical evaluation. Men and women of different training—chemists, pharmacologists, pathologists and physicians-joined together for the first time in seeking solutions to medical problems. This was a new concept of research in our country, for until then research was reserved for the individual investigator in the university and the institute, often isolated and because of this, frequently ineffective. This was the beginning of interdisciplinary research about which we hear so much today in government sponsored research programs. It is not un common today to find in our research that 50 to 100 technically trained research people have had some part in creating a useful therapeutic agent. No other research organization in the United States devoted to health problems, whether it be the univer sity, the institute or Government laboratories, has this capacity. It is through such organization of research that the American pharmaceutical industry has had such a significant effect on the science of therapeutics.

MIRACLE DRUGS AND SHORT MEMORIES

I don't believe that any of the experts would question the superiority of today's therapeutics over those of 1935. Let us remember that the term miracle drug was not the invention of the pharmaceutical industry. It was the doctor, the public, and the press who almost simultaneously acclaimed the miracle drugs of modern chemotherapy. The trouble is that our memories are short. We have forgotten what it was like before the advent of the drugs we now have. Who would want to turn his back on our present armamentarium and rely solely on the therapeutics of 25 years ago?

Let us look at the record of the American pharmaceutical industry during this short space of 25 years. No one can deny the contributions of the industry in the field of the vitamins. It was largely through its research and development that a number of the vitamins were isolated and characterized and that economical production of most of

the important ones originated in this coun-From these same laboratories came also such important therapeutic agents as Benadryl, the first antihistaminic available to the general practitioner; the first uricosuric agent, Benemid, for the treatment of gout; cortisone and its analogues, for the treatment of rheumatoid arthritis and a host of other diseases; Diamox, the first carbonic anhydrase inhibitor of medical importance; Diuril and its analogues for the control of edemas, heart failure, and hypertension; the broad spectrum antibiotics, Chloromycetin and the family of tetracyclines; the antibiotics erythromycin and novobiocin; pyrazinamide and isonicotinyl hydrazide for the treatment of tuberculosis; the less toxic and more versatile sulfa drugs; Nilevar, the first oral anabolic agent; meprobamate and Librium for mental health, and drugs such as Cogentin for the control of Parkinsonian syndrome. This is only a partial list and is only one part of the record for the past 25

DISTINGUISHED COLLABORATION

The second part of the industry's record is derived from the collaboration between the scientists of our laboratories and those of the universities, institutes, and hospitals. We at Merck are proud of our collaborations With outside investigators, since six of them had later become Nobel Laureates. Now What has this collaboration between the academic and industrial scientists meant? Streptomycin might have remained a laboratory curiosity or its availability as a drug may have been delayed a number of years had not Dr. Waksman sought the collaboration of research and development in the pharmaceutical industry. Insulin in a form suitable for the treatment of diabetics resulted from a collaboration between the Lilly research staff and the discoverers of insulin, Banting, McLeod, Best, and Collip. From such collaborations have also come the female sex hormone, estrone; such vitamins as B, and pantothenic acid; Dilantin for epilepsy; nystatin for fungal infections; thiouracils for hyperthyroidism, and Nallene for the diagnosis of morphine addic-

tion and morphine poisoning.

It is in this area—the collaboration area that our critics often forget industry's paramount contribution. In some of these collaborations, our contributions are clearly research in nature; in others developmental and still others a combination of both, less an organization pursues the development of a new therapeutic agent, the agent is worthless. Unless the physician has the agent available to him in effective dosage forms and useful formulations, his patients must do without it. Until the industry learned how to make an injectable form of vitamin K, therapy with Dicumarol, a lifesaving method in many instances of coronary thrombosis, was too hazardous for wide.

Widespread use.

The ability to collaborate and move quickly in research and in development is a priceless attribute of the industry, for one can't put a price on the urgency of saving lives or combating iliness and relieving pain. Penicillin, discovered by the British, undoubtedly, would have been delayed for the whole the American and the American Company of the Company of the American Company of the Compan whole of World War II, had not the American pharmaceutical industry applied its research and development resources when it did. The great rapidity with which Salk's Polio vaccine and the Asiatic flu vaccine Were made available to physicians can only be measured in terms of people saved.

SOMEONE ELSE'S TEST TUBE

It is senseless for anyone to charge that laboratory discoveries alone constitute the reason for the existence of research and to say that scientists who carry a discovery from someone else's test tube to a useful drug have contributed nothing. Is it correct to say that the German physicists who demonstrated nuclear fission in the thirties should receive the credit for atomic energy? Certainly, everyone recognizes the contributions of those who worked on the Manhattan project. As a matter of fact, the names we best remember in connection with the atomic project are Fermi and Oppenheimer and not Meitner, Hahn and Strass-

The pharmaceutical industry today characterized by the tremendous influx of new drugs and by an obsolescence of the older ones. As a matter of fact, we have been criticized for this. Why does this constant change of drugs occur? The answer is the intense activity that exists in the research organizations of the pharmaceutical companies. We think of this as competition actually the motive in research is the intense desire to produce a better drug. There is no drug in existence that is completely satisfactory—that cannot be improved upon from the standpoint of effectiveness, reliability, or toxicity. Even peni-cillin, considered at one time an almost ideal drug, has its failings. Some patients cannot tolerate it because of the dangers from anaphylactic shock. Some physicians are expressing alarm at the growing number of fatalities resulting from infections of penicillin-resistant staphylococci. The need for improved antibiotics is obviously imperative. The need for improved drugs in other fields of therapy is just as important. This is why during the past 10 years so many newer drugs have appeared in the fields of steroid therapy, hypertension, mental, and cardiovascular diseases. You may expect that still more drugs will appear as even better ones are discov-

A DEDICATION TO SCIENCE

At this point you can well understand why I changed the title of my talk and why I am exercised by events in Washington. I am adressing you this evening on this subject as a research chemist and not as an official of a pharmaceutical company. I am talking to you in the name of scores of thousands of research chemists who have made a career in industry. We have made this our career reasons beyond the need for a for many means of livelihood-a dedication to science, a desire to create and, not least of all, a desire to contribute something of importance to our way of life.

I think this is true in every field of chemical research, whether it be research in heavy chemicals, petroleum, steel, coal, food chemistry, or the pharmaceutical industry. feelings of creating and contributing are important factors in the morale, enthusiasm, and dedication we bring to our everyday performance of our jobs. Factors such as these spell the difference between inspired work and just doing a job.

If, as Mr. KEFAUVER and a number of the drug experts who spoke critically of our accomplishments would have us believe, the result of the tremendous research and development efforts which have gone into the pharmaceutical field has been to defraud the public, to swell the coffers of the companies and to exact merciless tribute from the infirm and the aged-it is a sad commentary on the meaning of the thousands of manyears of dedicated effort by thousands of chemists, engineers, biologists, and physicians throughout this country.

AN IRRESPONSIBLE INDICTMENT

Irresponsible attacks on motives and ethics of scientists can be permanently damaging to their morale. Irresponsible indictment of the best efforts of such an important segment of our scientific and technological manpower can have serious consequences in decreasing the sources of scientific manpower and on the youth of our country who see an expression of their idealism in the accomplishments of chemistry, biology, and medicine during the past 25 years. Toward these dan-

gers, our critics must take a responsible attitude. Those who have gone to such lengths to degrade the medical accomplishments of the American pharmaceutical industry must be made to realize the extent of the damage they cause and be willing to take the responsibility for it.
I can't believe that some of our scientific

critics at the Washington hearings really meant what they said. I question whether the views they expressed represent their overall assessment of research in the drug Could it be that they failed to appreciate the seriousness of giving their views in such a preemptory manner, not reflecting sufficiently on the importance of adequate perspective when expressing their

views in the public spotlight?

I had a special reason for bringing this unpleasant issue to you this evening. Having been a member of the American Institute Chemists for over 10 years, I know of its aims and purpose. Each of us here this evening has deep convictions about ethics, motivations, and dedication which make up the profession of chemistry. know that if the scientific integrity of one group of dedicated scientists is attacked with impunity then the dignity of all science will become degraded. If one group of scientists can be tarred and feathered without vigorous protest, then we are all slandered.

I hope that I have conveyed to you an appreciation of the seriousness of our situation and the obligations each of us has to defend the rightful position of the research scientist in the industrial and scientific development of the Nation. I also hope that each of you is equally indignant over this challenge to our scientific profession and that each of you will make yourself heard in words and deeds.

Madison County (Ark.), Soil Conservation District

EXTENSION OF REMARKS OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. TRIMBLE. Mr. Speaker, one of the most active soil conservation districts that I know about is the Madison County (Ark.), Soil Conservation District. They have been in operation 20 progressive years.

They are doing a wonderful job not only in the conservation of the soil but in public relations. To them I extend my heartiest congratulations, and I call to the attention of the Members of the House a report of their accomplishments for 1959 which I insert as a part of my remarks:

MADISON COUNTY SOIL CONSERVATION DIS-TRICT: HIGHLIGHTS OF ACCOMPLISHMENTS FOR 1959

The accomplishments in soil and water conservation have continued to be high for 1959. The last several years, pond construction has required most of the time of the Soil Conservation Service technicians. However, this year pond construction has dropped off a little. This was to be expected since this district has led the State in this phase of soil and water conservation for 5 years in a row, by constructing about twice as many ponds as the district in second place.

The construction of a large number of ponds has stimulated many farmers to move into a better pasture program by developing wild grass into excellent tame grass pastures and meadows. The farmers are finding that the developed pastures are paying good returns on the cost of establishing these pastures and meadows. Another tool that has been very instrumental in the establishment of the good grass program is the heavy equipment, such as the buildozer and the Rome bush and bog disk used in cleaning up a lot of the once cultivated fields that have grown up in briars, brush and low grade trees, such as hickory, etc. This phase of conservation was evidenced in the spring pasture tour in the Kingston community on April 24

The planting of warm season pastures has moved a long ways in the last few years. In 1959 more Bermuda grass was sown than in any previous year. We are learning that Bermuda grass can be secured from seed rather than depending upon the laborious task of planting the roots. Especially, we are finding the heavy equipment, the bull-dozer, and the Rome bush and bog disk, have done more to promote summer pastures than any other tool.

Tools to remove and control brush have increased during 1959 more than any preceding year. A large number of rotary brush mowers were purchased during the year. Many of these have been used to do custom mowing on neighboring farms. The use of chemical for brush and weed control is increasing annually. As knoweldge is gained, this is proving to be very helpful in the control of competitive plants that damage our desirable grasses. Also, the use of 2,4-D granules was demonstrated in some ponds to eradicate weeds with success.

Terraces and diversion terraces construction have not progressed as rapidly as we think it should. This phase of conservation is being pushed at every opportunity to get farmers to especially get diversion terraces constructed at critical areas to divert and protect water from cropland fields or areas being plowed, to establish perennial grasses and legumes for pastures and meadows. It is felt the farmers will continue to increase the use of these conservation practices.

Much publicity has been given to conservation activities of the district in news items in the daily and weekly newspapers in the county and adjoining counties. Miss Gayle Johnson, Hindsville, was given a writeup in State papers in Little Rock and Tulsa, designating her as the "Lady Farmer of the Year in Madison County." Other district cooperators have been recognized through the paper for the outstanding accomplishments in the different phases of soil and water conservation.

The board appreciates the space given in the papers to further the conservation program in the district.

The district board of supervisors of the Madison County Soil Conservation District is ready and anxious to assist every farmer in any way possible. We solicit from any citizen, farmer or businessman, any suggestions for improvement in the services the district may give to the public.

As we look back over the 20 years of operation of this district, we can't escape a feeling of pride and humility. Pride in the growth, accomplishments, and service rendered, and humility at the long list of people and organizations who have given of their time, talents and money to make our accomplishments possible.

Minutes of previous meetings show that M. E. Oliver, then of Japton, served as first chairman; Afton Wheeler, now of Best, was the first secretary; James Anderson of Crosses; Ross Sharp of Wesley; and Horace Holland, of Hindsville, made up the first board of supervisors. At the death of James Anderson, Ralph Buck was elected to replace him. Ewell E. Boyd of Huntsville replaced Ross Sharp, and A. H. Berry of Hindsville replaced Horace Holland. James M. Parker of Marble was elected and served as chairman. Hugh Bunch of Kingston served two differ-

ent times as supervisor. The second time he was made a supervisor at the death of Ewell E. Boyd. The present board for 1959 is Hugh Hargis, chairman; A. H. Berry, secretary; T. C. Anderson, Hugh Bunch and Roy Vanhook, who would like to express their thanks and appreciation for the many hours, the money and talents they gave in pioneering the soil and water conservation program in Madison County. To them we and every farmer in the district owe a debt of gratitude. This board would like to express their thanks to every farmer and businessman that gave them such wonderful support which gave them courage to face the problems and keep moving ahead in this vital phase of agriculture. Also, we wish to give thanks for this excellent support you have continued to give us.

The agricultural agencies and organizations—the Agricultural Extension Service, the Farmer's Home Administration, the Agricultural Conservation and Stabilization Committee, the Fish and Wildlife Service, the U.S. Forest Service, the Arkansas Forestry Commission, the REA, the Vocational Agriculture teachers, the Soil Conservation Service, the Farm Bureau, the Grange, the civil clubs, the ministers who have preached sermons on soil stewardship, and the schools have cooperated with us in our endeavor. To these and others we say thanks.

We have had, and still have, powerful friends in the National, State, county, and city government. We appreciate them and will always be grateful to them for the many ways they have helped us.

All these people and organizations have helped us. But it would have come to nothing if some 1,700 cooperating farmers had not done a magnificent job of applying the conservation practices on the land. To you go the thanks of everyone in the district.

Why Should We Imagine the Way To Talk
With a Dictator Is at a Summit Conference Where Every Advantage Is Possessed by the Unscrupulous? Peace Is
Too Precious and Too Hard To Establish
To Be Subjected to Such Mistreatment

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Washington Star by Constantine Brown. [From the Evening Star, May 24, 1960]

SUMMIT FAILURE AN ELECTION ISSUE— KHRUSHCHEV VIEWED AS WANTING DEMO-CRATIC PRESIDENT TO TALK TO

(By Constantine Brown)

Who killed Cock Robin in Paris? Was it the administration's blundering admission of U-2 espionage or was it the brutal Khrushchev tactics? This has already become an election issue.

The performance of the Red boss leads some observers to the conclusion that the power drunk Mr. Khrushchev intends to choose next November an American President of his own liking. He was unequivocal at Paris when he said that he would have no further dealings with Mr. Eisenhower but left the door open for another summit next year.

At the same time Mr. Khrushchev an-

nounced that he will have no truck with Mr. Nixon, the only Republican candidate, whom he has contemptuously compared with a "goat in a cabbage patch." Hence, the inescapable conclusion that Mr. Khrushchev would talk only to a Democratic President.

The "crowbar and sledge hammer" speech by Adlai Stevenson in Chicago only 2 days after Mr. Khrushchev had insulted the United States in the person of our President must have been music to the Soviet Premier. It would not be surprising if the Kremlin saw in him a man who could be handled in a future summit, for Mr. Stevenson is by no means out of the presidential race.

Mr. Khrushchev's views on John Kennedy are uncertain although the young hopeful joined in the chorus that the administration had killed Cock Robin. According to reports from Moscow, the Soviet boss frowns on Senator Lyndon Johnson whom he considers another "jingoist," presumably because of his Texas background.

Whatever Mr. Khrushchev's preference insofar as the personality of the Democratic candidate is concerned, there can be little doubt that he had the November elections in mind in his calculated brutality in Paris.

The American people have been sold a bill of goods by intensive propaganda of which both parties are guilty to different degrees that personal high-level conferences with the leader of a monolithic state can further world peace. The propaganda has been so skillfully conducted that the vast majority of our people actually believe that only by such "personal diplomacy" can peace become a reality.

Yet if we look at the record it is obvious that we lost out at every summit meeting. At Teheran, Yalta, and Potsdam we yielded to Stalin.

The mirage of better relations with Russia prompted the British Government to seek other summit conferences after the Labor Party was ousted from office. Although the late Secretary of State John Foster Dulles advised President Eisenhower in 1955 that there could be no gain from another person-to-person encounter with the Kremlin leader, we yielded to Sir Anthony Eden's pressing demand to meet with Bulganin and Khrushchev at Geneva lest the Labor Party be returned to office.

The results of the Geneva summit were negative for the free world but served to strengthen the then shaky B. & K. team in Russia as well as in East Germany, Poland, and Hungary where the serfs had become restless.

Finally under the illusion that relaxation could be achieved after Mr. Khrushchev had served an ultimatum on Berlin in November 1958, Mr. Elsenhower agreed once more to hold another summit parley. It was to be one of a series which we were assured could possibly lead to peace. He agreed once more to participate in a tragic farce which would only help international communism.

The record of the last 17 years shows clearly that the free world can expect no advantage from personal diplomacy since it lost every time it met the Red dictators in secret conclaves. Despite this indisputable record, our political men do not seem to want to learn their lesson. Today when Mr. Khrushchev's calculated insults are still so fresh in our minds there is already talk among professional politicans to continue "at a more appropriate moment" these futilities known as summit conferences. They say that it is better to talk than to fight, without telling the propagandized public that there is another alternative—to answer the cold war with the cold shoulder.

The position of Mr. Khrushchev would be seriously endangered if the free world were to treat him and his regime as an outcast with whom there is no point in arguing.

Shoe Imports

EXTENSION OF REMARKS

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. POFF. Mr. Speaker, the domestic footwear industry is becoming increasingly concerned about the alarming increase in imports from foreign nations. These imports are the product of cheap wages and substandard working conditions exploited by foreign industries partly subsidized by foreign governments

The problem has become particularly acute in the last several months. In March 1960, imports totaled 14.6 million pairs, including 3 million pairs of leather footwear and 11.6 million pairs of rubber footwear (exclusive of rubber boots). This represents an increase of 153 percent over March 1959. Total imports for the first 3 months of 1960 reflect an increase of 165 percent over the first quarter of 1959. Dollarwise, the quarterly increase was over \$13.8 million, a ratio increase of 91.6 percent.

Approximately 85 percent of these imports were manufactured in Japan; the other 15 percent originated from Italy, Hong Kong, England, West Germany, Switzerland, Mexico, Canada, and sev-

eral other nations.

In raw materials and workmanship, some of the foreign footwear is comparable to the domestic product. However, much of it is decidedly inferior, and the American consumer is the victim of a low price tag and shoddy merchandise.

It has been suggested that this problem can be solved by the process of voluntary quotas adopted by the foreign manufacturers. A similar process was attempted in the field of textiles. It met with only a limited degree of success.

I understand that a somewhat different approach is now under consideration whereby the tariff structure will be made flexible on a sliding scale. The sliding scale, I am told, would be geared to the wage differential between America and the nations where the foreign products originate. The declared purpose of this proposal is to equalize the competitive factor and thereby give some measure of protection to domestic industry against unfair competition from abroad.

Until the details of this proposal have crystallized and have been subjected to critical congressional hearings, it is impossible fairly to analyze its merits or demerits. However, it daily becomes increasingly apparent that America must come to grips with this problem in a realistic manner. Certainly, we want to maintain the friendship of our allies throughout the world. Surely, we want to help raise their standard of living. Of course, we do not want them to trade with the Communist world. And naturally, we want to hold them as friendly market places for American goods. At the same time, we must not allow our altruistic impulses to destroy our own American industry. American jobs are at stake. The stability of the American economic system is at stake. The economic welfare of the American people is at stake. The solvency of the Federal Treasury is involved. No one can properly suggest that, in order to raise the standard of living in a foreign nation, we must be willing to lower the standard of living in America.

I have always supported the principles of the Reciprocal Trade Agreement Act. However, I have always insisted that the bilateral and multilateral agreements negotiated under that act should be truly reciprocal and that such agreements should not undermine the economic stability or the national security of the United States.

Congress Rejects Expediency

EXTENSION OF REMARKS

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Near East Report of May 16 on the "Freedom of the Seas" amendment to the Mutual Security Act. As Senator Douglas said in support of the amendment during the Senate debate:

This is not primarily a dispute between Israel and Egypt. It is a case of one country, Egypt, having violated treaties, refusing to follow the rulings of the United Nations and going back upon its own promises.

The editorial follows:

CONGRESS REJECTS EXPEDIENCY

Congress has written a moral principle into the Mutual Security Act. America must not subsidize aggression. That is the meaning of the freedom of the seas amendment.

The proposal was angrily debated in the Senate, where unfortunate aspersions were cast on the integrity of its proponents.

This issue should be considered objectively

and on its merits.

The amendment originated in the House, because many Congressmen—and many editors of great newspapers—believed that an opportunity was lost when the World Bank loaned \$56 million for the Suez Canal at the height of the Nasser blockade.

The House Committee on Foreign Affairs told the House that our own Government had "not done as effective a job as it should

have" to open that waterway.

But the Senate Committee on Foreign Relations took no action, made no comment in its report. Its chairman, Senator J. W. Fulbright, Democrat, of Arkansas, believes that the Suez Canal should be open. He, himself, offered an excellent Senate resolution to that effect on January 29, 1957. But he opposed the House declaration because he efared that the Arab States would interpret it as a pro-Israel on an anti-Arab statement.

Thus, Congress faced a dilemma. Senate failure to concur in the House declaration could have been misinterpreted by the Arabs as warrant to continue the blockade and even to extend it to Aqaba, as President Nasser has threatened to do. The alternative was to speak frankly and clearly in reaffirmation of traditional American policy.

Congress made the right decision. The Arabs will never abandon their war against Israel if they can intimidate us into a frozen neutralism, and if they delude themselves into believing that American friendship for Israel is an insincere pandering to minority pressures.

The foreign policy of the United States should express the views of the American people. The Senate refused to allow it to be written in Cairo or Moscow.

It has been argued that the "freedom of the seas" amendment will be exploited by the Russians to our propaganda disadvantage in Asia and Africa, to prove that we put "strings" on our aid. The MSA now imposes many requirements on the recipients of both our military and economic aid. There are explicit conditions on aid to Yugoslavia and Castro's Cuba. The Senate Foreign Relations Committee, itself, recommended stiff conditions on continuing aid to Arab refugees, a proposal which had to be softened in Senate-House conference. The Senate committee also expressed reservations about the effectiveness of our Korean aid program "in the absence of an atmosphere of expanding basic freedom." There is nothing new about this. The administration has held up aid to Near East nations in the past, as both Egypt and Israel well remember.

We respect honest neutralism. We must not manacle the policies of other nations We agree that the United to our own. States should not require other nations to accept alliance with our policies to qualify for our aid. But they must not impose their policies on us so that we may qualify as their disinterested benefactors. The beneficiaries of our assistance programs must not put strings on us. They must not tie our hands. nor silence our lips, nor blunt our con-sciences, nor immobilize our policies by threatening to refuse our assistance or to embrace the Communists because we expect them to conform with international They do us no favors by taking our money. mutual. The mutual security program is The U.S. Treasury is not an automatic coin-vending machine.

Nor are the Russians our moral mentors, We do not look upon the world as a jungle where nations may disregard commitments and responsibilities, immune from reproach. We cannot accept multiple moral standards in international relations, nor free zones for aggression.

The congressional declaration is not binding on the President. But if the administration wants to make a new and determined effort to promote a just and honorable Near East settlement, it is fortified by a strong declaration that the American people want morality and law to govern our foreign policy.

The New York Times

EXTENSION OF REMARKS

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. McDOWELL. Mr. Speaker, on Monday, May 23, 1960, I placed in the Appendix of the Congressional Record, at page A4325, under the heading "Is Washington, D.C., Really a Hick Town?" an extension of my remarks. In the introduction I pointed out that the New York Times had not printed an article by Mr. Alvin Shuster, a member of the Washington bureau of the New York Times.

It was not my intention to cast any reflection upon the good name of the New York Times which, in my opinion, is one of the finest newspapers in our country. If my remarks have caused any embarrassment, I sincerely regret any such result. It was only my intention to call attention to the well-constructed and factual presentation of the article by Mr. Shuster, which so ably portrayed the fine cultural accomplishments of the Nation's Capital.

The Plight of the Prairie Chicken

EXTENSION OF REMARKS

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES
Wednesday, May 25, 1960

Mr. DOUGLAS. Mr. President, Americans who seek to preserve wilderness areas, our splendid park preserves, and other spots of natural beauty such as the Indiana Dunes, for which many of us have striven for some years, will be interested in a report which has recently come to my attention of the efforts of the Prairie Chicken Foundation of Illinois to halt the decrease in the numbers of this species as a result of grazing and cultivation of farm land.

I ask unanimous consent that the article, "Is the Prairie Chicken in Illinois a Lost Cause?" from the March 1960 Audubon Bulletin, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From The Audubon Bulletin, March 1960]
Is the Prairie Chicken in Illinois a Lost

(By Dr. Ralph E. Yeatter)

In his "Report on a Game Survey of the North Central States," published in 1931, Aldo Leopold stated: "In every State of the north central region except Wisconsin, the restoration of the prairie chicken is regarded as a lost cause.' The trend of the evidence to be here presented is to the contrary. It indicates that chickens respond even more readily than other cyclic species to management measures. The conservation movement has no right to discard these magnificent game birds when no real effort, other than ill-enforced closed seasons, has as yet been made in their behalf." Leopold believed that refuges were the key to prairie chicken conservation.

Investigations in Illinois and other States have borne out Leopold's views. We know now the type of refuges needed. Prairie chickens have a shorter breeding period than qualls or pheasants. Because nearly all broods are hatched before mid-July, relatively undisturbed nesting cover is required during the spring and early summer, Chickens cannot withstand indefinitely the heavy losses of nests caused by farm machinery and intensive grazing in general farming regions,

Prairie chickens continued to thrive in the redtop grass seed-producing region of south-central Illinois for more than 60 years after they became scarce or disappeared elsewhere. The seed did not ripen until July; thus the birds were able to hatch their young and get them on the wing before the harvest.

During World War II. however, farmers of the region found it was more profitable to lime and fertilize their fields for grain crops than to produce grass seed. Most of the redtop fields disappeared and the chickens began to decline sharply. Other grassland birds, including upland plovers, Henslow's sparrows, grasshopper sparrows, savannah sparrows, meadowlarks, king rails, marsh hawks, and even quails decreased also, in varying degrees.

The value of grassland nesting and brood cover is now widely recognized. A national refuge for prairie chickens is belatedly being established in eastern Kansas under the auspices of the National Wildlife Federation. Nearly all States with remnant colonies are making some effort to set aside refuges. Wisconsin seems to be well in advance of all other States in working out its program.

The recently formed Prairie Chicken Foundation of Illinois has the objective of establishing an adequate system of grassland refuges within the State. Parent organizations are the Illinois Audubon Society, the Illinois Federation of Sportsmen's Clubs, the Illinois Division of Izaak Walton League of America, and the Illinois Chapter of Nature Conservancy, Inc. Officers are J. W. Galbreath, chairman, of East St. Louis; Ralph Smith. vice chairman, of Chicago: Mrs. Madeline Dorosheff, secretary, of Springfield; and George B. Fell, treasurer, of Rockford. Various State agencies, including the Natural History Survey and the Department of Conservation, are cooperating.

What kind of refuges are needed to insure the survival of prairie chickens in Illinois? In the publication the Prairie Chicken in Illinois (Ill. Nat. Hist. Surv. Bul. 22(4); 1943), the writer stated: "In southeastern Illinois, prairie chickens are well adapted to living in prairie farming districts where from 20 to 30 percent of the total agricultural land is grass type cover that is not disturbed until July 1 or later. Presumably, similar grass acreages and farming practices would create fair to good prairie chicken range anywhere they might be applied on the Illinois prairie. Although solid blocks or closely grouped tracts are probably most satisfactory from standpoint of administration, good prairie chicken management does not require that refuge areas be contiguous, provided proper distribution of smaller refuge areas can be obtained. For example, certain sand prairie townships in northern Illinois might be converted into good chicken range by leasing and converting to grassland refuges, for a term of years, 25 percent of the total farmland in the form of 20-acre, 40-acre, or larger tracts of the poorer farm soil throughout each township."

Experience gained during the past 25 years leads us to believe that the above advice was sound, although some amendments are needed. It would undoubtedly be more economical and more permanent to buy, rather than lease, refuge lands. Moreover, gray soil prairie and sand prairie areas where chickens are still present, or where they would be likely to spread soon from existing colonies, should be sought, and these are not necessarily the areas of lowest fertility. Effort should be made to locate management areas where farming practices are likely to furnish part of the required nesting cover. Wisconsin has adopted a plan of setting aside an average of one 40-acre refuge per square mile to supplement dwindling nest-brood cover in the well-known Buena Vista marsh of about 46,000 acres in Portage Public-spirited citizens and organizations there already have purchased some of these tracts, and the Wisconsin Conservation Commission has stated that it is ready to lease and manage lands which are privately purchased for Prairie Chickens ("A Guide to Prairie Chicken Management," by Hamerstrom, Mattson, and Hamerstrom,

Solving the many problems of locating financing, purchasing, and managing suitable refuge lands will require much hard work by the Prairie Chicken Foundation and associated agencies. It seems probable that most of the 3 or 4 management areas now contemplated by the foundation should finally embrace 20 or 25 square miles each including the active farms interspersed among the refuges. Nevertheless, the refuges at first could be confined to farming areas as small as 4 square miles. Other tracts could be added as results were appraised and as funds became available. Such a scatter pattern of nesting cover appears to produce higher chicken populations than continuous prairie.

Rail-Water Rates

EXTENSION OF REMARKS

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial "Whose Fault?" of May 17, 1960, which appeared in the Journal of Commerce, an excellent newspaper published in the city of New York.

It seems to me, Mr. Speaker, that this editorial touches upon some very important points. The first point is the need for a more vigorous, clear-cut, and thoughtful approach to decisions by the Interstate Commerce Commission.

The second point is the need for action by that Commission to implement the national transportation policy declared by this Congress, so as to preserve in full vigor transportation by water, highway, and rail adequate for the commerce of the United States and our national defense.

Mr. Speaker, the Ninth District of New Jersey, which I have the honor to represent, includes the Borough of Edgewater. In the Borough of Edgewater is located the New York harbor terminal of the Seatrain Lines, a very unique coastal water transportation company which has pioneered the application of container methods to the transportation of freight by water. The Seatrain terminal is served by the New York, Susquehanna & Western Railroad Co., a small railroad which connects the Seatrain operation with all of the larger railroads serving the New York Harbor area.

I understand that about 25 percent of the Susquehanna's revenues are derived from freight interchange with the Seatrain Lines, and thus we have the somewhat unusual situation wherein the fortunes of this small railroad, which is vital to my district, are dependent to a large extent upon the fortunes of the water carrier.

Recently, the continued existence of the Seatrain service to and from Edgewater has been placed in jeopardy because of the rate war being conducted against the coastal water lines by certain major railroads. The decision of the Interstate Commerce Commission mentioned in this editorial apparently was somewhat equivocal, and did not insure the continuance of the Seatrain service between Edgewater, Savannah, New Orleans, and Texas City. If the Seatrain is forced out of business, this in turn would probably mean bankruptcy for the Susquehanna, and great damage to the commerce of my district.

I hope, Mr. Speaker, that the members of the Interstate Commerce Commission will read this editorial with great care, and will take its lessons to heart, and that in its future actions the Commission will be conscious of the need for decisions setting down a firm policy under which the coastal water lines, including the Seatrain, which are so vital to our commerce and national defense, can plan for the future with confidence. The editorial follows:

[From the Journal of Commerce, May 17, 1960]

WHOSE FAULT?

Charles A. Webb, youngest of the 13 members of the Interstate Commerce Commission, touched in an unusually direct way on some of the short-comings of that agency in an address delivered in Richmond, earlier this month.

He pointed out that the Commission was obliged to reach 1,721 decisions last year, and to issue a report on each under its own name or under the name of one of its divisions. This works out to some 172 cases per Commissioner, which means that if the Commissioners themselves had to prepare these reports, and the work was spread evenly among them, each would have to write himself (or closely supervise the writing of) three to four decisions per week.

Anyone who follows ICC's decisions, and knows the complexities involved in reports even on trivial cases, knows this is simply impossible. What actually happens, as Mr. Webb noted, is that much of this material is ghost written. But that is not the point. The point is that, as members of the Federal agency regulating most interstate transport, the 13 members wield great power—greater than many of them perhaps realize, and certainly greater than many Federal judges. They wield altogether too much power to be able to lean safely on ghostwriters.

We recognize that the Commission's work has vastly increased in complexity during the last 30 years. The extension of its regulation to trucks and water carriers via the Federal Motor Carrier Act of 1935 and of the Transportation Act of 1940, respectively, and of pipelines and freight forwarders has confronted it with problems far beyond the expectations of its first proponents.

We also agree with Mr. Webb that too much of ICC's time is taken up with trivial and run-of-the-mill cases—cases in which ghost-written reports will probably suffice for the present, and that if only the Commission's really important decisions were counted, they probably wouldn't add up to more than 10 or 15 per Commissioner per year, a workload that ought, at least, to be within manageable proportions.

The question is: How to get the Commissioners freed of trivial cases and then get them concentrated on the broader policy matters that rightfully should be their primary concern? A number of suggestions have been made in this respect; for example, increase the staff, or put more of ICC's day-to-day functions under a general manager, or both. Some might help, but first, we think, the Commission has got to help itself.

The trouble is that no small part of the vast complexities with which ICC is grappling is of its own making.

To put it bluntly, many of the present complexities arise from the Commission's dogged refusal to come to grips with the larger issues facing it, for example, the issue of joint rates, over which water carriers have been struggling with railroads for years, and the issue of the ratemaking clause of the 1958 Transportation Act on which ICC has not yet handed down a single definitive opinion despite a whole rash of pending cases filed for the express purpose of producing such an opinion.

It is because ICC is seemingly as determined to be fair as it is determined to avoid any kind of resolute stand on these issues that the labyrinth of complexities has mushroomed so swiftly.

An example is provided by its recent decisions on Atlantic coastal pulpboard rates involving Seatrain Lines with a number of rallroads

What the water carrier wanted in that case, and attempted to force, was a clear decision to the effect that the rails were bound to set up joint rail-water or water-rail rates, or that they weren't. It would then know at least whether to abandon the service, whether to count on staying in it, or whether to resort to the courts.

But, as in the case of a number of ICO decisions which could have determined the effect of the ratemaking clause, it go neither. In an attempt to be fair, ICC ordered the rails to give Seatrain other forms of rate accommodations, in consequence of which neither side is any surer of where it stands today than it was before the case was filed.

The result of this is that, not knowing just where ICC does stand on these key rate issues, rate cases by the score are pushed into the Commission's hopper by all kind of carriers subject to Federal jurisdiction in an effort to ascertain just how far they can go in any direction. And ICC itself, finding no set course in this paper sea, is more and more hopelessly mired in detail. Its overall policy, murky enough before the 1958 act was passed, has become, if anything, murkier still.

It may well be, as some of the commission's more thoughtful members and critics have said on occasion in the past, that a structural reorganization of the whole agency is advisable.

But before anyone proceeds to that, we think the Commission might show a little more resolution in meeting head on the primary regulatory problems it was set up to decide, within, of course, the framework set by Congress.

As we have said previously, ICC itself will not have the final say on these matters. On some of the larger issues a resort to the courts is virtually inevitable no matter which way its decisions go—the ratemaking clause being one of them. But until ICC itself acts, there can be no resort to the courts, and until the courts act, the whole transport horizon will remain hidden in the prevailing murk.

Air Transport Progress Is Discussed by Stuart Tipton at Morgantown, W. Va., Chamber of Commerce 40th Anniversary Event

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 25, 1960

Mr. RANDOLPH. Mr. President, last night at Morgantown, W. Va., the chamber of commerce of that city held its

annual dinner meeting in celebration of its 40th anniversary.

It was my privilege to have been a participant in the program in which Gov. Cecil H. Underwood and Representative HARLEY O. STAGGERS made brief remarks.

The event, for which President Robert B. Creel ably served as toastmaster, was built principally around the theme of airport expansion and development and the importance of air transport to commerce, industry, educational progress, and community betterment.

To develop and discuss the topic, the organization appropriately had as guest speaker, Stuart G. Tipton, president of the Air Transport Association of America, with whom I have had a most pleasant relationship which dates back to my 14 years of service in the House of Representatives during the 1930's and 1940's.

Stuart Tipton was one of the men in government who was active in the drafting of legislation which culminated in the Civil Aeronautics Act of 1938. He later served in the agency, and still later became associated with the organization he now leads, composed of 49 air carriers employing 120,000 men and women.

Mr. Tipton congratulated the Morgantown Chamber of Commerce on its 40th anniversary and noted that the Air Transport Association is having its 25th anniversary this year. He competently developed the story of the quarter of a century of progress by the air transport system.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record extracts from Mr. Tipton's address.

There being no objection, extracts of the address were ordered printed in the RECORD, as follows:

EXTRACTS OF ADDRESS BY STUART TIPTON

It was just 25 years ago that the airlines got together and formed the Air Transport Association. That was the beginning of the creation of an air transport system. There were airlines operating before 1936, of course, but they were operating in a highly individualistic manner. The common ground of a trade, and service, organization, permitted the airlines to offer the public a truly integrated network of transportation.

That network is still the backbone of the Nation's air transportation.

I'd like to tell you a little about this network because it has a direct application to Morgantown, and indeed, every city in the United States.

The Civil Aeronautics Act of 1938 established certain guidelines for the Nation's airlines. The act said that the airlines were to serve the Nation's domestic and international commerce; the post office; and the national defense.

As part of this mandate, the airlines were certificated by the newly formed Civil Aeronautics Administration in 1938. They were awarded certificates of convenience and necessity. Convenience: For the traveling and shipping public. Necessity: Because the Congress of the United States realized even in those fledgling days of air transportation that the future was in the air. And, if the United States was to take the leadership in air transportation, Government encouragement and Government leadership were vital.

This has been the result. The United States now has the finest, most efficient, system of air transport in the world.

But, all of the credit for this growth cannot be assigned to a single, Federal source.

It must be shared by the managements of the airlines, and by their employees, and by the investors who provided the private funds that permitted the carriers to invest in continually better aircraft.

But, it must also be shared by some 50 States of the Nation, and hundreds of

municipalities.

I say this because it was the States, cities, and local communities that saw the air age approaching and set about to prepare for it. They did this by building airports.

I don't think I have to tell you that without airports, you don't have a system of air transportation. And if you didn't have a system of air transportation, here are some of the things you wouldn't have:

Almost 55 million passengers traveling by air, spending about \$4 billion for food, lodging, entertainment, and other expenses, and about \$2 billion for the air transportation.

Almost 2 billion letters sent to U.S. citizens

throughout the Nation.

More than 650 million ton-miles of freight and express flown throughout the country, and to oversea destinations. And, perhaps more importantly, a fleet of 1,900 aircraft that are ready to support the defense effort in time of cold, or hot, war. Some of these aircraft-about 300-are in what is known as the civil reserve air fleet. These planes, and their crews, are frontline, modern, four-engined planes, ready on 36-hour notice to support the military anywhere in the world, carrying troops and critical supplies.

Other planes are part of WASP, the War Air Service Pattern. Their mission is to provide support to the military effort within

the United States.

And, of course, all of the scheduled airlines would take a major role in the transportation of priority passengers on their regular routes and schedules during a crisis. It would be impossible for any transportation pattern to be devised that would not place primary reliance on air transport. Last year, for instance, 47 percent of all common carrier, intercity passenger-miles were han-dled by the commercial airlines.

Probably about this time, at the present rate of expansion, the total passenger-mile haul of the airlines is equal to the total of

all intercity railroads and all buses.

Gen. Thomas D. White, Chief of Staff of the Air Force, in fact, said: "The importance of commercial air carriers and general aviation as elements of U.S. airpower has never been greater nor more influential than it is now.

But that's just one side of the contribution that the civil air transport system, and the civil airport system-and I can't emphasize that word system enough-make to the national defense.

Actually, the civil airport is an important link in the airpower chain. Here is how it works:

During World War II, about 430 airports were turned over to the military in the interest of the war effort. These fields had been designed, and built, from the ground up, to fulfill the needs of civil air commerce but the easy convertibility of peace to war needs made the transition smooth, and inexpensive.

And, today, 15 years after the end of hostilities, there are some 245 airports for which the Department of Defense has some military requirement. Just recently, the Air Force announced that it was considering plans for periodic or emergency dispersal of its B-47 bombers from military bases to civilian airports to help meet the growing Soviet missile threat.'

The Senate Interstate and Foreign Commerce Committee also saw the overall value of the airport in terms of military prepared-Last February, the committee pointed out that: Airports are not wholly local assets serving as vital and necessary links in the interstate flow of goods and passengers, in our foreign trade, in the discharge of Federal responsibility for the carriage of mail, and as active or standby facilities for military use." "Thus," the report went on, "in addition to the emergency value of civil airports, there is a day-to-day utilization of them by components of our Military Establishment."
And, I think you might be surprised to

know that one out of every five landings or takeoffs at the Nation's civil airports is by

a military plane.

The value, then, of airports in terms of the needs of the commercial airlines, and the national defense, is a dramatic, and visible,

What is not as well known, perhaps because it is so well camouflaged into the routine fabric of community life, is the fact that the airport serves in other ways.

Take, for instance, that great and growing segment of activity known as general avia-

The airlines operate less than 2,000 aircraft, the military about 37,000. General aviation-and by that I mean the private and company-owned aircraft-operates than 70,000 planes.

Airports have provided an enormous stimulant to the postwar tendency to locate plants in smaller cities, and corporate aircraft have becom flying offices—connecting the home factory, many miles away, with branch plants, subcontractors, and markets. Many corporations have established their private airlines, in fact, and these are used in the main for trips to off-line airports. About 70 percent of the total passenger-miles of annual corporate flying is to these smaller airport cities.

The private pilot, and the student pilot, have a need for the airport because it provides the vital facilities-fuel, hangar space, trained mechanical personnel—that must have. Some 400,000 men and women hold private pilot licenses. They are the nucleus of the Nation's reserve air strength, and the Civil Air Patrol.

It is not generally known that the airport is a tremendous asset to the farmer. In 46 States, farmer operators annually fly some 800,000 hours doing farm chores, such as spraying, seeding, dusting, surveying, checking crops, counting wild ducks, shooting Almost threecoyotes, and fertilizing. fourths of the Nation's airports sustain some portion of agricultural acitivity.

The airport today, then, is a key link in a circle of industrial and community development.

I have chosen "circle" as a description because it is more appropriate to the actual sequence of development than the analogy of the "chain."

Let's look at the circle. If you have an airport that is not up to date, that cannot adequately service all users, and I mean, of course, the private, the business, the corporate aircraft, as well as the commercial airline, then you will not be able to attract these users.

And, if you do not attract these users, the firms who are out scouting for new plant locations, will pass by your city, and look for one that can accommodate their aircraft.

If the plant scouts overlook your city, industrial development will lag and the need for commercial airline service that follows industrial development, with all of its attendant activity in terms of freight, passengers, and mail, will not materialize, and the airlines, too, will look for those cities that can produce the necessary amount of traffic.

Along about this time, you might find yourself like Goldsmith's "Deserted Village," where "village statesmen talked with looks profound-and news much older than their ale went round."

In brief, a community without an adequate airport in these days of air commerce, finds itself severely handicapped. It lacks

that basic tool for getting, and doing business. As Gen. James Doolittle said: "A city's economic health depends to a considerable degree on its ability to accommodate aircraft efficiently and safely."

The modern-day ambitious city must grab that circle of development. And the place to grab hold is right at the threshold at

the airport.

Let me bring this image into a little sharper focus and take a closer look at the Morgantown Airport.

As I understand it, the city council has decided to submit a \$790,000 airport improvement bond issue to the voters at a city election on June 7. This represents the first opportunity that voters will have had to vote on a bond issue to improve the airport.

Several times during the past 10 years, your city leaders have applied for, and re-ceived, matching funds from the Federal Government. But Morgantown was unable to meet the Federal appropriation on the required 50-50 basis.

What this has meant, of course, is that needed improvements have not been made at the airport, and its facilities are just about what they were about 20 years ago when the first scheduled airline service was introduced.

As some of the forward-looking leaders in your city have pointed out, you have, in effect, stood still in this era. But as you But as you transportation does not stand still. The picture has changed. I'm told that railroad passenger service is no longer available at your city. Bus service has changed only slightly. The highway network in and around the Morgantown area is inadequate.

So, your future, as well as that of any city, of any size, is in the air.

But, let's do a little arithmetic on the

problem of the airport improvement. Let's see what you get for your investment.

Last year, for instance, there were an estimated 75 persons earning their living in Morgantown in the aviation fields. Their total payroll was close to \$350,000. And more than half of the people were located at the airport itself.

Well, I've been talking in overall terms about the value of air transportation, now what does all this mean to Morgantown? It means this: Almost three-quarters of 8 million dollars a year.

Last year, almost Here's how it adds up. 10,000 persons came to Morgantown by air. most of them via commercial air transport-Their average stay was 3 days, and their average expenditure was \$25 a day. total for the year: three-quarters of a million dollars.

But the bond issue only calls for \$790,000. Therefore, in the first year alone, your community will get back almost its entire investment.

And, of course, that return doesn't come back in chunks to a few; it spreads through out the whole community—to hotels, and restaurants, and their suppliers; the retail stores, the local transit lines, the banks, the department of the departmen the drugstores, and every kind of service and supply.

These figures are based on the "old" air port. A new airport, with adequate runway lengths, with more and better facilities for attracting the private pilot, the corporate plane, the commercial airliner, will add greatly to the return on the investment.

I can't imagine a better buy for the money. But, looking at it from another point of view, suppose the airport is not improved. The impending sale of the Morgantown Ordnance Works brings the area to the door step of a potentially tremendous industrial expansion.

This expansion can only come about if you have a good "sky harbor"—available for industry and its ever-expanding and important labor force.

Also, consider the responsibility you have to the present industries and firms which are already here, and operating.

In order for them to compete with rival industries throughout the country, they, too, must have adequate air service, and an airport that can match that service.

A new hospital is going up at the university medical center. Much of the success of this new addition will depend upon the ease of transportation for the patients, visitors, medical specialists, staff, and critical supplies from Morgantown, to all parts of West Virginia.

of West Virginia.

But, this is the air age, and Morgantown, or Wheeling or any city in any State is not an entity, separate unto itself.

It is important, even essential, for instance, to Pittsburgh, that Morgantown have a modern airport because there are letters and express shipments, passengers, and freight, in Pittsburgh that are destined to be flown to Morgantown.

How many letters, how many passengers, how much freight is delivered, and how frequently, from just this one point depends upon what Morgantown is doing to improve

its air facility: the airport.

This concept, really, is the heart of the Pederal system of airports and it is why the Government does appropriate funds for airports throughout the country.

The Congress has passed, over the years, various pieces of legislation, and for varying amounts, to the end that this system

Would be strengthened.

They have had faith in the future of Morgantown as an important center of commerce. That's why, through the Federal Aviation Agency, funds are made available for the development, and improvement of your airport, and others.

They're described, as I said earlier, as matching funds." What is needed, it seems to me, is for "matching faith" on the part of the Morgantown area residents who share the Government's optimism, as well as respect, for the potential of this city.

West Virginians can be well assured that they are being represented by legislators who understand the meaning of, and will work toward, the full realization of industrial and community development that the air age can bring.

Gen. Edward P. Curtis summed up what this means for all of us several years ago when he told President Eisenhower in a special report:

"The United States is becoming more and more an air community. During the last several years our national strategy has come rest essentially upon airpower in its Widening manifestations. The industrial skills devoted to air technologies now comprise the largest single pool of employ-ment in manufacturing. The airplane has become the prime mover of our population In its circulation over distances of 200 miles. developments are changing the American way of life, our habits of work, our hational outlook. If they are given room to follow their logical evolutions they may well provide the principal sustaining elements to our social and economic well being as well as our national strength, for years to come."

Mr. RANDOLPH. Mr. President, in my remarks in introducing Mr. Tipton, I declared that West Virginia cities need better airlines service and suggested that there is a case pending before the Civil Aeronautics Board which could be most helpful to our State and its citizens, namely, the so-called Great Lakes Local Service case on which the Board should reach a decision, inasmuch as it has been processing the matter for more than 3 years.

Mr. President, I now ask unanimous consent to have printed following these remarks, and at this point in the Appendix of the Record, further excerpts from my talk at the chamber of commerce meeting.

There being no objection, excerpts from Senator Randolph's remarks were ordered printed in the Appendix of the Record, as follows:

EXTRACTS OF REMARKS BY SENATOR JENNINGS RANDOLPH, DEMOCRAT OF WEST VIRGINIA, AT MORGANTOWN CHAMBER OF COMMERCE DINNER MEETING, MORGANTOWN, W. VA.

The CAB, by other decisions in recent years, has established a pattern of strengthening local service carriers, ether by substituting them for larger trunklines in smaller and medium-size cities, or by decertifying long-haul airlines at points where the feeder carriers have already been serving in conjunction with the bigger compaines.

The purpose of these air traffic pattern changes has been to improve schedule frequency, and, at the same time, reduce the subsidy of the local carriers. The CAB has applied this program to dozens of cities, and it is significant that, although some communities raised questions at the time the issues was posed, I know of none which objected after the alteration in service was instituted.

The Civil Aeronautics Board, following receipt of the examiner's report last September, has had more than 7 months to reach a decision in the Great Lakes Local Service case which could be the means for real improvement in air traffic for numerous communities of West Virginia and other nearby States.

Frequency of service, and increased aircraft departures and enplaned passengers, are vital to our State. It has been the experience of other States and areas that frequency of departures and passenger increases have been stepped up as much as threefold after the changeover to local carrier service has been accomplished.

Then, too, new and expanded air transport service will aid in the industrial de-

velopment of West Virginia.

It is appropriate, however, that I speak of the splendid service which has been provided to our State and its citizens by both trunklines and local carriers during the pioneering and transition period in which the pattern of airline service has been changing. I mention especially the American, Capital, Eastern, Trans World, Allegheny, and Piedmont Airlines.

I emphasize that it has been almost 8 months since a Civil Aeronautics Board examiner, after more than 3 years of investigations, made recommendations to the Board.

I do not imply any prejudice as to how the CAB should rule in deciding the case, but it does seem unreasonable that the Board should further delay a formal ruling which I hope would be consistent with the pattern it has established for other areas in recent years. Such a decision is vital to a number of West Virginia communities, especially those which presently experience too-infrequent aircraft arrivals and departures, such as Morgantown, Clarksburg-Fairmont, Eikins, Wheeling, Parkersburg, Huntington, Beckley, and Bluefield. Any decision improving local service schedules likewise would benefit aerial intercourse between these communities and the Capital City at Charleston, a trunkline airport city.

Recently, I addressed the members of the CAB and brought to their attention a special study which shows the remarkable increase in schedules and traffic enplaned at a number of typical cities in the year immediately following replacement of a trunkline by a

local carrier, or suspension of a trunkline where a local carrier was already operating.

It was noted, for example, that at Bristol, Va., a trunkline company had 4,559 alrcraft departures the year prior to August 25, 1952, whereas its successor on that date—a local service airline presently serving West Virginia—had 6,605 alrcraft departures during its first year of operations at that airport following the August 25, 1952 trunkline-to-local service change-over. The trunkline had served 19,195 passengers the year prior to that date, whereas the local service airline successor served 29,416 passengers its first year at Bristol.

At Mansfield, Ohio, where another local service airline which figures in the case presently pending before the CAB replaced a trunkline had only 658 aircraft departures the year prior to April 15, 1953. But the local carrier successor had 2,332 aircraft departures its first year in service at Mansfield following that change-over date. Enplaned passengers increased from the 2,961 served the last year by the trunkline to 4,444 served by the local service airline its first year at Mansfield.

Equally significant changes could, and probably would occur at the Morgantown, Clarksburg-Fairmont, Elkins, Wheeling, Parkersburg, Huntington, and other airports in West Virginia if the case pending before the CAB for so long could now be expedited and implemented.

Cooperative Efforts for Agriculture

EXTENSION OF REMARKS

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. GEORGE. Mr. Speaker, at a meeting of the board of governors of the Agriculture Hall of Fame on Friday, May 20, 1960, Mr. B. Bynum Turner, chairman of the board, delivered an address which I thoroughly enjoyed hearing and which all Members should have an opportunity to read.

This meeting brought many famous and successful men from all parts of the United States in the interest of agriculture. Cooperating with Mr. Howard A. Cowden, president of the Agriculture Hall of Fame, in making plans for this spring meeting were the executive managers of the three chambers of commerce, Mr. Ellsworth Green, Jr. of Kansas City, Mr. Chad A. Wymer of Olathe, and Miss Peg Carr of Ottawa. These three contributed materially to the success of obtaining this project for Wyandotte County.

Attending the luncheon meeting in addition to the board of governors were leaders in agriculture, leaders of labor, and leaders of business and industry. Besides benefiting all fields of agriculture, this project brings together important and successful men and women of labor, industry, and agriculture who cooperate and work together for a single objective. This permits a better understanding of the problems of labor by industrial leaders on the one hand and of industry by labor leaders on the other, and both learn more of the problems confronting the farmers.

Last session, Mr. Speaker, I introduced H.R. 5789, a bill to incorporate the Agriculture Hall of Fame which passed the House this year and is now awaiting action in the other Body. Permit me to express my appreciation to you, Mr. Speaker, to the Honorable John W. McCormack, the majority leader; the Honorable Emanuel Celler, chairman of the Judiciary Committee; the Honorable E. L. Forrester, subcommttee chairman, and the members of their committees for such splendid cooperation in assistin in ogbtaining House approval of this legislation.

Mr. Turner in his address showed a businessman's keen insight regarding the situation confronting the farmers of America and visualized the important contribution that the Agriculture Hall of Fame will make, not only to agriculture, but to business, industry, and education.

I ask, Mr. Speaker, that the address of Mr. Turner be included as part of my remarks:

ADDRESS BY MR. B. BYNUM TURNER, AGRICUL-TURAL HALL OF FAME, BOARD OF GOVERNORS SPRING MEETING, KANSAS CITY, KANS., MAY 20, 1960

It's rather like carrying coals to Newcastle for anyone to speak before a distinguished group such as this about anything having to do with agriculture. For, if anybody knows and appreciates the traditions, the past achievements and the future potential of the farmer and his honorable profession, it certainly is you people here in this room.

I have, during the past several weeks, given some serious thought to the Agricultural Hall of Fame. Since I am so new in this job as chairman of the Hall of Fame's board of governors, my thinking necessarily has been that of a man on the outside looking in, rather than on the inside looking out. Nevertheless, I have arrived at some views, and if you will bear with me, I should like to pass them on to you for what they may be worth.

As you know, halls of fame have long been established in various fields, especially athletics, and down in Oklahoma City a hall of fame to honor the American cowboy is taking form. Throughout this land of ours are many other types of shrines dedicated to the men and women who helped to make our country great. The petroleum industry, for example, has its Drake Well Memorial Park in Titusville, Pa., where oil was discovered a century ago.

But nowhere in America is there a central shrine that honors the farmer for the role he has played, and continues to play, in making and keeping us the best fed and best clothed people in the history of civilization.

As you know, steps are now being taken to overcome this omission. It is both fitting and significant that the Agricultural Hall of Fame should be planned for the Kansas City area, for it is this part of the country that provides so much of the food for the tables of America and so many of the fibers that make our lives more comfortable and pleasant.

The Hall of Fame is not to be an elaborate complex built by farmers for their own self-glorification. Rather, the project is an all-embracing one of widespread interest. While it is designated as the Agricultural Hall of Fame, it is an undertaking that merits—and will, I know, be built upon—a broad base of cooperation and support by people everywhere.

It is indeed a lamentable fact that the average American little understands or appreciates the indispensable role played by

agriculture in the Nation's economic wellbeing. In recent years, a word has been coined to convey something of this significance. The word is "agribusiness," which obviously is a blending of the two words "agriculture" and "business." Agribusiness is broader than agriculture itself, of course. It is a combination of all production operations on the farm, of the manufacture and distribution of supplies and equipment to be used on the farm, and of the processing and distribution of farm commodities and items made from them.

Measured in total assets, agribusiness in the United States is almost twice as large as the sum of all of our manufacturing enterprises. It accounts for 40 percent of all consumer expenditures in this country. and it employs 37 percent of the Nation's total work force. You also realize the magnitude of agribusiness in the fact that last year the American farmer invested almost \$5 billion—a new high—in buildings, machinery and equipment. He spent perhaps and additional \$2.5 billion for fuels and lubricants to operate his equipment, using more petroleum power than did all industries combined. The modern farmer obviously is a key customer of many other industries. Think of the great volume and variety of items he buys-rubber tires for his tractors and other equipment, chemicals to fertilize and condition the soil, motor vehicles and trucks by the millions, steel for his buildings, and on and on.

The farmer today is every bit as much a business executive as any man in this room. He is the manager of a going business whose capital investment is on the average \$75,000 and upwards. Totally, American farmers can count assets of more than \$200 billion—holdings, incidentally, that are about equal to the value of all stocks listed on the New York Stock Exchange.

The successful farmer nowadays must be management-conscious or he won't continue to be successful very long. He has to plan and execute on the basis of more variables than most other businessmen. He must be alert to world conditions more so than most executives because, for instance, what happens to Argentine and Australian wheat could be of direct economic concern to him. If he is a livestock farmer, he must prophesy correctly what the markets will be months ahead. He must carefully plan and execute all of his purchases himself to make certain that he is buying what is needed, when it is

needed and at the most economical cost. So rapid and so pronuonced has agricultural progress been in the United States that even the farmer himself may have not found occasion to reflect on just how notable the total accomplishment has been. Here in the so-called breadbasket of the Nation you are familiar, I am sure, with the statistic that the farmer of 20 years ago produced enough to feed himself and 11 other people; whereas today's farmer takes care of himself and 26 others. What the farmer has thus achieved is what might be called a "pattern for plenty."

Freedom from famine is pretty much the exclusive property of modern-day America. It is a luxury that not even our Nation's founders enjoyed because it has come to us only in the past 50 to 100 years. It was neither by luck nor coincidence that the farmers of this Nation scored substantially more progress in a few generations than was recorded in all of the centuries of civilization previously. Agriculture has achieved its tremendous gains by working hand-in-hand with industry, commerce, science and education within the framework of America's unique climate of political and economic freedom, initiative and competitive enterprise.

History provides a classic comparison. In many respects, the farmer of the early days of the Roman Empire was not unlike his

American counterpart of today. He owned and worked his own land, and farming then, as now, was a highly esteemed occupation. In an atmosphere of economic and political freedom, Roman agriculture built the foundation of modern farming. Romans recognized the value of legumes in preparation of the ground for wheat. Their methods of growing grapes and olives were so sound that they were followed with little change for century after century until 100 years or so ago. Their stock breeding was advanced for its day, and they were learned enough to yoke oxen and use animal power to help till the fields.

For 1,800 years no significant agricultural progress was made. George Washington and Thomas Jefferson actually could plow no faster than Solomon or Caesar. But then came the unprecedented agricultural revolution of the 19th and 20th centuries when resourceful Americans began applying their inventive genius, their engineering aptitude and their scientific skill to the task.

Jefferson was among those who helped to launch the mechanical revolution on the farm. He designed the first American moldboard on sound mathematical principles, thus making it possible for plowwrights to produce moldboards of a common model. The development of the reaper ushered in a new era of progress. With a hand sickle, good man in the year 1800 might cut half an acre of wheat a day. By 1840, mechanical reapers were cutting 5 or 6 acres daily. With the appearance of the two-wheel sulky in the middle 1860's, the farmer rode on his plow for the first time. Soon came the threewheeler to give him greater safety, stability, and control. Threshing machines appeared on the scene not long after the Civil War. Meanwhile, oil had been discovered in the hills of western Pennsylvania and, in the kerosene age that followed, the number of farms in America trebled and the production of all crops literally skyrocketed. American agriculture was well on its way to establishing the pattern for plenty that so many of us now take for granted.

Development followed development, and each one, in its own way, contributed to the momentum of the agricultural revolution-The 1930's, for instance, saw the production of the all-purpose tractor. This modification combined the ability to do rowcropping with drawbar and beltpower usefulness, and also permitted the tractor to serve as an efficient carrier for many types of mounted and semimounted implements. The introduction of rubber tires on tractors stepped up tractor performance and speeded most field operations from 25 to 50 percent. Another sig-nificant development was the introduction in 1935 of the high compression, gasolinepowered tractor. It is a matter of consider able pride to my associates and me that Ethyl Corp. played a leading role in bringing about this indispensable mechanical workhorse of the farm.

These, of course, are but a few of the developments in agriculture in past decades. There have been many others, and there will inevitably be many more to help our farmers produce the vast amounts of food and fibers that the world's ever-expanding population will require in the years before us.

The individual who has never paused to consider what the agricultural revolution has meant to him personally indeed has a revelation in store. Never before in the history of man has a people eaten so well, both quantitatively and qualitatively. At the same time that our farmers are helping so measurably to feed less fortunate nations of the world, we here at home enjoy abundant food supplies with plenty left over. Not only that, but we have at our command a greater variety of food of higher quality than ever, and that food reaches us in many convenient forms—concentrated, ready-mixed, heat-and-serve and so forth.

These advances have been made possible, of course, through the happy combination of greater farm production and modern processing, distribution and marketing techniques. Even with the more, better and varied meals we enjoy, Americans today spend a smaller percentage of their income for food than they did 20 or 25 years ago. At the 1958 spending level, according to the U.S. Department of Agriculture, 21 percent of total consumer income went to pay for food, compared with 23 percent during the 1935-39 period. If we ate at the same level as 20 years ago, only 16 percent of consumer income now would be going for food.

Is there any more inspiring story of free enterprise at work than this? I can think of none. This story of American agricul-tural progress is one that should be known and understood by every last citizen, adult and child alike. But, as you and I both know, that, unfortunately, is not the case. Therein lies the value of the Agricultural Hall of Fame. Such a national shrine will serve to call the Nation's attention to the many contributions of agriculture and those industries related to it-automotive, chemical, petroleum, rubber and steel, to name just a few. The hall of fame will bring to the farmer the credit and public acclaim he truly deserves. It will lend added dignity to the occupation of farming. It will be a meeting place for the common interests and ideas of agriculture, business, industry and education. It will honor the leaders of agriculture and constitute a permanent record of their great accomplishments on behalf of all mankind. But, most of all perhaps, the hall of fame will symbolize progress-the progress of years gone by, the progress now being achieved, and the inevitable progress that will be accomplished in the years ahead.

It is the fond hope of all of us that the day is not too distant when the proposed Agricultural Hall of Fame will pass from the realm of man's dream to actuality. A dynamic, living, hall of fame will require the vision and the efforts of many. I am certain that we shall find no dearth of that kind of support among those who might be called upon to carry this worthy project through to completion.

Pope Thanks Levinson for Aid

SPEECH

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1960

Mr. LESINSKI. Mr. Speaker, I am today inserting an article in the Record which I believe is a fine example of the fact that peoples of different nationalities and religions can assist each other and live in harmony when they respect the rights and values of others:

[From the Detroit Times, Apr. 27, 1960]

POPE THANKS LEVINSON FOR AID.

VATICAN CITY, April 27.—Benjamin Levinson, head of Detroit's Franklin Mortgage Co., today had the personal thanks of Pope John for assistance he has given to the Catholic missionaries of SS. Peter and Paul.

After receiving Levinson and his wife Clara in a special audience, the Pope told them:

"The missionary cause of the church is its most important. We thank you for past and any future effort you may make in its behalf."

Levinson explained he was of Jewish faith and said he and his wife were overwhelmed by the Pope's kindness to them.

Pope John also thanked Michigan's Governor Williams for a personal letter to him as well as for a gift medal of the Mackinac Bridge cods.

Levinson, beaming, presented two medals to the Pope, the one in the name of the State of Michigan, from the Governor; the other from Mayor Miriani.

The mayor's was a bronze medallion struck in commemoration of Detroit's 250th birth-day year, 1951.

In a personal letter from the Governor which Levinson handed to the Pope, Williams

"The whole State of Michigan wishes you health, happiness, and the satisfaction of serving God and your fellow man in rich measure."

Earlier, Levinson was accorded the unusual honor of a personal tour of the papal apartments, including the Pope's study.

The Detroiter was also privileged to stand at the exact spot in the window of the papal apartments where the Pope imparts blessings upon crowds in St. Peter's Square helow

The square was bathed in bright sunlight yesterday as Levinson gazed upon it.

Levinson's road to the Vatican started about 15 years ago when, in his own words, "the Dominican Order in Detroit was trying to build a school and they were being pushed around."

He succeeded in obtaining Government approval to release scarce material and helped raise funds.

That was only the beginning and Levinson soon found himself assisting in the building of Austin Catholic High School and St. Michael's and later in projects at the University of Detroit.

He also helped the late Cardinal Mooney's fund drive for Boysville and similar projects before he met the P.I.M.E. Missionaries of SS. Peter and Paul about 2 years ago.

Levinson became interested in the work of the missionaries in Asia, Africa, and South America and helped raise \$86,000 last year at a \$1,000-a-plate dinner in Detroit.

The fund will go toward building a seminary to be known as the Maryglade College for Missionaries in Memphis, Mich.

Levinson was made a Knight of Charity last November 18 when the dinner was held.

The superior general and other priests of the missionary order accompanied the Levinsons to the papal audience.

They presented him with a silver medal with a papal inscription expressing gratitude for efforts of Detroiters on their behalf.

Levinson promised an even bigger Detroit campaign to assist the cause of building the seminary. He said he would reveal details when he returns to Detroit.

The Levinsons flew to Nice, France, last night and will motor to the principality of Monaco today.

Trade Unionism, an Ethical Force in a Pecuniary Society

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I include an address delivered by Solomon

Barkin, director of research, Textile Workers Union of America, before the 10th annual conference of the International Association of Personnel Women in New York on April 30, 1960:

TRADE-UNIONISM AN ETHICAL FORCE IN A PECUNIARY SOCIETY

(By Solomon Barkin, TWUA Director of Research)

The present conference has centered its attention on the moral and ethical conflicts in our society. The primary emphasis has been on the ethics in the market place. This issue is not a new one for the trade-unionists. His primary role in our society has been to raise this very issue and test our performance by this criteria.

The trade-union movement has considered itself one of the primary agencies of critique designed through moral preach-ment, and practical activity to secure a correction of the malpractices in our society which subordinate human and ethical values and repress the individual in free development. It is an agency of protest which has never relied solely upon good intentions of the governors of our economic organization. It has rallied the mass of the industrial citizens to take the job of correction into their own hands and to fight for the amelioration of their own lot and relinement of powers. The possessors of power have seldom yielded their might, privileges, and endowments with grace, even when they have recognized some of the merits of the upsurging groups demanding greater equality, status and more economic returns.

Theories of justice, visions of equality, and acceptance of the logical merits of other's positions have proven to be useful preparations for the battle of change. But older orders seldom graciously yield their entrenched positions. The new gains have repeatedly to be wrested from the mightier. Our great hope has been that the extension of the democratic process would facilitate the broadening of the base of citizenship so that the transfer of power could be smoothly effected through the ballot box. This hope has been denied in many countries of the world where colonial powershave retained their grip until local exasperation broke it by revolution. The areas where the transfer of political power has been effected smoothly stand as a confirmation of our belief in the democratic moral-But even in the United States, the battle for implemeting elementary principles of political, economic, education, and social equality has been prolonged and is still continuing. One cannot fear the worst after speaking to the responsible political and communal leaders of the Deep South in this country. Yet by resisting the implementation of the principles of equality, they are inviting forceful protests and sinking deep shafts of resentment into the souls of millions of Americans. The resulting bitterness will reap its vengeance on the children of the present defenders of the status quo.

The fight for greater social justice is the raison d'etre of the trade-union movement. Unions are created and are being constantly formed by employees to achieve their goals of equality and independence in the market place. They represent the local skirmishes in the battle for greater democracy in the full society. The individual workers' resentments against employers, society or his entire way of life and the denial of the rights which the community had promised him, are positively expressed in the specific demands made on the local employer. Only after the union has been formed does the worker become part of an entire social movement which labors incessantly for the implementation of the great teachings of the brotherhood of man.

Union leaders have generally been re-cruited in the formative days from amongst the protesters, the religious men and the social idealists. They are the rebels of the society. While the institutionalization of the processes of negotiations and collective bargaining tends to submerge this voice of general social dissent, the greater movement never loses this character no matter how prosaic its articulation, how preoccupied it may be with the routines of bargaining and the problems of administration. Even the tolerance of the membership for unethical and undemocratic conduct by some of its leaders is borne out of a cynicism for the nature of the society in which they live. They have allowed such leadership to continue because they have lived in the midst of the moral mire of the society which continues to drown them and know the real might of power and force. They have known that management violates the moral codes and feel that their own first job is to get along with the improvement of their own lots and the protection of their own rights rather than the creation of effete institutions modeled on the rules of middle-class morality which is observed more in the breach than in the fact. But these same groups are active participants with greater social calling of this movement.

The leadership of the trade-union movement has drawn its inspiration from its sense of injustice at the inequities in our economic, social, and political society from the teachings of the great religious leaders and from the social idealistic, philosophic teachings which have deplored many practices in our society. This drive for a more ethical society may seem to be subordinated in the daily processes of union administration, collective bargaining, and political action. But this very routine provides the leverages for achieving these goals in a practical manner. The grievance process capped by arbitration enhances the dignity of man for now he can argue his claims of injustice and have them independently adjudicated. His collective strength makes it possible for him to match the employer's power in negotiations. Through his union he can mitigate the cruelty of the competitive system or raise his voice in protest against unwelcome industrial practices or sound his sentiments and views on the needs of the community and the Nation.

The social idealism of the movement has been ever visible though the public has focused on strikes, violence, strife and bar-gaining power. There are no better monuments to this deeper strain of dedication to public purpose than the profound part which the trade-union movement had in helping bring public free education to this Nation and establish universal suffrage. The benefits of the shorter work day and week were secured only after a century and one half of continuing struggle in which many lives were lost. The famous Chicago Haymarket Massacre of 1886 was a episode in this long and continuing story of social advance toward a shorter work period. Even now the trade-union movement is foremost in the fight against discrimination though a contracting segment within its own ranks in their own economic self interest, resists this principle. Who can be counted as stouter fighters for more liberal social insurance, for adequate medical benefits for the aged, for aid to distressed areas, for a full employment economy, for assistance to foreign countries? Who has been more aggressive and continuing in their resistance to communism in this and foreign countries than the trade unionists?

The goals, and scope of the trade-union movement are not fixed. It is a living organization which constantly adapts itself to the changing economic environment. As the nature of the inequalities is altered, its demands are varied; as the injustices are experienced by new groups of people, it embraces them to help them gain the status to which they have aspired and realize the benefits which they seek. As the opportunities for effecting advances shift from economic to political methods, the movement tends to move in these new directions.

Your program properly speaks of a "changing labor market"-for our country is undergoing vast alterations which portend new developments of fundamental importance to the future of industrial and labor relations and to the nature of trade-unions and collective bargaining. First, there are new trends in the work population. More younger and older people will be in the labor market than ever before; but the middle aged group will actually remain stationary. The challenge to management is clear. younger people will be better educated and have loftler concepts of their own rights and place. The adjustment process will be therefore more difficult as they will have to be trained for the specific jobs. The educational institutions will graduate people with larger preparation, but the specific tools will have to be taught to them.

More older people on the labor market mean the redesign of an increasing number of jobs and schedules of work will fit these people. We are only on the threshold of accumulating information on the nature of the jobs at which older people will be able to perform effectively. This means that the work will have to be adjusted to their needs. The rise in the older worker population will accent the general trend of fitting jobs to people and establish the complementary principle of fitting people to jobs as one of equal but not transcending importance.

Both the demands of the younger people in a desirable workplace and the older people for jobs suitable to them will enhance the usefulness of the experimental psychologist in the production team. The rising numbers of married women in the work population presents another type of an accommodation which the production man will have to make.

Finally, personnel people must prepare themselves now to deal with the expansion of employment of colored and newer ethnic groups in the work population so that they can gain fuller acceptance as equals in the workplace and be offered equal opportunity on all jobs according to their individual com-

Second, the higher rate of technological change which we will experience presents a serious challenge to the individual worker, enterprise, and society. The newer changes are more sweeping for they will eliminate large numbers of jobs requiring existing skills and place a new accent on higher educational preparation. Displacement will be more frequent; transfers will become more necessary in plants where total employment is being maintained; retraining will become imperative as expansion opens up jobs for which there are no persons in the labor market. The higher rate of plant closings will spell more migration and the shift of more responsibilities for helping people to the communal social agencies.

The Nation's responsibilities for assisting communities and people to deal with the problems of personnel and communal adjustment will necessarily increase. The agencies for economic redevelopment for distressed areas will have to be multiplied so that the transition from contraction to economic expansion and from closing plants to the opening of new ones will be effected in the shortest possible period.

Third, the development of automation presents our society with another challenge for which we have not been adequately prepared. The significance of this technical

innovation is that it not only is associated with three new tools: the transfer machine, the electronic computer, and the servo-mechanism, but that it has finally established means for mechanizing clerical and technical jobs. For the first time we are able to eliminate thousands of them. the initial impact has not been invariably unfavorable from the point of view of employment, as new uses are developed for data, and people and the large numbers of female workers in these jobs have provided a setting favorable to easy adjustment, the long-term outlook is not so reassuring. The shifts of employment to more highly demanding ones and the routinization if not the elimination of many of the current thousands of administrative jobs and managerial jobs will present a serious challenge. For concurrently along with this develop-ment we are observing the increasing concentration of displaced people in the service employments paying lower wages and providing less attractive opportunities. characteristics of future job groups are not equally attractive.

It is, moreover, more than likely that as routinization develops and as authority is concentrated into an executive management group in the future business enterprise as more service organizations are operated by large-scale business agencies, that the pres-

sure for unionization will grow.

Finally, we may also report that another force favoring unionization of many groups hitherto unresponsive to the appeal will become increasingly felt. The emphasis on democratic participation and in decisionmaking which has become widespread both in industry and our society will have to be reflected in provisions for employee organization within the enterprise. While the channels for personal advancement through changes among employers were open, and resulted in constantly rising standards and broader individual opportunities, the employees in the newer industries and occupations will not be interested in unions. But this entire setting will be revised. Employees will seek to obtain more of a say in the determination of their conditions of employment and the decisions affecting their opportunities. The response will be or-ganization. The new agency may at first avoid the term. Professional groups may undertake to provide grievance machinery or standards of employment. But these are likely to be makeshifts as the new cycle of

unionism matures in this country.

Personnel management can make its greatest contribution in recognizing that the tools are no substitute for substance. basic employee equities and rights, and opportunities can only be effectively realized in an expanding full-employment society where he is organized and speaks through his own union to establish not only proper conditions for employment but also participates in the decision-making processes relating to his employment and looks to the union to carry on the continuing battle for equity both within the plant and in the society as a whole.

Personnel management has the responsibility of interpreting these needs to the dominant economic powers within the enterprise. Resistance to these demands as to all movements for greater rights and democracy will, in the long run, challenge the viability of the society and the social system itself. Management should be helped to come to terms with these demands.

The second major responsibility for personnel management is to help the enterprise to adjust to the changing character and complexion of our work force and our economic structure and the continuing public emphasis on the obligation to hire a fullcross section of the people in a community rather than practicing policies of discriminatory selection. More emphasis must be

placed on fitting jobs and industrial environments to people rather than the reverse.

The third responsibility for personnel management is to recognize that the enterprise has an obligation to minimize the difficulties of personnel adjustment through the development of programs of transfer, training, and income maintenance.

Freedom of the Seas

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. FLOOD. Mr. Speaker, recently the Congress of the United States approved an amendment to the statement of policy of the Mutual Security Act which has written moral principle into our economic aid legislation. This declaration favors freedom of the seas and economic cooperation between nations who are recipients of our aid and records its opposition to economic warfare, boycotts, blockades, and restrictions on international waterways.

The amendment created tremendous interest throughout the country, and I would like to call the attention of the Members of the House of Representatives to this editorial which appeared on May 4, 1960, in the Scranton (Pa.) Times:

SENATE RAPS SUEZ BLOCKADE

Over the protests of the State Department and of Senator J. W. Fulbright, Arkansas Democrat who is chairman of the Foreign Relations Committee, the Senate has put itself on record as favoring retaliatory measures against the United Arabs Republic for its blockade which has kept Israeli shipping from the Suez Canal for the past 12 years. The action came on the observance of the 12th anniversary of the founding of Israel as a sovereign state.

By a 45-to-39 vote, the Senate wrote into the \$1,405-million foreign-aid spending bill an amendment which would give President Elsenhower or his successor discretionary power to withhold aid from nations practicing economic warfare. The amendment, offered by Senator Paul H. Douglas, Illinois Democrat, and Senator Kenneth B. Keating, New York Republican, did not mention Egypt by name, but in the debate Senator Douglas made it clear that it was aimed at the Arab Republic

the Arab Republic.

He pointed out that since 1957, Egypt has been under a pledge to the United Nations to permit free transit of the canal but that it has violated its promise. The United States is morally obligated to see that this pledge is compiled with, Senator Douglas argued. "Are we going to go on with conversations or are we to try to get some senae that there are moral laws in the world?" he asked.

Senator Fullberght attacked the amendment as "an unhappy intrusion" into foreign affairs and charged that it was dictated by a domestic political "pressure group." The State Department expressed fears, that its adoption would "inflame" the Arab nations against the United States without climinating the canal blockade and would appear to confirm the charges, so often made by the Communists, that American foreign aid loans and grants have political strings attached.

In thus trying to please everybody, the State Department may wind up by pleasing nobody, least of all the American people who undoubtedly oppose restrictions on the use of any international waterway. The Douglas-Keating amendment is not binding upon the President, but at least it puts Congress on record, as New York's Senator Javrrs put it, as "insisting upon morality and upon the honoring of international commitments."

Employment of the Physically Handicapped

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr ROOSEVELT. Mr. Speaker, an informative and enlightening speech on the employment of the physically handicapped was recently given before the annual meeting of the President's Committee on Employment of the Physically Handicapped.

I find myself in agreement with the speaker, Mr. James A. Brownlow, President of the ALF-CIO Metal Trades Department, when he stated that "It is indeed hard to realize that in this great land of ours and with the tremendous strides we have made by working together, we have as yet failed to meet our responsibility in a field so vital to the welfare of us all, namely, employment of the physically handicapped."

As pointed out, that while it is true that Government, private industry, trade unions, and social agencies "all show continuing progress in this field, it is at far to slow a rate and can give us nothing but a limited pride in its accomplishment."

Mr. Speaker, I commend and recommend Mr. Brownlow's speech for a better understanding of the problem and the challenge:

REMARKS OF MR. JAMES A. BROWNLOW, PRESI-DENT, METAL TRADES DEPARTMENT, AFL-CIO, BEFORE THE ANNUAL MEETING OF THE PRESIDENT'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED, WASH-INGTON, D.C., MAY 5, 1960

It is indeed hard to realize that in this great land of ours and with the tremendous strides we have made by working together, we have as yet failed to meet our responsibility in a field so vital to the welfare of us all, namely, employment of the physically handicapped.

While it is true that the record of government at both the State and National level, the record of private industry, the record of our trade union movement, and the record of private social agencies in our country all show continuing progress in this field, it is at far too slow a rate and can give us nothing but a limited pride in its accomplishment.

We have won some skirmishes, but the victory still lies ahead.

There are those who may differ, but to me it seems patently clear that our greatest task is to integrate the employable handicapped into the work force in the shortest period of time and to use them at their highest possible skills so as to enable them to gain or regain the dignity and pride which

come from successful work performance and the satisfaction of earning one's own way to the greatest extent his capacities will allow.

Our population is growing and our life span is constantly lengthening. We are confronted with a growing number of persons handicapped in one way or another, who must get the chance to fit in effectively and efficiently in industrial employment and be given the opportunity to carry their appropriate part of our national responsibility. We as a Nation are guilty of indifference

We as a Nation are guilty of indifference and can be appropriately charged not only with the waste of human resources, but with a lack of social consciousness in failing to face up to our responsibility in meeting this problem

Technological progress is developing rapidly throughout our Nation, not only in industry but in medical science. Certainly, our great specialists in medical technique and know-how should be challenged to achieve the goal of preparing each permanently impaired member of our society so that he can rapidly gain and enjoy his greatest potential of employment and usefulness.

Certainly, our industrial engineers and specialists should be challenged to develop the techniques and arrangements which will allow industry to integrate economically such handicapped workers into its industrial work force

The blame for our slow progress to date is not chargeable only to one group in our society. All of us from labor, management, and government must take our share of responsibility. We know that we still have today some very substantial roadblocks closing plant gates to the employable handicapped.

In addition to the general reluctance of an employer to employ a handicapped worker and which is certainly unjustifiable from a social viewpoint, we know that in the vast majority of our States many employers are reluctant to expose themsleves, rightly or wrongly, to what they believe are substantial additional economic risks which must be borne by those employing handicapped. One reason often given is workmen's compensation insurance costs. Unfortunately, most of our States still have workmen's compensation legislation which fails through an appropriately established second injury fund, to limit employers' liability.

In far too many States employers are still subject to broad and unfair liability in the event of injury to workers who were previously handicapped. Naturally this has served to close off the handicapped's employment opportunities.

However, a few States now have workmen's compensation legislation which provides for second injury funds which limit the employer's liability strictly to those injuries occurring to the handicapped while he is in such employer's employment.

It is imperative that immediate and concerted efforts be made to enact legislation in all States which require same and which will remove the broad and unfair liability which still must be borne by employers in the event of injury to a worker who was previously handicapped.

It is also of utmost importance that a far better job be done in disseminating the facts with regard to employment of the handicapped. Their good record of job performance and low absenteeism should be broadcast to dispel contrary fictitious views held by employers not experienced in handicapped employment.

In addition, it is of vital concern that a far better job be done in resolving the misapprehensions still held by many poorly informed personnel and employment relations directors regarding all phases of employment of the handicapped. In those States where employer liability is properly limited by second injury fund legislation,

such fact should be publicized so that there is no possibility of personnel departments rejecting applicants on the basis of fears of liability which no longer exist in many States.

The composition of our work force has been constantly moving toward a higher and higher proportion of professional and skilled workers with a constantly decreasing demand for the pure backbreaking manual labor type of jobs, needing physically strong and complete bodies for their performance. This change in composition of our work force should increase our ability to effectively employ workers who have physical handicaps.

Power equipment, conveyors, and a myriad of devices of industry are constantly nar-rowing the physical demands and bringing the worker to a position where his mental and human qualities of thought, judgment, perception, etc., are displacing the requirements for mere physical prowess.

These factors should provide a basis for utilizing and integrating the handicapped worker in the work force with growing rapidity.

Naturally the placement of a handicapped worker on a job which will allow for the fullest use of his abilities as a worker and which will not make undue performance demands upon him in the area of his handicap will help to assure satisfactory job performance.

In the limited time at my disposal I do not intend to discuss all of the arguments, fears, and reasons given by employers against the employment of handicapped workers.

I would not have anyone believe that the full responsibility for failure to employ the physically handicapped is solely the fault of the employer.

The fact remains that we have many unions whose agreements are such that they preclude the employment of the physically handicapped.

One would be naive indeed if he believed that in every occupation, the physically handicapped possessed the same facility for production which the general worker has. In many instances it might well be to the advantage of the labor union to take into consideration the productive abilities of the handicapped and make provision for them in their negotiated contracts.

Resistance of unions to companies employing physically handicapped and the fear that they are working at wage rates less than able-bodied employees, should thoroughly examined than it is today and work places made for as many of these handi-

capped as industry can absorb.

We are convinced that with all-out teamwork, cooperation of labor, Government and private organizations all working together with employers, much of the resistance still encountered to employment of the handicapped can be dissipated and far larger numbers will be able to prove through their job performance that the employer is not eco-nomically penalized through the employment of the physically handicapped.

Before discussing briefly with you the trade union movement's role and responsibility in this cooperative effort, let me merely mention the new hazard brought into being with the development of our atomic program and which undoubtedly will present us with a problem of worker handicap which will

require special attention.

I am referring to the problem of radiation exposure. For example, a worker may be required to deal with radioactive substances or materials and receive a large overdose of radiation sufficient to bar him from further employment in this area of work, perhaps for some months or even for the remainder of his work life.

This man is no less a handicapped worker than is the man who has suffered the loss of a limb or some other bodily faculty.

The radiation worker's injury is not readily seen but the record of his overexposure and the requirements of law bar him from working where further exposure is possible. the rapidly growing use of radioisotopes and other radioactive substances, the problem of the radiation handicapped worker will increase and will also require the concerted efforts of all elements of our society.

In the past several months the newspapers have again highlighted the problems of one of the workers involved in a radiation incident in Texas several years ago and the present predicament in which he and his family find themselves as a result of his overexpo-

We in the trade union movement acknowledge and recognize our responsibility to work toward improved legislation in all fields necessary to remove the existing barriers and resistance to the employment of qualified physically handicapped workers.

On the workmen's compensation front we have urged the broad type coverage for second or subsequent injury funds in State workmen's compensation laws, with limited liability on the last employer, so as to effectively remove his fears of being hit with heavy compensation loss in the event a handicapped worker suffers an additional injury.

These second injury funds should also be broadened so that they cover all types of injuries, not just loss of a member of the body and they should specifically cover radiation injuries. They should be so designed that while the employer's liability is fixed within prescribed limits the employee will be fully compensated with the second injury fund paying the difference.

The worthwhile cause which brings us all together here today warrants the full and constant support of all segments of our society and the devotion of its leaders.

We, in the labor movement have made some small progress through our collective bargaining agreements and union management cooperation.

Many of our agreements make specific provision to take care of the replacement and retraining, if necessary, of workers injured on the jobs and their transfer to jobs which lie within their capacities.

Many agreements made special provision for the superannuated worker in order to assure him of an opportunity to retain his employment.

Some agreements make special provision in their job bid or seniority clauses for the right of such workers to move on to jobs which they are capable of performing.

The AFL-CIO is striving to increase employment opportunities for the physically handicapped. It has recommended to all of its affiliates a specific program as follows:

"Through collective bargaining the local union should give special recognition to the problems of the physically handicapped and negotiate necessary contract provisions to safeguard their rights and guarantee them equal treatment.

"The local bargaining committee should consider all problems arising in the employment, reemployment and transfer of all impaired workers, whether the physical condition arises out of on-the-job injuries, war service, or off-the-job impairments resulting from disease, injury or congenital

"Practical plans for new employment, reemployment, or transfer of workers call for a knowledge of the actual physical requirements of jobs. The committee should determine this requirement following an onthe-spot analysis of the job and conditions of employment.

"The disabled person's physical ability to handle the job safely and adequately should be determined for the specific job for which he may be considered and otherwise qualified. Sometimes a probationary tryout may be the practical method for final determina-

"Adequate training is an essential element in proper placement of handicapped em-ployees. On-the-job and apprenticeship types of training should afford equal opportunity for the physically handicapped employees to acquire job proficiency.

Proper placement is the key to successful employment of physically handicapped workers. Physically handicapped workers should be required to meet the same production and safety standards as other workers-no more, no less."

Let me add a word of caution here.

In many instances the use of preemployment physical examinations are most necessary to protect the health and safety of the handicapped employees, but their adoption for any other purpose than to determine physical abilities for a suitable job is unsound and will not be tolerated. The AFL-CIO program continues:

The proof of satisfactory placement is satisfactory performance and progress on the job. To assure such progress one or more checks should be made by a member the bargaining committee or steward. Followup and practical counsel may be necessary at frequent intervals in the first

months of employment." I don't agree with those who feel that rehabilitation should be submerged and made secondary to the promotion of legis-

lation to gain appropriations to support those requiring rehabilitary assistance. To me, the dignity of man and the satisfaction which he gains from his work achievements, far transcends the importance of paternalistic care of handicapped persons.

Fortunately, most of the people in our country have been blessed by our Maker with sound bodies and normal minds. All of us so endowed are obligated to preserve their rich endowment.

But, we cannot stop there. We have a further obligation which we cannot evade. It is our responsibility to those not so fortu-

They have the same hopes, the same ambitions and the same desires as all of us. It is our obligation as citizens to see to it that they are afforded every opportunity to fully use all of their existing faculties to the fullest extent that their physical condition will

We cannot meet this responsibility by merely appropriating money for food, clothing, and shelter.

We must devote ourselves to the task of integrating them into our society and our work force, regardless of the cost and effort required. Only in this manner can we meet our responsibility.

Senator Dodd's Advice

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following editorial which appeared in the New York Journal-American of May 21, 1960:

SENATOR DODD'S ADVICE

Senator Thomas J. Dopp, Democrat, of Connecticut, has given voice to what we believe must be in the mind of every American with respect to Soviet Premier Khrushchev's inexcusable treatment of President Eisenhower at the ill-fated summit meeting.

Senator Dopp told the Senate:

"Certainly a new, alltime low has been hit in the world when a man of Khrushchev's record, having the blood of millions on his hands, can lecture a man like Dwight Risenhower about morality.

"Perhaps this incident will help to wake

up the American people."

Seven months ago, the Connecticut Senator spoke out on the floor of the Senate against the Khrushchev visit to the United States. For some time, Senator Dopp has expressed the belief that Premier Khrushchev would contrive some means to keep President Eisenhower from visiting Russia and talking directly to the people of the Soviet.

Events have proved the Senator correct. President Eisenhower's only fault, according to the Senator, was that "he trusted this evil man—Khrushchev—too much—but he

did so with all good intentions for our country." Another mistake was to agree to a summit meeting without knowing in advance what was going to be talked about.

Senator Dodd has a timely warning regarding the massive propaganda effort Khrushchev is carrying on in an attempt to get us to suspend permanently all nuclear testing. He said it would be national suicide if the Communists were permitted to succeed.

The Connecticut Senator has given us a fine example of patriotic statesmanship. We believe American unity will be strengthened it we heed this advice from Senator Dono:

"From this hour forward, let us give up all self-deception and speak and act like freemen who know the truth and are not atraid."

Spy Plane Affair

EXTENSION OF REMARKS

HON, JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. WESTLAND. Mr. Speaker, the Sumas (Wash.) News published in Whatcom County is one of the leading newspapers in my district. Its able publishers are Mr. and Mrs. Harry J. Christensen.

Each week Mrs. Christensen editorializes in a column entitled "From Mrs. C.'s Mail Bag." I believe what Mrs. C. has to say in regards to Mr. K. is of interest to the Members of Congress. The item from the May 19, 1960, issue of the Sumas News follows:

FROM MRS. C.'S MAIL BAG

The "spy plane affair" is most regrettable but it will never diminish the wonderful record of peaceful intent by the United States.

Our "open" society has indicated to the world our good will. We've spent billions of dollars for aid to needy peoples, our recent agreement with India for \$1 billion worth of Brain is a remarkable gesture of the goodness of American Government. We've never sought the enslavement of people or the expansion of the United States,

A bloody record of enslavement of millions of people against their will is the Soviet Union's record. Hungary remains on the World's conscience.

Khrushchev lost his greatest opportunity to show an honest intent for an alliance when he "blew" the summit conference. We may have been guilty of poor judgment in

the reconnaissance flight over the Soviet Union on the eve of the summit, but we've never been guilty of inhumanities.

When Khrushchev pointed an accusing finger at President Eisenhower, he proved himself incapable of handling a crisis and again stands on the outside of the circle of people committed to "peace with justice." His propaganda blast knitted closely the Western Powers he hoped to separate and brought more of the uncommitted people of the world to our side.

Khrushchev's ruthless propaganda in Paris left no doubt he never held the common interests of humanity, only that of Commu-

nists

Thirty-second Anniversary of Jordan's Independence

EXTENSION OF REMARKS

HON, ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. POWELL. Mr. Speaker, today marks the 32d anniversary of Jordan's independence. The history of the Jordanian independence dates back to May 25. 1928, at which time a self-internal independence became known as the Princedom of Transjordan. As the years drew back the curtain of repression and self-expression, in 1946 Trans-Jordan concluded a treaty with Britain, whereby the latter recognized the independence of Jordan and its full sovereignty, with His Majesty, King Abdullah, as the newly proclaimed King. This achievement of independence, this long awaited dream for Jordan's people became a reality through the unceasing efforts of His late Majesty, King Abdullah, the grandfather of His Majesty, the present King Hussein.

April of 1950 viewed the end of hostilities between the Arabs and Jews in Palestine. The Jordanian Parliament, composed of central Arab Palestine and Trans-Jordan proper, approved the union of the mentioned regions with the new state to be acknowledged as the Hashemite Kingdom of Jordan. Presently, Jordan's monarch is His Majesty King Hussein, the young grandson of

the late King Abdullah.

The historic perservance of this kingdom's zealous struggle for independence, the vigilant alertness which it protects itself from shackling antidemocratic elements, the perpetual challenge it brings to other nations, certainly characterizes a kingdom deservant of distinguished recognition.

From a persistent strife of chaos, a kingdom has risen to exert itself among the free nations of the world. Amid present misunderstandings and misgivings, the true sovereignty of Jordan has shown that the seeds of democratic principles can only grow and blossom through the tender nurturing of patience, understanding, and tolerance.

On this, their day of Independence, I wish to extend greetings to the people of Jordan, His Majesty, King Hussein, and the Honorable Dr. Yousuf Haikal, the Ambassador from Jordan.

Opinion Poll for Seventh District Voters

EXTENSION OF REMARKS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. BRAY. Mr. Speaker, we have been in session this year for better than 4 months. In the remaining weeks before adjournment many important decisions will be made. As I have done on previous occasions, I am submitting to my constituents a list of questions, as follows, and requesting that they express their views in this manner. I will place the results of this poll in the Congressional Record.

Do you favor:

1. Government-sponsored medical care for social security retirees? H.R. 4700, the Forand bill, proposes that the Government pay the medical and hospital bills—with certain maximum limits—for social security retirees to be financed by increasing the social security tax. Opponents maintain this would injure the stability of social security, and that millions of elderly people not eligible for social security benefits would not receive this assistance.

2. Limiting national expenditures to balance the budget? President Eisenhower has predicted a budget surplus of \$4 billion next year, which he believes should be used to retire part of the national debt. In the Congress many new programs are suggested which seem desirable, but which would involve the expenditure of millions of dollars. In deciding on new programs we must consider how the money for them will be raised or whether to borrow more money.

3. Use of import quotas to protect local industries from foreign competition? Many industries in Indiana manufacture products which are also produced abroad. In the continuing efforts of our Government to reduce tariff barriers, and facilitate world trade, the competition of these products coming from countries where wage standards are considerably lower is intense. It has been suggested that more adequate protection should be accorded our domestic industries, including farming.

4. Increased spending for national defense? We are spending more than \$40 billion a year for defense, which is the major portion of our national budget. Yet many critics say our defense efforts have been pinchpenny and that recent Russian developments necessitate greater

defense spending.

5. U.S. recognition of Red China? Today we recognize the Chinese Nationalist government on Formosa instead of the Communist government in Peiping. Some believe that we should recognize and begin trade with Red China.

6. Increased funds for foreign aid? In the last 15 years the United States has spent in excess of \$80 billion for foreign aid. Some claim that our aid is doing much to halt the further spread of communism and to build strong new bastions of freedom. On the other hand

some say that this should be eliminated or cut.

7. Returning to the States one-half of the cigarette tax collected from its residents for educational uses without Federal direction? Proposals are before Congress to give Federal assistance to schools through grants to the States in accordance with a formula weighted to assist those which have a greater need. A different approach would be to return a portion of an excise tax collected in each State, such as the tax on cigarettes, provided that the money would be used for school purposes, either in the construction of buildings or teachers' salaries, but not subject to Federal direc-The return to Indiana of one-half of the Federal cigarette tax paid there, which would be 4 cents on each package, would realize \$24 million per year, three times the amount to be received under another proposed program.

8. Giving in to the Russians by abandoning West Berlin? The prime target of Soviet foreign policy is to get the United States to withdraw from Berlin.

9. Withdrawing from pledge to buy sugar from Cuba at above the world price? We are obligated until the end of 1960, under the Sugar Act, to make one-third of our sugar purchases in Cuba at above world prices. Owing to anti-American feelings which have been expressed since the Castro regime took over. it has been suggested that we not renew the Cuban sugar quota.

10. Repeal of loyalty oath requirement of students receiving aid under the National Defense Education Act? Students applying for loans and fellowships under the National Defense Education Act are required to take an oath of loyalty to the United States. Bills are before the Congress to repeal this

oath.

11. Retention of the Connally amendment which allows the United States to reject the jurisdiction of the World Court? In accepting the jurisdiction of the World Court in 1948 the United States reserved the right to determine if a particular matter is domestic and hence not subject to international control. It has been suggested in the Senate that this amendment be repealed.

12. Increasing the conservation re-serve—soil bank—from 28 million acres to 60 million acres? If you are engaged in farming, also check here . The basis of the so-called farm problem has been overproduction, which is unquestionably causing great difficulties in the Farm Belt. We can, however, be thankful that our difficulties have been with abundance and not with scarcity. The soil-bank program sets aside large areas of land for several years, insuring that they will not be used for production and that the soil will be conserved and replenished. There are about 28 million acres currently in this conservation reserve; some analysts suggest that if the reserve were increased to about 60 million acres it would balance agricultural production and eliminate creation of additional surpluses.

I am looking forward to the replies I will receive, and I will advise you at a later date of the results of this poll.

Israeli Shipping

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. GALLAGHER. Mr. Speaker, I am pleased to insert in the RECORD an excellent editorial which appeared in the Newark Star Ledger on May 4 supporting a position that the United Arab Republics cease the blockade of Israeli shipping from the Suez Canal.

The splendidly written editorial expresses exactly my sentiments in sponsoring the amendment when our committee, the Foreign Affairs, was marking up the mutual security bill. I was happy to see Senator DougLas adopt our amendment in the Senate version of the bill.

I sincerely believe that it is against our national interest and contrary to our principles not to serve positive notice on Nasser that we will not condone a policy of looking the other way in his aggressive acts toward Israel. To allow him to do so is not only being unfair to our friend and ally, but it is tolerating a policy opposite to the goals of the United States in sponsoring the mutual security program. To encourage United Arab Republics in its acts against Israel is to encourage such conduct against the United States.

I feel that we must be consistent in our policy. It is not the military might of the United States alone that will win us world respect, it is a dedication to ideals. Let us demonstrate to Nasser that we believe in our own ideals.

I call the wonderfully expressive editorial to the attention of this House.

EXCHANGING BOYCOTTS

The be-nice-to-Nasser policy suffered a setback when the Senate adopted an amendment to the foreign aid bill giving the President power to withhold assistance to the United Arab Republic if it continued to block Israeli shipping from the Suez Canal.

It is a mistake, however, to view Nasser's war on Israeli shipping as solely an action against Israel. For Nasser has put into effect a boycott of ships that handle cargo to or from Israel. And that affects American shipping.

Part of the agreement under which the Western nations condoned Nasser's seizure of the canal was a stipulation that it was to remain open to international shipping. This has been violated right from the beginning by Nasser. The United Nations has been powerless in its efforts to persuade him to change this policy.

It does not seem at all unreasonable for us to show displeasure at a policy which is directed against the freedom of American shipping as well as against Israel. Freedom of the seas is meaningless if one country can impose the restrictions and boycotts that the UAR now is enforcing.

One school of thought maintains there is something improper about withholding aid from those who take hostile action against us. It is possible to tie too many strings to foreign aid. But it also may be possible to dispense aid in such a way that it hurts us instead of helps us.

We are told we mustn't "rock the boat" in the Middle East. But if someone is punching holes in the boat, it would seem wise

to try to stop him-even at the risk of rocking the boat.

Experience has shown us that a be-kindto-Nasser policy earns us scorn and abuse If our foreign aid program is to be a mutual security program—as it is termed—we can-not shut our eyes to the avowed hostility of a Nasser.

If Nasser is to decree a boycott on shipping, he might well expect to be the target of a boycott in foreign aid.

Americans Have the Same Good Will Toward Russians Today as in 1921 When We Gladly Sent Food To Save Millions of Russian Lives-We Hope Millions of Russians Still Have the Same Good Will Toward Us Now as They Did Then, Despite the Efforts of Their Dictators To Poison Them Against Us

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, 1 include the following article on how American corn and other grains saved lives in Russia after World War I. The article was written by Miss Margo Cairns, who is widely known as the Corn Lady because of her efforts, which I wholeheartedly support, to have our Government show our gratitude for the incomparable benefits corn has brought to our people, by declaring the tassel of the corn to be our national floral emblem.

GRATITUDE, HOW DEEP?

(By Margo Cairns-"The Corn Tassel Lady") Today Russian officials are making every effort to confuse the world's thought regarding America and to disparage Americans. Our proffered friendship has been mistrusted and rejected. An Iron Curtain has again been substituted for the normal relations of other nations. However, within the memory of adult Americans is proof of kindness unequaled in the annals of history, of a lifesaving mission to 20 million Russians, a mission so successful that it even saved the tottering Soviet regime.

Less than 40 years ago no walls of secrecy could keep the evidence of impending disaster from neighboring nations. No reconnaissance planes were needed to discover the sufferings of a great people. Hot winds carried the ominous tidings to the world.

In 1921 there was a great crop failure in the Volga valley and vast stretches of the Ukraine. There were no food reserves in the rest of Russia to cope with the threat of famine. In former years the careful peasants had kept gain reserves to protect them through occasional periods of drought, but Communist officials seized every morsel of food from the villages for the Red Army. There was no grain left for fall and spring sowings, no scrap of food for either the people or their livestock.

The spring sun baked the bare land until it was as hard as cement destroying every living thing. The water in the wells failed. Then the hot winds began to blow from Si-The terrified people beria and the deserts.

tried to escape from their villages, to flee to distant Moscow. Many fell, never to rise again.

Officials in Moscow ware alarmed—they tried to keep the free world from knowing of the impending catastrophe, but on June 26, 1921. "Pravda" admitted that 25 million Russians were starving. Then on July 23 Maxim Gorky, world-famous writer, appealed to Europe and America for bread and medicine.

The great heart of America responded. Herbert Hoover, who had founded the American Relief Administration (ARA) to feed Europe's destitute children after the ravages of World War I, cabled Gorky, offering food, clothing and medical supplies. The offer was accepted.

Immediately the wheels of salvation began turning. Swift congressional action made millions of dollars available. Early in 1922 the first tons of lifesaving, bodybuilding corn arrived in Russia and was sent where it was most desperately needed for adults. Soup kitchens cared for the children. Hospital and medical supplies quickly aided in battling disease. The crisis was met. Hope stirred.

For 3 years a large staff of soulless Americans labored behind the Iron Curtain alteriating hunger and suffering. They introduced corn or maize, the native grain of the Western Hemisphere, to the farmers of Russia, the grain that has been the dependence and priceless treasure of all the Americas. They taught the manner of planting, cultivation, and some of its multiple uses.

The ancient name of "maize" means mother, that which feeds, nourishes and sustains. This "mother" was waiting on the Atlantic coast to feed, nourish and sustain the white race as it surged into the New World. So, with the aid of the Americans, it continued to fulfill its mission by "mothering" the Russian peoples.

In an article by Henry C. Wolfe which appeared in This Week, February 15, 1959, Mr. Hoover said:

"It took 3 years—from 1921 to 1924—for the American Relief Administration to get Russia back on her feet. Henry C. Wolfe was one of the several hundred dedicated Americans, who, under the command of Col, William N. Haskall, did a splendid job in helping the victims of the great Russian famine.

"When it was over, the Russians gave the entire American staff a great banquet in the Kremlin. In the speeches they said we had saved 20 million lives. They presented me with an elaborate diploma signed by all the leading Bolsheviks.

"This scroll says in part: Be it resolved by the Council of the People's Commissars, in the name of the millions of people who have been saved—to express the most deeply feit sentiment of gratitude, and to state that all the people inhabiting the U.S.S.R. never will forget the aid rendered to them by the American people, holding it to be a pledge of the future friendship of the two nations."

And Mr. Wolfe wrote: "But they have forgotten. And this is the irony: there surely must be many high Communist officials today who owe their lives to the ARA. Who knows? Perhaps Malenkov—who was a teenager in Orenberg, the worst famine center in Russia—received our food and clothing. Perhaps Gromyko, a child of 12 in 1921, ate in our child-feeding kitchens. Even Khrushchev himself may have benefited by our generosity."

In addition to the dedicated services of hundreds of trained Americans, the American Relief Administration spent about \$70 million voted by Congress and approved by the President, to help the Russian people.

Gratitude, how deep? The answer seems to be in the dust clouds that the hot winds are again carrying over the Iron Curtains.

According to Pravda, the "unusually capricious spring with its strong, impetuous winds and sharp changes of temperature from one day to another, night frosts alternating with day temperatures of close to 70 degrees have begun to dry out the soil."

Very recent reports tell that "dust clouds thick enough to blot out the sun, are drifting slowly up the Danube." "In Bulgaria, Rumania, and Yugoslavia these clouds have impeded visibility. On certain days thick deposits of sand and top soil covered the streets of Bucharest. These dust clouds are blowing in from the U.S.R."

Are these dust clouds a symbol of a government's ingratitude? A nation is only as great as it is grateful.

Cuban Danger in Westchester County

EXTENSION OF REMARKS

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. BARRY. Mr. Speaker, the situation in Cuba is serious. Recently I drew the attention of the Congress to the seizure of the Otis Elevator Co. plant in Cuba. Now, apparently, there is some fear that there is actual danger from Cuban revolutionary activities in my own county of Westchester. I would call your attention to an article which appeared Thursday, May 19, 1960, in the Herald of Westchester:

INCIDENTS FEARED HERE—ENVOYS HOMES WATCHED

Westchester homes of Latin-American diplomats are being closely watched by county law enforcement officials in a hush-hush stepup of security precautions, triggered by the flareup of Cuban political agitation in New York City.

The secret protection of Latin-American

The secret protection of Latin-American envoys has been going on for some time. But gun-toting bodyguards, nationals of the country involved, have been doing most of the protecting up to now.

Very quietly, in the past few days, local police officials were instructed, through channels of communications tracing back to Washington, that some of the diplomats' homes should be discreetly kept under closer scrutiny.

High-level U.S.A. officials, it was learned, fear a possible "incident"—kidnaping, assassination attempt or just unruly mobaction

About a dozen Latin American nations' consulate or United Nations officials and their families—usually including children—reside in Westchester, according to information this newspaper has received.

The tinderbox situation in Latin America, produced by Fidel Castro's conquest of Cuba, has kept most diplomats edgy.

Even more worried than the working envoys are those who are out of a job. The appointees of ousted regimes, they could not return to their countries.

Some of them are still living here, waiting to see what happens next. They, in particular, are potential targets of agitators.

The increased protection of diplomats here was begun after last week's widespread riots between pro-Castro and anti-Castro street fighters in New York.

This show of violence so close to Westchester's residential neighborhoods has worried area security agents more than ever. Meanwhile, in Washington, still another aspect of the touchy Caribbean situation was noted by a Westchester Congressman.

noted by a Westchester Congressman.

Castro's seizure of the Otis Elevator property in Cuba is "a direct blow to the people of my city of Yonkers where is located the Otis Elevator plant which has supplied the Cuban subsidiary with millions of dollars' worth of equipment."

So stated Congressman Robert Barry, of New York's Westchester and Putnam Counties, on the floor of Congress.

He explained that American jobs here at home, not just across the sea in Cuba, are involved.

"Some way must be found so that American property owners in Cuba are adequately compensated," BARRY said.

"I say it is an arbitrary seizure, an imposition on the rights of our citizens who, through their investments, have contributed much to the progress of the Republic of Cuba," Barry told the Congress. He described as "outrageous" that Castro has so far refused to negotiate seriously with our State Department.

Introducing into the Congressional Record a report on the seizure of the Otis Elevator plant in Cuba, Barry told that the person put in charge by Castro was a 23-year-old native of Guatemala, a Julio Caceres, who had no previous experience in the elevator business.

This young revolutionist's first act was, of course, to dismiss the Otis manager, Vincent Pedre, a native Cuban who had worked for Otis continuously for 34 years.

The result of this and other actions has been gradual dissolution of the Otis Elevator business with its 200 and more Cuban employees.

Support for Adequate Minimum Wage

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1960

Mr. ANFUSO. Mr. Speaker, a heartening development in our generation has been the closer relationship among the great religious faiths in our Nation. While each has properly retained its own religious concepts, its own approach to the common goal of salvation, there has been a growing realization that there is a great community of interests, a wide area for joint or parallel action, by people of all faiths.

A striking illustration is in the matter of protection for the least-privileged and the lowest-paid members of society. We find the great religious bodies, Protest-ant, Catholic, and Jewish alike, speaking out with increasing vigor on this question.

Just as they share a tradition of charity, these great faiths share the conviction that the laborer is worthy of his hire. The principle of a living wage for every toiler was a part of God's law, long before necessity made it a part of man's.

It was in this spirit that a recent convention of the National Council of Jewish Women, with 110,000 members throughout the country, reaffirmed its upport of a social program that includes a better wage-hour law. I ask unanimous consent to insert in the RECORD a

copy of the council's resolution, which reads as follows:

RESOLUTION ON FAIR LABOR STANDARDS ACT

The National Council of Jewish Women believes that the economic policies and programs of Government have a major influence on the total well-being of the American people.

It, therefore, resolves to favor maintenance of adequate minimum wage and maximum hour standards with safe and sanitary work-

ing conditions.

Jobs After 40

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1960

Mr. HOSMER. Mr. Speaker, Senators Jacob K. Javits and Hubert Humphrey have both been active in dispelling discrimination against older workers. The following are extracts from what each has said or written on the subject:

JOBS FOR OLDER WORKERS

(By Senator JACOB K. JAVITS)

One of the most critical issues in the American economic structure is our inability to deal with the unjust and unreasonable discrimination against workers over 45—indeed, in some instances over 40—in their opportunities for employment.

Such discrimination deprives the Nation of a most important resource of experience, highly skilled employees and it adds materially to the number of persons requiring public assistance. It deprives mature citizens of the dignity and status of self-support and continued participation in constructive economic activity.

economic activity.

You shouldn't take my word for the fact that this is a problem. Here are a few sim-

ple figures:

Statistics show men over 45 collecting unemployment compensation take substantially longer to find new jobs.

Opportunities for getting a job, once in the unemployed category, are about 50 percent less for the man who is over 45.

More than half of openings listed with employment offices in cities surveyed contained maximum hiring ages.

Yet the fact is that the older worker has greater skill, greater dependability in many cases and a lower accident rate.

Things that you can do to aid include:

1. Urge the Government Contracts Committee to end age discrimination in defense industries.

2. Back the pending bill, S. 1073, the National Act Against Age Discrimination in Employment.

3. Make an effort to get your State to pass a law against age discrimination in industry.

JOES FOR OLDER WORKERS

(By HUBERT H. HUMPHREY)

Despite the fact that wisdom comes with experience, and experience comes only with time, our most precious human resource—wisdom—is nevertheless being wasted by the present social attitude toward our aging population.

Productivity: One of the arguments against employing workers over 40 has been the belief in management circles that low-cost mass production conflicts with the hiring of older jobseekers. Yet, Department of Labor studies indicate that older workers

produce just as much and sometimes more than younger workers.

Proneness to accident: Other assumptions against hiring older workers also have been refuted, such as the argument that they are injured more frequently than younger workers. A study of 17,800 workers in a variety of manufacturing industries, published in 1948 by the Bureau of Labor Statistics, shows that the opposite is true.

Absenteeism: The same is true of attendance records which, according to a study conducted by the Bureau of Labor Statistics of 15,500 men in 109 manufacturing plants, showed that older workers had a 20-percent better attendance record than the younger workers.

Pending before the present Congress is legislation, supported by the Fraternal Order of Eagles, which would make unlawful discrimination against an individual with respect to employment because of age. Also pending is a House join resolution which would create a Commission of Manpower Utilization to conduct an investigation of all phases of employment of older workers in the United States, including the extent of bias against hiring older workers.

The Eagles "Jobs After 40" campaign is a most commendable and worthy project, and one which deserves wholehearted support. You certainly can count on mine.

The New Spirit of Armed Forces Day

EXTENSION OF REMARKS

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. EDMONDSON. Mr. Speaker, the citizens of northeastern Oklahoma have just had the opportunity to observe a splendid demonstration of the coordination and unity which are strengthening our Armed Forces in their preparation for American defense.

The occasion was the observance of Armed Forces Day in Muskogee, last Saturday, May 21.

Thousands of Oklahomans were on hand to witness a combined Air Force, Army, and National Guard operation in which a mock battle was fought for control of Davis Field.

Thanks to television and radio coverage, additional hundreds of thousands of our citizens were both thrilled and impressed by the well-planned and perfectly executed maneuvers, both on the ground and in the air, which accompanied the battle.

The demonstration not only provided a vivid illustration of the readiness of our National Guard and Reserve Forces, but also impressed thousands with the importance and effectiveness of strong, well-balanced forces to meet all military situations.

In the mock battle at Davis Field, an important airbase was saved from "enemy capture" by well organized team effort of our defense forces.

That team effort, which played such a significant role in the victory of World War II, is even more essential in the perilous times which now confront our Nation.

As representative of the district in which Davis Field is located, I am proud of the contribution which its mock battle of last week has made to public understanding of our defense effort, and to the effectiveness of that effort in Oklahoma.

I am also proud of the officers and men of all the Armed Forces units who planned and executed the exercises of last Saturday so admirably. They are all a credit to the uniforms which they

Maybe Benson Was Right

EXTENSION OF REMARKS

HON, HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. BUDGE. Mr. Speaker, the following editorial which appeared in the Twin Falls (Idaho) Times News seems particularly timely with another Brannan plan approach to be considered by the Congress shortly:

MAYBE BENSON WAS RIGHT

Now that Secretary of Agriculture Benson has announced he will return to Salt Lake City and resume a working relationship with the LDS church as soon as President Eisenhower's term of office expires, it's quite significant that no one seems to be particularly jubilant over this upcoming change in Washington.

Many opportunist politicians with an ulterior motive will have to look for a new whipping boy, now that Secretary Benson is about to retire from the Department of Agriculture.

In trying to perpetuate themselves in office, they have criticized Secretary Benson at every opportunity, blaming him for all the farmers' troubles.

They have closed their eyes to fantastically soaring costs of price support programs and the staggering waste involved in steadily mounting stockpiles of wheat, corn, and other commodity surpluses. Instead of facing up to the fact that all this waste and extravagance has been wrecking our agricultural economy, they have clamored for more Government spending as the only possible solution.

All this while, Secretary Benson has advocated a cut in high and rigid supports as a step toward reducing the cost of the farm program, reducing surplus stockpiles and freeing farmers from Government control and interference while building farmers markets.

Now that most of the farmers find themselves no better off than they were before billions of dollars were poured down the drain in a futile attempt to stabilize agriculture by such artificial methods, many of them are beginning to wonder whether Secretary Benson was not right all along.

Just recently the Committee for Constitutional Government came out with an interesting observation in this connection. Following is what it had to say on the subject:

"Recent developments in the dairy industry are shedding new but virtually unnoticed light on this country's farm problem—a problem so vast, so misunderstood, and so encumbered with politics that it has seemed insoluble to many observers.

"A look at what's been going on in the dairy industry is extremely revealing.

example, it vindicates the stand taken by Secretary of Agriculture Benson. Consider the following facts:

"In 1954, as a result of high and rigid supports for dairy products (90 percent of parity), Uncle Sam had enormous quantities of milk, butter and cheese in storage (600

of milk, butter and cheese in storage (our million pounds of dry milk, 468 million pounds of butter, 435 million of cheese).

"Inevitably, perhaps, a clamor arose for further intervention by the Government in the dairy industry. A few dairymen wanted the Brannan plan, under which the price of the brannan plan, under which the price of the pr dairy products would seek their market level and a payment to individual operators would make up the difference between the price and the price objective (90 percent of parity).

Benson pointed out that the scheme would have to rely on appropriations from the Treasury, which were uncertain and subject to fluctuation with changes in the makeup of Congress and changes in policy.

"Other dairymen wanted strict production controls, coupled with continued supports at 90 percent of parity. Benson told them this would involve very rigid controls, involving production quotas to the individual farmer. The country's experience with production controls over the past 25 years had been unsatisfactory. We should move away from controls, rather than toward them, he said. (Instead) he urged vigorous Governmentindustry promotion of dairy products and reliance on self-help instead of Government

Props and controls.
"In April 1954, the Agriculture Department reduced price supports from 90 to 75 percent of parity. Six years later, in February of this year, Benson took stock of the dairy situation. To many observers the results have been surprising:

"The 1.5 billion pounds of dairy products in Government hands at the beginning of

1954 had been liquidated.

"Supply and demand for dairy products were virtually balanced—for the first time in 8 years.

"Dairy income hit a record high level for farmers in 1957. Incomes have continued at near record levels ever since.

There's little doubt that there would have been chaos and confusion in the industry if Benson had followed the advice of those who wanted to put the Government deeper into the dairy business.

"In view of the dairy experience, the question arises as to whether our entire agri-cultural situation wouldn't be much brighter if Congress had followed his advice concerning the further adoption of reasonable supports for surplus farm products and— as far as possible—get Uncle Sam out of the business of running the Nation's agriculture."

Farm Director Visits Escalon To Study Dairy Problems

EXTENSION OF REMARKS OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. McFALL. Mr. Speaker, under leave to extend my remarks I would like to put into the RECORD today an article from the Stockton Daily Record in California describing a dairy industry tour by State Agriculture Director William Warne.

Last fall, the Small Business Committee sent a special investigator, Brooks Robertson, to California and his find-

ings were reported to the Congress last month. The article about Mr. Warne's investigation confirms many of the findings of Mr. Robertson concerning the desperate plight of California dairymen. The article follows:

FARM DIRECTOR . VISITS ESCALON TO STUDY DATRY PROBLEMS

(By Geraldine Russell)

ESCALON, May 6 .- State Agriculture Director William Warne learned yesterday everything isn't "peaches and cream" in the Esca-

lon area. Particularly not cream.

The director, on a tour of San Joaquin,
Stanislaus, and Merced Counties to investigate the dairy industry's problems, found there are plenty of them.

Not that the new agricultural chief was not aware of that previously. He told local

dairymen:

"Most people contacting me today are those with dairy problems. I have met many of you at milk hearings. I feel more of these hearings to discuss agriculture problems are

The W. L. Sadler & Sons Dairy was the first stop for the director and Dr. James Ralph, deputy director.

TAPE RECORDINGS

Here the director took tape recordings of the dairymen's views along with statements on the blend price they receive on all their

Sadler recently switched from a grade B to grade A dairy at a cost of about \$7,500, but has been unable to get a Class A contract.

He asked Warne why 10 years ago the dairymen were getting \$1.15 per pound of butterfat while today they are getting 82 cents. Operating costs are all up, but the price is down, according to Sadler.

NO DANGER

Warne was asked by the dairymen if they would lose their contracts with creameries if they spoke against what they think are unfair practices. He assured them they would not.

At this point many started talking. All had the same complaint.

According to the dairymen, they are all given certain monthly quotas they must They are paid grade A prices for a certain percentage of their quota. Yesterday these ranged from 22 to 50 percent. The rest is bought at grade B prices.

Yet creameries press them to produce more than their quota even though surplus is classified grade B.

Quotas can be cut. One rancher said when he complained about having his quota cut, he was told he could quit if he didn't like it, so he did. Fortunately another company picked up the contract,

CEREMONY

Warne was greeted at city hall by dairymen, city officials, and local businessmen.

Paul Ford, Escalon Chamber of Commerce president, presented him with a case of cream. He took it with thanks, but patted his midsection and explained his wife had not let him use cream for 9 years.

The Escalon packers gave the director a case of peaches to carry out Escalon's peaches and cream theme. California Dairymen, Inc., added a maple milking stool.

FUTURE PROBLEMS

Warne told Future Farmers of America at the ceremony:

"Agriculture is faced with difficult problems today. Solutions formulated to correct them now will create problems for you to solve 20 years from now."

He said Governor Brown has asked him to investigate a milk stabilization law and make recommendations to the legislature at its 1961 session.

At a Modesto meeting later in the day, Warne said the industry is the most important economically of the State's farm products and its problems the most complicated

LOWER PRICE

He said California consumers get milk a cent cheaper than the national average despite high production costs in the State. There is no need for large-scale revamping of dairy laws, however, but some changes are needed in various areas.

He cited Stanislaus County problems of

high production and low usage.

Warne also toured dairy facilities in Manteca, Los Banos, and Gustine.

First Task for Congress

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. MULTER. Mr. Speaker, we will soon commence a debate which may prove to be a historic one in terms of our relationship with the free world.

I am referring to the approaching debate on appropriations for the military security program-a program which is proving one of the greatest deterrents to Communist economic and military expansion.

The events of the past week in Paris and the debate now underway in the United Nations should erase any doubt as to the cynical approach of the Soviet Union toward our efforts to achieve a just and lasting peace with all nations.

The May 21 issue of the New York Times in an editorial appropriately entitled "First Task for Congress," eloquently described the mutual security program as one congressional action that would be a most valuable immediate answer to the collapse of the summit.

I commend this timely editorial to the attention of our colleagues, as follows:

FIRST TASK FOR CONGRESS

The warm welcome President Eisenhower received in Washington yesterday gave tangible expression to the sympathy we believe most Americans feel for the President's dignified posture at Paris in the face of Premier Khrushchev's studied insults. Eisenhower is not returning from the wreckage of the summit conference as a conquering hero-there was too much inexcusable bungling in the administration's early handling of the U-2 incident for that-but he is returning as a chief of state who went to Paris in good faith in the search for peace, only 'o be crudely rebuffed by an ultimatum impossible to accept. The effort of the free world to achieve an honorable understanding with the Soviet world must go on, however; the future of civilization literally depends on it.

Meanwhile, the people of the United States have certain things to do at home. We will naturally reject Mr. Khrushchev's attempt to interfere in the elections; but this does not mean that we should refrain from a reasoned self-criticism of our own errors, a self-criticism that will have to steer a sensible course between our customary complacency and a newly rising tendency to blame ourselves for everything that

went wrong. But even before such an inquiry could profitably get under way, there is one congressional action that would be a most valuable immediate answer to the collapse of the summit. That is speedy passage of the mutual security appropriation.

Mutual security means money-\$4 billion of it-but it means more than that. It means solidarity of the United States with our allies and friends of the free world, and a determination to do our best to preserve that freedom and independence for all nations outside the Soviet orbit for their own sake, against a military threat and a politico-economic offensive of increasing magnitude. A wholehearted vote for mu-tual security would be the one thing that could most surely and quickly strengthen the President's hand in the present crisis.

Minimum Wages

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. DINGELL. Mr. Speaker, we are all familiar with the adage, "Justice de-layed is justice denied." There is no area in our national life where this fundamental truth applies with greater force than in the area of fair labor standards.

Year after year we have been told about the plight of our fellow citizens whose earnings are fixed by the Federal minimum wage, and about the even more desperate plight of the 20 million or so who are denied even the meager guarantee of \$1 an hour. Yet nothing has been done.

It is hardly surprising that those of us. in and out of Congress, who have been calling for the modernization and improvement of the Fair Labor Standards Act should find ourselves wondering, at this point, what else we can say. All the facts are on our side; all the arguments have been made. Must we repeat them, over and over?

An example of this dilemma is contained in a resolution adopted by the 50th annual convention of the National Association for the Advancement of Colored People. Some of my colleagues may not realize that apart from its work in the field of civil rights the NAACP traditionally takes a deep and active interest in all social problems affecting the entire population. Over the years the NAACP has set forth in detail its support for a better wage-hour.

Under unanimous consent, I include in the RECORD the NAACP resolution on minimum wage legislation.

The resolution follows:

MINIMUM WAGES

Our goal, announced in our 1954 resolution, and which we still support, is an increase to \$1.25 an hour. Such an increase will mean a greatly needed advance in the standard of living of over 2 million workers,

Equally important is a broadening in the coverage of the minimum wage law to include nearly 10 million workers not now included, particularly agricultural workers and those in retail trade.

Results of Survey Concerning Some Important Issues Facing Congress

> EXTENSION OF REMARKS OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 19, 1960

RHODES of Arizona. Mr. Speaker, recently I sent a questionnaire on some important issues facing Congress and the Nation to 22,000 of my constituents. Of the number sent, 17 percent were returned. Under permission previously granted I am placing in the RECORD the results of that questionnaire, together with some additional information about the age groups and occupations of those who answered:

Age groups: Under 25, 1.3 percent; 25 to 30, 4.6 percent; 31 to 40, 18.2 percent; 41 to 50, 20.8 percent; 51 to 60, 19.8 percent; over 60, 25.8 percent; no answer, 9.5 percent.

Occupations: Retired, 15.8 percent; farmers, 3.3 percent; laborers, 6.5 percent; housewives, 8.8 percent; professional, 21.8 percent; businessmen, 22.5 percent; government, applications, 11.5 percent, applications, 11.5 percen Occupations: Retired, 15.8 ment employees, 11.5 percent; students, 1.0 percent; armed services, 0.6 percent; no answer, 6.4 percent.

DEFENSE

- 1. Should we, in 1960 and 1961, gear our defense effort to a dollar amount we can afford within a balanced budget? Yes, 78 percent; no, 15 percent.
- 2. Should we concentrate our defense effort on:
- (a) Deterrent capabilities (mainly mis-
- siles)?—14 percent.
 (b) Conventional weapons, aimed at fighting limited wars?-3 percent.
 - (c) A combination of both?-78 percent.
 - 3. Do you feel:
- (a) Terribly worried over allegations that we are behind the Russians in certain types of missiles?—13 percent.
- (b) Confident that our overall deterrent capability will, for the foreseeable future, prevent a Russian attack?-81 percent.

FOREIGN AFFAIRS

- 1. In our attitude toward Communist nations, are we:
 (a) Too soft?—76 percent.
- (b) Too hard?—1 percent. (c) About right?—20 percent.
- 2. Do you feel that:
- (a) We should increase our pressure on international communism, even at the risk of all-out war?-60 percent.
- (b) We should keep deterrent capabilities militarily, and coexist with communism, hoping Communists will eventually see that our system is better than theirs?-28 percent.
- (c) We should do something else?-21 per-
- 3. Foreign aid will cost the American taxpayer about \$3.2 billion this year. Below are listed the principal expenditures.

Do you favor continuing:

- (a) Military aid (\$1.3 billion this year) to the armed forces of our allies?—40 percent.

 (b) Defense support (\$695 million this
- year) to bolster the economies of many of our allies?—27 percent.
- (c) Special assistance (\$245 million this year) to bolster the economies of so-called neutralist or undetermined countries?-15 percent.
- (d) Technical cooperation (\$181.2 million this year) supplying instruction and knowhow to underdeveloped nations?—54 percent.
- (e) Development loans in dollars (\$550 million this year) to underdeveloped coun-

tries repayable mainly in the currencies of those countries?-40 percent.

(f) None of these; end the program?-24 percent.

1. Do you feel it is important for us to be able to travel in space as soon as possible? Yes, 42 percent; no, 52 percent.

2. Do you feel that ability to travel in space will have military significance in the foreseeable future? Yes, 51 percent; no, 40 percent.

FARM PROGRAM

1. Do you favor an immediate end of all farm price supports?-36 percent.

2. Do you favor high rigid price supports to guarantee farmers return of their growing costs and return on their investment?percent.

3. Do you favor reducing farm price supports over a period of several years until a free farm economy is restored?-60 percent.

FISCAL

- 1. Do you believe that the budget of the U.S. Government:
- (a) Should always be balanced?-53 percent.
- (b) May be unbalanced in years of decreased business activity to stimulate business?-43 percent.
 - 2. Do you favor:
- (a) Lowering Federal taxes immediately, without regard to a balanced budget?—9 percent.
- (b) Increasing Federal taxes if necessary for additional public services?-6 percent.
- (c) Lowering Federal taxes after reducing expenditures and reducing the national debt?-83 percent.
 - 3. Do you favor:

cent.

- (a) Systematically reducing the national debt each year?-88 percent.
- (b) Increasing the national debt in order to provide additional Federal services without raising taxes?-3 percent.
- (c) Keeping the national debt at its present level of about \$290 billion?-5 percent.

FEDERAL AID TO EDUCATION

- 1. Do you believe the Federal Government should assume a definite part of the responsibility for public school education in Ameriincluding payment of administration costs and teachers' salaries?-8 percent.
- 2. Do you favor Federal assistance for public school construction on a general basis?-10 percent.
- 3. Do you favor limiting Federal aid to the programs we now have, including assistance to federally impacted areas?-32 per-
- 4. Should we have no Federal aid whatsoever?-44 percent.

MEDICAL BENEFITS TO THE ELDERLY

- 1. Do you favor free medical care for all people over 65 paid for by the Federal Government?-7 percent.
- 2. Should we include surgical and hospital care for persons over 65 as a part of social security?-26 percent.
- 3. Do you favor Federal incentives to private insurance companies to provide health insurance to the elderly?-18 percent.
- 4. Do you feel there should be no Federal program of any kind to provide medical assistance for elderly persons, leaving this to States and private resources?-50 percent.

VETERANS PENSIONS

- 1. Paying pensions to veterans without service-connected disabilities on a basis of need?-16 percent.
- 2. Giving all World War I veterans an honor pension of \$100 per month without regard to need or disability?-8 percent.
- 3. Pensions to disabled veterans should go up automatically with the cost of living?-60 percent.
 - 4. Other?-35 percent.

Remarks of Dr. William C. Kvaraceus, at Boston University Symposium

EXTENSION OF REMARKS

HON, JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include the remarks of Dr. William C. Kvaraceus, professor of education at Boston University at the Boston University symposium entitled "Juvenile Delinquency, Sin, Sickness, Sport, or What? What Can We Do About It?" I also include a brief biographical sketch of Dr. Kvaraceus: Remarks of Dr. WILLIAM C. Kvaraceus at Boston University Symposium

Most American citizens live in the hope and expectation that eventually some outside authority or agency—police, psychiatrist, social worker, teacher, recreation director, child guidance clinic, youth commission or State youth authority—will come to the rescue and solve (with something of magic if not money) the delinquency problem. In many communities these various agencies have teamed together in cooperative effort to control and prevent the serious and persisting norm violations of youth. But these team approaches generally omit or exclude the most important player—the delinquent himself. Only the delinquent can solve the delinquency problem.

Most urban communities maintain an array of "youth-serving agencies." We need to consider the subject of the verb "serve. Generally it is the agency that is the subject and youth is the direct or indirect object. We need to make youth the subject of the Verb serve—youth serving themselves and the community. We need to enable youth to undertake important and meaningful tasks in home, school, and community life. We heed to encourage youth to study the local delinquency problem. Instead of doing community research and case studies on, to, or for youthful norm violators, we should encourage youth to community study and case study themselves. Youth must develop insights in their own problems. They need to work out their own solutions. Adults need to look at youth's findings and suggestions seriously. Only through insight and self-determination at both levels—youth and adult—can the community hope to achieve a diminution of the soaring delinquency

Many agencies and institutions in their concern for troubled youth and in their zeal to help have been deflecting from their Original and unique functions. This confusion of roles is resulting in a fast-emerging Alice in Wonderland world in which parents are acting like their youngsters' Peers, police in juvenile details are acting like social workers, social workers in aggressive casework are acting like police, probation officers in conducting informal hearings are acting like judges, and judges in adjudicating are acting like psychiatrists. Some agency workers have even taken on omnibus functions; they are trying to be everything unto everyone. Unless agencies and insti tutions stop to define or redefine their unique purposes and functions and begin to evaluate their efforts to aid the young norm violators in terms of their special and specific services, the result can only mean a community suffering from institutional schizophrenia. The incipient stages are already visible in many communities.

The American community lacking both facts and funds will hardly dent the delinquency problem. Every community, and this means every community worker and citizen, must be knowledgeable at three levels of functioning if we expect to bring down the delinquency rate. There must be a validated theoretical frame of reference from which to operate; there must be available facts on the local youth situation on which to tailor local programing; there must be available facts on the individual child who shows a delinquency tendency or who persistently or seriously engages in law violation. Lacking these three sets of facts and operating on a dime-store budget, community efforts at delinquency prevention and control will tend to follow the impractical-practical approaches involving the curfew and the night stick. These approaches cost little. They are also irrelevant to the factors generating the youth problem.

BIOGRAPHICAL SKETCH

William C. Kvaraceus: One of the Nation's leading authorities on juvenile delinquency, Dr. Kvaraceus of Sharon, Mass., is professor of education at Boston University's School of Education. He received his A.B. at Boston College and his Ed. M. and Ed. D. degrees from Harvard University. Prior to his appointment to Boston University in 1945, he taught in the Brockton public schools and was assistant superintendent of schools in Passaic, N.J. He has taught and also served as supervisor and director of guidance and research in public and private schools. Dr. Research in public and private schools. Dr. Kvaraceus spent 1952–53 in Turkey, serving in an advisory and teaching capacity to the Ministry of Education. In 1953 he was a member of the U.S. Senate subcommittee investigating juvenile delinquency. From 1958 to 1959 he directed the National Education Association research project on juve-nile delinquency. He is the author of "Juve-nile Delinquency and the School," "The Community and the Delinquent," "Juvenile Delinquency: What Research Says," and co-author of "Delinquent Behavior: Culture and the Individual" and "Delinquent Behavior: Principles and Practices."

Slater High School Commencement Address, May 17, 1960

EXTENSION OF REMARKS

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. MOULDER, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the commencement exercises of Slater High School on May 17, 1960:

Reverend Byers, Reverend Hellwege, Dr. Gamby, Mr. Grubb, class of 1960, ladies and gentlemen, we all regret the death of Mr. Kendrick's mother and his unavoidable absence on this occasion and extend our deepest sympathy in his bereavement.

Your selection and invitation for me to be your speaker is a great honor to me and I hope I can justify your choice of a speaker by informative words which you will enjoy and always remember.

It has been said that new and important occasions teach new duties. Therefore I believe it to be my duty to discuss a few very important subjects with you this evening. First, I want to talk to you about the im-

portance of government or politics—mind you, not Republican and not Democratic—but simply politics as the science or method by which all governments, big and little, are created and maintained throughout the world.

In this world in which we live today there is no subject which should have more interest and attention. And the subject of government should be particularly important to the young people who are now graduating not only from high school, but graduating soon into mature citizenship and full share of responsibility to the preservation of our great Nation.

If a nation values anything more than freedom and good government, it will lose its freedom and self-government; and the irony of it is, that if it is easy comfort or money that it values more, then it will lose that too.

Our priceless form of government was fashioned, in all of its ingenious complexity, to preserve to the very fullest extent possible the freedom and security of each individual citizen. This was the goal; this was the objective of those brave and thoughtful men who drafted the Declaration of Independence and adopted the Bill of Rights and the Constitution of the United States. That was the goal of our forefathers; that was the purpose of their documentary handiwork; that was the heritage which they handed down to us.

Among the great and noble men who established our form of government was Thomas Jefferson who wrote the Declaration of Independence. You will always remember his historical words:

"We hold these truths to be self-evident: that all men are created equal, that they are endowed by their creator with certain inalienable rights, among these are life, liberty and the pursuit of happiness. That to secure these rights governments are instituted among men."

Then, almost 96 years ago, that great immortal Abraham Lincoln, standing on the site of one of the great battles of the Civil War, said this:

"Four score and 7 years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation or any nation so conceived and so dedicated can long endure."

There were times in the past history of mankind when the problems of all governments were extremely simple, when the citizen of any government expected no more of it than the protection of life and property. That was a long time ago.

As the centuries have rolled by, governments have materially changed. Leaving their simple character of early days, they have constantly become more and more complicated organizations as they have undertaken to perform added services and make greater requirements of the individual citizen.

Thus it came about that government has its hands upon all of us in some way from the moment we are born until the last rites when our mortal remains are whisked off to the cemetery.

If the influence of government is all persuasive in our lives as I have said it to be, then there can be little hesitation upon the part of any citizen, man or woman, about the necessity for his or her active participation in civic and political affairs.

In a word, it behooves every citizen to actively participate in civic and political affairs. And again I reiterate and emphasize that I do not recommend that you necessarily have to make politics a personal career nor do I suggest that it is necessary for you to seek public office in order to participate in government or political affairs,

By the use of the word "politics," I am referring to the unbiased and serious study and discussion of the governmental issues and the exercise of your leadership and influence on those issues.

The United States, though but 194 years old, has lived through three epochs and is now at the threshold of the fourth. The three epochs that have passed into history are: (1) Independence; (2) enfranchisement; (3) unification. Today we are confronted with many serious problems and issues. The time allotted to me as your speaker this evening is insufficient to discuss all of these problems and issues. I will mention a few which are vitally important to every man, woman and child.

Our military preparedness programs are essential but the present annual cost or expenditures for this purpose, plus the mutual security and other so-called foreign aid programs are endangering our national economy via inflation and a national debt larger than all other nations combined. This is a very serious problem.

Then we have the problem of inflation and high cost of living affecting millions of our citizens with stationary or retirement incomes; the problems of agriculture, so important to our national economy; the problems of taxation and Federal aid to education. There are many other important State and National problems which you must think about and help in solving by participating in political and civic affairs of your community and our country.

Bear this fact in mind—the American people are currently in the throes of tor-menting and frustrating readjustment. Both as a nation and as individuals we grew up accustomed to regard war and peace as distinctly separate states of affairs like day and night. But, today we live in an around-the-clock twilight of neither war nor peace.

Youth is the first victim of war: the first fruit of peace. It takes many years to make a man: it takes only a few seconds of war to destroy him.

Too much is being spent by all nations today in fear of war. Sixty-five percent of Federal tax dollar collected in our country each year in a so-called peace period If these reis spent on military affairs. sources were turned to peaceful uses, many, many more of the world's problems could be more easily solved.

Once upon a time, we led the world, we, Americans, towards a lighted window, and, I think this is important and certainly before we spend any more billions trying to buy collective security, we owe ourselves this backward glance. From 1789, until World War I, all other nations on planet earth were totalitarian except the United States. Did you ever stop to realize this?

In 1789 we were a little country of 3 million people completely surrounded by an ocean of totalitarianism. Everywhere else kings claimed to rule by divine right, others ruled with military might, but we alone ruled ourselves. What happened? Suddenly, the rest of the world watching our experiment in individual liberty and self-government began to copy us. Statesmen and writers visited the United States and returned home with glowing reports and the urge for freedom began to spread like a prairie fire across whole continents. The French threw off the yoke of their dissolute king and repacious aristocracy. England initiated sweeping democratic reforms. Mexico, and Central America and South America freed themselves from Spain.

From 1789 until the full World War I broke out, democracy was spreading around the world. How come? Our Nation had not given the old nations any money. We had sent forth no paid propagandists. We'd had sent forth no paid propagandists. beamed no broadcasts beyond our neighbor's

borders. We hadn't sent any experts overseas to show them how. We sent them no guns, no butter, no money. We made no concessions to foreigners which would penalize domestic producers. Our new Nation didn't insist on any mutual defense agreements. And, yet, though we ignored them, the older nations began to imitate our example and freedom was the world's dynamic, expanding force prior to 1914, and when the German dynasty collapsed in 1917, the Russian's in 1918, the last strongholds of despotism had fallen.

But now what? Suddenly democracy began to take itself for granted. Communism, fascism, nazism-these became the world's dynamic political forces. We shot two, but we failed to follow through, and since World War II, communism has captured approximately 100 million new disciples every year. Our better product has been left unsold because they have a better sales technique; because, instead of trying to lead other nations as our gallant 3 million forefathers did. we've been trying to push them. Our Declaration of Independence has been sup-planted with half a hundred declarations of dependence on others and so, failing to command respect, we try to buy it.

Times have changed? No, times haven't changed. We have changed. For all our grandeur and our gold, we win fewer converts to democracy today than our great granddaddies did with nothing but a light in the window.

I remember August 1945, when suddenly

a weapon 400 million times more lethal than anything ever before had been loosed on the world-we sat down in our councils of men chewing our fingernails up past the second knuckle worrying about what we are going to do with this hideous weapon that suddenly had been loosed upon us.

Even today, there are some who would say we should bury it in a cave in New Mexico or, in concert with other nations, destroy this technological advantage. In World War III, God forbid it should ever be, they're going to outnumber us 8 to 3 and I mean even if all our frightened friends stick with us, the Soviets and their satellites are going to outnumber us better than 2 to 1.

We need Will Rogers with us today and I imagine he would say:

"Folks, I guess, I ought to come back. Wyatt Earp is back and Matt Dillon and Bat Masterson and a lot of others.

"Do you know why folks nowadays like TV westerns? I'll tell you why. We've got so we can't do much for ourselves, anymore,

so we like to watch somebody who could.
"Then a man could solve all his problems with a gun and a horse; today he needs radar, sonar, and an IBM machine.

"We had spacemen, though, back yonder. Cowboys ridin' herd on a quiet night in the middle of the prairie with all the heavens hung out above 'em. A cowboy could pick a star or the moon and go to it anytime he wanted. Must have gone to the moon a hundred times, sometimes twice a night.

"Then we went on those space flights for fun. Today you go on the run, scared. Little wonder. Some radio stations today make more noise just introducing a newscast than we did gettin' out the Claremore fire department. News ain't news, anymore. It's a round-the-clock warning.

"Why, you got a generation of parents scared of their own kids. Maybe it happened when you all moved to town. Men build great cities, but cities don't build

"How many boys nowadays have seen a crop come on-and helped harvest it? How many boys know what it is to raise pigeons, to hear a screech owl at night, to be butted by a goat and 'rassle' a calf—that a 'possum can gnaw out of a wood box and be gone in the morning? That you don't have to

sow weeds; you just put down the hoe and

they'll choke out the flowers.
"How many boys know what nature always does to a coward or a loafer or a thief?

"The big city makes a man think he's -but he's not. That's why the Bible was written by farmers and shepherds and

"Also, I figure this juvenile mischief was partly brought on by the safety razor and the electric shaver.

"So, 2 years in a row you had to go back to the one State of Mississippi to get your-self a beauty queen. You know, I remember once back in Claremore we had a beauty contest and nobody won. Nobody even came in second. A traveling man came in third and he wasn't even in the contest.

"So you took in Alaska and Hawaii? I'll say you did. Now they gotta kick into the Federal oversea kitty and provide asylum for their own old used Congressmen. Instead of askin' to be States, Alaska and Hawaii might a done better by askin' to make 'em full fledged foreign countries instead.

"Why did I leave this earth 'before my time,' as so many of you kind folks have said? I don't know. A fellow has something to do and he does it. He has something to say and he says it. After awhile there are new things to do and new people to do them, new things to say and new people to say them.

"The old fellow is from a different age and new people don't understand him. He is the 'old man around the house' who always wants to give advice. A man is seldom old enough to be a philosopher until he has looked into the eyes of his grand-child, and then he is so full of compassion and has so many warnings that the young'uns don't like to listen. A man had better do what he can and say what he has to say while he has people his own age to listen."

And then Will Rogers would probably

say:
"My time's up. Thanks for lettin' me drop in like this. Now it's your turn. So

Well, at least Will Rogers was spared the indignity of TV. I got along so well for many years with radio that I kind of resent this TV stepchild in our midst. Also I seemed to have timed things so badly. vision was on the way in at the same time my hair was on the way out. But as some of you can attest, there's one thing about being bald-it's neat.

I keep remembering the old Mack Sennett comedies where the culprit chased by the policeman would point and say, "He went that-a-way." The policeman would tear off down the street after nobody and the thief would stroll home with the loot. We are chasing Russia and Russia is pointing at the moon and saying "That-a-way While Russia prepares to pick up the marbles on planet Earth.

Soviet cars are now moving into U.S. markets. Khrushchev has declared economic war on us and when we strengthen his economy we're helping him win that war. Ten thousand Russian-made Moscovitch sedans have been ordered delivered in Syracuse. N.Y., where a dealer wants to sell them in the United States. But Congress is debating the space race and who will get first to Mars. Some of us are getting ulcers on our ulcers worrying that Russia might get to Mars before we do and the Russians have already landed in Syracuse.

Don't think the Soviet press wasn't delighted when that announcement was forthcoming. All 16 of Moscow's newspapers headlined the fact that "Soviet technical achievements are now such that Americans are having to buy Russian-made cars." In an economic war they construe this to be an American retreat.

Back in Washington military men are being called on the congressional carpet, confronted with the evidence that the Soviets are winning the space race and asked, "Why?" The result is almost certain to be an increased military budget, not because it makes sense, but because it will slience congressional critics in election year. Military men challenged, a military budget, military objectives, and we're not fighting a military war. We are engaged in an economic war, and we're not winning it.

In buying cars from the Soviets we are in effect supplying weapons to the enemy—inviting mass unemployment in the American automobile industry. Cheap foreign labor plus government subsidies have been enabling other countries to build 2,000-mile-an-hour jet airliners now, and we're

American manufacturers cannot afford to compete. The Russian and British Governments give tax dollars to the plane makers. CAB says unless our Government now subsidizes our plane makers, American alrilnes might be buying airliners from Russia in 5 years. I wonder if it isn't time for us to tend now to our homefront economy to keep us strong, to defend us against invasion from without and to think twice about hurling 100 missiles at the sky while Russia carefully tests only two.

I cannot help feeling—and I hope others will realize it—that our teachers in truth are our first line of national defense. In fact, they always have been, but we have never talked about it enough. Our school-teachers, who are so grossly underpaid, are the quiet force in this country that molds our most precious resource—our children. The full impact of the valuable service teachers give to the people of this country and its future, in a sense, ultimately guides the destiny of the free world. I carnestly hope, in the near future, that we can find a way to provide for our school systems the additional Federal financial support which they so urgently need.

During the present period of world strife and tension in international affairs and in the future, you of the class of 1960 will play an important part in preserving our democracy and American way of life. You will be called upon as an American citizen to exercise your influence to keep and preserve our democracy and form of government and the liberties which we American people now

I recall my graduation from high school as the proudest occasion of my life, and I know that this evening you are affected with a deep feeling of nostalgia; memories of your school days, teachers, and friends. Nothing is so delicate as friendship and yet, nothing is so durable, so necessary, so pleasant, so inspiring, and so profitable as fond lasting memories and friendships.

But your graduation today is not a day for looking back. You have not traversed enough of life's path for that. This is a proud day for looking forward to the future.

proud day for looking forward to the future.

High school graduation is indeed one of
the major milestones in the journey through
life. It symbolizes the transition from a
period of youthful preparation to a lifetime
of adult service and citizenship.

Even so. I am confident that you will regard this as a beginning, and not an ending, of your quest for knowledge and experience, and that you will apply your talents and energies to the development of a finer and better America for the future.

You are now facing one of the first really big decisions of your life. You must decide whether or not you will go on from high school to college. With the possible exception of choosing your future vocation or a husband or wife, this decision will probably have as far-reaching effect upon your life as any other decision you will ever make. Whether you realize it or not, the pattern of

your life for the next 50 years may be determined by your answer to this question. The question of whether or not you should

The question of whether or not you should seek a college education is for you to decide, with guidance from your parents, teachers, and older friends who have been through the mill of college. Don't plan your future education without examining all available sources of education. Don't decide hurriedly. Don't be swayed or influenced by such factors as whether or not your best friend is going to a certain college with you.

It is true that a college education is now considered as important as a high school education 50 years ago. However, many of the best thinkers on the subject today believe that even though it is essential for nearly everyone to complete high school, it is not necessarily essential for every young person to complete college. Probably a 2-year or junior college plan will be desirable for many high school graduates. However, a student who plans to enter a profession or special fields or arts, science, or executive administrative work will be compelled to attend college from 4 to 8 years.

The American creed that all men are cre-

The American creed that all men are created equal is not exactly true. What is actually meant is that before God, before the law, and before our fellow men we all start equal, and there is equal opportunity for all who have the talent, the ambition, the courage, and personality to use that opportunity.

But, we should always bear in mind that opportunities are not always in faraway lands. For most people it can be found at home, or in their own community, country, or State.

I am sure that you have heard the story of the man who, in his youth, constantly dreamed and was determined to become rich and successful by exploring and discovering diamond mines. He left his farm home and traveled throughout the world—working and tolling in his efforts to discover a diamond mine. Finally, in his old age, he returned back to his old home—sad and disillusioned. He resumed his farm operations on the old farm and one day while in his own backyard digging a well, he uncovered the greatest diamond mine ever discovered.

And so, in the battle of life, you can never be assured of the exact course one should travel for the location of financial success. But, above all financial success one may obtain in life, the most important success is happiness and contentment, and that success can never be achieved without honesty and faith.

Shakespeare said:

"This above all; to thine own self be true, and it must follow, as the night the day, thou canst not be false to any man."

No better advice can be found for the young men of this class than the advice given to Andrew Jackson by his beloved mother. When Andrew Jackson left his mother in North Carolina as a boy to seek his fortune in the West, he knew he probably would never see her again. After the Battle of New Orleans, this great man told his comrades:

"Gentlemen, how I wish she could have lived to see this day. There was never a woman like her. She was gentle as a dove and brave as a lioness. Almost her last words to me when about to start for Charleston on the errand of mercy that cost her life were: 'Andrew, if I should not see you again I wish you to remember and treasure up some things I have already said to you: In this world you will have to make your own way. To do that you must have friends. You can make friends by being honest, and you can keep them by being steadfast. You must keep in mind that friends worth having will in the long run expect as much from you as they give to you. To forget an obligation or be ungrateful for a kindness is a base crime—not merely a fault or a sin, but an

actual crime. Men guilty of it sooner or later must suffer the penalty. In personal conduct be always polite, but never obsequious. No one will respect you more than you esteem yourself. Avoid quarrels as long as you can without yielding to imposition. But sustain your manhood always. bring a suit of law for assault and battery or for defamation. The law affords no remedy for such outrages that can satisfy the feelings of a true man. Never wound the feelings of others. Never brook wanton outrage upon your own feelings. If ever you have to vindicate your feelings or defend your honor, do it calmly. If angry at first, wait till your wrath cools before you proceed." Gentlemen, her last words have been the law of my life. The memory of my mother and her teachings were after all the only capital I had to start in life with, and on that capital I have made my way.' "

And to the young ladies of this class of 1960; I hope you will always remember that in whatever role your lives may be cast, whether as homemakers, in the professions, the business world, or in religion, real success, and happiness will depend far more on character than on any other single element you count among your resources. Character is a thing of many facets. In women, as in men, it means integrity, strength, courage, consideration for others, ability to discern, and appreciate what is worthwhile, and to pursue it in spite of every distraction and every obstacle.

In addition, in woman, it implies the development and enrichment of qualities that are her special God-given gifts—namely, gentleness, graciousness, and the capacity for unselfish, and yes, at times even heroic, dedication.

I commend the faculty for their great work in this school and I join with each member of the graduating class in expressing appreciation to your proud parents and all others who provided for and made this high school graduation possible for you to achieve.

And I sincerely congratulate every one of you, the Slater High School class of 1960: Barbara Ackelberry, Emma Aldridge, Edna Baker, Jo Ann Bearden, Bobby Black, Betty Bock, Eldred Borgman, Larry Bossaller, Beverly Butts, Gay Byers, Catherine Coleman, Larry Cott, Wayne Cott, James Elliott, Jo Ann Feuers, Craig Gann, Everett L. Gilliam, Gladys Hader, LeRoy Hager, Birdie Hamilton, Lois Harris, Melody Ann Harriss, Brenda Herrmann, Kathleen Hogan, Nancy Huston, Corinthian Jaco, Jim Klasing, Sally Martin, Carol Ritterbusch McFarland, Edward McMellen, John Miles, Doris Murphy, Edward Narron, Geary Norris, Anna Lee Norton, Wayne Ruppert, Audrey Shepard, Sherry Shook, Charles Smith, Terry Ann Taylor, Linn Van Winkle, Michael Walker, George Washington, Dickie Wise, Elizabeth Wykoff, and James Young.

With all good wishes for your happiness and success throughout life.

Facts To Be Faced

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Joseph Alsop, written from Paris, as it appeared in the New York Herald Tribune of May 20, 1960.

CONGRESSIONAL RECORD - APPENDIX

FACTS TO BE FACED (By Joseph Alsop)

Paris.—After the ugly scenes of the aborted summit meeting, it is wise to make up a sort of balance sheet of facts to be faced.

The first fact that needs facing, alas, is the grave loss of prestige and confidence that President Eisenhower has suffered. As Walter Lippmann has written, it is right that men of all parties should rally to the President, but it is also wrong to be self-deluding. The affair of the U-2 has caused America's greatest friends in the Western Alliance to conclude that America's present leadership is bumbling and meladroit.

There is no use arguing about the justice or injustice of this conclusion. It is there, like the weather; and like the weather, it has to be taken into consideration.

The second fact to be faced is less painful to American self-esteem but decidedly more alarming. The leadership of the other great world bloc is even more dangerous and implacable than all but the worst of pessimists had imagined in their gloomiest moments.

After seeing Nikita S. Khrushchev do everything but froth at the mouth and chew the carpet at his incredible press conference, a great many observers in Paris began to use the grim adjective "Hitlerian." In this reporter's opinion the adjective is misapplied. Khrushchev was intentionally making Hitlerinke noises, in order to intimidate as Hitler intimidated. But those who know the man best believe that he was doing this from calculation, and not because he was carried away as the neurotic Hitler so often used to be.

But even if Khrushchev is not semilunatic, as Adolf Hitler was, the consolation is trifling. The character of his mental processes is not very important, after all, if he is capable of talking as he has talked and acting as he has threatened to act. The Khrushchev seen in Paris was no jolly, proverb-quoting, detente-seeking peasant. This man was a political carnivore, cheated of his prey.

As for the third and final fact to be faced, it flows directly from the second. A major effort to strengthen the military defenses of the West is now a matter of great urgency. This is clearly true, even although the incident of the U-2 has revealed a current balance of power that seems to be reasonably satisfactory.

There are two reasons why a strengthened defense effort is now urgent. On the one hand, no one who has watched Khrushchev's macabre and brutal performance in Paris can doubt that this man is capable of striking at the United States and the West with every bomb in his arsenal, if ever he believes he can do so with impunity. On the other hand, the military balance, though still apparently satisfactory, is plainly tilting in Khrushchev's favor. Later on, therefore, he may come to believe it is safe to strike. This is what has to be averted at all costs.

The main things that need doing are the same things that were discussed during the debate on national defense at the beginning of the year. Appropriations are needed to inaugurate a maximum airborne alert of the Strategic Air Command's entire force of B-52 bombers. The airborne alert ought to begin now, and continue at full strength until the U.S. siriking power in long-range guided missiles has been massively augmented.

Similarly, the buildup of the long-range missles ought to be increased in every way possible, and every dollar should be appropriated that can be used to speed the two reconnaissance satellite projects, Midas and Samos. In addition, the affair of the U-2 plainly proves the shortsightedness of the policymakers who have cut back production of the B-52H bomber almost to zero.

Here is a bomber with the range, speed and altitude characteristics that will allow it to imitate the U-2's performance. It can go almost where it will in the skies above the Soviet Union, just as the U-2 did for so long. It is not menaced, so far as is known, by improvements in the Soviet air defense system, whereas the B-52, flying at lower speeds and at somewhat lower altitudes, may well be menaced later on.

It is hard to understand how any policy-maker can have all but stopped production of the B-52H bomber, with the example of the U-2 before his eyes. But this is what was done. And this is what should now be undone as far as possible.

More costly defense programs; still deeper distrust of the Kremlin; apologies needed for our own leadership's performance—they make an unpleasant list. But we have now been warned. It can be very dangerous indeed if the warning is ignored.

Assistance for Our Youth

EXTENSION OF REMARKS

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. GILBERT, Mr. Speaker, it is gratifying that the Committee on Education and Labor has reported favorably a bill to provide for Federal grants and contracts to carry out projects with respect to techniques and practices for the prevention, diminution, and control of juvenile delinquency, and for the training of personnel. The bill reported is similar to one I introduced.

Juvenile delinquency has reached terrifying proportions throughout our Nation. All communities are beset by the problem-urban and rural, in the higher social and economic levels as well as the lower. Our youth are the future of our Nation; they are our hope in the years ahead: on them will fall the burden of the preservation of our democracy. It is incumbent upon the Federal Government to recognize its duty and obligation to our young people; investments of necessary funds and time and effort must be made now in assistance to our youth: there is a crying need for more research on causes and prevention of delinquency.

It was recently charged that we, as a Nation, have more information about pigs than we do about children. This is a startling accusation, but true, in my opinion. We recently heard the heart-breaking prophecy that between 4 and 5 million children will be referred to juvenile courts within the next decade. It is not enough to ask "Why?" and "Who is to blame or failing in its duty—the home, school, or community?" The problem must be attacked with vigor and vision; our children must have help.

The Federal Government should take positive steps to increase the ability to prevent delinquency and rehabilitate offenders. This requires support for research, field and pilot studies, and demonstration projects. The present acute shortage of adequately trained personnel to cope with delinquency must be relieved. The basic aim in combating juvenile delinquency must be to foster in the young a respect for the law—for its

reasonableness and fairness and for the values of the community. This means that the community itself must set a good example and uphold those values which it expects its youth to respect, in an effort to prevent lawlessness among our youth. It is as important to try to understand our young people—their aims, beliefs, dreams, fears—and to help them in their struggle for security and happiness, as it is to try to rehabilitate them after crimes have been committed and their names have been besmirched and their futures blackened by the pall of misdeeds.

Because the assistance to our youth, as provided in the bill which has been reported, is so vitally necessary, and because time is of the essence in dealing with the increasing problems of juvenile delinquency, I urge that the bill be brought before the House for action, without delay. It is incumbent upon the 86th Congress to pass this proposed legislation before the close of the session.

Discrimination Against Aged

EXTENSION OF REMARKS

HON, JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. WESTLAND. Mr. Speaker, age discrimination is a major problem of the older worker and is a definite barrier to his employment once he has become unemployed. This problem has been recognized by the Fraternal Order of Eagles and this fraternal group has exerted its efforts toward elimination of this problem. I am proud to be counted among the members of the Everett, Wash, acrie.

In my own district each aerie has contributed its efforts and has taken part in the national drive to get signatures on petitions for presentation to the Congress. Brother S. R. "Stan" Anderson of the Anacortes, Wash., aerie has done a particularly outstanding job and, under leave to extend my remarks in the Record, I include a letter he wrote to the editor of the Anacortes (Wash.) American Bulletin. The letter appeared in the November 3, 1959, issue:

AMERICAN LETTERBOX

DEAR EDITIOR: Aerie No. 249 Fraternal Order of Eagles is again taking part in a national drive to secure signatures to petitions to present to Congress legislation outlawing discrimination against jobseekers who are past 40.

In past drives, Eagles have secured 750, 000 signatures. Their aim is to present to Congress during the next session 1 million signatures of American citizens who are heartly in accord with this program.

Eagles believe that the practice of refusing to hire workers past 40 years of age, that is becoming more and more prevalent among our larger employers of labor is cruel, wasteful, and unsound and in direct contradiction to the principles upon which this Nation was founded.

They are cruel, because they deny the right of a large segment of citizens the

right to earn a decent living and provide for their families.

It prevents their full participation in the life of their country. Any worker that be-comes unemployed during this period finds it impossible to get a job of any importance, or at a wage commensurate his ability and experience. It robs him under the social security program of any chance of receiving worthwhile benefits at 65 years because at least 90 percent of the covered employment is contained in industry from which he is barred.

The fruitless years between 40 and 65 that should be the golden years to which his industry and good citizenship entitled him are instead a period of no meaning, no sense of belonging, and breed discontent and disrespect for our form of govern-

These age barriers are wasteful because they rob our economy of the wealth-producing potentials of a segment of our labor force whose experience has produced skills that could be of untold value. To discard these workers at the very height of their Proficiency is foolish and wasteful.

They are unsound because they remove from our economy a large segment of potential consumer-customers. An employed worker is an asset to his country because he pays his own way by paying taxes. An unemployed worker produced nothing and therefore is a liability who has to be fed by the rest of us through taxes.

An employed worker creates his own job by the alchemy of money circulation.

This practice has been caused by the rigors of present-day competition and cannot be corrected by the employers themselves. It can only be corrected by governmental action.

Therefore the Fraternal Order of Eagles is asking all citizens to join with them and petition Congress to pass legislation to outlaw this unwise practice.

These petitions are now being circulated in prominent spots throughout the city. If you see one ask to sign it. If you wish to sign one and you do not see one, "Mr. and Mrs. Anacortes Citizen," contact the Eagles Hall or one of the committee (Stan Anderson, Harley Sutt, Ray Balthazor, or Al Chonzena)

Thank you.

Secretary of Defense Gates Opens SEATO Conference

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include therewith an address delivered by the Honorable Thomas Sovereign Gates, Jr., Secretary of Defense, on Wednesday, May 25, to the opening session of the 12th Southeast Asia Treaty Organization (SEATO) Military Advisers Conference, in Washington. I had the great privilege of witnessing this historic event.

Secretary Gates' speech was a clear, concise, and dignified greeting and statement of our Government's stand against the Communist threat to world peace. With his usual and noteworthy clarity, he told the world of the U.S. intention to honor our commitments in defense of freedom-loving peoples in this important quadrant of the world's surface. The speech follows:

STATEMENT OF THE HONORABLE THOMAS S. GATES, JR., AT OPENING OF THE SEATO 12TH MILITARY ADVISERS CONFERENCE, WASHING-TON, D.C.

Excellencies, military advisers, delegates. ladies, and gentlemen, it is a unique honor to address this distinguished group and to open the 12th SEATO Military Advisers Conference.

On behalf of President Eisenhower, the U.S. Government, and the American people I extend to each of you a most cordial welcome.

We meet at a time when the world has been startled and shocked by the abruptness with which the hopes for the reduction of tensions from a successful summit conference have been shattered. One thing has emerged of great value to all who are devoted to freedom: a new appreciation of the solid basis on which our relationships with our allies rests. The people of this country are deeply grateful for the unity shown by the nations of the free world at this time. The bonds among us have never been stronger.

The purposes, current activities, and future tasks of SEATO constitute a vital element in maintaining stability in the course of world events. With communism seeking to destroy all that the free nations of the world are striving to build and to maintain, the stability of the free world depends on the security of each of us. SEATO is based on this concept of interdependence, and is a proud demonstration of its success.

The purposes of the SEATO collective defense to which we have mutually bound our-selves remain valid. Time moves quickly, It has been 6 years since eight free nations pledged their collective resources to maintain the peace and security of southeast Asia and southwest Pacific through common action. It is significant that the Communists have not challenged its integrity nor tested its collective strength through direct overt aggression.

During its short span of life SEATO has grown from an idea into an effective organization. National forces of the southeast Asia countries, backed by powerful mobile forces contribute to the deterrent and provide the security behind which the free peoples of the area live and develop their resources. Coordinated SEATO military plans have been prepared and are capable of rapid execution to parry any likely Communist threat.

Through military field exercises, skills have been developed and refined, operating procedures established, and command arrangements tested. SEATO exercises have progfrom simple observer type to the sophisticated maneuvers of land, sea, and air units of member nations.

The United States remains dedicated in its support of SEATO. We are prepared and will honor our commitments. Our military forces have never been more powerful. They are capable of decisive action in general war if this should be forced upon us. Together with our allies we can meet lesser military actions anywhere in the world.

While it is inspiring to note the strides already made, great tasks still face us. The military threat of communism has not declined since SEATO was born in Manila 6 years ago. Communist leaders remain dedicated to the achievement of their goal of world domination. Their tactics, as you are aware, consist of threats and blandishments, warnings, and false promises. They exploit every opportunity and apply various forms of pressure. If a government is weak, greater and increasing pressures are applied in the hope that a revolutionary situation will develop. If a government successfully counters one particular Communist thrust, the Communist tactics change. The recent history of the southeast Asia and the southwest Pacific is replete with evidence of such Communist actions. They well may resort to military force if they believe it will be successful.

The nature of this opposition simply makes it more difficult for us to accomplish our high purpose. We can be encouraged, however, by our success to date. The collective security arrangements of the free world have deterred military aggression. The resolution of the nations of SEATO, backed by the tangible assistance rendered by the United States through its military assistance program, have achieved an effective defense.

The Secretary of State, the Joint Chiefs of Staff, and I are convinced of the indispensability of military assistance as an integral part not only of our own defenses but those of the entire free world.

We are strongly supporting the program the President. We are determined to make the maixmum use of the resources which Congress makes available. Our goal is to obtain on a worldwide basis the best possible free world defense.

I have just returned from Paris. Since the world press featured the Paris events on their front pages almost continuously for 2 weeks, there is not much I can add to what you already know. In view of the happenings in Paris, I wish to quote from President Eisenhower's message to the NATO ministerial meeting in Istanbul about a month

"We approach these Paris talks with a sincere desire to do all possible to reduce the tensions and dangers that now exist. Yet we cannot reasonably anticipate any quick or spectacular results. This meeting will be one more in what may prove a long succession of diplomatic exchanges dealing with some of the most difficult problems of our era. These are not susceptible to early solution. We can, at best, hope to make some modest progress toward our goals."

We did approach these talks with a sincere desire to reduce world tensions. As the de-velopments unfolded, however, it became increasingly clear that the Soviet Union has decided well in advance to torpedo the summit. Western firmness did not back down before Khrushchev's ultimatums.

I would be remiss if I failed to note that our colleagues from Britain and France, as well as the other NATO partners, displayed a convincing unity of purpose and action in the face of Soviet divisive efforts. The Soviet conduct both in Paris and at the United Nations demonstrated that a difficult road lies ahead as we seek solutions to the most complex problems of our times.

It is too early to tell what further developments may take place. The President of the United States will continue his efforts toward peace with justice and still hopes to make, as he put it, "some modest progress towards our goals" even though the Soviet actions have increased the difficulties. In short, we still intend to seek a relaxation of tensions by all means, short of impairing our common security. We must always negotiate from strength.

We recognize that military preparedness will not by itself meet the challenges facing southeast Asia. Our multilateral efforts to promote the economic growth of the area and the material well-being of the people must be intensified. Mere survival not enough to meet the demands of the future. Social and economic progress must be made. Mature and stable national institutions are necessary to the structure we are jointly striving to build.

Each SEATO Military Advisers Conference has cemented the ties of friendship and co-

operation. Conferences have developed ideas and recommendations which resulted in coordinated plans and actions. This meeting I am confident will be no exception. I take pleasure in declaring this conference open, and I wish you every success in the work before you.

Canal Block-No Aid

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. ROOSEVELT. Mr. Speaker, earlier this month, the Congress approved an amendment to the "Statement of Policy" of the Mutual Security Act.

This amendment reaffirms America's traditional support of freedom of the seas, and our opposition to boycotts, blockades, and restrictions on the use of international waterways, conducted by nations that receive U.S. economic assistance against other beneficiaries of our aid.

The amendment created widespread interest because of its implied calls for a positive and firm U.S. policy in the Near East. In this connection, I would like to call to the attention of the Members of this body an editorial which appeared in the May 4, 1960, issue of the Statesman, Salem, Oreg.

The text of the editorial follows:

CANAL BLOCK-NO AID

The Senate on Monday passed the mutual aid authorization bill. Its ceiling was only about \$50 million under the budget request whereas the House cut was \$87 million. The final amount, however, will be determined by what is included in the appropriation bill to follow. Probably the cut will be considerably larger.

The real battle in the Senate developed over a provision to withhold aid to any country which denies free access to international waterways. This was in the bill passed by the House, but Senator Fulbright, Chairman of the Foreign Relations Committee, offered an amendment to soften this ban. It was defeated 45 to 39.

Everyone knew that the provision was aimed at the United Arab Republic headed by Nasser of Egypt who has barred ships from using the Suez Canal if they were carrying goods to or from Israel. The prohibition has been strongly condemned, the United Nations itself calling on Egypt to open the canal for universal use. Nasser replies that Egypt is still in a state of war with Israel, and so is not bound to permit passage of its commerce.

Nasser conveniently forgets that United Nations, led by the United States, pulled his chestnuts out of the fire in 1956 when Britain, France, and Israel had Egypt on the ropes in their invasion and attack on the canal. He forgets that, to induce the invaders to withdraw, Dulles gave assurances for this country respecting the opening of the canal. He forgets, too, the fast work under United Nations to clear the canal and thus renew the flow of revenues to the Egyptian treasury from the users of the canal. Nasser also rejected the intercession of Dag Hammarskjold, Secretary General of U.N., who was commissioned to appeal for opening the canal to Israeli shipping.

If not a breach of faith, it is certainly base ingratitude toward U.N. for rescuing Nasser

and his regime from probably crushing defeat. But the Arab bitterness toward Israel bars any concession even though the Egyptian stand is quite untenable.

Nasser knows we aren't going to go to war to open the canal, so he just thumbs his nose at us. The administration favors walking softly in the Middle East. That is understandable, but it is hard to justify foreign aid when a nation is so obdurate in resisting the pressures of the United States and United Nations. Withholding aid is a mild alternate to brandishing Teddy Roosevelt's big stick. We don't need to be pushed around all the time by the small nation bidding for aid while it ignores its obligations to the international community.

Adlai Still Not Attuned to People

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. ARENDS. Mr. Speaker, I have the privilege of representing one of the finest districts in the Midwest.

A great many people think that we who live in the interior of the country are not as interested in foreign affairs and national defense as those who reside on the seaboard. That is not a fact. We are deeply concerned about the international situation and we are well aware of our need for a strong defense prepared for any emergency.

It is important that the Congress know what the "man on the street" from the Midwest thinks. I am accordingly inserting in the Record the following editorial that appeared in the May 23 issue of the Danville Commercial-News, one of the leading newspapers in my district:

ADLAI STILL NOT ATTUNED TO PEOPLE

Adlai Stevenson again has demonstrated that he is out of touch with the man on the street. In condemning the administration for the events prior to and admittedly connected with the collapse of the summit meeting, he was—as he has been known to do in the past—talking from the top of his head.

On the face of it, his criticism does not seem out of the way, considering his position as titular head of the Democratic Party. In a republic, it is not only the privilege but the duty of the opposition party to be a watchdog for the people's interest.

But will the man on the street so interpret Stevenson's attitude? The chances are great that he will not. In the first place, the timing of the criticism was much too belated. The immediate reaction of the people to disclosure of the U-2 plane incident was indignation. There was a widespread feeling that we had goofed, that the administration had committed another blunder in a long series of diplomatic mistakes dating back through both Republican and Democratic regimes. But it soon became clear that the summit was doomed to failure under any circumstances. Legitimate or trumped up, Khrushchev would have found an excuse to torpedo the meeting.

Few Americans, regardless of party, doubt Eisenhower's sincerity of purpose. And when he and the great Nation he symbolizes as President were subjected to a vicious, guttersnipe attack, what happened?

An enormous wave of sympathy developed. A tremendous chain reaction of resentment,

hot as nuclear fission, built up against the Soviet Union. Our President was being pushed around by a loud-mouthed, arrogant bully. Hence, America was being pushed around. Americans don't like to be pushed around. They don't like to see other Americans pushed around.

Stevenson finds fault with the President for not lying when Khrushchev "gave (him) an out by suggesting that he was not responsible." Is this sort of astonishing faultfinding likely to endear Stevenson, or the party which he represents, with the man on the street?

To be sure, many Democrats in high places disavow any part of such criticism. They rightly resent Khrushchev's intimation that he could deal with an administration of their party. But what does Stevenson mean when he says that successful negotiation with the Soviet is impossible with the GOP in power? Successful for whom? Does he suggest that if he were President—or Secretary of State for Kenney—that he could establish an entente cordiale with the Kremlin?

The man on the street is likely to feel that a Khrushchev happy with the American Government is a Khrushchev who, to paraphrase a popular song, has the whole world under his pudgy thumb.

The Democrats certainly must bear a major share of the blame for the ineptitude of our bipartisan dealings with Russia over the years. It is a little late in the day for a Foreign Relations Committee probe to fix blame for the spy plane incident. The roots, if the investigation were fair and complete, would extend back at least to 1933.

But the responsible Democratic leaders, motivated both by their American patriotism and the realities of practical politics, cannot help but be chagrined by evidence that Adlai Stevenson still hasn't learned how to get through to the man who counts most: The man on the street.

Memorial Day 1960

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960 r. VAN ZANDT. Mr. Speal

Mr. VAN ZANDT. Mr. Speaker, within a few days Americans everywhere will observe Memorial Day.

In keeping with the occasion the following statement appeared in my Washington Newsletter May 28 in lieu of my usual report on legislative activities:

MEMORIAL DAY 1960

Memorial Day is distinctly an American institution—a deeply significant sentimental custom established by our American people more than 90 years ago. It is not only observed in every community across our Nation but in many foreign lands and across the high seas.

What the American people do in their local communities on Memorial Day is actually symbolic of our contribution to the overall Memorial Day observance which is being duplicated by millions throughout our land and in several foreign countries.

To make the point clear the following facts must be considered: There are more than 1 million names on the honor rolls of the American war dead. These names are the men and women who have fought and died for our country since this Nation was founded some 185 years ago.

Throughout the United States and in some 25 American military cemeteries beyond our shores, the mortal remains of some 400,000 Americans who gave their lives in World War I, and World War II and the Korean conflict are buried or are recorded as missing in action.

At 8 American military cemeteries or spe-cial memorials in France, England, and Belgium, there are nearly 31,000 World War I

veterans buried.

Some 76,000 World War II dead are buried at 14 American cemeteries in England, France, Belgium, Luxembourg, Holland, Italy and Tunisa, north Africa. In addition, more than 90,000 World War II and Korean War dead are buried or recorded as missing at American cemeteries in Puerto Rico, Hawali, Alaska, and the Philippines.

In Arlington National Cemetery on the banks of the Potomac River across from the Nation's Capital surrounding the Tomb of the Unknowns are some 99,000 other war dead which represent all forms of military

service

In the American military cemeteries are graves and chapels, pools and gardens, statues and-most impressive, the walls of the missing. Alined in rows there are two designs of white marble headstones, the Star of David for those of the Jewish faith and the Latin Cross for all others. These markers identify the remains of the known American war dead. All of these material tributes are creations of our best talent in architecture and landscaping and in poetry and prayer. These oversea cemeteries and memorials are in charge of the American Battle Monuments Commission and the Department of the Army.

In our oversea cemeteries where our known American war dead are buried, there are more than 60,000 in France, 13,600 in Bel-glum, 17,000 in the Philippines, 13,500 in Hawaii, 12,000 in Italy, 8,000 in Holland, 5,000 in Luxembourg, 4,000 in England, and

2,000 in Tunisia, North Africa.

For the unknown war dead, rows of marked graves are to be found in the vicinity tremendously imposing structures, the walls of the missing. One of these walls of the missing is located on the south coast of England and inscribed on its 274-foot-long wall are the names, the ranks, the combat organization and the home States of American servicemen presumed to be dead but whose remains have not been recovered or identified. The following inscription appears on the walls of the missing: "Here are recorded the names of Americans who gave their lives in the service of their country and who sleep in unknown graves—grant unto them, O Lord, eternal rest."

Thus the real meaning of Memorial Day is revealed by the worldwide tributes that We as Americans pay to our war dead. The sun never sets upon all of these memorials.

Above the hallowed grounds upon which these memorials are located flies the Stars and Stripes—the fing of our country. It is the fing which says: "They were my de-fenders. They were your defenders. Their patriotism and their valor were proved on the fields of battle. Let their achievements and sacrifices be your inspiration forever."

This is the message for each of us on this

Memorial Day of 1960.

Capsule of Nixon's Political Creed

EXTENSION OF REMARKS OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. WILSON. Mr. Speaker, one of Washington's top political writers recently left Potomacland and returned to his native city of San Diego where he is now turning out outstanding editorials on the staff of the San Diego Union. For 12 years Frank Macomber, who is known as Jeff to his many friends, built up a reputation as a keen observer on the national and international scene. His columns and news articles were featured in the Copley Press, in leading newspapers around the country.

Macomber was on duty in Washington when RICHARD NIXON arrived as a newly elected young Congressman from Whittier, Calif. He watched Nixon estab-lish himself as a leader and spokesman of basic Republican principles. He recently summed up in a few typically well chosen words his interpretation of Nixon's creed.

Under unanimous consent I include Macomber's excellent column as a por-

tion of my remarks:

READY FOR STEP-UP-CAPSULE FOR NIXON POLITICAL CREED

(By Frank Macomber)

Vice President Nixon has many biographers already, at the age of 46. Yet this might be the time to put into a capsule the political philosophy of the man who seems destined to be the Republican presidential candidate this year.

Nixon's overall record is that of one who likes the middle of the highway in preference to the ditches at either side.

He has been interested deeply in international affairs ever since he served on the so-called Herter committee in Congress in the upper-middle forties. Today's Secretary of State headed the special committee which conducted a searching study of our foreign policy in those days.

Partly because of his experience on the committee, Nixon always has been for liberal foreign aid. He supported the United Nations and defended the Voice of America when it was under heavy attack in this country. This displeased the isolationists, of course.

However, Nixon does not view the U.N. as a superstate to which we should sur-render our sovereignty. He prefers tempo-rary foreign alliances to permanent partnerships.

The Vice President battled Mr. Truman's Far East policy, which irritated some on the far left, but supported Mr. Truman's con-troversial aid to Greece and the decision to send troops into Korea. That angered the right-wingers.

On the domestic front, Nixon would go after a balanced budget, which horrifles the Americans for Democratic Action, He thinks it should be balanced in 4-year cycles.

Nixon has favored reforms to eliminate labor racketeers and restrain labor bosses and give rank-and-file union members the rights to which they are entitled. That antagonizes the labor bosses.

He fought to extend social security to the 12 million workers not previously covered and to increase unemployment benefits. That antagonized the opposite group.

The Vice President favored reduced excess profits taxes to provide business incentive and foster depreciation rates to encourage expansion of industrial plants and thus provide more jobs. His aim was to produce a climate conducive to volume productionrisking lower prices to attract more salesand thus steadily improve living standards.
Nixon's record and his speeches mirror a

philosophy or a political creed something like this:

A faith that our system can achieve the wide distribution and resultant prosperity which is the theoretical justification for socialism. That, with social conscience for the infirm and the unfortunate, and equal

opportunity for the able, we can achieve what merely is the illusory promise of communism.

And we can do these things without sacrificing our individuality and our freedoms to all-powerful big-brother government and supremacy of the state, which is the price demanded by both communism and social-

For others, the Vice Presidency has been somewhat like falling down an elevator shaft: A flurry of excitement when you first step in, then-oblivion. For Nixon it has been an enriching experience as an assistant President. Now he is ready to take the only step-up left to him-the biggest step of all.

Treatment of Narcotic Addicts

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of a statement which I submitted on May 16, 1960, to the President's Interdepartmental Committee on Narcotics at its meeting in New York City that day:

STATEMENT BY CONGRESSMAN VICTOR L. AN-FUSO, DEMOCRAT, OF NEW YORK, PRESIDENT'S INTERDEPARTMENTAL COMMITTEE ON NAR-OOTICS MAY 16, 1960, IN NEW YORK CITY

I have introduced H.R. 12120, which provides for Federal assistance to the States for the payment of one-half of the cost per bed patient for the treatment of narcotic drug addicts in closed institutions maintained and operated by the States. It is my hope that with financial assistance from the Federal Government the States having a severe narcotic problem will be encouraged to provide for a drug treatment program under which the narcotic drug addict is committed through a State civil action, to remain under treatment until released by competent medical authority as having attained maximum medical benefits.

Statistics recently presented to the Subcommittee on Treasury-Post Office Departments Appropriations of the House Appropriations Committee by Commissioner H. J. Anslinger of the Federal Bureau of Narcotics caused me grave concern. Particularly was I appalled when I learned that of the total number of known drug addicts in the United States 45.7 percent, or 20,732, were recorded as being in my own State of New York. Furthermore, it was enlightening to know that nearly 80 percent of the known drug addicts are recorded as residing in only four States, New York, California, Illinois, and Michigan.

Since I am firmly convinced that drug addicts should be treated and cured of their drug addiction and that this can be successfully accomplished only through their compulsory confinement in a drug-free atmosphere, I endeavored to learn what the States were doing toward accomplishing this purpose. I was shocked to learn how little is being done by the States in this regard. I am convinced that with the proper impetus, which I believe my bill will have, the States will be willing to assume a more active participation in what has so far proved to be their weakest effort at curbing the narcotic drug problem-providing treatment facilities for drug addicts.

I learned that the State of Illinois is preparing to provide a treatment center as quickly as possible to take care of 300 drug addicts at one time. This bill will assist both New York City and Chicago in their efforts to cure the drug addict.

The enforcement of our criminal statutes again the drug peddler cannot alone eliminate drug addiction in this country. We must find a way of providing the much needed facilities for requiring the drug addict to remain under treatment in a hospital institution plus the additional facilities for rehabilitation and reinstatement into a normal life activity after being released from the institution. If we are going to admit that a drug addict is a sick person, we must be willing to spend the money necessary to cure him of his sickness.

The Congressional Cemetery

SPEECH

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12326) making appropriations for civil functions administered by the Department of the Army, cer-tain agencies of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority, and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes.

Mr. MAHON. Mr. Chairman, I want to commend members of the committee for directing in their report that up to \$2,100 of the funds recommended in the bill for cemeterial expenses be allocated for maintenance of the Federal graves in the Congressional Cemetery, which is located in Southeast Washington, D.C. The budget recommended allocation of only \$750 for fiscal year 1961 for the maintenance of the 806 Government burial sites which are scattered throughout nine burial sections in the cemetery.

The Congressional Cemetery was established on April 4, 1807. The cemetery is under the ownership and control of the Washington Parish, Christ Church, From the beginning it was intended that this cemetery would be used in part as a burial ground for Members of Congress and other officials of the U.S. Government. At the beginning of the 19th century, it was, of course, not feasible to transport human remains long distances for burial. Thus, it was essential that there be a burial ground in the Federal Capital which would be appropriate to receive the remains of Government officials.

The church made a gift of a large number of burial sites to the Federal Government. Three Presidents-John Quincy Adams, William Henry Harrison, and Zachary Taylor-all died in Washington and their remains were taken to. and briefly interred in the Congressional Cemetery pending removal to their home cemeteries. Most of the Senators and Representatives and other high-ranking Government officials who died in Washington prior to the establishment of the Arlington National Cemetery were buried in the Congressional Cemetery. Many of these were later removed to their home

cemeteries. There are now in the Congressional Cemetery the remains of about 14 Senators and 42 Members of the House of Representatives.

The establishment of Arlington National Cemetery in 1864 and the development of improved methods to ship remains over long distances terminated the necessity for Government burials to be made at the Congressional Cemetery. No interments have been made in any of the Government-owned lots since 1902. As a result of this situation Congress has tended to lose interest in the Congressional Cemetery. For a time, the Army Memorial Division sent its own personnel into Congressional Cemetery to care for the Government-owned graves. The transportation of these men to and from the Congressional Cemetery obviously made this work expensive, and several years ago, the Army contracted with the superintendent of the Congressional Cemetery for the cutting and trimming of the grass on the Government-owned lots and the filling of any sunken graves. The superintendent of the Alexandria National Cemetery was delegated to straighten and clean and replace headstones when such work was necessary and will continue to do so.

I feel that we are taking appropriate action in making better provisions for the upkeep of the historical Congressional Cemetery and I have inserted the foregoing information with the thought that many Members would be interested in it.

The Businessman's Responsibility in Economic Growth

EXTENSION OF REMARKS

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, April 28, 1960

Mr. BOW. Mr. Speaker, it was my pleasure on Monday to accompany Hon. Frederick H. Mueller, the Secretary of Commerce, to Alliance where he addressed some 500 members of the Alliance Chamber of Commerce at a banquet. Both the Secretary and I were gratified by the large attendance in Alliance, and all present were impressed with his excellent address, the text of which I include with my remarks:

THE BUSINESSMAN'S RESPONSIBILITY IN ECONOMIC GROWTH

(By Secretary of Commerce, Frederick H. Mueller)

This year marks the opening of the 1960-70 decade, fraught with potentials for the greatest era of good times in the annals of mankind and also clouded by the worry that civilization itself could perish in the disaster of nuclear ashes.

We stand at an unmarked junction of history. We must choose the right course. we have only experience, logic and faith as our roadmap.

Problems and opportunities-all affecting us in one way or another—are multiplying all over the globe. Every morning we ask, what next?

As economic power is the generator of our

modern technological society, the Nation makes earnest demand on business for wise and courageous leadership. Not only in private industry, but also in public affairs.

Buisnessmen are wanted in Government administration. But they also are urgently needed to keep tabs on Government, to create better public understanding of the priceless value of free enterprise, and then to make such resulting public opinion heard in city hall, State house and in the National Cabitol.

Public policies are being designed in this commencement year of the decade that might well decide the success of our economic system for the next 10 years. Our very survival as a nation depends on the current might and growth of our free enterprise economy.

For members of a chamber of commerce or other businessmen to keep mum on vital public issues this year would be to abandon the defense of business and to desert civic responsibility.

What are some of the hazards that business

should point out to the public?
One is concealed in the word growth. We all want growth; the danger is in artificial, inflation-fed growth.

Let me illustrate from history: Not so many years ago, the nearsighted complained that the last frontier had been reached and, therefore, economic growth no longer was possible. Their solution was to distribute the leftover wealth. But this stagnation theory was not in the American tradition of dynamic enterprise—and the people rejected such defeatism.

So a new set of dreamers concocted a new panacea, using a few socialistic drugs in the dose. They admitted that, after all, growth was necessary. But, they said, the way to achieve it was through government action. They argued that private initiative was washed up and that the businessman must step down and be replaced by the bureaucrat. Only big government, they claimed, could supply the power thrust of economic growth.

That false doctrine is being repeated on the stump in this election year. Some people with short memories are being fooled. They forget that the sky's-the-limit spending theories were tried before but history exposed their fallacy. Despite every pep pill in the medicine kit, unemployment in 1939 was more than 17 percent of the labor force. The 1930-40 decade was the only decade in our economic history that failed to grow-Only the outbreak of war with its war production saved the witch doctor prescription from complete repudiation.

Why should we swap the free initiative of free enterprise for Government interference with private action and Government burdens heaped on taxpayers?

I am proud to be here as a representative of the Eisenhower administration that endeavors to maintain a climate favorable to private enterprise. During the last 7 years, the American people have had more jobs, more new homes, new schools, new hospitals and higher income than in any previous 7 years.

And that unprecedented prosperity continues. Due to a strong surge of production, the gross national product for the first 3 months of this year at an annual rate hit the \$500 billion alltime record mark, a rise of nearly \$17 billion over the last quarter of 1959

A very significant point is that although inventory accumulation after the steel strike was a factor, more than half of the overall gain went into consumption, fixed investment and other final uses, and represents basic growth. So, right now, we are actually in that half-a-trillion-dollar economy which we all have been anticipating so eagerly.

This is a solid foundation, characterized by stable prices, on which to build during the rest of the year.

New plant and equipment eutlays, consumer spending and other indicators justify a realistic, down-to-earth mood of calm confidence for the rest of 1960. My forecast is this: Not an inflation-fed boom, but a record year—the best year so far.

The administration will do everything

within its power to advance prosperity by striving to maintain a climate favorable to

private enterprise.

We shall continue to alert the public to the necessity of keeping the budget in balance, with the surplus used to reduce the \$290 billion national debt. We shall continue to oppose unnecessary projects financed through deficit spending, which would indefinitely postpone tax cuts. We shall never quit in our opposition to those who would rather satisfy well-meaning or grasping pressure groups than save the entire people from the terrible disaster of inflation that would be followed by the universal misery of depression.

We welcome, as always, congressional bi-partisan support for fiscal integrity, and we

are getting it.

We will not play partisan politics with Public duty.
So much for the current situation. Where

do we go from here? Let us look ahead to some of the possibili-

ties of economic growth in the 1960-70 We are enjoying the bounties of the tech-

nological revolution, still in its infancy. It required millions of years for anthropoids to evolve into cavemen. The stone age last-ed about 500,000 years. The age of steam began less than 200 years ago. The age of petroleum and electricity started in the last century. Yet crowded into this 20th century have come the electronic, nuclear, and space ages-all three.

If you should list the names of ever scientist since the dawn of time you would find that 9 out of every 10 named belong to our generation. Within the lifespan of persons now living have arrived more technological marvels than in all previous history. And as the explorations of man range from the minuscule subatomic particles to the vast reaches of the universe, marvels beyond imagination will be born and utilized for

the benefit of mankind.

As Secretary of Commerce I am a constant eyewitness of man's creative genius. Our Patent Office has issued and now has on file around 3 million patents, developed since the system was inaugurated in the days of George Washington. Right now it is re-ceiving 350 patent applications every working day. We are experimenting with elec-tronic memory disks to speed patent search and grant.

Heading toward our Patent Office are the fruits of research. As the last decade began, only \$2.8 billion were spent on research and development. Today the private sector and the Government are investing annually more than \$12 billion, which will be transformed into new and better tools and products.

The great technological agencies of the Commerce Department are initiating many significant modern improvements for sound growth. We are completing the world's first nuclear-powered merchant ship. We are translating the messages and reproducing the photography of manmade satellites to find ways to improve weather forecasting. We are bouncing radio rays off meteor trails to develop better broadcasting. We are prob-ing the ocean depths for ideas to reclaim long lost dust of precious minerals.

In discussing future research and invention, one of our bright young scientists at the National Bureau of Standards said, "When the decade of the sixtles has passed into history, we will perhaps wonder why we were so timid in not predicting even greater things."

Such expectations should thrill the imagination. But such responsibility also should

stir our sense of duty.

We are the promoters of a technology which can further enrich the economy. We are also custodians of an economy that can create tremendous technological progress. One factor cannot exist in modern life without the other. They are interdependent. Wreck the economy and the act also wrecks the science developed and financed by the economy.

Let us guard both precious blessings.

I can conceive of no more important duty this year than for businessmen not only to mind the store but also to mind the Government.

Advancing upon business are forces that could cause serious trouble for all private enterprise unless all its defendants quit the solo dancing, pool their resources, and act together in the common cause.

"Eternal vigilance," said Thomas Jefferson, "is the price of liberty."

All of us together must pay that price if we are to save our free market system. You and I and all who believe in a sound economy must do more to alert the general public to the measureless value of private enterprise.

We must do more to expose and refute false economic doctrines.

We must fight harder, longer, and better to protect sound economic growth from the knockout drops of leftwing theorists and the squanderlust of spendthrifts.

We must be wise, active, and dedicated in doing a better job in building a stronger and better America for ourselves and the coming generation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Mem-bers of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

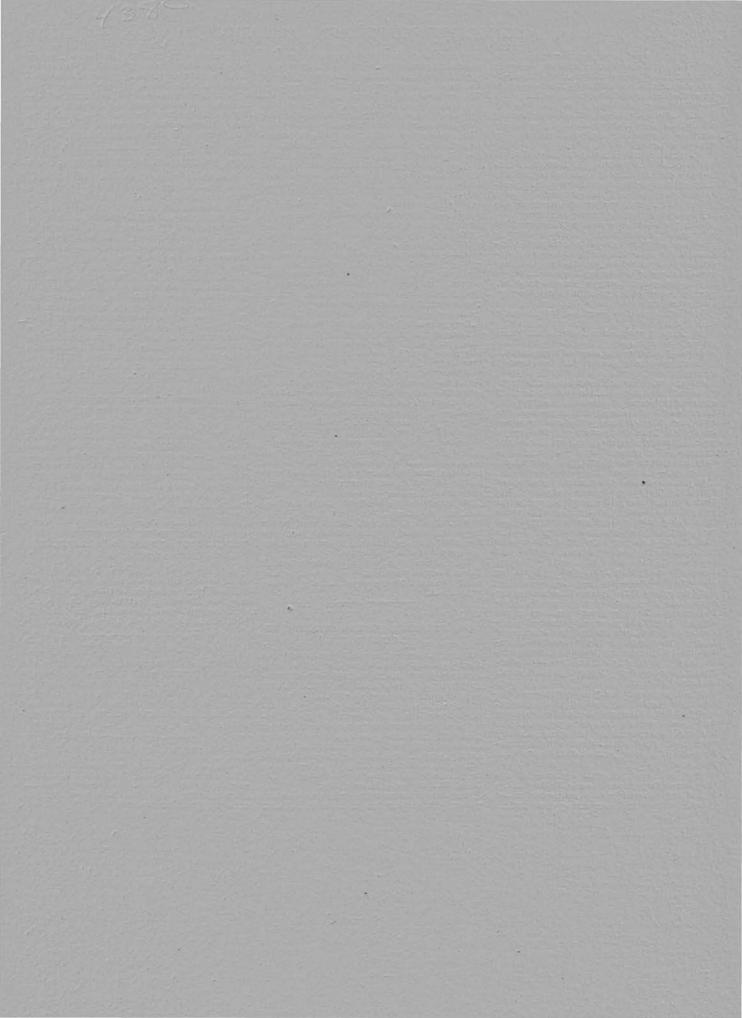

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Address by Senator Chavez to New Mexico National Guard Conference

EXTENSION OF REMARKS

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES Thursday, May 26, 1960

Mr. CHAVEZ. Mr. President, on May 15, I delivered an address to the New Mexico National Guard Conference, at Santa Fe, N. Mex. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address Was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR DENNIS CHAVEZ, NEW MEXICO NATIONAL GUARD CONFERENCE

In the past 5 years the concepts of warfare and military tactics have been affected by greater technological gains than in any other period in our history. The outlook for the future is for even more accelerated advances as the total of our scientific experiences pyramids toward yet unknown at-

tainments.

In this era of rapid achievement and

In this era of rapid achievement and change, the military services are continually rushing toward positions where their mis sions must be reexamined. The old must be cast aside or revitalized to fulfill new tasks. New formula and new attitudes must obtain.

At these points, where the new order of things begins, the military services are being challenged as to their capacity to play new roles, to fill voids no other can, to alter direction to seek out new solutions.

Today, there remain a good many people who advocate a lesser role for the National Guard. In viewing the great problems of our time and the economic and strategic concepts which must be weighed in charting our course, they judge the National Guard in terms of previous wars, in terms of older concepts. They are always looking back. Today, in all our policies we must set our sights before us, not behind us.

In looking back, these detractors of the National Guard don't fail to see the great achievements of the National Guard—the fighting at the rude bridge at Concord, or the bolstering of our forces in the great wars, or the poignant sacrifice of the New Mexico National Guard at Bataan. No, they see all these things, and further they fully realize What the National Guard has meant to the Nation in the past. The trouble with these people is they delineate the Guard's present Potential by the yardstick of its past contributions.

They see the National Guard of today as they see the National Guard or loudy as it was before. They think, "Yes; it was good then, but we don't fight that kind of war any more." They don't look ahead and envise. visage the great roles that the guard is capable of playing. They don't look ahead and see how this potential can be linked with our national goals. They don't look ahead and see that the National Guard can play various parts in a future scheme that it has never played before. They don't look ahead and see that the potential of the National Guard can be utilized in offsetting the economic and strategic challenges that burden us as the citadel of freedom. I cannot emphasize enough that what the National Guard can do today is not and should not be limited to the role it played in antiquity.

The person who desires to look ahead in providing for our national needs has only to examine the recent progress of the National Guard to get some hint as to the vast potential the guard can bring to bear

on our great problems.

In recent years both the Army and Air National Guard have taken on tasks heretofore reserved for the active Army and Air Force. By 1961 the Army National Guard is programed to operate 76 Nike-Ajax sites in the continental United States. The Hawaii Army National Guard will be manning six sites equipped with Nike-Hurcules missiles. These deadly weapons are capable of carrying atomic warheads.

This defense screen, stretching across the entire expanse of the Nation, will be operated entirely by National Guardsmen. Concentrated in the most vital industrial and population centers, it is an integral part of our air defense network.

The Air National Guard now maintains 21 fighter squadrons on alert status with aircraft and crews ready to meet possibly hostile planes on short notice. The Air National Guard also has 4 aircraft control and warning squadrons on alert 24 hours a day, 7 days a week. Serving as part of the active Air Force's radar network, these squadrons are constantly on guard against sneak attacks.

These full-time minutemen have shown the potential of the National Guard to participate in the day-to-day programs of the active establishment. By effectively assuming an active role in the defense of our Nation, these guardsmen have enabled the active Army and Air Force to use their limited resources and still spread our deterrent power over a far wider range. With the aid of the National Guard, the active Army and Air Force have been able to take on more defense responsibility without increasing their numbers.

It has been said again and again that the National Guard provides the best way to provide adequately trained forces in sufficient numbers without placing too great a burden on our economy.

Today the Army National Guard has 400,-000 men and almost all of them have completed basic training. As a result of new programs which provide for the training of men before they join their units, the Army National Guard has for more than a year been able to concentrate on unit training.

Last year and the year before, when it was proposed to cut the strength of the Army National Guard and Army Reserve, Congress resisted and set a strength floor of 400,000 for the Army National Guard. In response to the will of Congress, the Army National Guard has maintained its strength level.

I was pleased to learn that you in the New Mexico Army National Guard were successful in your recruiting efforts during this fiscal year and made a contribution to the maintenance of the guard's overall strength. By the end of March 1960 New Mexico's Army National Guard had a strength of 3,485 and holds its place among the few States which consistently maintain near maximum

Again this year a proposal has been presented to the Congress to cut the strength of the Army National Guard from 400,000 men to 360,000. Both the Secretary of the Army and the Chief of Staff of the Army have taken the position that the Army National Guard needs a strength of 400,000 in order to maintain its effectiveness. Because I too am convinced that 400,000 is the minimum required. I will strongly resist a further cut and am optimistic that the majority of the Congress holds to the same convictions as I. Because the guard has the capacity to meet the greater challenges of the future, this effectiveness should not be impaired.

With the recent completion of its nationwide pentomic reorganization, the streamlined Army National Guard is ready to take its place beside the Active Army in both nuclear and conventional warfare.

The Air National Guard is also prepared as never before to meet the test of modern warfare. Its 62,000 airmen and 8,600 officers have a degree of readiness never before achieved.

As part of its modernization program during the next year or so, the Air National Guard will convert 18 squadrons to the more deadly and effective aircraft. These planes are part of the widely acclaimed Century Series, a term that has become more familiar in New Mexico than in most States since Albuquerque's own 188th Fighter-Interceptor Squadron was the first Air National Guard unit in the country to receive a Century Series aircraft.

The Air National Guard is also assuming an important airlift mission. By the end of the present fiscal year, the first Air National Guard squadron will be trained to operate the 4-engine C-97. Six squadrons are scheduled to receive a total of 48 of these heavy transports. By gaining an airlift capa-bility the Air National Guard has added another important link in the ever-increasing part it plays in national defense.

The formidable fighting force that is the National Guard is spread strategically through every portion of the Nation. The Air National Guard is stationed on 94 flying fields and 42 nonflying installations. The Army National Guard is located in approximately 2,500 communities drawing on the human wealth of virtually every corner of the 50 States and Puerto Rico.

Those who have been able to look ahead have forseen that the great dispersal of these National Guard units is an asset that can be applied to our national needs as no other can. The forward lookers have realized that the National Guard might be our most important resource if our country is subjected to a nuclear attack.

Those who have probed the future have analyzed the period following a nuclear attack at a time when our resiliency may well turn the tide in the overall struggle. forward lookers have envisaged a recovery role for the National Guard that is both prospective and particularly suited to the nature of the National Guard.

The National Guard is so dispersed that its entirety would not succumb to a nuclear attack. A framework of adequately trained forces would ultimately survive and be prepared to advance with our own nuclear re-taliation. It can't be disputed that the conclusive victor in a nuclear war may well be the Nation that can rebound with welltrained land forces to occupy the enemy's territory.

Although the National Guard represents an impressive contribution to our defense, its budgetary support amounts to only about 1½ percent of the total defense budget of \$41 billion.

The budget request for the National Guard in fiscal year 1961 amounts to about \$610 million. Although small in comparison to our total defense needs in this atomic age, this figure is enormous when compared to the standards of our everyday pursuits. Consider, for example, that 610 million minutes have not passed since the birth of

Here in New Mexico, the nearly 3,500 Army guardsmen and 525 Air guardsmen are caught up in this swirling tide that may well

affect the destiny of our Nation.

In the recent reorganization of the Army National Guard, the total number of New Mexico units was reduced by one one-from 52 to 51. But in terms of effectiveness, the reorganization of the New Mexico Army National Guard has greatly increased its value.

The reorganized units are now dovetailed with those of the Active Army to provide the needed whole in the event of mobiliza-The reorganization has enabled the New Mexico Army Guard to tighten its efficiency and provide for a more significant contribution to national defense.

New Mexico can take pride that it has contributed to the commendable performance of the National Guard throughout the United States in carrying out this vast re-organization. Extensive as the reorganization was, requiring changes and redistribution from the ground up, the National Guard of the United States completed the reorganization more than a year ahead of schedule.

Two years ago, I had the pleasure of participating in the ceremonies when New Mexico's fighter squadron received the first Century Series aircraft assigned to the Air National Guard. At that time the unit became the pathfinder in the Century Series its outstanding performance while flying the old F-80 Shooting Star, and the fine facilities available at Kirtland Air Force Base. With newer and more advanced aircraft being made available to the Air National Guard in the next several years, it is probable that the 188th will be given an opportunity to get even more advanced Century Series aircraft. In fact, I have been informed that the New Mexico Air National Guard will have F-102 fighters in the near future. The announcement will be made within the next few days.

During the present fiscal year, the Federal Government provided a total of \$3,394,547 for support of the New Mexico Army National Guard. The dollar support for the New Mexico Air National Guard totaled \$1,501,781

during the fiscal year.

These figures are large, but they are hardly close to the total Federal invetsment in the New Mexico National Guard. Including buildings, equipment, and other capitalized items, the total Federal investment in the New Mexico National Guard, both Army and Air, is more than \$54 million. This represents a capital investment of \$13,500 for

every guardsman in the State.

Since 1950, when Congress enacted the National Defense Facilities Act, New Mexico has made great strides in providing the most up-to-date structures possible for its Army National Guard units. During the past 10 years, a total of \$639,037 in Federal funds have been contributed for obligation for the construction of 10 new armories in New Mexico. The Congress has appropriated for contribution toward the construction of two more armories, at Espanola and Socorro. In addition, projects for the construction of armories at Clayton and Las Vegas are in the bill for authorization in fiscal year 1961.

As a Senator, I have witnessed the adoption of programs to increase the preparedness of the National Guard. I am proud of my support of these programs for on my visits to New Mexico I have seen and heard of the effects of these programs here at home. I have experienced great pride in what you have done for our State and Nation.

Military leaders in Washington have called the National Guard our readiest reserve force. The manifest preparedness of the National Guard throughout the United States, and its contributions to the roundthe-clock defense network of the Nation have demonstrated the capability of the National Guard, both Army and Air, to operate the highly technical weapons required in modern warfare. Furthermore, the modern Minutemen have shown that the National Guard is ready to participate in the day-today programs of the active establishment.

In spite of the rapid advances in military science, the Guard has kept pace. But the present high degree of effectiveness in the National Guard is not the outer limit of its

effectiveness.

Those who must muster our means to meet the challenges of this modern age must not fail to apply all the resources in our great arsenal. Most of all, in applying these resources, they must look to them from the standpoint of our future needs and not in terms of their previous use. Let us look ahead with confidence that the National Guard is America's up-to-the-minute men, ready, willing and able for service to our State and Nation.

Area Development

EXTENSION OF REMARKS OF

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. GRAY. Mr. Speaker, I have the honor of representing one of the finest congressional districts in the country, the 25th Congressional District of southern Illinois. We have good schools, churches, and fine people. However, due to a serious decline in the fluorspar and coal mining industries over the past few years we have experienced economic hardship through a loss of jobs in these industries. The 1960 census tentatively shows a population loss in 14 counties of my 15county congressional district. Speaker, this is frightening and appalling to think that so many people are forced to leave their homes and loved ones to go elsewhere seeking employment. Over 30,000 persons have been forced to leave the area in the past few years and an additional 20,000 are toughing it out at home trying to find work.

Every community of my district has been trying diligently to help themselves. We have had a transition to other types of industry. However, the decline has been greater than the progress. Therefore, if our economic decay is to be stopped, we must have some outside assistance. I am happy to say that Congress has been good to us and we are now working on various Federal projects. However, much more must be done.

We were all grieved when the President saw fit to veto the area redevelopment bill that would have meant so much to our district. It is hard for my people to understand why we continue to pour billions into foreign countries while they cannot receive a pittance of aid at home.

Mr. Speaker, a good example of our Government's neglect at home has been experienced in the small city of Golconda, in Pope County, Ill. This community had an opportunity to locate a new factory in the city and applied to the Small Business Administration for a measly \$51,000 loan to help finance the construction of a plant that would have provided employment for approximately 100 per-The community had agreed to put up \$35,000 in cash to match the \$51,000 needed from the Government, but after fighting the red tape for several weeks. and wires and telephone calls were made by my office and that of Senator DougLAS, the loan was rejected.

Mr. Rodney J. Brenner, publisher of the Golconda Enterprise, has written an editorial in his paper concerning the refusal of the Small Business Administration to help this community. City Attorney Wayne Clemens prepared all of the papers in connection with this loan and made several trips to the Small Business Administration office. Mr. Speaker, my people as well as myself are very disappointed in the Small Business Administration's efforts, or lack of effort, to help provide assistance as prescribed by Congress in the Small Business Act. With a local community putting up almost 50 percent downpayment, I cannot understand why SBA would want to reject a loan of this type, particularly in view of the fact that it would mean food in the mouths of hungry people. Jobs are very difficult to obtain and when we have an opportunity to secure an industry with a little help from the Federal Government, we should receive that help. In this case we did not.

Mr. Speaker, under permission previously granted me. I include a newspaper article on the subject and also the editorial by Mr. Rodney J. Brenner:

[From the Herald-Enterprise, Mar. 24, 1960] REFUSES FACTORY LOAN-SBA DEMANDS \$51,000 FROM COMMUNITY

Pope County's superhuman efforts to pull itself out of its economic doldrums through establishment of a community-sponsored furniture factory seemed futile today with word from Washington, D.C., that the Small Business Administration will refuse the community's request for a loan.

Actual refusal has not been made, but according to the office of Senator PAUL DOUG-LAS, the SBA has reached the following de-

The loan will not be granted on the present basis of 60 percent Government funds matched by 40 percent community funds, the original terms specified by the SBA and the terms met by the community, because:

1. The SBA now believes the project to be under-capitalized and will demand that the community's share be raised to \$51,000 to match \$51,000 contributed by the Government (instead of \$35,000 community and \$51,000 Government).

2. The SBA does not believe that the project will pay a 4-percent profit, which was the figure arrived at by one of the State's top certified public accountants employed by the county to make a thorough study of the

3. The SBA does not believe that the proposed project can put up sufficient collateral to cover the loan.

Word of the SBA's unfavorable attitude toward the project came this morning in a

telephone call from Senator DougLas' office to City Attorney Wayne Clemens. Source of information was the Washington office of the Small Business Administration.

(By Rodney J. Brenner)

The true farcical nature of the so-called Small Business Administration, hypocrisy in Federal Government, dogmatic, bureaucratic, unsympathetic attitude of self-righteous, smugly self-satisfied, payrollers, who unfortunately control billions of tax dollars, and the apparent futility of any attempt by our small, self-sacrificing, well-deserving southern Illinois community to strengthen its economic position, was never more clearly outlined than today in the refusal of the Small Business Administration to grant a loan to establish a stable industry in Pope County.

Never have we known of a more sound, a better thoughtout, a more secure plan of business than the proposed furniture factory

in Golconda.

Never have we despised with such a degree of intensity a system of government that Would allow a segment of that Government to administer what well could be the death blow to a community that although on the financial ropes thus far has refused to die.

Never have we realized with such clarity that apparently no longer have we a Government "for, by, and of" the people—but a Government "for, by, and of" preferred

people.

From Kansas City, Mo., to Washington, D.C., the Small Business Administration offices, crammed to the rafters with pseudoexperts, many who luckily have landed wellpaying jobs financed from the public till, have knifed Pope County in the back, with a switchblade more deadly than that of any hoodlum-switchblade of doubletalk, unfounded second-guessing, and deliberate rejection of a basic, wonderful fact—the fact that a small, downtrodden community amazingly has reached into its frayed pockets to lay \$35,000 on the line, with no hope of direct personal returns from the investment, in order to build an industry that would spell conomic uplift for this section of southern Illinois.

Pope County has not asked the impos-sible * * * nor even the improbable. It has presented the SBA with an orderly, extensively investigated plan which, according to a highly regarded, topflight certified public accountant, should be an outstanding finan-cial success. What business can the SBA show us that is able to purchase building and equipment at bargain prices, produce a promise from a market source to handle the entire year's output of the proposed factory, two furniture factory experts * * unques-tionably proven in their field, and so certain of the project's success that they are investing their own money in the enterprise, and the good wishes of an entire community, ready, willing, and able to back up its faith in the plan with cold, hard cash?

When the SBA turns down a proposition of this type, it is time to run a congressional investigation of the SBA. Its lack of foresight, lack of faith in our community, and inability to see the importance of a boost rather than a kick in the pants, leads us to believe that the Government has sent a boy

to do a man's job.

This community would be happy for a disinterested expert on factory management to study Pope County's brochure on its proposed furniture factory, and compare it with that of other similar projects already ap-

proved by the SBA.

It is entirely possible that we in Southern Illinois would be wise to annex ourselves to some foreign country * * * then ask for the money. No doubt it would be forthcoming without delay.

Address by Senator Wiley Before the 47th National Rivers and Harbors Congress

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, May 26, 1960

Mr. WILEY. Mr. President, I ask unanimous consent that excerpts taken from an address which I delivered on May 26, 1960, before the 47th National Rivers and Harbors Congress, be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD,

as follows:

EXCERPTS OF ADDRESS BY SENATOR ALEXANDER WILEY, REPUBLICAN OF WISCONSIN, SENIOR REPUBLICAN OF THE SENATE FOREIGN RELA-TIONS COMMITTEE, BEFORE THE 47TH NA-TIONAL RIVERS AND HARBORS CONGRESS, MAY 26, 1960

I welcome the opportunity-along with the distinguished Senate Majority Leader Lyndon Johnson-to extend warmest greetings to you attending this 47th national convention.

Wisely and diplomatically, you have elicited greetings from both sides of the political You well appreciate that experience has taught us, however, that there is almost no field in which partisanship is so out of place—and cooperation so necessary—as in our natural resources development programs.

With the fast-expanding population, the United States is confronted with the task of carrying on effective and further improved water resources programs for human consumption, industrial utilization, irrigation, power generation, navigation, and recreation.

In addition, we face the well-recognized challenge of further improving flood control, rivers and harbor development projects, and

other related programs.

Reflecting my long-time interest in ade-quately developing our water resources, I cosponsored Public Law 358 of the 83d Congress which authorized U.S. participation in deepening, improving, and modernizing the St. Lawrence Seaway.

The seaway—a magnificent engineering and construction feat unparalleled in American history—promises great things for the utilization of the Great Lakes, the greatest inland waterway system in the world, and its contiguous rivers and other water bodies.

Regionally and nationally, the seaway, I believe, will create new economic life for

Across the country, as reflected in this nationwide representation here at your 47th annual meeting, however, there is a growing need to assure ever better utilization of our invaluable resourse—water. This includes projects for flood control, river and harbor improvements, irrigation and reclamation, and carrying on conservation practices and water and soil resources.

For over half a century, you, the National Rivers and Harbors Congress, have contributed in a splendid way toward attainment of such goals by inspiring greater public concern and interest in our Na-tion's urgently needed water development programs; acting effectively to convert plans into reality; and strengthening the co-operative effort between Federal, State, and local agencies working in land and water

In establishing realistic criteria for determining your support of development projects, you have been of tremendous help

to our national legislature in providing the necessary Federal support for such programs.

As you well appreciate, Members of Congress cannot always get on-the-spot information for flood control, waterway and harbor improvement, antipollution, irrigation, and other programs. Consequently, it is particularly helpful to have a reputable organization reviewing, analyzing, and advising Congress, helping to establish priority on the many works projects in the Nation.

As you know, the omnibus rivers and harbors bills, passed by the House of Representatives last year, is scheduled for consideration, in executive session next in the Public Works Committe. In addition, the Senate will now consider the public works appropriations bill passed by the House yesterday.

The measure contains many significant projects including several in my home State

of Wisconsin

I am hopeful that Congress will pass a realistic bill, one that will help us to prog-ress at a proper pace, but that will not invite a veto.

Within this framework, some might call it a handicap, I believe that Congress should move forward as expeditiously as possible toward approval of this piece of legislation.

Like all of you, I am well aware that there are other projects, all over the country, which, if further developed, would better serve not only local, but the national inter-

As constructively exemplified in your work, however, there is a need to establish a priority system for such projects, even though we, by natural inclination, would like to accomplish the jobs all at once.

Consequently, I am hopeful, that as soon possible, the many meritorious projects still being held in abeyance can also be considered and approved soon in successive

As we face the future, I want to again commend you, and express appreciation for, the splendid work you are doing in this significant field.

Moreover, I shall look forward to what I know will be the constructive results of this convention. In your efforts, I am confident, you will write another significant page in the history of the Nation's rivers and harbors development programs.

The Grange Reports on Farm Legislation

EXTENSION OF REMARKS

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. QUIE. Mr. Speaker, the National Grange speaks out clearly and forcefully on agricultural policy through its regular newsletter, the Grange Farm Reporter. I found a recent issue of the bulletin which deals with the "Farm Surplus Reduction Act of 1960" recently reported by the House Committee on Agriculture of great interest. I believe that other Members of Congress will appreciate having the opportunity to study this report. which follows:

WASHINGTON, May 21, 1960. DEAR SIR: The farm legislative pot, stoked by warming political fires, boiled furiously in Washington this week. Senate and House

May 26

Agriculture Committee chefs began to dish out a number of bills, some of which had

been cooking for months.

The main farm dish on the menu is a bill made out of leftovers from an unpalatable Family Farm Income Act concocted earlier this year by a Democratic farm study group in the House. The House Agriculture Committee choked on it a couple of weeks ago.

The committee took it back to the kitchen and, after removing such ingredients as cotton, tobacco, rice, and peanuts, put it back on the bill of fare as the Farm Surplus Reduction Act of 1960.

The new recipe for curing what ails farmers now calls for a choice between two wheat programs, a hash of feed grain cure-alls, and a side dish of changes in the food surplus

disposal programs.

For dessert, House Agriculture Committee Chairman HAROLD COOLEY offered a bill to extend the Sugar Act for 1 year beyond next December 31, without change. It does not include a provision that would give the President authority to shift Cuban quotas to other countries if things get too hot in "Castroland."

COOLEY advised Congress to proceed with great care and caution while we wait and see what happens in Cuba. He cautioned against embarking upon a program of economic aggression against Cuba or any other country, large or small.

Hungry as the farm groups in Washington are for a substantial serving of new farm legislation, the Farm Surplus Reduction Act failed to arouse any great enthusiasm. There

is, they complain, very little "meat" in it. Grange Master Herschel D. Newsom commented that although the bill has some good points, "it is not a bill that the Grange can support." With only about 6 weeks remaining before Congress adjourns, "this is not the time to launch a program of general farm legislation," Newsom said.

Newsom plans to make Grange farm program recommendations to the farm policy committees of both the Democratic and Republican parties in July. He has been in-vited by both committees to personally present Grange recommendations and to discuss

farm program objectives.

Meanwhile, the Grange and National Association of Wheat Growers this week threw in the towel on their certificate wheat plan for this year. They agreed that although the bill has strong support in Congress, there is no point in pushing for action now in view of strong administration opposition and a probable veto. Newsom said the Grange hopes conditions will be more favorable next year.

Newsom expressed disappointment with both the Senate and House bills on wheat. The bill approved by the Senate Agriculture Committee may be cleared for Senate debate sometime next week by the Democratic policy committee. It calls for 80 percent of parity supports, a 20 percent acreage reduction, and

a 50-percent in-kind payment.

Back of the 11th-hour drive in Congress to get on record with specific farm law proposals is a disinclination to go into the farm belt political campaigning emptyhanded. Democrats in particular want a farm bill with a Democratic label on it. But not just any bill. It is not likely they will be able to agree on a bill this year.

The degree of politics in the farm surplus reduction bill can best be judged by the division of votes on reporting it this week. Twenty Democrats voted for it. Twelve Republicans and one Democrat (McSween, of Louisiana) voted against it.

The bill, if cleared by the Rules Committee, faces rough going in the House. The odds are it won't have the votes to pass. So far there is no indication that it will be considered on the Senate side of the Capitol. No one thinks it would be signed if it should reach the White House.

Here, briefly, are the three main sections of the bill, H.R. 12261 by Representative

W. R. Poage, of Texas.
Wheat: Calls for a July 25 referendum. including the so-called 15-acre growers, to choose between the "A" and "B" programs.

program would offer supports The "A" at 85 percent of parity (\$2.03 a bushel), a 25-percent reduction in allotment and a 55 percent of normal yields-in-kind payment on acres taken out of production. Would make 15-acre growers subject to marketing quotas and eligible for in-kind payments.

The "B" program would repeal allotments and marketing quotas, establish price supports, after 1961, at the support level for corn after taking into account the relative feed values of the two grains, and extend the soll bank conservation reserve for 3 The 1961 supports would be 120 peryears. cent of the corn support rate, or about \$1.27 a bushel, and about \$1.15 thereafter. This is the farm bureau plan.

Feed grains: Election of a farmer-committee to develop a program which the committee suggests would "bring production into balance with demand, return feed grain producers between 85 percent and 100 percent of parity, and authorize retirement of up to 50 percent of crop land in return for in-kind payments." Prohibit Government purchase or storage of grains and limit program costs to 10 percent of the value of the crop

Surplus disposal: Authorize a substantial increase in distribution of dairy, poultry, and meat products to needy through charitable institutions and the school lunch program. Transfer administration of the programs from USDA to the Health, Education, and Welfare Department, and direct CCC to sell a bushel of feed grain for each \$2 worth of animal or poultry products distributed to needy.

A House Labor Subcommittee held hearings this week on bills to raise the minimum wage from \$1 to \$1.25 an hour and extend coverage to agricultural workers and employees of retail stores. Secretary of Labor Mitchell issued a 280-page study purporting to show that extension of minimum wages to farm workers is practical.

One of the three bills being considered would eliminate some of the exemptions on wage minimums and overtime pay for first processing and area of production workers. Another would prohibit employment (except for members of the farm family) of workers under 14 years of age in agriculture, and restrict employment of 14- to 16-year-olds to jobs specified by the Secretary of Labor.

Another bill would require migratory labor crew leaders to obtain a license from the Labor Department, post bond, and file a work plan to include a description of housing, transportation, and wage rates to be paid.

Predictions are that the House will increase minimum wages, perhaps to \$1.10 an hour, but it is questionable whether the Senate will act this year.

Fraternally yours,

FRED BAILEY, (For the National Grange.)

Moving Tribute to Our War Dead by Col. William H. McIntyre

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, May 26, 1960

Mr. KEATING. Mr. President, a moving tribute to our war dead and the solemn obligations of all Americans to continue to strive for the goals for which they died, was recently evoked by Col. William H. McIntyre. He spoke at the 42d annual memorial service for the 1st Provisional Regiment of the New York National Guard at Sleepy Hollow Cemetery, in North Tarrytown, N.Y.

Because of the eloquence of his words and the importance of his message, I ask unanimous consent that Colonel McIntyre's memorial address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEMORIAL ADDRESS BY COL. WILLIAM H. McIntyre, at 42d Annual Memorial Serv-ICE, 1ST PROVISIONAL REGIMENT, NEW YORK NATIONAL GUARD, MAY 22, 1960, SLEEPY HOL-LOW CEMETERY

My fellow Americans, today is one of reverent memories. On this occasion we once again pay tribute to the American dead who gave their lives in the defense of freedom and democracy. On this May day, as nature strives to bring to life all sleeping things, we gather, to pay homage of respect and love to our honored dead, resting in cemeteries at home and overseas in foreign lands.

It is not a sudden impulse of sentiment that prompts us to bow our heads in prayerful reverence. We do so because we, as free people, wish to recall and honor the legacy of fredom and equality of opportunity bequeathed to us by those who gave their lives for freedom.

With deep gratitude and humility, we recognize the sacrifices of these men and women and of their families. It is fitting we set aside this day to decorate with flags and flowers the graves of our dead comrades and of our families and friends. The placing of spring flowers and the rites being observed today bear evidence and respect and here love for them.

We, the living cannot exist entirely in the present. From time to time it is appropriate that we view the various aspects of our country's history, recall the unselfish patriotism of our men-in-arms, and consider the sacrifices they made to make our Nation For, in the pages of history we find the spiritual wealth of our Nation, and from the past we inherit our national traditionsour American heritage-our love of God and country.

At previous times I have explained how the birth of Memorial Day came about. Nearly a century after our first Memorial Day we are reminded of our heroic dead who have emblazoned the pages of history with such names as Valley Forge, the battle of New Orleans—of the Alamo and Gettysburg, San Juan Hill-of the Marne and the Argonne of Bataan, Corregidor and Iwo Jima—of the bloody fights in Korea. The cost of war in human sacrifice is staggering. Battle and nonbattle deaths during World War I, World War II, and Korea were 450,000. we once again pay tribute to our war dead, we wonder if we have come very close to the goals for which they gave their lives.

The dangers which confront our Nation and the world today are massive. The problems, complex and trying. Our theory democracy is being challenged in a cold war with communism, a designed plan for world revolution that would strip man of his belief in God. Stop for a moment-What happened in Paris?

The cause of freedom is never won lightly or completely, and the course of freedom has never been a steady or smooth one. Since the beginning of our Nation, the course has been rugged. One again, Memorial Day services are being reenacted in many cemeteries throughout our land, where men and women of many wars lie silent.

On this day, we veterans and others pay solemn and grateful tribute to the memory of those who sacrificed everything in order that our Government and its blessings, and our many freedoms shall be perpetuated. Over the silent chambers of these honored dead we place flowers, symbols of our love and devotion, sacred testimony that their memory lives in our hearts—our pledge that the Nation for which they fought and died, shall always live.

In conclusion, I would like to repeat the words of Abraham Lincoln at Gettysburg, be etched in our minds and hearts. "It is for us, the living, rather to be here dedicated to the unfinished work that they have thus far so nobly carried on. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to the cause for which they here gave the full measure of devotion."

Therefore it remains for us to guarantee that the cause for which they gave their lives shall not be forgotten—that the very cornerstones of our way of life—liberty, human dignity, and respect for the rights of our fellowmen—shall continue firm.

The "Padre of the Americas": A Worker for the Good-Neighbor Policy

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I would like to include a factual report prepared by the able members of the Washington Bureau of the Milwaukee Journal. This interesting piece relates the reasons why a Wisconsin-born priest, educator, author and diplomat, has been invited every year to offer the prayer in the U.S. House of Representatives every year on Pan American Day, the date officially designated for the Capitol Hill celebration of the cause of inter-American friendship.

In this connection, it may be added that almost all the American Republics, in one form or another, have shown their admiration for the pioneer work accomplished by the Rev. Father Joseph F. Thorning, Ph. D., D.D., in drawing attention by his lectures, books, articles, and special diplomatic missions to the value and importance of promoting sound socioeconomic policies that bear upon the welfare of the peoples throughout the Western Hemisphere. More than one distinguished Member of the U.S. Congress, for example, has started his study of Latin American history and culture because of the suggestions made by Father Thorning. Many of my esteemed colleagues have acknowledged this fact, privately and publicly. The article from the Journal follows:

[From the Milwaukee Journal, Apr. 16, 1960]

"Padre of Americas" Gives 16th Good

Netchbor Prayer

Washington, D.C.—For the 16th consecutive year, a Milwaukee-born priest, Father Joseph F. Thorning, gave the opening prayer

this week at a Pan American Day ceremony in the House of Representatives.

Father Thorning, who will be 64 on April 25, is asked to give the prayer every year in recognition of his unceasing work in behalf of the good neighbor policy.

HOUSE EXTENDS GREETINGS

This year the ceremony marked the 70th anniversary of the founding of the Pan American Union, from which grew the present inter-American regional system called the Organization of American States.

The House adopted a resolution extending greetings to the 20 other American Republics and expressing its desire to strengthen the bonds of friendship which have made possible the maintenance of an organization devoted to hemispheric peace.

ASKS FOR REDEDICATION

Only last week, in the same House Chamber, President Lleras-Camargo, of Colombia, told a joint session of Congress that "we are partners in the most effective enterprise for the elimination of war, for collective defense, and peaceful cooperation."

Father Thorning, who has specialized in inter-American relations as an educator, author, and lecturer, warned in his prayer of "the shadows of a new slavery that are apparent over nearby American skies."

The priest, who was graduated from Marquette Academy in 1914, asked for a rededication to the ideals of the good neighbor policy and implored fresh gifts of wisdom, bravery, resourcefulness, and imagination characteristic of men and women of prayer.

Father Thorning, called the "Padre of the Americas," by Senator Mansfield, Democrat, of Montana, is pastor of St. Joseph's Church, Carrollton Manor, Md., and professor of Latin American history at Marymount College, Arlington, Va.

The son of the late C. M. Thorning, a ship-builder who worked on the shores of Lake Michigan, Father Thorning has two sisters in Milwaukee County—Mrs. M. Paul Reilly, 2200 East Stratford Court, Shorewood, and Mrs. C. R. Reilly, 1908 North 73d Street, Wauwatosa.

Political Interest—A Job for a New Generation

EXTENSION OF REMARKS

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, May 26, 1960

Mr. COOPER. Mr. President, the future well-being of our Nation will be determined by the younger generation of the United States.

Recognizing this fact, the National Small Business Men's Association is engaged in the praiseworthy activity of publishing Student Issues. This publication is designed to create interest in affairs of government and acquaint students with the more important legislative issues facing government today.

All of us who come in contact with the young people of the Nation, in our schools and colleges, are impressed and derive comfort and hope for the future—for they are informed and deeply concerned about the great issues, national and international, which our country faces.

I ask unanimous consent to have printed in the RECORD a message to students which the association asked me to write for its current edition.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICAL INTEREST—A JOB FOR A NEW GENERATION

(Guest editor, Senator John Sherman Cooper)

Plato once said: "The penalty that people pay for not being interested in politics is to be governed by people worse than themselves."

The philosopher's saying is as true today as it was in the days of Grecian glory. But it has more meaning today because the world has shrunk, nations live in closer proximity, armaments are globally destructive, and government by morally competent men in a heaithy political atmosphere, nationwide and worldwide, is essential to universal peace.

Now, there are two reasons why people don't become interested in politics. These are the twin viruses of ignorance and neglect. Once fastened on a nation's body, they drain it of the mental and moral vitality that is needed to carry on governmental activities beneficial to the welfare of the country and the world.

Thus, it is imperative that we do not permit these viruses to enter the stream of political consciousness in this country. And the most effective preventive medicine is for our own youth to take an active interest in current politics because the young men and women of today will be responsible for our Nation of tomorrow.

It is not enough merely to say that you are for or against a certain proposition. You have to know why you have taken such a stand; you must marshall facts to help you think clearly to the conclusion that you reach. You should discuss the issues with your fellow classmates so that the pros and cons are in clear perspective, the issues more sharply defined.

It is well to recognize that these exchanges of ideas, in the classroom or privately, not only help to lay the foundation for a better nation, but they are of great current value in maturing the mind of the individual. It should be of selfish interest to every man and woman to include in this type of mental exercise for his or her mental and moral betterment.

In your own generation, you have seen the world pass from the stage of hot war to that of cold war. In essence, it has gone from the battlefield of bloody struggle to that of politics in the realm of ideological conflict. How long this cold war will last, we do not know. We do know, however, that we will need the keenest mentality and the strongest morality to win it.

If this is so—and it obviously is—from whence are we to get our replacements to preserve the Nation and the free world in this global struggle for men's minds and hearts? You are the replacements. Your minds are the future armaments in the arsenal of democracy. Your duty as citizens is to fashion and temper these minds, in your own individual way, for the common good of a free national and worldwide society.

Political interest and action on your part is not only essential for the common well-being in the future. It is needed now, not only for yourselves, but also, as examples to your elders. There is too much political apathy in this country now. You are in a position today to lead the older generation along proper political paths that they should have set for themselves in their youth.

Seaton Support From Alaska

EXTENSION OF REMARKS

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. WEAVER. Mr. Speaker, another area of the Nation, our 49th State, has added weight and momentum to the growing Seaton for Vice President bandwagon which is now rolling across the country. In an editorial in the Anchorage (Alaska) Daily Times, Mr. Seaton's fine qualifications and his great service to the people of Alaska are pointed out. This is but another indication of the growing strength of the Seaton movement which is pushing the Secretary of the Interior, Fred A. Seaton, to the fore. The editorial from the April 19, 1960, issue of the Anchorage Daily Times follows:

SEATON WITH NIXON IS BEST GOP TICKET

The Republican meeting held in Anchorage last week missed an opportunity to get on an important bandwagon.

It is the one boosting Secretary of the Interior Fred A. Seaton for the vice presidential nomination.

It is a popular proposal. It has a good chance of being a winner. It would be appropriate for Alaskan Republicans to be the ones who get the bandwagon firmly started down the road that leads to the national convention and the final nomination.

Instead of doing it, the local gathering became involved in a debate over semantics in connection with the draft Rockefeller move. Expanding their time and attention on this subject, they tiptoed through the tulips while they should have been hoeing a more productive garden.

Secretary Seaton is a logical man for the Republicans to put on the ticket with Nixon.

He is a leader in national politics. His public record is outstanding and should make him a strong votegetter in the campaign.

Seaton has been a troubleshooter for the administration. He has shot down troubles in flames. He first came to national attention when he was appointed to the U.S. Senate to fill a vacancy from Nebraska.

After completing that assignment, Seaton

After completing that assignment, Seaton refused all the lures and enticements that were dangled before him to keep him in politics. He returned to his publishing business in Nebraska.

But his retirement from public service was a short one. President Elsenhower drafted him for a job as Assistant Secretary in the Defense Establishment. He served so well in clearing the decks of troubles in that office that he subsequently was taken into the White House as a Presidential adviser. There he helped shape important administrative decisions at the top.

President Eisenhower made Seaton Secretary of the Interior when that office became vacant. Seaton took over at a time when the Department was wallowing in ineffective programs that had aroused widespread disastisfaction. He injected it with a new vitality. He applied sound principles that made it one of the strongest departments.

This record makes him a personality of national prominence and proves his administrative abilities.

He has been the best boss of the territory, an invaluable leader of the statehood effort. His first speech when he became a U.S. Senator was one advocating statehood. He was a consistent booster for it until it was achieved.

As the boss of the territory, he visited here several times, pumped life into the multitudinous Interior agencies that ran Alaska and espoused programs that were long overdue. Statehood would have had slight chance of enactment had he not dedicated himself to it.

Seaton has been the best Interior Secretary that Alaskans have known for a generation. History books support the prediction that he will prove to be the best since Alaska was purchased from Russia in 1867.

Years ago, when Seaton first proved his administrative ability and was started on the career that has been so successful, this newspaper urged him for next President.

We were proud when we discovered that we were the first to make such a suggestion. Many others have done so since.

More recent political developments have made it a cinch that Nixon will be the candidate. He and Seaton have always worked together as a team and have many constructive views in common. They would make a strong, effective, and inspiring team to have as the leaders of this great Nation.

The Alaska Republicans, in State convention, should give serious consideration to the matter of taking a leading position in nominating Seaton to be Nxox's running mate.

Smalltown Presidential Commission Commands Support

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 26, 1960

Mr. MUNDT. Mr. President, since our Committee on Government Operations filed its favorable report on the passage of S. 3140 which I introduced in the Senate on March 5, 1960, and which was cosponsored by Senators Mansfield of Montana and Case of South Dakota, a considerable amount of support has developed around this proposal. This has been manifest by speeches, editorials and personal correspondence.

I ask unanimous consent to have printed in the Appendix of the Record, two of the fine editorials appearing in South Dakota newspapers in support of this legislation.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Watertown (S. Dak.) Public Opinion]

MUNDT BILL FOR SMALL TOWNS

Senator Karl Mundt, of South Dakota, is sponsoring a bill in Congress which would create a Federal Commission to deal with the problems of small towns and rural areas in America. It has recently been recommended for passage by the Senate Government Operations Committee, clearing the way for a vote on the floor.

The timeliness of the South Dakota Senator's proposal is apparent. His bill comes before the Senate just at the time reports of the 1960 Federal census are confirming the trend of population away from the small towns and rural areas in South Dakota and many other States and the accelerating increase of population in larger urban centers.

It is a trend that poses some serious problems for much of South Dakota—problems to which many discussions have called renewed attention since the census reports began to appear this spring. But the problems are not new. They have been in the making for years, and there has been widespread recognition that this is so in the recurrent references to need for diversification of the State's economy and the creation of incentives, in the form of more and better opportunities for employment, to keep our young people in South Dakota as well as to attract new residents.

Mechanization of agriculture is increasing the size of farms, but reducing the number of farmers. This trend has been underway throughout America for years. It is expected to continue. And this, together with the relative slowness of industrial development in South Dakota, as compared with other States, accounts for losses of population in communities where there is not enough economic opportunity to support larger populations.

The Mundt bill would confer broad functions on a Federal commission whose purpose, supposedly, would include devising means to deal with this situation.

Under the provisions of the Mundt bill, according to the Senate committee report. "this Commission shall make a full and complete investigation and study of Federal policies and programs relating to the needs and problems of the Nation's small towns and rural county areas. It shall study such problems as the needs, present and future, related to highways, public service, water resources, schools, recreation, financing, law enforcement, and business and industrial development."

It would also determine the capabilities of State, county, and local governments to meet these needs. It would investigate possibilities of the Federal Government encouraging wider dispersal of Government procurement operations and in the location of Federal facilities to promote the social and economic well-being of small towns and rural areas.

The proposed legislation does recognize and pinpoint the problem. How effective a Federal commission may be in creating the economic environment which obviously must be developed to reverse the decline of small town and rural population is an open question. But it offers governmental cooperation that might give local initiative and effort just the needed extra punch to turn the tide.

One thing is obvious: If we desire more people, the economic resources and opportunities for profit to attract them must be provided. Growth in population alone, without these basic assets, is undesirable. With them, population gain would come automatically.

[Editorial from the Huron (S. Dak.) Plainsman!

SMALL TOWNS, SHORT BOOTSTRAPS

Luncheon club speakers often joke about how young men in small towns and rural communities work hard to get to the big city to make enough money to retire to a small town or a farm.

While there is a good chuckle in this observation, there is in it also a real element of truth.

The small towns and rural communities of this Nation have made significant contributions to our society. And many of them do provide comfortable places for retirement.

But the small communities are having troubles. The growing size of farms and the lack of opportunities for employment in the rural communities are pushing many of our rural youth into the cities even when they don't especially want to go there. As a result, the economies of the smaller communities suffer. And this in turn results in tax

troubles and in time to school, health, and law enforcement problems.

The smaller communities do not have the resources to find solutions to their problems. Most of them don't have economic bootstraps long enough to pull themselves up. There is no agency in Government for handling the problems of small towns. Cabinet member is charged with the task of assembling data about such communities. No research committee, commission, or department has been directed to look into the problem though commissions have been formed to look into the problems of just about every other facet of our economy

In short, the small towns of the Nation are a no man's land, forgotten and neglected by the rest.

Senator KARL E. MUNDT, of South Dakota, recognizing this problem, has asked Congress to establish a commission to make a study of this situation. The bill (S. 3140) was referred to the Senate Government Operations Committee which has reported favorably on it. The bill already has the support of a number of organizations, but it deserves the support of every community of less than 10,000 population, to assure its passage in Congress itself.

New Dimensions in National Security

EXTENSION OF REMARKS

HON, WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. BROOMFIELD. Mr. Speaker, a few days ago during the celebration of Armed Forces Week, the Honorable Wilbur M. Brucker, delivered a stirring speech to the Economic Club of Detroit, Mich.

In this speech, he placed in proper perspective the long-range goals of our Nation's defense effort, the steps we are taking to protect ourselves from the constant threat of Communist aggression and what will be necessary in the future to safeguard ourselves and the rest of the free world from attack.

May I recommend that my colleagues pay close attention to the words of this Outstanding American who is doing such an excellent job in seeing to it that the Army is ready for any eventuality in this increasingly complex world:

NEW DIMENSIONS IN NATIONAL SECURITY

(Address by the Honorable Wilber M. Brucker, Secretary of the Army, Economic Club of Detroit, Veterans Memorial Building, Detroit, Mich., May 16, 1960)

It is a genuine inspiration to be back home to 16 a genuine inspiration to be back licenses in Detroit to participate in Armed Forces Week with its significant piedge: "Power for Peace." President Eisenhows in Peace." for Peace." President Eisenhower has rightly called true peace "the imperative of our time."

Contemporary history underscores the validity of Toynbee's remark: "It would seem that the more civilized we become, the more incapable we are of maintaining civilization." No matter how hard we Americans have striven over the decades to create and develop this great free Nation, we face even greater demands today upon our stamina, our courage, and our dedication to freedom than ever in the past. History has a stubborn way of repeating itself. Many centuries ago Cyrus, after he had captured Babylon, re-

marked: "To have been once brave men is not sufficient; it is harder to hold what you have than to gain it." The question of the hour is simply stated: Having built a great civilization, founded upon the aspirations of free -can America keep it?

At first thought, the summit conference now being held in Paris, called to search for a pathway to true peace, might seem far removed in spirit and emphasis from our annual national observance of Armed Forces Week, but in reality the two are very closely related. It is only because our Nation has the strength of a powerful Army, Navy, Marine Corps, and Air Force, supported by the forces of our free world allies, and backed by millions of Americans who are willing to accept and bear their responsibilities, that we have the opportunity to negotiate at allin Paris or anywhere else.

We find ourselves face to face with the most formidable and ominous challenge in the life of our Nation. Of all the obstacles to world peace, none looms larger than the armed might of militant communism dedicated to ruthless conquest and regimentation of all mankind. Let us not forget that the Sino-Soviet bloc has upward of 8 million men under arms and that active Communist forces include over 400 ground divisions, more than 450 far-ranging submarines and more than 25,000 modern aircraft. They have already acquired 5 million square miles of territory, subjugated over 600 million people, and have strengthened their capability for all kinds of combat. More than two-thirds of the Soviet military budget is spent on the Soviet army, the largest modern land army on earth. It is plentifully provided with powerful tanks, tactical missiles, and a wide range of other weapons of the

most advanced design.

Furthermore, the Soviets are concentrating almost all of their best scientific and engineering talent on the development and production of still more ultramodern weapons and other technological devices in an all-out effort to give the Communist leadership the absolute power to dominate the land, the sea, the air, and even outer space. The Soviets have developed an intercontinental ballistic missile to supplement and supersede its long-range bomber forces, and its stockpiling of nuclear weapons has increased its capability to a marked degree. At the same time, the Communist Chinese have steadily increased their military power.

It must then be clear that the military obstacle to world peace is and will continue to be the armed might of the Sino-Soviet bloc. There is no other threat, and its ominous strength hangs over the world like the Sword of Damocles. It is imperative that every American recognize the magnitude of the new dimensions of national security which this challenge has imposed.

One of the most important of these new dimensions is the immediacy of the threat. For the first time in our history, the continental United States is subject to serious destruction-and possible devastation-by foreign military aggression. In neither World War I nor World War II was there fear by Americans that our homes and families in the United States might be destroyed. Today, however, all that is changed by giant Soviet strides in science and technology which have placed our homes and loved ones in jeopardy of long-range, strategic attack.

Then there is the dimension of totality. In other times, military power was the chief tool of a would-be conqueror. Today, the conflict is not limited to military pressure. We must be able to cope with a combination of military, economic, political, and psyor military, economic, political, and psychological aggression. We must have strength adequate in kind, quality, and amount to respond immediately and effectively to any move of which the Sino-Soviet bloc is capable.

Then there is the dimension of width which covers the broad spectrum of possibilities. At one extreme of the spectrum is cold war in which power is used by the Communists to intimidate relatively weak and helpless nations, while supporting Communist efforts to nibble away the free world through coercion, blackmail, infiltration, and corruption. Cold war shades into limited wars of varying military magnitude and intensity. At the far end of the spectrum is total nuclear war. Only a complete deterrent-with offensive and defensive capability-covering the entire war spectrum from end to end-can match the threat and stop the Soviets from reaching their goal of world domination.

The very bigness of the effort required to provide this complete deterrent adds the new dimension of scope. To cope with the Sino-Soviets we must encompass the entire globe. No more can we think in terms of Fortress America." The foundation of our present national military policy is the great mutual defense system which links the United States with more than 40 other nations associated with us in the worldwide structures of mutual security which have been built with painstaking care since World War II. Our dimensions of defense are no longer the frontiers of our own country, but stretch from pole to pole and entirely around the world. Our own Army forces are deployed today in more than 70 foreign lands. Through military aid and training assistance we help our allies to maintain ground forces of nearly 5 million, naval forces of 2,300 combat ships, and air forces with 29,000 aircraft. All these are as much part and parcel of the defensive strength of the United States as they are of the individual countries concerned. allies also furnish us the use of 250 foreign bases, many of which are absolutely essential to the deterrent capability of our strategic retaliatory forces.

The aid we render to the nations of NATO and SEATO and our other alliances through our military assistance program helps to provide the United States with one of its strongest bulwarks. Dollar for dollar, it is the best investment in defense we could possibly make. It is an absolutely essential element of our "forward strategy," designed to create-with the solid support of welltrained, well-equipped and resolute allied forces—a stout barrier against Communist military aggression at critical points throughout the world.

More than two and a half million young Americans in uniform on active duty in peacetime-plus large, organized and trained Reserve forces constantly ready for duty on land, on sea, or in the air—is only one measure of the breadth of our response. It also involves a mountainous arsenal of planes, ships, missiles, rockets, guns and other weapons and war equipment of all kinds, much of which was unknown only a few short years ago. Furthermore, weapons and weapons systems, including rockets and missiles, each containing tens of thousands of individual parts, are so complex and involved that a high degree of expertness and skill is required just to fire or launch them. In other days we measured the power of weapons in terms of tons of conventional TNT explosives, but so vast has been the increase in power that tons have become too cumbersome a yardstick. Today we speak not of tons, but of multiples of a megatonwhich is a million tons.

Along with firepower, the cost of weaponry has multiplied manifold, requiring unprecedented peacetime expenditures. In addition, the never-ending pursuit of research and development for new and more modern weapons and military hardware of all kinds necessitates the constant employment of a large proportion of America's finest scientists and engineers on military projects.

Two weeks ago at Fort Benning, Ga., President Eisenhower witnessed a roll-by consisting of 32 new and improved major items of Army combat equipment, extending bumper-to-bumper for approximately half a The subsequent display of these and mile. 163 other major items of new and improved Army equipment occupied an area of well over one-half million square yards. They ranged all the way from the M-14 rifle, which replaces three former Infantry weapons, to the mighty Nike-Zeus, which is being readied to bat down any intercontinental ballistic missiles coming in from 15,000 to 25,000 miles an hour. This was a most impresmiles an hour. sive demonstration of the new dimension of bigness in our national security.

The Army is constantly exploring every field of science and technology to provide the American soldier with the most modern and effective weapons and equipment with which to do his job in these modern mo-mentous times. We are developing many types of guided missiles and rockets, for instance, to supplement those we now have. Among these are the Sergeant and Pershing missiles, both of which are long-range, surface-to-surface missiles being developed to fire at far distant ground targets, and capable of delivering either a conventional or nuclear warhead. The solid-fuel Pershing is designed for a 300-mile range, and will supersede our present 200-mile Redstone. has an inertial guidance system which makes it safe from enemy jamming.

The Davy Crockett is a weapon carried by frontline, Infantry soldiers. It looks very much like a bazooka, and is capable of firing atomic or conventional warheads in support of the Army's front line pentomic battle

groups.

Modern electronic communications have enabled the Army to increase its command and control capabilities to match the revolutionary demands of complete mobility and wide dispersion. Unarmed Army surveillance drones will be able to penetrate deep into enemy lines and send back valuable information. A wide variety of "sensors"—such as radar, automatic TV cameras, infrared, acoustic, and seismic devices—are being placed in the drones so that the field commander will be fully informed at once of the situation behind the enemy's lines.

In this same connection, we have in development sensitive automatic data processing systems—computers which instantaneously sort and evaluate information so that a field commander can coordinate the intelligence he needs for rapid decisions.

A personnel carrier, designed for frontline transport of soldiers in this atomic age, features aluminum armor to give maximum protection against atomic blast and heat, as well as gunfire and shell fragments, with a 50 percent saving in weight over its predecessor. It is highly mobile, "swims" inland waters, and can carry 12 men in addition to the driver.

The latest Army tank has a diesel engine that will give it 100 miles more cruising radius, and a larger caliber gun which will match the Soviet tank guns. Other ground vehicles will benefit from emphasis on engines which will greatly increase fuel economy and reduce the heavy support requirements in this critical supply area. Efforts are also being directed toward development of an engine that will use fuels other than gasoline. These developments are of particular significance when we remember that many successful advances in World War II were halted, not because the drive was held up by enemy resistance, but because the attacking elements simply outran their fuel supply lines.

In the area of transportation, we have some other interesting developments to give us the

mobility that we require for the future battlefield. On the ground we look to the "Goer" type of equipment which had its inception in commercial earth moving and heavy construction work. Its tremendous 10-foot wheels and tires give true, off-road, cross-country mobility. The Goer is also potential launching and carrier vehicle for many of the missiles now coming into our arsenal.

In the air we are developing types of vehicles that will give us the takeoff and landing characteristics of the helicopter together with the advantages of the fixed-wing aircraft in forward flight. You have probably seen pictures of some of our flying "test beds" that look like disks, platforms, or "flying saucers" propelled by unusual powerplants. These are the vehicles that are giving us the answer to flying low, slow, and quietly just above the battlefield.

Another interesting development in the electronics field is an unmanned vehicle which may be operated by radio remote control. This device has many potential uses, especially in forward areas which are under fire, heavily mined by booby traps, or contaminated by radiation or chemicals. Under development is a device which will operate like television, allowing the operator to control the vehicle even when it is out of sight.

As they have throughout its history, many Army developments also contribute not only to the Army's combat effectiveness but also to the general scientific and technological advancement of the Nation, and to the pride and well-being of the American people. Army's success in orbiting the free world's first earth satellite, Explorer I, January 31, 1958, only one item in a lengthy and impressive catalog of achievement, is a case in point. I want to mention in particular two very recent additions to the list which illustrate the scope and span of the Army's research and development activities. Both are accomplishments of the Army's Signal Corps, which this year is celebrating a full century of service to the Nation.

In cooperation with the University of Michigan's Willow Run Laboratories, as a part of the Army's Project Michigan, the Army has developed an amazing airborne radar camera which scans enemy territory at right angles to the aircraft direction of flight and produces maplike photographs for intelligence study. It can operate day or night and in any kind of weather. From a protected position over our own lines, this camera can "see" far into enemy positions and take pictures which are clear and yield valuable information. This radical new "side-looking" system produces a distortionfree strip map on which the ground appears as though it were directly below the aircraft, although the aircraft is flying many miles to one side. This radar camera is a tremendous scientific advance.

Then there is Tiros I, the orbiting weather station launched last April 1, as part of a program under the National Aeronautics and Space Agency, from which 850-mile square pictures of weather conditions are being taken and relayed back to earth. The entire satellite system-including instruments and ground station equipment—was developed under Army technical supervision. The principal pieces of equipment aboard the new satellite are two television cameras which photograph the earth's changing cloud cover, providing-among other weather information-detailed pictures of hurricanes and cyclonic patterns. The pictorial information obtained by these television cameras is stored on magnetic tape, and periodically transmitted, on radio command from the earth, to ground stations in the manner used with Project Score in 1958, when President Eisenhower's Christmas message was relayed back to earth in the world's first demonstration of a communications satellite. While Project Score relayed only voice or teletypewriter signals, Tiros sends back talking pictures. Electrical power for Tiros is supplied by the sun through solar cells arranged in banks. The sun of sun batteries of this nature was pioneered by the Army, and given its first practical demonstration when the United States launched Vanguard II on February 17, 1959.

Our strategic nuclear retaliatory forces are a significant part of our power for peace, and they must be kept modernized and at adequate strength, and shielded from enemy air attack. However, we must not forget for a moment that they constitute only one part of the structure of deterrence which we must maintain today. Even though the Soviets have developed a substantial nuclear capability, they have not used it to date. They have resorted to lesser forms of aggression. with successive limited objectives—a course which they may feel offers them the attractive possibility of attaining world control little-by-little on the installment plan, with minimum risk of bringing down our nuclear power upon themselves.

There can be no doubt of the tremendous peril to the free world inherent in the aggressive policies of the Soviet Union, and in the power which the Kremlin has instantly available to support them. However, the Soviet threat is only a part of the ominous challenge we face. It would be extremely dangerous for us to become so preoccupied with long-range Russian missiles, and the immense Soviet and satellite ground armies marshaled against the NATO nations in Europe, that we lost sight of the massive menace of Red China. I liken Red China to a sharp-clawed tiger, crouched ready to spring upon any prey that is weak or unwary. Both our friends in southeast Asia and the Red Chinese themselves recognize that United States is the principal obstacle to the establishment of Communist rule over the Far East, and it may well be that as goes vast Asia, so will go the whole world.

I visualize that, as the Soviets' strategic nuclear delivery capability increases, the Communists may feel its counterdeterrent value will cause us to retreat further and further from the point where we would be willing to use our capability for massive retaliation in response to limited aggression. As a consequence, they may be tempted to engage in more ambitious peripheral activi-For this reason it is essential that the United States ability for retaliation against nuclear attack be complemented by a versatile capability to deter creeping aggression. which, if not successfully curtailed, could lead to disaster just as surely as could all-For this reason, our limout nuclear war. ited war capability is as important a part of the complete deterrent as our nuclear retaliatory capability.

The U.S. Army plays a principal role in providing the complete deterrent to aggression. This is a new role for the Army. tween our wars of the past, our Army was largely a skeletonized reserve-a mere framework upon which to build an adequate combat force after war broke out. How different is the picture today. The bulk of the Army's highly trained and splendidly equipped combat forces, organized and armed to fight either with conventional of atomic weapons, are stationed overseas in areas of major strategic importance. soldiers are in the front line of our defense throughout the world, working actively to deter Communist aggression, and prepared for instant combat action of any nature should deterrence fail.

Army divisions are deployed on the ground in Europe and the Far East. The Army furnishes 63 percent of the military personnel comprising the American military assistance advisory groups and military missions which are engaged in assisting in the training of about 200 Allied ground divisions in 42 countries. Here in our own country we have our powerful Strategic Army Corps (Strac) of one infantry and two airborne divisions, ready day and night to be airlifted so as to reinforce our oversea deployments, and to come to the aid of our allies in areas where no U.S. forces are now deployed. At the expense of great personal hardship, the men of Strac have completely adjusted their lives to meet the requirement that they be ready to fight at any point on earth as soon as planes and ships can transport them to their objective.

When we speak of strategic weapons, we are tempted to think of long-range airplanes or missiles which could carry warheads to distant targets. Soldiers, except for certain strategic reserve units, are thought of primarily in the tactical sense—to be engaged in battle after a war is underway. Today our large-scale oversea deployments place our Army forces very definitely in the category of strategic weapons in the effort to prevent war. They are part and parcel of our forward strategy. They perform a multiple role in support of the strategic aspects of our national policy. Together with allied forces, they constitute the foremost bulwark of American security. They are the cement which binds our collective defense alliance together.

The picture presented by our ground troops standing shoulder-to-shoulder with our stal-Wart allies gives a feeling of solidarity, unity of purpose, and mutual determination which can be achieved in no other way. It has an Impressive effect throughout the world. Our oversea deployments are essential to successful deterrence because they help to provide an en-the-spot defense for free peoples living under the shadow of Communist might. For example, our U.S. 7th Army, deployed across free Germany, is manning a major segment of the 4,000-mile NATO defense line extending from the northern border of Norway to the eastern reaches of Turkey, ready day and night to resist aggression at the time and place it may occur.

I wish you could all stand as I have with Our American soldiers who patrol that frontline today, and look out toward the Czechoslovakian border only a stone's throw away. There the Iron Curtain is a near and ugly reality. You would see right before your eyes the strip of ground which has been plowed the entire length of the Czechoslovakian and Hungarian borders, and is kept neatly raked so that footprints will quickly betray any luckless victim seeking to flee from Red tyranny. Along the plowed strip is a con-tinuous barbed wire entanglement, backed by an electrified fence. Overwatching these formidable barriers at short intervals, you would see steel towers—"towers of terror manned by helmeted border guards, their machineguns ever ready to cut down anyone seeking to escape. Fierce dogs prowl on constant ratch, and mines have been planted to seal the ominous border even tighter. Thus the Communist dictatorship goes about keeping its people in bondage preventing the victims of its oppression from escaping to freedom.

Furthermore, behind that boundary—as across the armistice line in Korea, where two American Army divisions stand guard, and in other parts of the world—the powerful military forces of communism are Poised ready to take full advantage of any opportunity we might give them to overrun the free world and make good the threat to destroy us. Only so long as the Communists know that they could not launch an attack without encountering the immediate resistance of determined soldiers, armed with the most modern weapons of war, is it reasonable to suppose that they will be deterred from entering upon some armed adventure which might engulf the Whole world in catastrophic conflict.

In this age of machines and miracle weapons, man still stands straight and tall as master of any battlefield. The mightiest and most destructive weapons can do little more than pave the way for the ground soldier, for it is he who must move in and take control before a firm and final decision can be obtained. Bombs and missiles can destroy, blockades can starve, propaganda can weaken, and subversion can corrupt, but the soldier's rifle is still the indispensable weapon. Army forces are an absolutely vital element of our national deterrent, not only against direct nuclear attack on the United States, but also against lesser forms of aggression that in their aggregate could spell defeat, and they would play an equally imperative role in general war.

The Army is also charged with a major responsibility for the air defense of our centers of population and industrial productivity, and providing the defensive shield for our strategic retaliatory force which is essential if it is to be an effective deterrent to nuclear attack. The Army's Nike air defense missiles-the Nike-Ajax and the Nike-Hercules-together with the Hawk missile are able to strike down any enemy aircraft known to be in operational use, at any height or speed. The third generation of this proved family, the Nike-Zeus, is the Nation's only weapons system now being deto provide an adequate defense veloped against ballistic missile attack within the reasonably near future.

Ready Reserve forces—our Army National Guard and Army Reserve—represent our strength-in-depth. They are integral parts of our "one Army"—trained units standing ready to reinforce the active Army at the moment of mobilization in case of a war emergency. A host of scientists and technologists are constantly engaged in research and development in order to provide the American soldier with the most modern and effective weapons and equipment to do his job in these momentous times. Supporting forces, which constitute the foundation of our mobilization base, provide for such diversified activities as logistical support, troop training, maintenance of vital war reserves, and assistance to the reserve forces in preparing for their wartime tasks.

White reviewing the whole panorama of our national military effort, I would be remiss if I did not point out that our way of life cannot be protected by military forces alone. Much more is required of Americans.

No matter how much some people may hanker for the soft and easy way of life, events will not allow us to enjoy it. Americans have always been an optimistic people, and it is good that we should be optimistic today, but it would be the worst folly we could commit to allow an inordinate optimism to lull us into the self-deception that everything will turn out all right without extreme effort and sacrifice on our part. The new dimensions of national security make it imperative for each of us to put forth his utmost effort for the national interest. National security is no longer the exclusive job of the President, the Cabinet, the Congress, or the Armed Forces. become the responsibility of each individual citizen-not just in some figurative sense, but in actual, grim reality. We are living in a new world of catastrophic change where there is no place for any of us to run away or hide from responsibility.

We fervently hope that the time will come when accepted standards of national morality will prevail in the Communist world, and we need no longer maintain predominant deterrent strength, but it would be the gravest folly to let mere hope betray us into lowering our guard until there is ample and convincing evidence of the Soviet Union's willingness to become an ethical member of the community of nations.

Make no mistake about it-were it not for

our splendid Armed Forces, maintained at a high level of capability, dedicated to the preservation of peace—but ready around the clock to fight effectively in the Nation's defense should war be thrust upon us—we would have no choice today but ignobly to accept a conqueror's terms, or face utter and final defeat. Power is the only argument the Communists respect. "Power for Peace" is not just a slogan; it is the unvarnished truth.

It was not the military power of the barbarian hordes hammering at the gates of Rome which brought down to the dust that great civilization which had stood for a thousand years. Rome was finished long before the enemy finally attacked. It was finished because those who should have been caring most about preserving the integrity of their civilization were more concerned with the pursuit of pleasure. When there were rumors of trouble they assured themselves that it was no concern of theirs-the legions would take care of it-and turned once more to the banquet and the bath. Rome fell because the individual Roman citizen forgot his individual and personal responsibility for the safety of the state.

We need not go so far back into history for examples of abdication of responsibility, nor do we have to cite only the love of rich living as the reason. Mr. Nehru of India, in commenting about his country, said: "frightened by this new development, the moderate elements dropped out and sought safety in seclusion." In other words, the moderates, whose sanity and integrity were the hope of India, joined in a "massive retreat from responsibility," and their search for "safety in seclusion" almost turned India down the Communist road of violent revolution.

There is some evidence in America today of a longing desire among a few to avoid having to solve the problems of national security the hard way—to find, instead, some easy "out" which will not disturb the routine of everyday life. There is a prevalent tendency to feel that since conferences are being held among world leaders, and protracted discussions of disarmament are being carried on by ministers of state, we ought to be able to stop worrying so much about defense. There is a vague feeling in some places that danger is a long way off, and the diplomats will work out a satisfactory solution around some council table.

This is to mistake the dross of mere words for the gold of deeds. Any such state of self-deceptive happiness is completely out of touch with reality. Let no one refuse to realize that grave danger walks beside us every hour of every day, and that the price of survival still must be paid in the coin of determination, patience, and perseverance.

It is not only imperative but downright shortsighted to say: "We ought to cut military expenditures so that we can lower taxes" or: "Our young men ought to be relieved of their obligation for military services so that they won't fear interruption of their careers." Such loose thinking could jeopardize our future as a free nation. Just as there is no vicarious liberty, there is no vicarious defense.

What does it profit us to be the richest country on earth, and to have the highest standard of living in all history, if we lack the maturity and resolution to stand up like men and defend it at any cost to our careers or our dollars? In these critical times let us recall St. Luke's parable of the rich man who said to his soul: "Soul, thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry." Immediately came the divine rebuke: "Thou fool, this night thy soul shall be required of thee: then whose shall these things be?"

America has been chosen for greatness, not to be pampered but rather to shoulder double responsibility. It is a time for vision, and a time for individual toil and sacrifice beyond any previous measure. Let there be

no retreat from responsibility.

In the final analysis, removal of the military obstacles to world peace depends upon the growth and fruition of ideals in the hearts of men. The spiritual and intellectual field is the real battleground upon which the future of the world will ultimately be decided. It should be clearly evident, therefore, that the major task which devolves upon each one of us today is to utilize every talent we possess with the utmost vigor, vision, and creative imagination to help make the power of our American ideals and principles felt throughout the earth. There is nothing more important in this endeavor than developing in members of our rising generations a solemn sense of the obligations of citizenship, and providing them with the spiritual and intellectual re-

what America will be tomorrow depends on our sense of individual overriding responsibility for the maintenance of the strength of our country in every area of our national life. If there is one characteristic that has marked all great Americans, it is the fact that they have recognized an obligation to people yet unborn. This is the great American unselfish dimension of

loyalty to the future.

The freedom we enjoy was brought for us long ago by courageous and resolute men and women who feared no foe and shunned no responsibility. Other courageous and resolute Americans defended this Nation and built it to greatness through the years. But the stalwart men of yesterday cannot assure our safety today, nor our survival tomorrow. Not only the very life of America and the perpetuation of our cherished free institutions, but also the liberty of all mankind, depend upon how well we, who alone can bear the burden of this hour, measure up to the high bench marks of character, courage, and dedication to the tenets of our American faith which were established so long ago by the Founding Fathers.

There is a line in an old hymn which tells us that "Each age its solemn task may claim but once." Today America is charged with the most solemn task of all her history. We must seize with strong hands and stout hearts the opportunity which is afforded us to fulfill our destiny and bring to the world a new era of peace and freedom, for we will

not have the chance again.

The Moral Force of Foreign Aid

EXTENSION OF REMARKS

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 26, 1960

Mr. SCOTT. Mr. President, I believe the following editorial from the Philadelphia Inquirer of May 4, 1960, is a good analysis of an important issue. I ask unanimous consent to have it printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MORAL FORCE OF FOREIGN AID

President Eisenhower—in a televised address to the American people Monday night and a special message to Congress Tuesday—pleaded earnestly for support of his proposed \$4 billion foreign aid budget as a program vital to the security of this Nation and the entire free world.

Response to the President's pleas—in the Capitol and across the country—ought to be overwhelmingly favorable. The size of the appropiration sought by the administration does not seem excessive.

Senate approval of a bill authorizing \$4,-125,660,000 for foreign ald—only \$49,400,000 less than Mr. Eisenhower asked—was a victory for the President. So was the foreign aid authorization in excess of \$4 billion voted recently by the House. The real test will come when bills appropirating the money come to a vote.

A point of bitter controversy that highlighted this week's foreign aid debate in the Senate centers on the continued refusal by President Gamal Abdel Nasser, of the United Arab Republic, to open the Suez Canal for vessels of all nations. Nasser imposes a blockade against Israeli shipping.

The Senate by a vote of 45 to 39 retained in the foreign aid bill a provision which gives the President authority—at his own discretion—to withhold aid from any government which obstructs free navigation in

international waterways.

We believe the free navigation proviso is a sound and praiseworthy addition to the foreign aid measure. Since the instruction to the President is discretionary instead of mandatory it will not interfere with operation of the foreign aid program. Rather, it gives welcome support to long-standing administration policy defending the right of Israel to send ships through the Suez Canal.

President Eisenhower, in a memorable TV address on February 20, 1957, when control of the Suez Canal was a burning issue, declared: "We should not assume * * * Egypt will prevent Israeli shipping from using the Suez Canal or the Gulf of Aqaba. If, unhappily, Egypt does, then this should be dealt with firmly by the society of nations."

It's time that the United States, as a leader in the society of nations, took some action to back up this solemn pledge.

To the surprise of no one, opposition to the Suez Canal provision in the foreign aid bill was led by Senator J. William Fulbright. The Arkansas Democrat urged, with questionable soundness, that the United States maintain an impartial attitude on Suez navigation rights.

Coming as it did from the chairman of the Senate Foreign Relations Committee, this was an extremely unfortunate statement. Mr. Fulbright is suggesting, in effect, that the Senate refuse to back the President in a matter of foreign policy.

Senator Fulbright's timidity about tying strings to the foreign aid bill does him no credit. It is the duty of the United States to insist that foreign aid funds be employed as a moral force for what is right and just—as well as for what is militarily or economically expedient.

The Suez proviso not only is a desirable appendage to the foreign aid bill but should be used to advantage by President Eisenhower in a concerted effort to end the Suez blockage against Israel.

The Practical Approach to River Development

EXTENSION OF REMARKS

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. DAVIS of Georgia. Mr. Speaker, the development of America's waterways to the point of realizing their full potential has long been the dream of many men of vision. The development of the Chattahoochee River and the construction of the Buford Dam at the headwaters of this great river are among the projects which I have sought to achieve since first coming to the Congress in 1947. The completion of the Buford Dam is now history and the development of the Chattahoochee River south of Columbus and Fort Benning, Ga., is well along toward completion.

To realize the full potential of the Chattahoochee River as a source of great economic strength and as a material benefit to our national defense, there remains a vital segment of this river which needs to be developed. I speak of that portion of the river south of Buford Dam to the Columbus, Fort Benning area. Completion of the development of this portion of the river would convert Atlanta, the greatest communication and transportation center of the growing Southeast, into a waterway port.

On May 2, Mr. Caughey B. Culpepper, of Atlanta, delivered an address to the Rotary Club of Dothan, Ala., which goes to the heart of this matter. Mr. Culpepper is a leading figure in the development of the great Chattahoochee River system, and I commend his speech to the Members of this body. Pursuant to unanimous consent, I insert this speech herewith:

THE PRACTICAL APPROACH TO RIVER DEVELOPMENT

(By Caughey B. Culpepper)

The development of inland waterways has been in progress in the United States almost continuously since we became a nation. Most of the time it has been of sufficient importance from the standpoint of communications, industrial development, and economic progress to warrant its supervision and conduct by some branch of the Federal Government. It has also been, and still is, considered a major ingredient of our national defense.

Since this work was delegated to the Corps of Engineers of the U.S. Army, many major streams have been successfully and dramatically developed and many millions of dollars have been spent on the necessary work.

The Columbia River, the Colorado River, the Missouri-Mississippi River system, the Ohio River, and the St. Lawrence Waterway are outstanding examples of projects sponsored and paid for by the Federal Government in this vast program.

Coming a little nearer home we have the Tennessee River development and the Authority which operates this program. There are also a number of smaller streams and river systems that have been the object of work by the Corps of Engineers. The Tombigbee-Warrior River has been before us for quite a while and right now is receiving attention looking to the modernization of its development, the consolidation of some of its dams and the improvement of its flow and control.

These rivers and the work being done upon them are mentioned simply to focus your attention on the one fact that the development of our inland waterways has always been considered of major importance. Usually there are many benefits to be derived from the proper development of any sizable stream. Quite often flood control is a primary importance; soil conservation is a vital consideration in many cases; the production of electric energy is nearly always at least a byproduct and quite frequently a primary end; and, recently, there has grown up a

recognition of the creation of facilities for recreation purposes. This latter item was not recognized for quite a while; but, as our people have had more leisure and the worth of proper recreation has been recognized, the Government itself permits the Corps of Engineers to give consideration to the benefits that would be derived from the creation of lakes and park areas when multipurpose dams are built on our inland streams.

With the above few thoughts, I would like to discuss with you for a few minutes our own project, the Chattahoochee River. All of you gentlemen know that years and years of planning, pleading, surveying, and studying have been put into this project by the people of Apalachicola, Dothan, Bainbridge, Columbia, and Columbus; but I wonder if you realize that just as much time, effort, and money have been spent by the people of West Point, Newman, Gainesville, Buford, and Atlanta

You see, in the overall development of this wonderful river there are so many benefits to be derived that unless we get a total picture of the entire project we come to the place where we can't see the forest for the trees

One of the first specific developments to be completed was the Buford Dam way up yonder in north Georgia at the headwaters of the river. It is this one dam with its potentiality of controlling the flow of the Chattahoochee River that makes possible enough water at the proper time to permit the justification for building the Jim Woodruff Dam, the Columbia Dam and the Walter F. George Dam. If the Buford Dam had not been built, the Chattahoochee could not have been harnessed so that navigation could be provided to Bainbridge on the Flint River or to Columbus on the Chattahoochee.

There are few items carried in our Federal budget on which it is harder or more dimcult to secure approval of, and appropriations for, than waterway development projects. There are many Members of Congress who quite honestly feel that appropriations for inland waterway development are the first items that should be eliminated in the interest of national economy.

Almost in every instance, a charge of "pork barrel" has been leveled against these appropriations. That charge is based upon the assumption that the people desiring the development are entirely selfish and that they simply want to benefit their particular community and, therefore, that the Congressmen or Senators advocating such appropriation are doing so simply as a political measure and to satisfy their constituents.

That position may be true in some instances. In fact, there might possibly be an element of selfishness in nearly all of the projects that have been approved and consummated. However, in spite of this, after a most careful study, I fall to find a single major waterway development that has been approved or completed that has not, or will not, return to the United States as a whole equal or greater benefits even from a financial standpoint than the amount of money expended thereon; and this does not take into consideration the valuable angle of national defense. I realize that in case of an attack on our country that we could not logically claim that a fully navigable Chattahoochee River would be the only salvation of our country. However, it is quite possible that if we were at war and our railroads and highways were bombed, it would be an analysis of the country to the country would be quite essential to have a navigable stream from Atlanta to the gulf whereon we

could move troops, munitions, and supplies.
You will notice that I have not quoted a single figure or statistic. I do not intend to do so. I simply want to impress upon you the importance of the development of the Chattahoochee River to every inch of the stream from the Gulf of Mexico, up

through the towns and counties located in Alabama and Georgia at which the river forms our boundary, through Columbus, Lanett-West Point over into the State of Georgia itself, even beyond Atlanta and finally to the great Lake Lanier at the very beginning of this great river.

The people of Columbus and Bainbridge and Dothan and Eufaula could well say we have accomplished our purpose and now have a controlled stream with 9-foot navigation as far as we need it. My friends, that is not the exact truth, for, while the most expensive operation in the full development of the river to Atlanta for navigation will be in the construction of the dams between Columbus and West Point, where the fall is so sharp; and, while at least three major dams with appropriate locks are needed between West Point and Atlanta, the construction of every one of those needed dams and the expenditure of every single additional dollar to-ward this further development, will make your river below Columbus more usable, more beneficial and more stabilized. thermore, the economic field of the additional development of the river will be reflected in your own welfare, civic growth and financial development. The more boats you have to pass your town, the more will be your opportunity for trading and port development.
So I come to you today with a suggestion

that may, on its face, seem selfish. I suggest to you that the full development of the river to Atlanta should always be our aim. Your support in this direction cannot hurt you and can only bring you added benefits.

I would like to point out that, in the reverse direction, officials, individual citizens and organizations have fought valiantly for the approval of every dam from Columbus to the gulf. They have pleaded with the Corps of Engineers to approve the projects, they have pleaded with the Bureau of the Budget to recommend the expenditure of the money and they have spent their time and own money in appearing before Congress with pleas to appropriate the necessary funds. We are proud and happy that you will have the benefits and the blessings of this great river when it is open to navigation in 1962. We crave your support and endorsement of proper studies, careful planning and favorable records on the part of the Corps of Engineers, looking to the development of the river above Columbus. In addition to helping your neighbor, you will be doing your country a great service and your own community a great amount of good.

There is one other area in which I feel that I might well enter. That is the slowness with which this and similar projects all progress. My own organization, the Atlanta Freight Bureau, has actively supported and plead for the full development of the Chattahoochee River for 50 years. Almost before the entry of your gallant Mr. Jim Woodruff, Sr., of Columbus, into this field, the bureau was conducting surveys and financing studies to prove the feasibility of the development of the river. We do not let up. We do not intend to quit. And yet I wonder if you realize that should the Corps of Engineers tomorrow inaugurate a final study of the plan to make navigable the river from Columbus to Atlanta and should promptly approve the project; that, if we could prevail upon the Bureau of the Budget to recommend the expenditure of the necessary money, and if we could secure even at this session of Congress the appropriation of needed funds, it would be 10 years before the first barge could enter the dreamed-of port of Atlanta.

It has taken a long time to get this far; it will take a longer time to realize the fulfillment of our complete dream, but I pledge you my word that the hearts of the people of Atlanta, the Atlanta Chamber of Commerce, the mayor of our great city, the At-

lanta Freight Bureau, and all other wellinformed citizens are still wrapped up in this dream, and we will not quit until it is an accomplished fact.

We would like to have your active interest in the painting of the picture that we would like to see completed. We would like for you to be as unselfish as we have tried to be. Finally, should circumstances so develop that it is many years before we obtain our port, and even though it looks sometimes as if the dream will never be realized, we will continue to be happy for you, lend you our help in keeping this great stream open for navigation and even help supply the tonnage necessary to make the operation profitable.

Recognition and Honor to the Cavalry

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 26, 1960

Mr. CARLSON. Mr. President, in 1961 Kansas will celebrate its Centennial Year, and it has been proposed that on this occasion we give special recognition and honor to the Cavalry.

It has been suggested that the Cavalry, which played such an important part in the settlement of the United States, and particularly the Middle West, be recognized by the erection of a statue of a mount and a trooper at Fort Riley.

Fort Riley is one of the largest inland military reserves in the United States. It covers 53,000 acres including Marshall Army Air Field, Camp Whiteside, Camp Forsyth and Camp Funston, home of the 1st Infantry Division.

Fort Riley, which was the cradle of Cavalry for 83 years, is now the home of the Army General School. Established in 1852 as Camp Center to protect trade along the Santa Fe Trail, it was renamed Fort Riley in 1853 and was a base of operations against Indian uprisings, during and after the Civil War.

Located at this post is Wounded Knee Monument in honor of 7th Cavalry men slain in the battle against the Sioux Indians at Wounded Knee Creek, S. Dak., in 1890. The cemetery also contains the graves of 7th Cavalry men slain at Wounded Knee.

Many of our outstanding Cavalry generals, officers and commands were stationed at Fort Riley. Among the familiar names are General Custer and Gen. George S. Patton.

A few years ago a large hall was erected on the post as a museum and dedicated Patton Hall in honor of General Patton.

I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Let's Honor the Gallant Cavalry."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S HONOR THE GALLANT CAVALRY

Homer Cook, a Spanish-American War veteran who lives at 846 North St. Francis, is trying to promote an idea of great merit in connection with the coming Kansas centennial. He wants to honor the cavalry with a great statute of a mount and a trooper at Fort Riley.

He is not alone in his idea. The Kansas centennial organization is very much for it. The Junction City Chamber of Commerce approves. And the 1st Cavalry, now stationed in Korea, is seeking to raise \$10,000 for the project, despite the fact that many of the young troopers scarcely know a horse from a goat.

Cook, who served with the 1st Cavalry and was wounded in some bitter campaigning in the Philippines, urges other cavalry veterans to get in touch with him and help put the idea over.

The role of the cavalry in securing Kansas for civilization and helping to build it has been underemphasized. The pioneers and the cowboys would have had a bad time of it if the hard-riding Long Knives had not kept the tribesmen on the run. Kansas was dotted with forts, many of which are now practically forgotten by history. They were all fighting forts. Day after day, the hard-bitten troopers, led by young West Pointers, rode forth on patrol. Many were the desperate battles they fought, nonetheless desperate because the numbers engaged were small and glory was slow in coming.

The western military operations did much to shape the patterns of the Civil War. Most of the ranking professional officers learned their campaigning in the West, and carried the tactics of Indian fighting into the war. And, to a remarkable extent, the lessons learned on the Plains had their influence on American strategy in World War II. General MacArthur, for example, was the son of a famous Indian-fighting general.

Wherever the oldtime cavalry went, it became the spearhead of civilization. The settlers, the pastors and the schoolmasters followed. J. E. B. Stuart, who later became a Confederate hero, was one of the founders of the Episcopal Church in Junction City. Always in the forts, the officers' ladies, lonely for the sophisticated life of the East, maintained a desperately genteel little society.

There will never be again soldiering like the cavalry. A trooper was a different kind of warrior. Even the toughest old boot had a touch of knightliness about him. The reasons for this is not hard to understand. The horsesoldier lived by and for his horse. The horse came first. He did not eat until the horse was fed. He did not rest until the horse was groomed. His life depended on his care and his mastery of his mount. Often the horse and rider became like one creature.

The invention of the machinegun spelled the end of the cavalry. The spear-armed German uhlans were massacred on the west-ern front. The Americans sent no cavalry to World War I. But so great was the love of cavalry that it was hard for military men to understand that it was obsolete in modern warfare. Soldiers at Fort Riley continued to drill with horse and saber. Cavalry, armed with machineguns, gave good account of itself in the disastrous defense of the Philippines.

The last of the mounted troops have disappeared from the American forces. There are veterans and soldiers who feel that the glory departed from the military when the last trooper dismounted and bade farewell to his horse.

By all means, let us honor the cavalry in the centennial. Fort Riley was the greatest of all cavalry posts, and the cavalry made Kansas safe for civilization. Standing alone on the prairie, an imaginative man can almost hear a ghostly bugle calling "Boots and Saddles" Peacetime Eulogy to Two Friends and a Stranger

EXTENSION OF REMARKS

HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. PIRNIE. Mr. Speaker, the following eulogy was written by Ens. Gene Huntley Porter, U.S. Navy, after the tragic loss of two friends and a stranger from the U.S.S. Valley Forge in July 1959. Ensign Porter is a graduate of the U.S. Naval Academy and a resident of my district.

This peacetime eulogy has a timely message for all Americans and I would like to share it with this House:

PEACETIME EULOGY TO TWO FRIENDS AND A STRANGER

(By Ens. Gene Huntley Porter, U.S. Navy) This is my island in the sun.

From here I view the magnificant and serene summer Atlantic, broken only by the sharp swirl of a destroyer, the delicate feather of a periscope, the propwash of a low-flying plane, or occasionally, a floating, empty helmet with intricate wings of gold embossed on the forehead. It happens fast these days, even flying these propellar types—no time for emotion—that comes later—only action at the instant, and then the adrenalin's effect fading with hope.

Things went smoothly last night; the bridge watch performed superbly, the signal gang had their searchlights on in less time than it takes to tell it, and the rescue destroyer was Johnny-on-the-spot. Too bad it wasn't a drill; we would have received a fine mark. Not much room for pride, though, when all you have left of a friend is a hardhat and part of his gas supply in a wingtip tank. Why did he go in? Why, with a part of his gas supply in a wingtip tank, why did he go in? Why, with perfect launching conditions and plenty of wind from the right place, and riding a good plane properly inspected, did he end up inverted a few hundred yards in front of the ship, floating for a short time with the ship, floating for a short white white the landing gear looking faintly ridiculous in the deepening twilight while bright beams of light and a hundred eyes probed the dark water in vain? Norm knew he was a good pliot. I had flown with him—same plane, same catapult—but he will never tell me and neither will Marty, or the crewmen. I don't really care why, except that it might help out someone else sometime when he is just airborne and suddenly finds himself in a near snaproll 50 feet above the water, twisting the horizon crazily-the classic example of "Just one of those things." ing is dangerous; everyone knows it. Pilots get paid extra for it, and if they believe in life insurance, they pay extra for that. This happens all the time. Just read the papers—you will find it between columns describing a 5-car smashup on the Freeway and reports on the rock-and-roller-of-theday's current haircut.

All of this isn't important—only the fact that two friends and a stranger whom I admired for their professional competence and liked for other reasons—guys I've talked with in crisp indifference on the radio and laughed with over a drink here and there; guys to whom the last I said was, "Give me a call when you get to 2,000 feet," never will be at that altitude again. Remember Norm?

The stocky, good-looking one in blues? He was proud of his wife and three kids; he'd shown us pictures of them at our last blg dinner in the wardroom. Our guest liked him. And Marty? Marty had four kids.

Do you have the picture? Do you really? I doubt it, because as it stands it is quite unimportant. Do you really feel very much when you read that 100 people died in a Chinese flood? But what completes the picture? Don't ask "Why did it happen?" You'll get all tied up in aeronautics and differential equations. Ask—"For what did it happen?" and it will become interesting. Patriotism? An outdated word, or at least not stylish these days, but I guess it is about the best we can do. I believe in it. You believe in it. We all do. We all believe that the United States of America should have the best Armed Forces in the world to protect our freedom (only let's be economical about it; and it's peacetime so let's not join up, and really, anyone who stays in the service with so much money to be made on the outside must be either a misfit who can't get a job elsewhere, or else he is just sort of odd.)

OK, fine, this is what we are here for, supposedly, to insure that the majority won't have to be; to insure that our preclous freedoms remain available to all. But look in the mirror. What has happened to the use of these freedoms now that we have successfully protected them a few times on foreign battlefields? Are we here to make sure that everyone has the right to have a backyard barbecue pit, or are we here to make sure that no one is interrupted while everyone is forced to build barbecue pits, or dig them, or whatever you do? Are we here to save a national attitude that doesn't care if it is saved?

What has happened to the Nation that idolized independence of mind and spirit so that it now coddles gangsters and racketeers. allows inflation to become a routine thing, with the majority believing there is no harm in it and glosses over the logical results of being priced out of world markets all across the board, with savings dwindling to nothing? Why do they allow themselves to be forced to pay more to an eighth-grade-educated steelworker who puts in 40 hours & week rolling steel than they do to an 80 hour a week college professor who is contributing so much to society? How did they get in the ridiculous situation where farmers are paid not to grow things and where what they do grow is paid for by the taxpayers and stored in an ancient hulk on the Hudson? And public power? And how about everything else that is gradually taking away not only the rights but also the re-sponsibilities? Once the responsibilities go. where is the power of choice?-(Martinis or Manhattans?) Do you want never to see a good portion of your paycheck and live with the knowledge that the Government is keeping it all for you and if you live long enough they'll give it back to you piece by piece so you won't have to work in your old age and will be able to rock away on the porch of that modest little bungalow in St. Augustine or is it St. Petersburg? If so, you've got it made.

But you, did I hear you say that if that is what you want you will use a bank and deposit your own money and make your own decisions as to how much you need? Fine; and if at the age of 45 you decide that you want something else, say a boat to cruise the south seas and to subsist by writing quaint little tales of island culture, you'll write a check? Try writing a check on your social security number.

The point I make is this: What is happening to the old fashioned revolutionary idea that all men are created equal is that it is being misinterpreted to mean that all men are created identical—and if they aren't—

graduated income taxes will attempt to be the great equalizer, along with a couple of other concepts that change the individualistic pursuit of happiness into legalized pres-

sure to conformity.

Our American way of life is the best the world has ever seen. Of this I am sure. I'm not sacrificing anything I would rather do to be out here in uniform. I like to drive ships around, to give a command and feel 40,000 tons answer to the helm. Did you ever see a carrier flight deck at night, with dozens of planes tuned up and lights telling the story? It is one of the most awe inspiring things in the world—as far as I am concerned. Not only do I like my job, I think it is important.

But the next time I sit in the cockpit of a plane, or hear a frantic "Mayday" radio (and there will be a next time, it's mathematical) I'll think of Norm and Marty and the kid last night, and maybe their seven-plus children, and certainly all of the rest of this, and will wonder why so few of the 170 million people read the front page of the paper before they read the sports and society columns, and so many couldn't even find the editorials (they've read the same paper for years) and so many choose their man for office on the basis of a TV

Where will it stop? Or will it? I honestly don't believe it will. But then, that is what time is for: to allow old ideas to fade away and new ones to take over. Is the majority always right? If so, then I guess inflation is okay after all, and I shouldn't mind if most concepts of private enterprise and private responsibility to self and family and else are slowly eaten away. Is this really necessary for the national good, or even for the national existence? I'd like to think so, but it is sort of tough to believe that we have knowingly and legally and conscientiously developed a situation where tradition dictates that a union boss will get something now for his men each year at contract time, or else, like last night, a nation of free people is tied in a knot while two friends and a stranger settle slowly under 10,000 feet of sea water.

Water Conservation-Key to Survival

EXTENSION OF REMARKS OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES Thursday, May 26, 1960

Mr. McGEE. Mr. President, the National Select Committee on National Water Resources, under the leadership of Senator Robert S. Kerr, is at present conducting a wide series of hearings by taking testimony from witnesses who represent various organizations and points of view here in Washington. The committee, of which I am a member, is engaging in the staggering task of assimilating and digesting the mountains of material which have been accumulated during these hearings, and also from the many Government agencies which have to do with the development and use of our water resources. The committee hopes before long to be able to take the report on the relationship of the development of our national water resources to the national interest which was contemplated in S. Res. 48. In connection with this coming event and because it epitomizes the increasing in-

tensity of concern over the development of our water resources which is taking place in the minds of citizens all over the country, I ask unanimous consent to have printed in the Appendix of the RECORD an essay entitled "Water Conservation-Key to Your Survival" by Joe Russin, of Laramie, Wyo. This essay won first place in the senior division of the annual essay contest held in Wyoming in connection with National Wildlife Week. It is important because it is a very fine and a very eloquent plea for adequate conservation and development measures and it is also important because the judges who selected this essay as the best of nearly 3,000 entries recognized that the key to a successful integrated multipurpose conservation program lies in the field of water conserva-

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Laramie Daily Boomerang, May

22, 1960] WATER CONSERVATION—KEY TO YOUR SURVIVAL

Joe Russin, 1712 Custer, Laramie, won first place in the senior division of the annual essay contest held in Wyoming in connection with National Wildlife Week, State Chairman Charles R. Rodermel reports.

Rodermel, chief of the Wyoming Game and Fish Department's Information and Education Division, said the subject for the contest was "Water Conservation-Key to Your Survival."

Russin's winning essay was judged as the best of nearly 3,000 entries. Eighteen county winning themes were submitted for State awards. Russin is a University High School

Other winners in the senior division contest included Particia Skiles, Buffalo, second; Donna Foote, Fort Laramie, third; and Paula Reeves, Afton, Miriam Greer, Cheyenne, and Jerry Harrington, Powell, honorable men-

In the junior division Andrea House, Casper, received first place award. Other winners in that division included Billy Castle, Bosier, second; Mary Martinez, Torrington, third; and Noaleen Larson, Luski, Susan Barnard, Evanston, and Patrice Fisher, Mc-Fadden, honorable mention.

WATER CONSERVATION-KEY TO YOUR SURVIVAL (By Joe Russin)

The ugliest creature in the world is a dirty, polluted river. Winding its muddy way through a gully-filled valley and then down through a slimy bed in a city, the river resembles a vicious snake. It can well be compared to the most poisonous viper, because the poison carried by a polluted river is in every way as deadly. It is also more plentiful. A snake can only inject a few drops of venom into one person at a time. The river can carry thousands of gallons of infection to millions of people every minute.

The river is ugly because it is an eyesore. It desecrates the fields and it gives the city a slumlike appearance. It is ugly because its very substance is death to the fish that inhabit it and to the small children who innocently play along its shores. It is ugly because it costs valuable dollars to clean and to restore. But, most of all, it is ugly because it is needless.

The placid, flowing current of a pristine river with its power to refresh the tired soul and to work wonders for industry and the people who use it wisely is a God-given bless-There is no reason why we and our posterity should not enjoy this blessing. We

forfeit our right to it only when we become careless.

The ugly river does not just happen. Perhaps a hunter forgot to completely put out his cigarette before throwing it into the bramble. He did not stop to think that the fire he was causing would destroy an invaluable watershed. Farther down the stream a farmer may have been lazy one spring and decided not to plow around that little hill in his field, but rather cut straight furrows over it. The small amounts of erosion caused by the rains of the summer did not bother him. Not until the spring thaw which wrought havoc in his field came and carried priceless inches of topsoil into the river did he sense the danger-but then it was too late. He could only think back with regret to that day last fall when he decided to burn the stubble that remained from his crop so that the spring plowing would be easier. Even as he surveyed the damage, he thought it would be too much trouble plant a cover crop and try to reclaim the soil. So the field was abandoned, the gullies grew deeper, and the river grew muddler.

Down near the city a factory may have decided to make use of the powerful motion of the current of the stream. The river also seemed to provide a ready, inexpensive sewage system. It never occurred to the manager of the plant that the chemicals and bacteria he was dumping into the river would poison the drinking water of the city, just a half mile downstream. It never occurred to him, that is, until his little girl died. It usually takes a severe shock such as this to awaken most communities to the serious situations being caused by neglect to the water supply. By the time they wake up, it is already too late for quick remedies. Tedious work, costly expenditures, and long-range planning will be necessary to restore the stream to a healthy condition.

Fortunately, we in Wyoming are blessed with many streams and good watersheds. Nonetheless, we live in a zone of less than 20 inches of annual rainfall, so it is important that we use our water wisely. We cannot afford the dubious luxury of carelessness which results in polluted rivers. Just because many of our streams are currently clear is no assurance that they will remain so in the future unless we act now to pre-

vent disaster later.

In Wyoming our water offers us many special opportunities. Nearly every free moment of my summer, time is spent on the grassy banks of remote mountain lakes or in working along the banks of crystal-clear creeks. The glistening speckled trout which I match wits with are also enjoying the tangy mountain water and find it makes an excellent As I fish, especially along lake and pond shores, I can see suspicious deer edge to the water for a quick drink. They, too, appreciate unspoiled water. In the larger lakes, I can enjoy the thrill of a motorboat ride, or the tingling sensation of swimming in snow-fed waters. Water, clean and chaste, is a tremendous recreation and health treasure house.

But water can provide more than that. This little HO molecule which has caused untold numbers of wars can be a great force in making Wyoming into a State with vast industrial capacity. In our streams is the key to the prosperity and survival not only Wyoming but of many other States as well. Our waters find their way into two oceans, servicing millions of people along the way. The way we use our water in a large part determines the use others may put to it. It is our responsibility to keep the waters clear and to store them prudently.

It might be very well for us to consider building substantial reservoirs and pipes to store water in case of an atomic attack. In this way we could save a large amount of water not only for ourselves but the whole West as well from nuclear contamination. Water is essential to our life, and it is vital that we insure an adequate supply. What better place than Wyoming for such a project, as many great rivers have their headwaters within our borders.

We in Wyoming have our responsibilities to our neighboring States, but we also have a responsibility to use carefully the water we have within our borders. The time has passed for squabbles over water rights between farmers, ranchers, and the cities. It is now vitally necessary that we join forces and realize that water conservation is a reciprocating responsibility. Good conservation practices are needed just as much in the cities as they are on the farm and ranch. The ugly river we traced can be prevented. All that is required is a little knowledge and

Address of Paul Harvey at Third Annual Meeting of the National Independent Dairies Association

EXTENSION OF REMARKS

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address of Paul Harvey, American Broadcasting Co. news analyst and author, at the third annual meeting of the National Independent Dairies Association at the Mayflower Hotel, Washington, D.C., April 6, 1960:

Good evening Americans. My goodness, Scott, I feel like the Okeefenokee swamp boy who fell into a barrel of molasses. He said, "Lord, give me a mouth equal to the occasion."

Seriously Scott, that's the second most flattering introduction I've ever received in my life. The only time I ever got a more flowery one was once when the master of ceremonies failed to show up and I had to do it myself.

Storms never end. I wish I could bring you some more pollyanna promise than that tonight. I wish I could promise you no work and all ease, all honey and no bees, but it isn't going to be that way. If I have any distinction, it is not those so graciously enumerated in my introduction, it's the fact that I am one of the few appearing before public forums this year who is not running for or from anything—and that makes a difference. And, storms never end. I hope that in the ensuing few minutes I can satisfy you that you wouldn't really want it any other way.

Once upon a time, we led the world, we, Americans, toward a lighted window, and, I think this is important and certainly before we spend any more billions trying to buy collective security, we owe ourselves this backward glance. From 1789, until World War I, all other nations on planet earth were totalitarian except United States. Did you every stop to realize this? In 1789 we were a little bitty country of 3 million people completely surrounded by an ocean of totalitarianism. Everyone else kings claimed to rule by divine right, other ruled with military might, but we alone ruled ourselves. What happened? Suddenly, the rest of the world watching our experiment in individual liberty and self-government began to copy us. Statesmen and writers visited the United States and returned home with glowing reports and the urge for freedom began to

spread like a prairie fire across whole continents. The French threw off the yoke of their dissolute king and rapacious aristoc-racy. England initiated sweeping democratic reforms. Mexico, and Central America and South America freed themselves from Spain. From 1789 until the full World War I broke out, democracy was spreading around How come? Our Nation had not the world. given the old nations any money. We had sent forth no paid propagandists. We'd beamed no broadcasts beyond our neighbor's borders. We hadn't sent any experts overseas to show them how. We sent them no guns, no butter, no money. We made no con-cessions to foreigners which would penalize domestic producers. Our new Nation didn't any mutual defense agreements. insist on And, yet, though we ignored them, the older nations began to imitate our example and freedom was the world's dynamic, expanding force prior to 1914, and when the German dynasty collapsed in 1917, the Russians in 1918, the last strongholds of despotism had fallen. But now what? Suddenly democracy began to take itself for granted. Democracy racy, like an uninspired housewife, neglected herself and then was herself neglected; communism, fascism, nazism-these became the world's dynamic political forces. two, but we failed to follow through, and since World War II, communism has cap-tured approximately 100 million new disciples every year. Our better product has been left unsold because they have a better sales technique; because, instead of trying to lead other nations as our gallant 3 million forefathers did, we've been trying to push them. Our Declaration of Independence has been supplanted with half a hundred declarations of dependence on others and so, failing to commend respect, we try to buy it. Times have changed? No, my dear Americans, times haven't changed. We have changed. For all our grandeur and our gold, we win fewer converts to democracy today than our great grandaddys did with nothing but a light in the window. We always worry about the wrong thing, don't we? I remember August 1945, when suddenly a weapon 400 million times more lethal than anything ever before had been loosed on the worldwe sat down in our councils of men chewing our fingernails up past the second knuckle worrying about what we are going to do with this hideous weapon that suddenly had been loosed upon us. Even today, there are some who would say we should bury it in a cave in New Mexico or, in concert with other nations, destroy this technological advantage. Oh my goodness. In world war III, God forbid it should be, they're going to outnumber us 8 to 3 and I mean even if all our frightened friends stick with us, the Soviets and their satellites are going to outnumber us better than 2 to 1.

Wars never end. Storms are a part of the normal climate of life. In the three and a half thousand years of recorded history. fewer than 8 percent of those years have been without their shooting wars and even in this time in between, the wars between the wars went on-which we come to call cold wars, waged by the forces of espionage and counterespionage. It's interesting to reflect that history demonstrates who wins this war between the wars generally determines who gets the drop on whom when somebody blows the whistle on a shooting And yet, there are some who say we should bury or destroy this weapon when it's the only equalizer that's cut the limitless hordes of Asia down to our size. is the one deterrent that thus far has kept the big red bear treed. We do destroy it, then somebody blows the whistle on another war, and what do we do? Go back to fighting wars with bamboo spears and bayonets again—outnumbered better than 2 to 1? My dear Americans, give your sons better odds than that. I believe with all my

heart that an allwise, Almighty entrusted that hideous weapon to our tiny, little 7 percent God-fearing fraction of this earth's population—not for our destruction, but for our deliverance.

February, a year ago, Khrushchev wrote a book. In that book he blueprinted his plans for world conquest just as graphically as Hitler did in "Mein Kamf." He told us exactly what he was going to do to us. title of the book is "To Victory in Peaceful Competition With Capitalism." The great The great nation states now have become so strong in the arms and so soft in the tummy that none dares wage armed combat again. initiation of such a conflict would in itself be a suicidal act. Thus, the great nation states of the world now have approached, for the first time in history, a military stand of which conceivably could perpetuate this war between the wars and thus delay doomsday indefinitely. But, you understand, this presupposes that we're going to keep us strong—that's us spelled U.S.—strong in our arms and in our hearts. For if there is one irrefutable lesson that we can learn from the history of the other great nation states before ours-Spain, Greece, and Chinanone ever was destroyed by anybody else's marching legions; each rotted away with moral, social, cultural, and economic decay, almost simultaneously. With a military standoff enforcing military peace, Khrushchev instead reverts to victory through peaceful competition with capitalism. The Communist plan for world conquest has not been changed, only the weapons and tactics have been altered. It is in this volume that he promises to overtake us and then take over the United States within 7 years. bury you," he says. You may gather from this that I have little respect for Mr. Khrushchev's present overtures seeking to lure us back to the summit. That's correct, I have little respect for those overtures. I don't know what we will barter away this time in order to spare Berlin-another blockade, but something. Once I recall we celebrated breaking the Berlin blockade and overlooked the fact that we had lost China. Another time we forestalled a Berlin blockade, but without a shot gave up Tibet. What will we give up this time? Something. It seems to me that every time Jack and

Jill go back up that hill, we are thrust much into the position of the overanxious brideto-be who discovered that marriage licenses were not available on Saturday, and so she asked the minister, "Couldn't you just say a few words to tide us over the weekend?" would I wish to be categorized with those who think the only answer is to drop a bomb on Moscow now. Though I confess some-times, by jing, I listen to this diplomatic doubletalk going back and forth, and I find that some of the fire in the belly that characterized my Pennsylvania Dutch grand-daddy. You know back there around Al-toona some of the Quaker faith used to be attired always in black, even at milking time. I recall this one ancestor of whom it is said, while milking one day, the cow kicked the bucket and splashed milk all over his frock and black buttonless habit. This ancestor stood and sized up the situation and said. "Now, cow, thou knowest that because of my Quaker upbringing it is inappropriate for me to abuse thee physically and, cow, thou knowest that because of my religious persuasion I cannot swear at thee but I wonder. cow, if thou knowest I could sell thee to a southern Baptist who could just kick the hell out of thee."

Perhaps a cardinal weakness in the character of Americans is that we're inclined to take our blessings for granted. "Taking for granted" means that we assume our possessions without any effort on our part, will remain forever intact. This is a basic error of course. We possess nothing. We are cus-

todians of the things, nothing more. We have but to relax our grasp on our blessings to lose them. You ask any wife how long a tender love taken for granted can thrive-no longer than a flower you forget to water. And yet, Americans are oft times inclined to take for granted our loved ones, our liberties, our luxuries, even our jobs. Somewhere a twisted lie was conceived that the world Owes us a living. That's not what the Bible says, you know. It says, "As you sow so shall you reap." But some, peddling a promise of security in exchange for votes, sought to convince the electorate that we didn't want opportunity anymore, we wanted security. They said, you don't want opportunity, that's old hat, you want security. So, we demanded security. We sacrificed quality for equality. We demanded that our employers take care of us, or that Government take care of us whether we sow or not. We took our paychecks for granted. No longer was that reward for honest effort but something the world owed us and should be forced to pay. While we looked the other way, the world picked our pocket and we dared not protest. Similarly one after another of our liberties alipped away. We took it for granted that, freedom won for us at Theonderoga and Valley Forge, would remain forever intact and undiluted. Yet today we're regulated in business, regimented as individuals, restricted by laws piled on laws limiting by taxes how much we can make, dictating through social security what insurance we must buy, prescribing by mandate where Big Government spends our money, negating the climate in Which small business has flourished and thus has made us the powerhouse of this planet

Now maybe, as the dictators say, we are not competent to govern ourselves. tell tell you something. In the beginning Americans under God did. But now we take Him for granted, too, assuming 1 hour each Sabbath will atone for 6 days of pride, passion, and payola. You know, just as surely as I'm convinced that that awesome weapon was first entrusted to us that we might have another reprieve, I am similarly satisfied that there was more reason than met the eye when one day we looked overhead and saw that the first tin moon circling in space was labled, "Made in the U.S.S.R. Then, we were sore afraid. But I wonder if that wasn't once again a beneficent wisdom seeking somehow to show us that we have no corner on industry, that either we're going to get off our cottonpicking posteriors and get back to work again or we're going to follow those other great nation states into the graveyard of ignominious oblivion. If I may paraphrase Mr. Lincoln, or if he had it to say today, "Nine score and 3 years ago our forefathers brought forth on this continent a new nation conceived in liberty, and dedicated to the proposition that all men are created equal." Now, we are engaged in a great economic war testing whether that that nation or any nation so conceived and so dedicated can long endure. We are met on a great battlefield of that war, Main U.S.A. For here is going to be determined whether government of the people and by the people, and for the people shall or shall not perish from the earth.

I wish so often at times like this that I could yield the floor to a neighbor of mine from Oklahoma, Will Rogers. Of course, I was from Tulsa and he was from Claremore and we were 20 miles and 20 years apart, but whenever anybody becomes as famous as old Will did, anybody within 20 miles is entitled to call him a neighbor. I keep trying to imagine what old Will would say if he were here in my enviable position speaking to you tonight. I know it would be preposterously presumptious for me to try to put words in old Will's lifeless lips unless I were reasonably sure that he would understand, and I am entirely sure that he would. So for the next 3 minutes, more

or less, the words that I speak will be as I would imagine he would like to say them if this were his privilege instead of mine.

"Folks, I guess I ought to come back. Wyatt Earp is back and Matt Dillon and Bat Masterson and a lot of others.

"Do you know why folks nowadays like TV westerns? I'll tell you why. We've got so we can't do much for ourselves, anymore, so we like to watch somebody who could.

"Then a man could solve all his problems kith a gun and a horse; today he needs radar, sonar and an IBM machine.

"We had spacemen, though, back yonder. Cowboys ridin' herd on a quiet night in the middle of the prairie with all the heavens hung out above 'em. A cowboy could pick a star or the moon and go to it anytime he wanted. Must have gone to the moon a hundred times, sometimes twice a night.

"Then we went on those space flights for fun. Today you go on the run, scared. Little wonder. Some radio stations today make more noise just introducing a newscast than we did gettin' out the Claremore Fire Department. News ain't news, anymore. It's a round-the-clock warning.

"Why, you got a generation of parents scared of their own kids. Maybe it happened when you all moved to town. Men build great cities, but cities don't build great men.

"How many boys nowadays have seen a crop come on—and helped harvest it? How many boys know what it is to raise pigeons, to hear a screech owl at night, to be butted by a goat and rassle a calf—that a possum can gnaw out of a wood box and be gone in the morning? That you don't have to sow weeds; you just put down the hoe and they'll choke out the flowers.

"How many boys know what nature always does to a coward or a loafer or a thief? "The big city makes a man think he's

boss—and he's not—He is. That's why the Bible was written by farmers and shepherds and fishermen.

"Also, I figure this juvenile mischief was partly brought on by the safety razor and the electric shaver.

"So, 2 years in a row you had to go back to the one State of Mississippi to get yourself a beauty queen. You know, I remember once back in Claremore we had a beauty contest and nobody won. Nobody even came in second. A traveling man came in third and he wasn't even in the contest.

"So you got that Russian feller, Krewschef, comin' over here apartment hunting.

"I remember once we had an old bull down in the hollow where I used to hunt squirrels. He reminded me of this Krewschef, pawin' and bellowin' all the time. I never could be sure of that old bull, but we had respect for one another. Long as it was that way we never tangled. He always managed to bellow when I was about to shoot a squirrel, but he never charged me.

"But I missed a lot of squirrels.

"So you took in Alaska and Hawaii? I'll say you did. Now they gotta kick into the Federal overseas kitty and provide asylum for their own old used Congressmen. Instead of askin' to be States, Alaska and Hawaii mighta done better by askin' us to make 'em full fledged foreign countries, instead.

"Why did I leave this earth 'before my time," as so many of you kind folks have said? I don't know. A fellow has something to do and he does it. He has something to say and he says it. After awhile there are new things to do and new people to do them, new things to say and new people to say them.

"The old fellow is from a different age and the new people don't understand him. He is the 'old man around the house' who always wants to give advice. A man is seldom old enough to be a philosopher until he has looked into the eyes of his grandchild, and then he is so full of compassion

and has so many warnings that the young'uns don't like to listen. A man had better do what he can and say what he has to say while he has people his own age to listen."

And then Old Will would probably say:
"My time's up. Thanks for lettin' me
drop in like this. Now it's your turn. So
long."

Well, at least old Will was spared the in-dignity of TV. In case I may have aroused any misapprehensions concerning how I feel toward TV and conveyed to some the impression that I don't like it, thats right, I don't like it. Jealousy, partly. I got along so well for many years with radio that I kind of resent this illegitimate stepchild in our midst. Also I seemed to have timed things so badly. Television on the way in at the same time my hair is on the way out. But as some of you can attest, there's one thing about being bald, it's neat. Now, I've been not too secretly hoping they'd discover television causes cancer. You think about it. We could do away with both those evils at the same time and all go back to smoking cigarettes again. Actually, that isn't entirely fair. I understand that the cigarette manufacturers now have solved the cancer threat. The only thing is they've made the filter so long, you're liable to get a hernia from sucking so hard.

You know, there's nothing really so difficult to comprehend in Russia's present peace talk when we realize that she has had to shift emphasis, weapons and tactics because of the military standoff. Russia has everything to gain and nothing to lose from smiling and smiling and disarming us so we will export more and more American knowhow thus to make Russia look good. Have you ever heard the parable which explains why the animals of the jungle remain armed?

Once upon a time the animals were all assembled to a summit conference, to discuss disarmament. The lion looks suspiciously at the bull and declares all horns must be abolished. The eagle looked at the tiger and says, all paws, especially those with claws, must be abolished. And the bear in his turn said, "Let us abolish all such weapons. All that is really needed is a universal embrace." So the rest of the birds and the beasts decided they better remain armed.

If we are agreed up to here that it is necessary for us to keep us strong in order to perpetuate peace, to forestall doom's day until the Russians learn some manners, perhaps we should seek out the source of our strength. Ours is not the first, by George, good government to arise on the world stage. But, as history teaches, each enjoyed about what? A 150 years—that's just about our time in the new world—and then each rotted away. And, it's a cruel paradox that each was destroyed because it was a good government, not because it was a bad It was a good government and it bore bountiful fruit and the people got fat. And when they got fat they began to get lazy. And when they got lazy they began to want to absolve themselves of personal responsibility and turn over to government to do for them things which traditionally they had done for themselves. First, there doesn't seem to be anything wrong with asking government to perform some increasing service for you, but whenever you ask government to do for you, anything which you have traditionally been doing for yourselves, in order to perform the increasing function the Government has to get bigger? Right? In order to support its increasing size it to tax the individual more, so the individual gets littler. In order to collect the additional taxes it has to hire more tax collectors and the Government gets bigger. In order to pay the additional tax collectors it has to tax the individual more. So the individual gets littler and the Government gets bigger until one day the Government is allpowerful and the people are cattle.

The Government is everything and the people are hardly anything at all. That is precisely the way the great nations have gone from monarchy to oligarchy, oligarchy to dictatorship, dictatorship to bureaucracy, and from bureaucracy to pure democracy, where finally the people would cry out from the chaos and confusion of the streets, "God, give us a king." And God would give them a king. a monarchy, and start the whole silly circle over again. Because as anybody who was ever lost in the woods can attest, if you keep turning left you can't go any way but in circles.

I keep remembering the old Mack Sennett comedies where the culprit chased by the policeman would point and say, "He went that-a-way." The policeman would tear off down the street after nobody and the thief would stroll home with the loot. We are chasing Russia and Russia is pointing at the Moon and saying "That-a-way," while Russia prepares to pick up the marbles on planet Earth.

Soviet cars are now moving into U.S. mar-Khrushchev has declared economic war on us and when we strengthen his economy we're helping him win that war and we are thus strengthening his economy. Ten thousand Russian made Moscovitch sedans ordered delivered in Syracuse, N.Y., where a dealer wants to sell them in the United States. But Congress is debating the space race and who will get first to Mars. Some of us are getting ulcers on our ulcers worrying that Russia might get to Mars before we do and the Russians have already landed in Syracuse. Don't think the Soviet press wasn't delighted when that announcement was forthcoming. All 16 of Moscow's newspapers headlined the fact that, "Soviet technical achievements are now such that Americans are having to buy Russian-made cars." In an economic war they construe this to be an American retreat.

Back in Washington military men are being called on the congressional carpet, confronted with the evidence that the Soviets are wining the space race and asked, "Why?" The result is almost certain to be an increased military budget, not because it makes sense, but because it will silence congressional critics in election year. Military men challenged, a military budget, military objectves, and we're not fighting a military war. We are engaged in an economic war, and we're not winning it. In buying cars from the Soviets we are in effect supplying weapons to the enemy-inviting mass unemployment in the American aircraft industry. Cheap foreign labor plus government subsidies have been enabling other countries to build 2,000-mile-a-minute jet airliners now, and we're not.

American manufacturers cannot afford to compete. The Russian and British Governments give tax dollars to the planemakers. CAB says unless our Government now subsidizes our planemakers, American airlines might be buying airliners from Russia in 5 years. I wonder if it isn't time for us to tend now to our homefront economy to keep us strong, to defend us against invasion from without and to think twice about hurling 100 missiles at the sky while Russia carefully tests only 2.

Russia is deliberately trying to sucker us into an astronomically expensive modern arms race. Any worthwhile secrets we discover, she will steal. Meanwhile we could go bankrupt. There is evidence that Russia's much-mentioned giant footsteps in space were made by a boot on a broomstick.

I think we have made two grievous mistakes with our young. We told them half-truths which were in effect false ones. We told our sons, for example, that this country was carved out of the wilderness. This country was not carved out of the wilderness.

This country was hammered and scratched, and dug and clawed out of the wilderness by barehanded men who asked nothing for nothing. We told our young people what a wonderful thing it is to be an American. But we forgot to tell them what a difficult and a demanding and a dangerous thing it is to be a free American and to have to make decisions for yourself.

What a magnificent challenge we could have provided—but instead of that we promised them security from the cradle to the grave.

A boy, needing a chance to prove himself a man, does what? Seeks his challenge elsewhere, beats up old men on the street corners or rapes little girls or tries narcotics or steals cars just for kicks. If the American character has eroded away, then it isn't going to make much difference what we do here or what I say, but I will not believe that.

I get out of the highly industrialized area in which it's necessary for me to spend much time and wade around in the good green grassroots of this country, midst your constituents, and I get a refurbished faith that the American people, when they get mad enough, can do anything. If nothing else ever proved that, Pearl Harbor did. The American people when they get mad enough can do anything.

can do anything.

Sometimes I think that's my main mission in life, just keeping them stirred up. But this needs to be said: If we would keep us strong morally, socially, culturally, economically.

I have touched fleetingly on the delinquency which threatens because we have taken away from American youth a reason for being. That's important you know. What do we have to look forward to, you and I? Three score, maybe 4 years or more. Then probably in pain we will die and our earthly remains decay away. For goodness sake, if that is all there were to it we would be standing in line for the high windows. A man has to have a reason to live and a reason to die. As Whittaker Chambers said so effectively in "Witness," "Communism, a Godless religion, and it is nothing less, gives a man that reason."

Now, with what kind of an affirmative faith of our own are we going to counter that threat. What are we for? And equally important to what Americans stand for, is what Americans won't stand for.

This needs to be said. The broadcasting business has been lambasted with an avalanche of righteous indignation concerning payola. And there is more to come. Being a top target for some wild-eyed

Being a top target for some wild-eyed administrations, I personally have had to stay clean whether I wanted to or not.

So from this ivory tower I could preach a little religion to the diskjockeys who sold out their independence. But I will not. There are too many sanctimonious sinners holding their collective nose over this stink and ignoring their own dirty underwear.

Let us get this out in the open.

In by George almost every industry these days, money under the table is standard operating procedure. If I name only a few for instances, it is only because there is not space to list them all.

In the mattress business, some companies slip a spif of \$10 to \$20 to the store clerk who pushes one product over another.

In the dairy business, all manner of inducements are offered by some companies to store owners to stock my brand, including cash.

Push-money always favors the big fellows who can afford it over the little ones who operate on a close profit margin. Some store owners forbid it, others wink at it, but either way the bribery goes on.

Or the giant industrial combine that says, "You sell your dairy or your grocery to me—or I have the weight, influence and finances to force you to."

A refinement of the protection racket perfected by Capone.

Kick in or get kicked out. Payola.

Salesmen, buyers, purchasing agents; there are lots of hands out.

I am not through.

What about the ludicrously named "flower fund" in the city hall to which workers kick in every month to somebody's political coffers at the risk of losing their jobs. It's a kickback, by whatever name. It's payola.

Newspaper sportswriters on the payroll of big league ball clubs.

For that matter, every tip you give the barber or the doorman is a bribe intended to buy your way to the head of the line.

What about the pork barrel politics of

What about the pork barrel politics of "Til vote for your bill if you'll vote for mine," Mr. Congressman? That's a form of payola.

And so are the promises you make to your constitutents: "You vote for me and I'll get an airbase for your county." (You don't mention, Mr. Congressman, that the money to pay for the airbase is coming ultimately from the pocket of that voter. You let him think it's free. Payola.)

For that matter, when our foreign aiders demand more handouts abroad they always insist it's in our "enlightened self-interest." So if we are bribing allies to allow us military bases in their countries, it's payola.

Don't misunderstand. I'm not saying because everybody does it, it's right. I am saying that we are a pretty miserable bunch of hyprocrites, when our foreign policy and our domestic economy are so entirely predicated on the payoff practice, if we seek to divert attention from this big stain by smearing a handful of dee-jays for "doing what comes naturally" in this rotten climate.

It's time for somebody to rub the smug American nose in the whole nasty mess, so if we have any character left, we can all get back to working our way and earning alliving, instead of trying to beg, borrow or steal it.

If Uncle Sam is ever disgraced and destroyed in the eyes of the world it won't be the Russians that did it.

It'll be because he was lured astray by a low-necked, short-skirted, rose-scented, diamond-necked hussy named, "Something for Nothing."

For months I have anticipated this opportunity to talk tonight to you with anxiety approaching terror.

There is something I want so desperately to say that I fear, trying too hard, I might say it poorly, and to the detriment of the defendant in this case.

To "shuck down to the cob," as we say in the Ozarks, I have carried the plight of the independent dairyman on my conscience for what ails him is symptomatic of a malignancy which has affected several areas of our economy.

I think this can be said of no other issue: There has never been an election campaign in which any candidate for anything ever falled to praise this "small businessman."

And most mean it.

And yet for three recent decades the small businessman in this country has been between the dog and the fireplug, and he has had just about all the soaking he can stand.

I studied and sweated and sought counsel, hoping to come before this impressive assemblage with specific recommendations which would solve all the problems of the independent dairyman neatly and completely by 10 tomorrow morning.

I should have known better. It's not that

But then I had to remind myself, as you must, that nothing worthwhile ever is.

If this appears to be a cowardly passing of the buck, to place the problem in your lap unsolved, it is nonetheless the only honest approach to a solution I know.

But I wonder if, in contemplating the cause and cure, we might not do well to

consider its parallel on the larger world

I do not know when bigness, per se, becomes evil.

I honestly do not know where we draw the line and say this far, no further.

But we have seen that bigness-the corrupt Communist bigness of the limitless hordes of Asia-when they would have engulfed us.

We have seen that Red tide turned back and held back by a technological development which I still believe was a gift from

This "equalizer" has allowed our 7 percent of the earth's population strength sufficient to keep our enemies at arm's length. Which is perhaps quite enough to hope for in our time.

But now another kind of gargantuan growth within segments of our economy threatens to smother the small business tradition which contributed so much toward making us the powerhouse of this planet.

In the dairy industry, a thousand independents have been overrun by the "big four." These are already dominated by the "big two." These have only to become the "big one" and state socialism is effected. We've then had revolution by evolution. Defeat by default. And Khrushchev will have made good his vulgar boast.

Tonight I yield this problem and its inherent challenge to infinitely wiser ones than I. And there is no pretended modesty in what Lsay.

For I still stand in awe of the stature of Our statesmen. I believe with a schoolboy's Confidence that the American dream is still good and mostly because you are mostly good.

I entrust the problem to you with no recommendation for its disposition.

There is no man in this room who would

ask you to subsidize inefficiency.

There is none among us who believes we can make the small man tall by cutting off the giant's legs.

But I earnestly commend to your very prompt consideration the fact that we must enforce international peace as long as an amoral Godless religion threatens us from without.

And we must enforce ethics and morality in our domestic economy as long as an amoral conquest threatens us from within.

For the economic war in which we are engaged is altogether as much a struggle for survival as any military war could be.

As Congressman WRIGHT PATMAN once put

"There's an elephant dancing among the chickens."

Or to say it another way, "among the geese that laid the golden eggs."

At the outset I said storms are a part of the moral climate of life, and that I hoped to be able to satisfy you that you wouldn't really want it any other way. I hope you see what I'm trying so desperately to say, that this little earthly while is a testing time, right?

I mean a paradise is being prepared somewhere and we have to prove here that we deserve to be there. I'm not saying we're Roing to work our way. It is the persuasion of most of us, I believe, that it'll be by grace if we are saved. Yet it's going to be by our Works that we'll be known. We've got to prove here that we deserve to populate paradise. And if it were perpetual sunshine, there would be no victory.

So storms are a part of the normal climate of life. Sometimes we think our generation has been especially plagued with problems, but that's not wholly so. For every generation there have been dark clouds out there on the national or economic or international horizon. Storms sometimes took the shape of a military holocaust or an economic catastrophe, too much rain or too

little, but there have always been storms to test the mettle of men. Young people of every age have wondered if they should pursue an education or not. Young folks have wondered whether they should marry or not, whether they should bring babies into an era of regulation and regimentation-for there have always been these unanswered questions, these dark clouds out there on the horizon. They're a part of the normal year in, year out, necessary climate of life. you and I conceivably could roll out for our youngsters a plush carpet on which they could walk off into a problem-free future, don't vou see, Americans, it would not be in their best interests for us to do so? They deserve a crack at this test too. This is the shakedown cruise. This is where we separate the men from the boys. But if we can revive first in ourselves and then in our youth something of a basic American's creed, which may never have passed the pioneer's lips in this form, but I think he would have sald something like this, "I believe in my God and in my country and in myself, and in that order," then the horizon has never, ever been so limitless. If we can keep United States strong in our arms and in our hearts, thus to hold the Soviet at bay, and simultaneously to discipline ourselves domestically, internally, that we might once again become that beacon light in the fog of confusion which men might follow-as they will. They will follow if we are worthy leaders, but they will not be pushed.

The more I think about it the more I like this idea of an economic war which Mr. Khrushchev has declared. This is the kind of war every American mother's son can wage knowing why. It could be the best thing that happened to us since we dumped that overtaxed British tea into the Boston harbor. If we have left any of that old fire in the belly that characterized our granddaddies, this might be the kind of fight that will get our soft generation off its dead center and back into condition again.

In 7 years that head Red says Russia is going to increase her production 80 percent and wages 40 percent. You understand of course Russia is the promised land. For 30 years dictators have been promising Russians more bacon and beans and shoes for the baby. Dictators have to feed hungry people on polyanna promises because there isn't much else for them to eat. And Khrushchev also has to increase Soviet production in order to stay abreast in the astronomically expensive modern arms race. He didn't choose these weapons he had no choice. To protect himself against revolt from inside and weapons superiority from outside he has to make Russia more productive. Eighty percent more? Perhaps. Of course if you had only one peanut to eat today and you have two tomorrow you're a hundred percent better off tomorrow than today but you're still not very well fed by American standards. Also Russia coming from behind can be expected like an individual who has been ill to gain a lot of weight in a hurry. But if you continue to gain weight at that pace you'd become a monster. But let's assume that 7 years from now he will have increased Soviet production 80 percent. This according to his mathematics will be enough to overtake us. Oh for goodness sake. A year ago at this time the steel industry in the United States had produced 52 percent more steel than the year before. In 1 year. But then come to think of it there were 6 or 7 months last summer when he produced more steel than we didn't he? The forces which have quadrupled our national economy, our output, in the past 50 years are still at it. Our population has doubled since 1909, our production of goods and services has quadrupled. I mean despite depressions and recessions, we've continued to expand our economy an average of 3 percent per year compounding as we go. The Federal

Power Commission says we're outproducing Russia in electric power 3 to 1 and the edge is increasing. Russia is 20 years behind. we're 3 to 1 ahead and our lead is increasing. Now Khrushchev is no fool. He knows we're not going to stand still but he's a politician promising his constituents that the end of the rainbow is in sight. But according to the best estimates, Russia, even if she expands according to plan in the next 5 years, will have a \$401 billion economy by 1905. That's \$401 billion by 1965. Five years she has to get a \$401 billion economy. Ours, if we just keep on keeping on will be a \$510 billion economy by the end of this year. If we keep on keeping on. There is the rub. Orders from headquarters issued February 1959 to Reds in the United States intercepted by the FBI instruct Reds to infiltrate, undermine, and degrade our economic system. You see, he believes while the Russians are chasing our mechanical rabbit he can toss a monkey wrench in the rabbit's machinery.

Through psychological sabotage, Khrushchev is going to stir up all the labor agitation possible in the United States, thus to retard our economic progress. He will make every effort to reduce American workers to a 4-day week or less. He'll contribute whenever possible to restlessness of American workers, urging them to seek higher pay for less production, thus to build a bonfire of cheap dollars under our economic security. Khrushchev declared economic war and yet, did you recognize the gall with which he sent Mikoyan over here, trying to make a deal for steel pipe, sheet steel, and whole chemical factories In exchange for which he wanted to trade us cheap Russian furs and limitless quantities of vodka. Khrushchev might well have written, not only, "we will bury you," but, "we'll get you to furnish the shovel and do the digging." All I'm trying to say, Americans, is that he's on the defensive now.
We've got it made. Unless we do some darn, fool thing and go to sleep like the rabbit who thus was overtaken by the tortoise. Unless we get lazy, and demand longer coffee breaks and earlier retirement and less competition and cheaper dollars. Unless we lie down on the job or get drunk and fall down on it, United States of Americans are not only going to stay strong enough to enforce peace, but we're heading into the most magnificently, prosperous era in the history of the world. Now, don't stop me unless you've heard this lately. Once upon a time there was a wise old hermit who used to live in the hills of Tennessee. He used to be able to answer any questions the youngsters of the community would bring to his hillside cabin. In every community there is one scallawag, one tousled-headed little fellow who is always throwing spitballs at the teacher and who is always getting himself into trouble and always leading others astray. There was one such in this com-munity. One afternoon, he gathered his munity. One afternoon, he gathered his cohorts about him and said, "I have an idea how we're going to fox that old fellow up there on the mountain. He thinks he's so smart. I'm going to catch me a bird and I'm going to hold it in my cupped hands and we'll go up there and ask him what it is. He'll guess right, he always does. He'll say it's a bird but then I'm going to ask him, 'Is it alive or is it dead?' If he says it's dead. I'll let it fly away and prove him wrong. If he says it's alive, before I show it to him I'll crush it to death." youngsters caught a small bird and the ringleader held it in his hands. They ran up to the hillside cabin and rapped on the door. The old hermit came to the door and the boy said, "What have I here, old man?" The old man of the mountain said, "Why it appears to me it's a bird you've caught there boy.' And, the lad said, "But is it alive or is it dead?" The wise old hermit said, "It is as you will, my son." That is the whole of it. Americans, you have here captured the elusive eagle of individual liberty. Now, you

can love it and feed it and watch it fly, or neglect it and starve it and it will die. It is as you will. The future is in your hands. Thank you all very, very much.

Friendly Race Relations in Oklahoma

EXTENSION OF REMARKS

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 26, 1960

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a column written by my good friend, Ed Livermore, publisher of the Sapulpa (Okla.) Daily Herald, and which appeared in that newspaper under date of May 20, 1960. Mr. Livermore is also president of the Oklahoma Press Association.

Too often in the past, detractors of our country have been quick to seize upon the symbol of "Little Rock" as being a typical example of the alleged friction and bitter feelings between races. I remind them that the story of what has happened at Sapulpa, Okla., is evidence of the kindness and cooperation that actually does exist among so many of our people of different races who have learned to live as friend and neighbors in the same community. In his column, Mr. Livermore shows that the symbol of "Sapulpa" more nearly typifies the spirit of Oklahoma and America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE EDITOR'S NOTEBOOK (By Ed Livermore)

Perhaps unnoticed by the professional agitators who seem to be making a good living out of racial differences, was the fact that some 400 white people from this community spent last Sunday afternoon helping the Negro population of Sapulpa clean away the debris left by May 5 tornado.

Oklahoma has enjoyed very good results in its integration program. Race riots, such as the people in the northern metropolitan centers constantly fear, are unknown in Oklahoma. It would appear that leaders of both races in Oklahoma have a greater appreciation for understanding and mutual respect than do some of their northern neighbors.

The tornado winds which swept through the colored section of Sapulpa 2 weeks ago yesterday did damage that still is being counted. Citizens of the community already were gathering in the northwest part of town before the winds had died away. A hundred or more residents of this community spent the night helping Negro families find shelter and other necessities that had been swept away by the storm. At midnight the Herald office was receiving many offers of food, clothing, and shelter for the displaced Negro families.

Starting bright and early Friday morning and continuing up to this week's communitywide cleanup, countless people donated of their time to help the families who were hurt worst by the storm. This was in addition to the outstanding efforts of the professional disaster organizations whose personnel have been such a help in this hour of greatest need.

We mention this not to single out anyone, or group for personal credit. We mention it to show that too often the good that people accomplish is unnoticed. The efforts of both races, working side by side on the hillside last Sunday were for more newsworthy than lunch counter sitdown strikes, or the gangster tactics sometimes practiced between representatives of both races in the teeming jungles of the East.

We wonder if such a relation possibly exists between the two races in the so-called liberal sections of the country?

It's one thing to talk in glowing terms of respect, understanding, and human rights—and quite another to put these qualities into action—spontaneously, and without regard to race or color.

Last Sunday afternoon was a prime example of why integration has been without fuss or fanfare in Oklahoma. It's a lesson many other sections of the country would do well to study.

Taking Stock After the Summit Breakdown

EXTENSION OF REMARKS

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1960

Mr. COHELAN. Mr. Speaker, since the breakdown of the summit conference, a number of Members, myself included, have called for a full report by the administration on the series of about-face policy reversals and other mistakes which preceded and accompanied that breakdown.

At the same time, however, we must look ahead and plan new action to counter the threats and insults of Soviet Premier Khrushchev, and with that in mind, I submit the following article by Columnist Marquis Childs in which he takes stock of what can reasonably be expected in the way of continuing disarmament negotiations:

THE NEXT MOVES IN THE COLD WAR (By Marquis Childs)

On the day the summit blew up the London Times had in its letters to the editor column a communication with some wise things to say about this business of reacting to the Russians. The writer, William Sargant of the Department of Psychological Medicine of St. Thomas Hospital in London, pointed to the way in which the Soviets succeed in keeping the West off balance by taking first one line and then another by shouting peace one moment and aggression the next. He suggested that this was a deliberate technique patterned after the discoveries of the great Russian scientist Pavlov, showing how animals can be broken down by conditioning them to one set of signals and then deliberately altering those signals.

Pavlov's dogs went berserk when the lights flashed on and off in a different pattern from that to which they had become conditioned at feeding time. We in the West took the Russian soft line on peace and now there is evidence of frenzied reaction to the hard line. The analogy is too close for comfort.

Once again we are rehearing the evil deeds of communism as though we had not long ago had every reason to understand the real nature of the Communist challenge. The Kremlinologists are dredging up old fleshcreeping tales of Stalin's death and Khrushchev's ruthless deeds. It is as though the bogeys had to be taken out of the closet to frighten the children again.

The stress from the Eisenhower administration has been almost entirely on the production of more goods for a consuming public engaged in the pursuit of happiness through gadgetry. Western Europe seems to be following the American lead. With the spread of installment buying a consumergoods boom is developing that resembles the American boom.

Obviously, the West should not and could not, in meeting the Communist challenge, imitate the austere garrison society of the Soviet Union. Khrushchev, in his avowed intention of exceeding the American living standard, has spoken almost enviously of the horn of plenty that spills out in the West. But, nevertheless, a large question remains as to how this lush, freewheeling society reacts to the new signals out of Moscow.

The nuclear test talks which have been going on in Geneva for 18 months are a case study. After the solid months of concentrated effort that have gone into them, with all three negotiators—James Wadsworth for United States, Sir Michael Wright, for Britain, and Semyon Tsarapkin for the Soviets—deeply desirous of achieving an effective system of control and inspection to end testing, neither side wants to be responsible for breaking off the talks. But because political decisions had to be taken at the top on major issues these talks cannot now succeed, and it is vain delusion to pretend that they can.

In Washington the pressure will certainly be great to begin weapons tests, looking to the smaller nuclear arms that are the goal of those arguing for pushing on with the program. There should, however, be no illusions about the consequences if the decision is taken to go on with military testing. The Soviets will immediately follow suit.

In playing the game of the nuclear chipon-the-shoulder the Soviets can always win because they have no inhibitions of conscience or world opinion. Their propaganda will be to the effect that since the United States started it they were forced to follow suit.

The outlook for the 10-nation disarmament conference is even more certainly failure—just possibly the nuclear test talks can be kept flickeringly alive for the next 6 to 8 months while disarmament is bound to grind to a dreary propaganda halt. Due to resume on June 7, the conferees had expected that they would get from the summit a new directive, limiting the objectives in the first phase to what might be at least remotely possible. Without such a directive they will take up where they left off, which was nowhere. That is to say in a propaganda stalemate, with the Soviets demanding sweeping overall disarmament and the West insisting on a step-by-step approach with controls applied as each step is taken.

Turning Back the Pages

EXTENSION OF REMARKS

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Thursday, May 26, 1960

Mr. YOUNG of North Dakota. Mr. President, for more than 30 years far-sighted and public spirited citizens have

been working and planning for the development of the Missouri River Basin.

Thirty years ago the development of this great river and its resources was little more than a dream and only a few realized its great possibilities and what it would mean to the future resources and wealth of the Missouri Basin and the Nation as a whole.

I was happy to read in an editorial appearing in the Minot Daily News of Minot, N. Dak., under date of May 21, 1960, an appropriate tribute paid by a great citizen of Pierre, S. Dak., Mr. Robert B. Hipple, to the late Kenneth W. Simons, who for 18 years was editor of the Bismarck Tribune of Bismarck, N. Dak

Ken Simons was a very good personal friend of mine. I know something of the effective pioneer work he did in securing authorization from Congress to develop the Missouri Basin. I was very happy to note this well deserved tribute paid to my late and respected friend, Ken Simons, by the Minot Daily News and Mr. Hipple.

I ask unanimous consent to have this editorial printed in the Appendix of the

RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Minot Daily News, May 21, 1960] TURNING BACK THE PAGES

At a regional meeting of the Mississippi Valley Association at Bismarck this week, one of the pioneers of water conservation, Robert B. Hipple of Pierre, S. Dak., took occasion to unfold some of the early history of the great movement to make a semiarid area bloom. This man has some basic qualifications in his own right, for he introduced Gen. Lewis A. Pick, Chief of the Corps of Engineers to Gienn Sloan of the Bureau of Reclamation, the fruit of which was the Pick-Sloan plan for the development of the Missouri Valley.

Mr. Hipple took occasion to inform newcomers in North Dakota's water conservation movement and refresh the memory of pioneers, about a man who made a lasting con-

tribution to the cause.

Reference was had to Kenneth W. Simons, editor of the Bismarck Tribune from 1930 to his death in 1948.

Editor Simons preached the gospel of water conservation and probably more than any other single person was responsible for the enactment of the Water Conservation Act by the State Legislature of North Dakota.

He was appointed a member of the first commission and served as vice chairman.

While everyone in North Dakota today is enthusiastically supporting the diversion of the Missouri and the water program in general, that was not the case 30 years ago. Water meetings were attended by a handful of men, who were criticized for fantastic notions.

But the ground was well tilled and the seed of sound thinking finally germinated. The task of converting Congress and the administration today may seem monumental to some, but it was not nearly as difficult as the pioneer work in North Dakota.

Ken Simons and a very small group of men who projected their thinking far into the future, did a magnificent job, receiving little or no credit at the time and unfortunately remaining pretty much unknown to the present generation.

That is why we bow in admiration for the thoughtfulness of a South Dakota gentleman for an appropriate tribute to a man who did an outstanding job.

Mayor Willy Brandt of West Berlin

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I include a recent interview in Berlin with Willy Brandt, mayor of West Berlin, by William Randolph Hearst, Jr., editor in chief of the Hearst newspapers:

(By William Randolph Hearst, Jr., editor in chief, the Hearst Newspapers)

BERLIN.—For 2 hours on Friday evening a group of us sat around watching a TV show and later discussing the performers over an occasional glass of schmans.

occasional glass of schnapps.

This is not ordinarily of sufficient importance to base a story on, except that this particular group was headed up by Willy Brandt, the dynamic mayor of West Berlin, and several members of his staff.

And the TV show we watched together was the telecast of Nikita Khrushchev's speech in the East Berlin Sports Palast about a quarter of a mile away—the speech in which he toned down some of his previous tough talk about this beleaguered city.

It was a fascinating experience to sit there with Mayor Brandt and observe his reactions while Khrushchev blasted away on the screen about his intentions toward Germany in general and West Berlin in particular.

Frequently the mayor translated for me, and this was especially interesting when the Communist boss singled him out as his target.

I have news for Chairman Khrushchev. He didn't frighten Willy Brandt very much. In fact, Willy laughed aloud at some of his more outrageous remarks. And the whole room broke into a spontaneous roar when the TV camera, seeking out audience reaction to Khrushchev's victous attacks, focused on a comrade in the midst of a wide yawn.

Not that Willy Brandt doesn't take Nikita Khrushchev very seriously. He is the leader of a city of 2 million people whose existence as a bastion of freedom is threatened almost

daily by the man from Moscow.

So he listened closely to what Khrushchev had to say about his future intentions. When the TV show concluded, we moved into the mayor's office where the latter brillantly and concisely analyzed Khrushchev's speech in response to questions from a Hearst headline service panel which included Kingsbury Smith, publisher of the New York Journal-American, Frank Conniff, national editor of the Hearst Newspapers, and Serge Fliegers, chief of the Paris Bureau of our newspapers.

He also answered for us a wide variety of other questions about international affairs which you will find—and which I strongly urge you to read—in an interview on another

page of this newspaper.

Let me give you a few impressions of this outstanding young leader. He's 46, a tall, fair-haired, well-built, good-looking man. He has a strong face and gives you the impression of personal dignity and a firm character. At the same time Mayor Brandt has an ease of manner and a sense of humor which makes you think you've known him for a long time.

And in truth, we Americans have known him for a long time and have appreciated his courage in standing up to the strain of the continual crisis under which Berlin lives. Willy has visited our country several times and knows a lot about us, too. He speaks excellent English, which makes it easy for us reporters to talk with him.

Willy Brandt is no stranger to totalitarianism, having been chased out of Germany by Hitler as a convinced anti-Nazi. Right now he's the right man in the right spot—a hot spot, to be sure, but one that he can handle.

It's my impression that he's going a long way in German politics and will play an ever more important role in world affairs. He's of the coming generation which will come to the fore in Europe when the great elder statesmen like Charles de Gaulle, Konrad Adenauer, and Dwight D. Eisenhower leave the scene.

At the end of Khrushchev's speech we all got up and walked out in disguest when Walter Ulbricht, leader of the East German Communists, toasted Khrushchev following his speech for waging a war for peace at Paris.

How ridiculous can you get?

As a matter of fact, if he had played the role of the victimized innocent party, he might well have collected a good deal of sympathy around the world, and possibly even some concessions at the bargaining table for himself and his side.

Instead, by his unprecedented insults against President Eisenhower personally, then by refusing to answer De Gaulle's diplomatic notes, and finally by his incredibly rude performance before the press of the world, he affronted not only the statesmen he dealt with in Paris, but the whole of the reading and thinking public of the civilized world.

It is even possible that Khrushchev may lose face in his own world. When the Russian people ultimately learn of his clownish behavior—and they won't learn it from the party-controlled press—they, too, may take a dim view of his Paris antics.

Of course, they can't throw him out, because they don't have any free elections. But one of these days he may find himself no longer riding in that block-long Communist convertible Zil of his, but back behind the wheel of a sputtering, 4-horsepower model T Moskvitch.

A few summit thoughts while flying to Berlin to interview Mayor Willy Brandt:

It's now conceded by practically everybody that Khrushchev went to Paris determined in advance to wreck whatever possibility there existed for making any agreements with the Western allies.

If we had not unwittingly and regretfully handed him a perfect excuse in the form of the U-2 incident, he would have managed to feel insulted and worked himself into a tantrum for some other reason.

That he succeeded in accomplishing his goal is now historical fact.

But what he has just as surely accomplished—although unintentionally—is that, by the heat of his words and temper, he has fused the solidarity and determination to stand together of the three great Western allies.

Even that portion of the free world's press which can usually be depended on to put the United States in the wrong light over the smallest differences between us, and which only a week ago was making some pretty snide remarks about "L'Affaire U-2," were unanimous in their praise of Ike's restraint and dignified conduct in the face of K.'s boorish behavior.

It's like an outsider butting into a family quarrel. K. undoubtedly hoped and sought to divide the allies. After reading the abovementioned press, he probably thought he could join our critics and create a real schism.

From Sumter to Summit

EXTENSION OF REMARKS

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES
Thursday, May 26, 1960

Mr. MONRONEY. Mr. President, the Old Timer, of the Lehigh Valley in Pennsylvania, often called in recent years, without challenge, the dean of America's working newspapermen, is dead.

One of his friends has said that Brit Roth, of the Allentown Evening Chronicle, lived from Sumter to the Summit. Roth remembered the night a neighbor brought the news that Lincoln was dead; yet he continued writing in the day of rockets and satellites.

His newspaper career encompassed a printer's devil phase in the days of hand-set type, straight reporting after lino-types arrived, and column writing in the present era of teletypesetting with electronic tape. He graduated from newsboy to newspaper office the year Custer made his last stand and Bell invented the telephone. He died last week at 98.

As a former newspaperman, I was fascinated with the story of his life and career as reported by the Allentown morning paper. He covered Presidents from Grant to Wilson.

I ask unanimous consent to include the story in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Morning Call, May 19, 1960]

DEAN OF WORKING NEWSMEN—A LIPETIME SUMTER TO SUMMIT BRIT ROTH, CHRON-ICLE'S OLDTIMER, DIES AT 98

Brit Roth, the Lehigh Valley's beloved "Oldtimer," died last night.

More formally he was Britain Garrett Roth, dean of America's working newspapermen, author of the Evening Chronicle's "An Old-timer Remembers" column. Death came at 9:40 p.m. in the 99th year of an eventful lifetime that began in the same year Fort Sumter was fired upon.

Brit died peacefully in the bedroom of his home at 112 South Madison Street, Allentown, where, 2 weeks ago, he had gone to bed, not sick, but "tired."

Gradually his strength ebbed, although his mind remained sharp and alert. In these fading moments, one of the oldtimer's last thoughts was for his friends in the newsroom.

"Give my regards to the gang and tell them I was thinking of them." he bid one of his last visitors during the past week.

Through the past several months Brit's health had been on the downgrade. Many of his fellow newsmen who visited him at home felt they had seen him in the Call-Chronicle newsroom for the last time.

Today the busy keys of the office typewriters will seem a little muted. Part of the heart, the lifeblood of the newspaper, is

missing. Brit is gone.

For years, there in the corner of the newsroom, Brit had pounded away at his stories with a peculiar, staccato pace that was all his own. It had the same bounce and vitality as his walk.

Each day, until only a short time ago, Brit had made his way jauntily to his post. As the years piled up and his continuing pace

became more remarkable, his arrival in the office became known as "the daily miracle."

No matter how heavy the weight of passing time, Brit never faltered in his optimistic forward look. There were extensive celebrations for Brit when he passed the 90 mark. It was at that time he said:

"At 90 some people only look back with no thought for the future. I like to look ahead. I do not know when my time will come, but until it does I will look toward the future and won't live in the past."

Nor was Erit one to husband his strength, to tread a cautious path in fear of injuring his health. Brit admitted on his 91st birthday that he went to bed late, got up early and ate and drank what he pleased.

Slight of stature—he was only 5 feet 1 inch in height—he never seemed small in size when you were with him.

As a friend remarked on one occasion, "It is strange how so small a body can house so great and youthful a heart."

Although Brit was a person well known and loved in his home community throughout his lifetime, it was during the late years, as he continued active in news writing work, that his fame spread. There never was a challenge raised to his claim as the dean of America's working newspapermen.

On Brit's 94th birthday the story of his life and work was given lengthy coverage in the New York Times.

Two television appearances—one over a nationally aired show were made by Brit on recent birthday anniversaries. He was guest of honor on Philadelphia Channel 3's Open House program when he celebrated his 91st birthday.

Then 2 years later he appeared on the nationally televised "Life Begins at 80" out of New York City. Keen and alert despite his years, he came off top man in a battle of wits with one of the show's principals.

A SIXTH WARD "NATIVE"

Brit was always proud of his claim to having been born in Allentown's Sixth Ward. Actually he was born November 22, 1861, in what was then the Borough of Allentown.

At that time the community had a population just over the 8,000 mark. The Roth homestead was at Third and Liberty Streets.

When Allentown became a city, on March 12, 1867, this area was in the first of five wards. Later the first was divided into the first and the sixth wards and the site of his home fell within the limits of the sixth.

Brit had a seafaring father. He was William Roth. His mother was Maria Wasser. William Roth was a navigator on the old East India Line and in plying between Liverpool and Calcutta he made nine trips "around the Horn." Brit was named after Britain Garrett, head of the East India Co. He was the eldest of 12 children.

From his early Civil War years Brit retained only one vivid memory. That was of one dark night when there came a heavy pounding at the rear door. When his mother opened the door, one of the neighbors, outlined in dim lamplight, said dramatically: "Lincoln was shot."

HIS SCHOOLING

Brit's introduction to education came at the old First Ward School, located in a room above Devenny's saloon at Front and Tilghman Streets.

He went on in the field of higher education to attend Lewisburg Academy (Bucknell University), where he went to school for 2 years. In later years he also spent 2 years attending St. Stephen's College on the Hudson River in Annandale, N.Y.

Hustled back to Allentown from Lewisburg in 1876, by his father, after a window-breaking escapade at the academy, Brit started, at 15, to learn the trade of compositor at the old Chronicle and News.

BROAD CAREER

Eventually his lifetime career in the newspaper field covered work as compositor, columnist, court reporter, church page editor, general duty newsman, music and drama critic. It even included an almost-forgotten stint as a sports reporter.

Brit actually started his newspaper career as a boy when he was a carrier of the old Lehigh Register. He had 84 subscribers on his route. They were so widespread, he used to recall, that it took him a half day to get around.

The year 1876, when Brit became a printer's devil, was an historical one in the annals of the country. That was the year Custer made his famous last stand against the Sioux Indians at Little Big Horn. It was the year Bell invented the telephone. It was the year Wild Bill Hickok killed a man in a gun battle, and it was the year the Centennial Exposition opened in Philadelphia.

ITCH TO TRAVEL

After 4 years as a Chronicle printer, Brit got the itch to travel. His trail led first to New York City, where he became a compositor for magazine publishers J. W. Pratt & Co. Later he was employed by McKesson & Robbins as a typesetter of medical formula books in the Spanish language.

Like many printers and newspapermen of this era, Brit didn't stay long in one place. Hopping a boat, he went to Savannah, Ga. It was too hot for him there so he shifted to Atlanta, and a stint on the Atlanta Constitution.

Next stop in his perambulations was Cincinnati, a lively town, he liked to recall where he worked for the Times-Star. Then he moved on to Troy, N.Y., and was employed there on the Troy Times.

Late in 1902 the old home town beckened and he came back to Allentown and the composing room of the Chronicle once more.

SWITCH TO NEWS WRITING

Then, at the age of 41, he switched over to writing about the news. His first assignment was the community of Slatington.

A short time later, the late George Zimmerman, then city editor of the Chronicle, made him a permanent member of the newspaper's reportorial staff. There were two reporters on the staff, Brit and the late Eugene Quinn, who later became city editor of the paper.

Brit covered everything east of Sixth Street at that time, and Quinn covered the city west of Sixth. Those were the days of daily visits to aldermen, undertakers, and other news sources—all on foot.

During the major part of his newspaper career, however, Brit was the court reporter of the Chronicle. He covered this beat for 32 years and during that time saw much of the city's news history made.

Holding the top spot in his memory was his coverage of the famed Mabel Bechtel murder case. Still unsolved, this mystery gained national attention at the time.

Brit also witnessed the last hanging in Lehigh County. It was that of George Schaeffer, who died on gallows set up in the long corridor of the county prison for the murder of Leopold Erdmann.

FLOOD, FIRE, TRAGEDY

But Brit's beat covered many events, which he chronicled in his own inimitable style. There was the flood of the early 1900's which washed away the Hamilton Street Bridge. There was the fire which destroyed the Bittner-Hunsicker Building.

One of the most tragic stories he was wont to recall was the collapse of a quarry wall near Ormrod. Twenty men died, trapped under falling rock.

Brit was resourceful in getting to the source of the news. One day he got a call that there was a big fire burning out along the Seventh Street Pike. Dashing from the office, Brit jumped into a horse and buggy tied in front. Without waiting for permis sion, he whipped the horses into a gallop and was off to the fire.

"The cop yelled at me as I crossed the square, but I just kept on going," Britt recalled.

GREAT AND NEAR-GREAT

During his years in the newspaper field, he met many of the great and the near-great. At one time or another he covered stories concerning, or met personally. Presidents Grant, Garfield, Arthur, Harding, Taft, Cleveland, Teddy Roosevelt, and Woodrow Wilson.

William Jennings Bryan was the principal in one of his interviews. Pennsylvania Governors Pennypacker and Sproul and Senator Boise Penrose were others of whom he wrote.

Brit also recalled meeting and interviewing Mme, Schumann Heinke and Dr. Thomas Cook, of North Pole fame, who gave Brit an autographed copy of his book.

When Glenn Curtiss attempted a daring flight from the Allentown Fairgrounds to Philadelphia, Brit was there to cover the

event and talk to the famed flier. In 1926 he held up the presses for 2 hours

as he brought in the story of the triple shooting that resulted in the death of Sheriff Mark L. Sensenbach, his deputy, Harry Siegfried, afong with Granville Holben, the man they were trying to arrest.

In the blizzard of 1888 Allentown was cut off from the outside world for 4 days. Business was at a standstill, Brit remembered, and the city was buried under 4 feet of snow.

Brit was already 75-a time when most Persons would be ready to call it quits to a career such as his—when in 1935 he fell and broke his ankle. Bedfast, he called the office and told them to send him a typewriter—and so was born "The Old Timer Remembers."

Through this, his fame spread. He culled from his prodigious memory great events of the past, and made them an interesting sub-Ject for the readers of his column on the Evening Chronicle's editorial page.

The column brought to Brit many new friends, and it was his delight to answer the many letters that poured in to him from these readers.

One of his recollections in these columns was of his stint as a sportswriter when he Went back to Lewisburg in 1911 to see Muhlenburg College and Bucknell University tangle in a gridiron match. The press stand in those days, he recalled, was in the grandstand, and this same grandstand was a hillside overlooking the football field.

NEWSPAPER EVOLUTION

When Brit started as a newsman, stories were written and set in type by hand. Through the years he saw equipment and facilities in the newspaper field evolve into a pattern backgrounded in the electronic age.

Brit lived to see the miracle of sending photographs over the wires—telephoto. He saw linotype operation become even more complex with the advent of teletypesetting, transmission of material set direct by electronic tape.

He was born into the age of candle and kerosene light and an infant telegraph system. He lived to see electricity, the tele-phone, automobiles, and jetplanes, all mighty adjuncts to the speedy transmisison of news.

On his 96th birthday anniversary, Brit was Overjoyed at an invitation to visit the Army's Nike missile station near Norristown, where he was the subject of a feature story.

MUSICIAN AND SINGER

There was another facet of his life perhaps not quite as well known in recent years. That was his abilities as a musician and singer.

Starting in the Grace Episcopal Church boys' choir in 1888, he later became a member of Dr. J. Fred Wolle's Church of the Nativity choir in South Bethlehem.

When Dr. Wolle formed the Bach choir, Brit was a member of the bass section of the Church of Nativity choir that en masse became charter members of the Bach organization.

Brit also at one time sang in St. George's choir in New York City. He was a charter member of the Euterpean Society, later to merge and eventually become the Oratorio

PINAFORE IN DUTCH

As a singer Brit was in the cast of many local amateur musical productions. One that he liked to recall above all others was the production of H. M. S. Pinafore in Pennsylvania Dutch. The company gave over 30 performances all over this section of the country.

Brit became the organist of the Episcopal Church of the Mediator and directed its choir also from 1912 until 1919. He continued membership in this church to his

Many times, especially as he advanced in years, he was feted by fellow newsmen. On these occasions he was showered with gifts in remembrance of his role as the dean of news gatherers.

Perhaps the parties he liked the best were the yearly birthday parties in the Evening Chronicle newsroom. Members of the staff contributed to Brit's ale fund at these parties, bought him a big cake and supplied the coffee for the party in which everyone took a lovous part.

Highlight of these celebrations, for Brit, the feature that always brought a twinkle to his eyes, was the birthday greeting given him by the feminine members of the staff. They all lined up to give him a hearty buss.

Also during these late years Brit was honored with a 50-year pin as a member of Barger Lodge, No. 333 F, and A. M. Brit was a life member of the American

Newspaper Guild and a former member of the Allentown Elks.

He also was affiliated with the Allentown Rotary Club and was an honorary member of the Lehigh Valley Club.

He was preceded in death by his wife, Ellen Belford Roth, and his daughter Ethel, Mrs. Robert Ochs, Sr.

Surviving are his daughter Marjorie, with whom he resided, a son W. Belford, Allentown, Route 2; two sisters, Mrs. Bernard Repass, Bala Cynwyd, and Nan Roth, Allentown; four grandchildren and seven greatgrandchildren.

Services will be at 10 a.m. Saturday in the Episcopal Church of the Mediator, Allentown. Viewing will be 7 to 8 p.m. Friday in the J. S. Burkholder Funeral Home, 1601 Hamilton Street, Allentown.

School Construction Assistance Act of 1960

SPEECH

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10128) to authorize Federal financial assistance to the States to be used for constructing school facilities.

Mr. GEORGE. Mr. Chairman, I would like to add my support for this legislation to the views already expressed by so many of my able colleagues.

I feel that the time has come—in fact past due-when it is crucial for us to take action. It has been mentioned many times since this debate began that we currently have a backlog need for 132,400 additional classrooms in our elementary and secondary schools. This is an alarming figure but I do not feel that it adequately portrays the situation that actually exists. It is easy to shrug off the problem when you merely look at an abstract number of missing classrooms.

What I feel we should concern ourselves with for a moment is what this shortage actually means in terms of the effects on our children. The Office of Education has estimated from the State reports submitted to it that there are currently 1.88 million children in excess of normal classroom capacity. It has been further estimated that 10 million students are actually being penalized by this shortage. When there are 45 students in a classroom only 15 are listed as "in excess of normal classroom capacity" but all 45 are receiving inferior education due to the overcrowding and to the consequent lessening of the effectiveness of the teacher. This overcrowding means that thousands of children can attend school for only half of the day, and as much as 180 school hours can be lost to the child through such split sessions—almost 2 full months of schooling that the child was entitled to have. Or it means overcrowded classrooms with insufficient individual attention and assistance from an overburden teacher. Finally, it means that thousands of children are attending classes in makeshift or obsolescent facilities. To be even more specific it was reported last fall that in one city the high school students were attending classes in tents and 30,000 of the more than a million public school pupils in the county were attending classes in double shift. This is just one example of the situation that exists in some parts of every State in the Union.

I wonder if my colleagues realize that 10 million students represent almost onethird of the entire public school enrollment. Certainly, when the problem is considered from this point of view-that one-third of all our schoolchildren are being handicapped by this shortagewe cannot dismiss the matter lightly and just say that the State and local governments will eventually take care of the problem. Eventually is not soon enough.

It seems abundantly clear to me that the States and local areas will not be able to erase this deficit. Although they have been making record-breaking school construction efforts for the last few years they are barely able to meet each year's new enrollment and replacement needs. And all indications are that the State and local governments will not be able to continue these record-breaking efforts. In 1957-58 they were able to build 72,100 new classrooms.

In 1958-59 the figure dropped to 70,000. For this year, 1959-60, the figure is expected to drop to 62,700. Many States cannot spend the funds requisite for an adequate educational system because many school districts have no source of taxation by which needed revenue can be raised.

An infusion of Federal Government funds to assist our schools in catching up with this backlog is fully in keeping with our tradition and our spirit as a Nation. The President himself explained the philosophy behind this approach in his special message to the Congress on education on January 12, 1956:

The responsibility for public education rests with the States and the local communities. Federal action which infringes upon this principle is alien to our system. But our history has demonstrated that the Federal Government, in the interest of the whole people, can and should help with certain problems of nationwide scope and concern when States and communitiesacting independently-cannot solve the full problem or solve it rapidly enough.

Clearly, this is the kind of situation we face today in considering the school classroom shortage.

Our State and local governments have demonstrated their inability to meet the classroom needs that arise each year due to increased enrollment and the need for replacement of obsolete facilities. If the Federal Government will help them to to erase this backlog, they may then be able to meet the yearly problem alone.

I would also like to voice my approval for extending this bill to include funds for teachers' salaries as did the measure passed by the Senate. There is an indisputable shortage of qualified teachers across our country. Within the next 5 years 3,300 additional teachers will be needed in the State of Kansas, alone. We cannot hope to attract more qualified individuals into the teaching profession unless the salary level is raised; and the State and local governments cannot concentrate on raising teachers' salaries when they are forced to devote a substantial amount of their budgets to attempting to provide enough classrooms to house their students. I feel that we must assist both with construction and with teachers' salaries at least until the backlog of construction needs are erased.

The primary objection raised to any proposal for Federal funds for classroom construction and teachers salaries is that such a measure would lead to Federal control of education. I would like to take a moment to consider this proposition. For over 10 years we have been allocating funds for classroom construction and for operating expenses-which includes teachers salaries-under Public Laws 815 and 874. Surely these should be good test cases for whether this type of assistance does indeed lead to Federal control. Prior to serving in the Congress I worked as regional attorney approving applications under these laws, and I never saw any evidence of the "creeping Federal control" which the opponents of this bill would have us believe must necessarily follow. Furthermore, it has come to my attention that the University of Alabama's College of

Education recently conducted a survey by means of a questionnaire submitted to a cross-section of school superintendents in more than 3,000 school districts receiving assistance under these two laws. Ninety-three percent of the superintendents felt that this aid had not constituted a threat to State and local control; 5 percent termed the threat "little"; and 2 percent were undecided. None of the superintendents considered the threat great.

The interests of national defense, the danger of the Communist threat, of the need for an expanding economy, and of the need for maximum development of each individual citizen demand that we strive to give each of our students the best possible educational opportunity. They certainly are not receiving this opportunity when they must be taught in overcrowded, obsolete classrooms, on double-shifts, or by overworked teachers. No better investment can be made than in the education of American youth. It is an investment in the future to preserve our democratic way of life. Therefore, Mr. Chairman, I strongly urge passage of this legislation as in the best interest both of the Nation as a whole and of each individual citizen. It is vital and it is necessary.

The Soil-Our Stewardship of God's Bounty

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Thursday, May 26, 1960

Mr. HUMPHREY. Mr. President, the observance of Soil Stewardship Week, May 22 to 29, is an appropriate time to recall that we each have a responsibility to care for our inheritance of the soil and to bequeath it a little richer than when we received it to future generations.

Father Francis Hayden, rural life director of the Roman Catholic diocese of New Ulm, Minn., emphasizes the Christian responsibility of soil stewardship in a column in the May 20, 1960 issue of the Catholic Bulletin of the archdiocese of St. Paul and diocese of New Ulm.

Mr. President, I ask unanimous consent that Father Hayden's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

CATHOLIC RURAL LIFE-SOIL WE SAVE WILL HELP FEED FUTURE GENERATIONS

(By Francis Hayden, director of Catholic Rural Life, diocese of New Ulm)

GAYLORD, MINN .- To remind us of our responsibility toward God's bountiful land and to make us grateful for its soil and water and crops and forests, which have so comfortably clothed and fed and housed us, the National Association of Soil Conservation Districts has asked us to observe the week of May 22-29, 1960, as Soil Stewardship Week.

The land is our inheritance. It is ours to protect and use but not ours to waste or

It is difficult in this land of surpluses to give serious thought to the word "survival." Yet that will be a serious concern of the generations that will follow us if we do not regard conservation of our land as a matter of conscience.

Plato, one of the greatest of Greek historians, wrote an amazingly accurate and technical account of man-made soil erosion.

He observed that after several brief centuries of deforestation, accompanied by the searing of hillsides and plains with soil-devouring gullies, the Greek farmers finallly were compelled to turn to the sea for a live-

While it converted Greece into a seapower, it likewise marked the beginning of her downfall as a great nation, because Greece became dependent upon other people for her food, fiber, and fuel.

The farmer knows that although ours is an age of automation, there is nothing automatic about what happens between the planting of his fields and harvest time. During that time, there is the unpredictable weather with its hall and drought and floods.

Even in favorable weather, there are the varieties of insects and diseases that destroy the crops. Man's helplessness against these forces of nature has made him realize his dependence upon divine providence.

Thus each year he turns to God as he prays fervently for a good harvest.

It is with humble faith that skillful hands pause from work to be folded in prayer and that sweating brows bow before the God of mercy and goodness as we ask His blessings on our fields.

Prayer will have to be accompanied with care because, if the land is not cared for. we will have wasted fields and impoverished communities.

The National Association of Soil Conservation Districts reminds us:

Where the land is dry and bare the wind lifts its lifeless bulk into the sky and may move it hundreds of miles in the form of giant dust storms. It abrades as it passes. It damages where it falls.

"Rains falling on unprotected land collect and gather force as the water moves downhill seeking outlets in the rivers and the oceans. As the gathering waters speed downward, they cut into the soil, leaving rills which widen and deepen into gullies.

"The unhindered waters dissolve the soil and become mud-laden rivulets and streams. finally they deposit their burden of lifeless sediment over fertile bottomlands and over roads, in harbors and riverbeds, and almost always in a form and manner worse than useless.

"The steward of the soil, by his care, would spare his neighbors near and far from the consequences of such waste.

"The steward knows, as he conserves the soil, that other men and other families depend now and forever on the produce of an ever-fruitful land.

'He recognizes that the earth is the Lords' and that it was placed here for the benefit of all His children. And so the steward serves God as he serves men everywhere.'

Concern for the land belongs to every citizen of our Nation since not only our food and clothing but so much of our raw materials for our factories come from the land.

Even as we write, forest fires are raging out of control in our State, the cause of the fires attributed mostly to carelessness.

As a Christian people, we should all join in prayer for a good harvest and so that carelessness will be replaced by care—care for the richness of the soil, care for our Nation's water supply, care for our forests

and their heauty and materials and finally by a loving care for the generations that will come after us.

The land which we received as our inheritance should be given to the next generation a little richer than it was when we received it if we are to be called good stewards.

Care of the land can best be given by us through our cooperation with the soil conservation districts of our Nation.

Crisis in Camping

EXTENSION OF REMARKS OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. WAINWRIGHT. Mr. Speaker, under leave to extend my remarks, I include an article from the June edition of Outdoor Life entitled "Crisis in Camping." With national parks becoming smaller and the volume of tourists becoming greater, the areas for camping facilities have dwindled to the extent that the author of this article notes. I think it necessary that we take cogniz-ance of this problem. The article follows:

CRISIS IN CAMPING (By C. B. Colby)

Along with millions of other Americans, my family and I started out this past summer to have a camping vacation. We camped from one end of the country to the other and back again, covering 8,240 miles and visiting 16 States, 8 national parks, 3 national monuments, and 1 national recreation area. We also checked many State and roadside campgrounds along the way.

Our party consisted of my wife Lila, our son Fred, 17 (both veteran campers) and myself. What happened to us during this trip happened to a great many other campers and intended campers: we had trouble finding places to camp, and the problem got worse as the season progressed. Several times we had to give up the idea of camping

and stay in cabins.

Everywhere we stopped, we spoke with campers and camp officials, and almost everywhere the problem was the same-too many campers for the available campsites. Everyone seemed to agree that the situation is rapidly growing worse and will continue to do so unless fast action is taken.

We had one of our saddest experiences When we tried to sign up for a tent site at one of the largest camping areas in Yellowstone National Park. The harried gateman shook his head and said he'd have to send us to the overflow area some miles away. This turned out to be a grove along the bank of the Yellowstone River and was already jammed with tents and a few trailers. There were only two crude and violently malodorous privies for several hundred campers, no water except from the river, and no firewood unless you wanted to hunt for it along the road for half a mile in either direction.

During the night more campers arrived, Pitching their tents between others that Were already too close together. Trailers clanked through the darkness, and by morning even the forbidden field around the grove was filled with desperate campers. Were ordered to be out of there by noon or face arrest.

As we broke camp a day later and moved out, we saw many campers who had slept In their cars by the road, the others lined up for half a mile waiting to get into an already crowded camping area. We also saw many cars filled with camping gear and parked by hotels or cabins where would-be campers had finally found a place to sleep.

At Deer Ridge Junction in Rocky Mountain National Park in Colorado, a frantic father with a car full of crying youngsters came to our cabin at midnight to see if we could direct him to any place where they could spend the night. The nearest campsite was several miles away, and we had already been turned away.

Other campers we talked with there (also in cabins) were pulling out for home. They'd been unable to find a place to camp, or couldn't find ice, milk, water, food, or fuel, within driving distance of any campsite. Almost everywhere we drove on our nationwide tour, conditions were the same.

Camping as a national recreation has grown tremendously during the past 10 years. Among the most important reasons for this boom are the increase in leisure time, more and better camping equipment, more (but not enough) camping areas, more folk talking and reading about camping. In many areas the result is almost chaos.

I was frankly startled by the conditions we encountered face to face in the 16 States we visited on this trip-Michigan, Illinois, Iowa, South Dakota, Wyoming, Utah, Nevada, Arizona, New Mexico, Colorado, Nebraska, Ohio, Pennsylvania, New York, Idaho, and Indiana. I was equally startled by the replies I got after returning home and writing to officials concerned with camping in many of these States, and in other popular camping States that we did not have a chance to visit on this trip-Wisconsin, California, Vermont, Maine, New Hampshire, and North Carolina.

As an example of how fast camping has caught on, take the situation in Pennsylvana. Back in 1949, the State had accommodations for about 350 campers, and a total of 8,000 campers using them during the year. 1959 Pennsylvania had accommodations for 2,000 campers, or roughly 6 times the 1949 number; but by 1958 (latest year for which figures are available as this is written) the number of campers had already increased to 528,872, or about 66 times the 1949 number.

Michigan reports that it had to turn away 40,247 camping families-not just individuals-from State parks this past season. New Hampshire has turned away as many as 200 parties in a single day. New Mexico had 5½ times as many campsites in 1959 as it did in 1949, but more than 10 times as many campers.

New York is another States with serious camping problems.

'Camping is the fastest growing form of outdoor receration in our State," said Gov. Nelson A. Rockefeller in a message to the legislature in March. He noted, however, that "many families must wait on the roadside, sometimes for as long as 2 or 3 days, to gain admission to a public campsite.' also pointed out that at the 38 public campsites in the forest preserve region, many thousands of families had to be turned away last year.

"Over 107,000 persons," he said, "were either without accommodations at campsites, or were shunted to inadequate camping loca-

He quoted a survey by the New York State Conservation Department in stating that 23 new campsites would be needed in the State forest preserve in the next 5 years, and an additional 49 would be needed by 1976, plus 34 in areas outside the forest preserve. would require a total purchase of 89,000 acres by 1976.

To finance these and other outdoor recreation projects, the Governor recommends a bond issue that would be paid off by fees and other charges for use of the facilities. This program cannot be undertaken, however, unless approved by the voters of New York State in the November election.

Wyoming, with a permanent population only about 300,000, had out-of-State visitors totaling 6 million during the combined travel seasons of 1957-58. A large percentage of these visitors, of course, were campers and would-be campers. It is reported that 50 percent of all the visitors Yellowstone National Park (which is predominantly in Wyoming, and under Federal control) were campers, and mostly from out of State. Since Yellowstone has well over 900,000 visitors a year, this means that almost half a million campers arrive during a season and expect to be accomodated. It's a staggering problem, and growing worse every year.

What conditions do campers find when they arrive at a typical camping area, whether State-operated or at one of our magnificant national parks? This past summer on our trip we stayed at many national park campsites and checked dozens more in the places we visited. With some notable exceptions, here is what we found: Sites were terribly overcrowded. weren't enough attendants to cope with the crowds. Food, fuel, and particularly ice, were almost impossible to get. Unless you arrived early and were fortunate, it was difficult to find a spot to camp except in socalled overflow areas. These were generally some distance from the established sites, and conditions were worse than they'd have been in the real backwoods, due to the concentration of campers in one spot.

The results of such crowding were that sanitary accommodations were extremely bad in many places we visited, firewood had been cleaned out within walking distance in all directions, and you either had to use gasoline or propane camp stoves, or buy pressed-sawdust "logs" from a concessionaire. In such areas, campers pitched tents almost on top of each other. Late at night campers with cars full of fussy youngsters were still arriving, driving round and round trying to find an unfilled spot, and many just parking and sleeping in their cars. Then cars started roaring out even before daylight to get in line for a site back at the regular camping area when somebody moved out.

It wasn't unusual to wake up and find a late arrival's car blocking your own, his tent tled to your stakes, or somebody else cooking breakfast on the spot where you had your previous night's campfire, or with his gear piled high on what you had thought was your table. Of course these didn't happen at every campsite nor on every morning, but often enough to take lots of the joy out of camping.

Almost without exception, the National Park Service men we met and talked with were most cooperative and highly efficient. They're dedicated men doing a difficult job under conditions that are often almost impossible. They were simply snowed under by the hordes of campers, all clamoring for a place to stay. Many National Park Service men I talked with at length were deeply concerned about what will happen unless something is done immediately to expand existing camping areas and increase their staffs, as well as adding more personnel for new areas. I heard no complaints about pay or working conditions except that many NPS men resented unwarranted complaints over their inability to find campsites for everybody. Lack of camping space is cer-tainly not the fault of these hard-working and dedicated public servants. They deserve our thanks for handling the situation as well as they have in the face of such

The basic problem is lack of funds. Getting money for new camping areas is a huge and frustrating struggle. For one thing such appropriations are reportedly not so popular with legislators as are funds for projects that are proved votegetters. As one National Park Service official points out, however, funds for new camping areas may well become important votegetters. Another argument often raised against using public money for camping areas is that it appears to be spent for a limited segment of the population. Actually public camping areas are for the use of anyone who cares to enjoy them, just as are so many of the projects that are more popular with legislators.

The State officials concerned with camping, to whom I wrote after returning from our trip, were almost unanimous in their statements that they are handicapped by lack of funds and by lack of interest of the budget planners in the problems of campers.

In answer to my question, "Has the public been oversold on camping?" Robert D. Espeseth, Wisconsin park planner, said, "It is difficult to say whether the public has been oversold on camping or whether the fault has been with the public agencies for not being able to keep up with the demand. We all know that these increases (in campers) were predicted to some extent and that future increases are certain. Still with all this known, money and materials are still not available to the park and recreation agencies throughout the country. I believe that the public has not been oversold as much as our parks and recreation areas have been undersold by the legislators, administrators, and the public through a general apathy and lack of action. We have which could be made available for camping if we could get finances for even the most meager improvements."

Joe M. Clark, superintendent of the New Mexico State Park Commission, emphasizes that it's often hard to provide even meager improvements: "The mere details of grading the sites, building access roads, piping water nearby, and in some cases hauling wood, constructing fireplaces, benches, and tables or shelters, and cleaning the area regularly can be fairly expensive, however well planned

and carefully supervised."

Other letters frankly stated that money won't be forthcoming for additional camping facilities until campers prove that they need them.

One way to get money for developing and maintaining campsites would be to charge a camping fee, or to boost the fee if there already is one. Maine, which has charged \$1 a night per site, finds that this has resulted in an operating loss. Such losses have been made up from a general fund. Other States charge less, and some States or federally operated campsites have no charge other than one for entering the park itself. Fees for camping in national parks cannot be charged without an act of Congress, because part of the original congressional action was to stipulate free camping in all such areas.

Many campers, aware of the cost of building and maintaining camping areas, are in favor of some sort of direct charge. For example, a survey by the Wisconsin Conservation Department in 1958 indicated that 53.6 percent of park visitors had definite ideas on how to finance a better State park system. Forty-six and four-tenths percent had no suggestions at all. Some 19.1 percent of the park visitors favored indirect charges, but 34.5 percent were in favor of direct charges. Visitors suggesting direct charges lined up this way: 17.1 percent were for an annual windshield sticker, 13.1 percent for a daily fee, and 4.3 percent for a higher camping fee.

I am 100 percent in favor of higher direct fees wherever they're justified, and here is why. I'd much rather pay \$1 a night for a good place to camp than I would to avoid the charge but have no place—or a very poor one—to camp. It seems to me that a fee for a designated and exclusive site in a well-run area would be a good invest-

ment any night, as long as the money went for a better camping area. Even if the fee were \$2 a night, it would still make for an inexpensive vacation. With that additional money, much more could be provided for campers

A case in point: many privately owned campsites are springing up all over the country, particularly in the Northeast, and especially in Maine. In that State the private campsite operators have more individual campsites than have all the Maine's State parks combined. Tax money from these privately owned camps goes into the State coffers, so they save the taxpayer money. And for a fee of \$2 a night, you have many advantages in such privately operated grounds. For example, you can reserve a site in advance, usually impossible at a State or federally operated camping ground.

True, many of these private operators also run stores which sell food, ice, fuel, and camping supplies, and they also rent boats. Campers pay extra for these supplies and services. But extra charges for such services are also the rule in public camps. Many public camping areas, however, don't have any of these facilities within miles, and it is of great help to have them close at hand.

One of the greatest problems on our trip was the seemingly simple matter of getting ice for our icebox. In most camping areas, ice was impossible to get, and in others more of our food would have spoiled had it not been for restaurant operators and others who sold us buckets of ice cubes. I still recall with a faint touch of nausea the time I cleaned out an icebox stocked with butter, meat, and milk on the south rim of the Grand Canyon after 2 days without ice at temperatures over 100 degrees.

Before you start out on such a tour, get in touch with the National Ice Association, 810 18th Street NW., Washington, D.C., for a list of ice vendors in the area where you will travel and camp. It may be of considerable help. The New England Ice Association at 132 Center Street, Rumford, R.I., can furnish you with a booklet listing ice vendors throughout the New England area. Although there aren't many of these vendors yet, the list is increasing; knowing where to find one may save you not only money but a mess.

The availability of food, fuel, and ice at all public camping areas would not only be a great convenience, but would also probably have the additional advantage of dispersing the campers and preventing overcrowding in the few areas where such things are already available. I know of no list of all camping areas telling which of these services are available there, but perhaps the future will produce one.

Private camping areas are usually fine for the family with small children who must have fresh milk. Such areas are also usually well run, restricted as to the number of campers, designed for a maximum of privacy, and—if water is handy—you will usually find boats and motors for rent at reasonable rates.

Those who would prefer wilderness camping areas should take into account that many paper and lumber companies have opened up some of their vast holdings of wilderness to campers who agree to be careful with fire and observe company regulations. According to James M. McClellan, chief forester for American Forest Products Industries, 37,708,269 acres of commercial timberlands owned by forest industries are open to the public for camping. These areas, while generally far from stores and other conveniences, offer real backwoods camping thrills.

The situation at National and State parks is not entirely discouraging provided fast and intelligent action is taken and funds are made available, as soon as possible to speed up, the expansion of present areas and

the development of new ones. Right now the National Park Service is spending \$60 million a year on its 10-year Mission 66 to preserve the natural beauties and values of our national parks and monuments, while at the same time providing for their maximum use and enjoyment, according to Conrad L. Wirth, National Park Service Director. We saw substantial evidence of this great project's success at many national parks.

Mission 66 is aimed at handling an anticipated 80 annual visitors to our national parks by 1966. It's reasonable to wonder, though, how this will be possible when last year's 62,500,000 visitors couldn't be ade-

quately handled.

Nobody, of course, can precisely predict the rate of camper increase through the years ahaad. However, with part of this \$50 million a year or small additional funds much more could be done of immediate benefit to the campers who make up a great portion of national park visitors. I'm thinking of such armies as last year's more than 1,200,000 visitors to Yosemite National Park, Calif. Half of them were overnight visitors in cabins or campsites—a staggering number of persons to handle with adequate facilities, and almost impossible under the present conditions.

Many of our national park camping areas are splendid. In this category I'd include Bryce Canyon National Park, Utah; Colter Bay site in the Grand Teton National Park, Wyo.; Camp 15 in Yosemite National Park, Calif. (one of the very first well-planned campsites); and some of those at Mesa Verde National Park, Colo. Many others, however, were poorly planned years ago, and are now impossibly overcrowded and completely inadequate. The latter condition, of course, is not the fault of the Park Service.

In many parks we saw brandnew and elaborately constructed visitors' centers, modern in design and landscaped to perfection. But in one place, right across the road, was a new campsite all finished but unopened for lack of funds for roads and because the toilet and wash facilities were not yet completed. This was on the south rim of the Grand Canyon during the last few days of July-the height of the camping season. The loop roads were in, the spur roads, tables, benches, fire grills and rubbish baskets all installed, but not a single camper could use it. A couple of miles back, the only campground in the area was horribly over-crowded, a line of campers' cars was waiting for somebody to leave. The harried attendant did his best to put them somewhere. Many did as we did and hired from the local concessionaire a rather pitiful cabin that must have been built decades ago.

At Mead Lake in Arizona, we saw mobs of campers crammed into a hot and dusty "jungle" while a few rods away stood a new and vacant camping area complete with tables and benches, but with a "closed" sign unexplainably blocking the entrance.

One thing that would help a lot at many national parks would be for gatemen at the park entrance to be advised which camp areas were full and which could still take a few more campers. At Jenny Lake in the Grand Teton, Wyo., area, we were told to "just drive around and pick out a numbered tent site and then come back and register." We did drive around, and around again, only to find that every site was occupied, and then some. We returned to the entrance and reported this to the young man on duty. "Well, how about that?" he said, and went back to his book. We might have driven halfway to the next tenting area by the time we found out what the gateman should have already known.

The camping sluation is critical, and it's certain to get worse unless campers themselves do something about it. Camping tax-

payers, via letters and telegrams to their governmental representatives, can encourage the earmarking of more money for camping areas in their home States and in national parks. These officials should be encouraged to visit local camping areas during camping seasons to see for themselves the conditions con-

fronting campers.

Joe E. Clark, superintendent of the New Mexico State Park Commission, said in his letter to me, "We anticipate having more campers than we'll be able to accommodate the way we'd like throughout the coming decade." This may easily apply to every decade." This may easily apply to every popular camping State unless we work to offset the crisis in camping.

Let's not allow overcrowding and lack of facilities to endanger one of the greatest mass recreation programs ever taken up by

the American family.

U.S. Participation in International Trade

EXTENSION OF REMARKS

HON, JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, May 26, 1960

Mr. JAVITS. Mr. President, there is hardly a better way for the United States to sell its goods and its way of life abroad than by increased participation in the international exhibits throughout the world which are organized to bring together the technicians, the busihessmen and the people of many countries. It is for this reason that I introduced Senate Concurrent Resolution 106, to express the sense of the Congress that the U.S. Government and private citizens should provide for increased Participation in international trade fairs. I ask unanimous consent to have printed in the Appendix of the RECORD a brief summary describing the character of U.S. exhibits at oversea trade fairs in 1960.

Mr. President, I wish to invite attention also to the series of exhibits sponsored and organized by the U.S. Atomic Energy Commission in many countries,

with highly successful results.

A series of exhibits is scheduled in four South American capitals, beginning With Buenos Aires in September, and then in Rio de Janeiro, Caracas, and Lima. Another is planned for Karachi, Pakistan, in November. Right now the AEC has an exhibit in Cairo, capital of

the United Arab Republic.

There is something particularly satisfying in our being able to display the uses of nuclear power in industry, agriculture, and medicine in some of the industrially emerging countries of Asia, Africa, and Latin America. We feel strongly that this great new power Source, in the words of President Eisenhower, is "a unifying force when it is devoted to the cause of peace." The Government's attempt to show that the United States has made enormous strides in the development of atomic energy for beaceful purposes ought to be highly commended. Visitors at these exhibits have an opportunity to see how the very

frontiers of scientific agriculture and land development are being pushed forward to provide for the exploding world population. They are showing the world how nations can improve their living standards through better methods of medical diagnosis, by using radioisotopes, and in many other fields.

Commissioner John A. McCone is to be congratulated along with his capable staff for presenting the story of the peaceful uses of atomic energy to a world which longs for the use of the atom for life and an atomic terror of arms in the absence of effective disarmament.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

U.S. EXHIBITS SCHEDULED FOR PLACEMENT IN INTERNATIONAL TRADE FAIRS OVERSEAS DUR-ING 1960 BY THE DEPARTMENT OF COMMERCE, OFFICE OF INTERNATIONAL TRADE FAIRS

BOMBAY, INDIA-AN EXCLUSIVELY U.S. SMALL INDUSTRIES EXHIBIT, JANUARY 31-FEBRUARY

As in three earlier solo exhibits in India (at New Delhi, Calcutta, and Madras), this one demonstrated devices and techniques believed useful in India's industrialization program. Success of this series of exhibits is indicated by the fact that all salable items were sold, to those who saw values in their adaptation to the developing Indian economy. More than 100 American firms cooperated with their Government to make possible this exhibit, described by one Indian official as "a good effort, indicating a will to help India." That the showing brought close-That the showing brought closeup, personal impressions to a wide range of Indian people is shown by the total attendance at Bombay-1,253,191. (Total for all four exhibits in the series: 2,856,682.)

OSAKA, JAPAN-FOURTH OSAKA INTERNATIONAL TRADE FAIR, APRIL 9-26

The Japanese newspaper Mainichi described the U.S. exhibit as "an abundant array of America's finest and latest industrial products * * * which will find wide applications in Japanese industry." It attracted the largest numbers of the 600,000 visitors in attendance during the fair's first week. U.S. displays were in three major segments setting forth the theme, "Trade, Technology, and Tourism." The first illustrated mutual benefits through relaxation of certain Japanese trade restrictions. Next there were demonstrations of production and toolmaking machinery, automotive repair and maintenance equipment, and testing and quality control instruments. Compact cars, color television tape, and varieties of consumer products added to visitors' interest, and the tourism section sought to encourage a greater exchange of travelers between the two nations since "tourism, too, is trade." American firms were represented.

MILAN, ITALY-38TH MILAN TRADE FAIR, APRIL 12-27

In his report of this fair, John J. Casserly, Hearst Headline Service, wrote: "The United States today is scoring a smashing victory over the Soviet Union at the colossal 38th Milan International Trade Fair." The theme of the U.S. exhibit was "Testing for Quality in Mass-Produced Goods." Demonstrated were interesting devices and techniques used by manufacturers to give assurance to themselves and to buyers of the products that they meet high standards of safety and service, and are so guaranteed. Undergoing tests were home appliances, electronics equipment, food containers, automotive parts, skis, scales, pharmaceuticals, plastics, motors, and lawnmowers. Fifteen American firms provided the demonstrations, as well as displays of television and radio sets, cameras, sports

equipment, and other consumer products. Five million visitors, an alltime record, were expected at the fair, in which 55 nations were represented. Mr. Casserly further wrote: "The simplicity, yet prime importance of the American theme, has won plaudits from all nations. America's pavilion is, by far, the most studied display of the fair.'

CASABLANCA, MOROCCO-16TH CASABLANCA IN-TERNATIONAL TRADE FAIR, APRIL 28-MAY 16

For the first time in the 5-year history of official U.S. exhibits overseas, one industrial area was asked to develop an exhibit representative of this country's many centers of manufacturing and commerce. The port of Philadelphia responded, cities on the upper Delaware River presenting to the port of Casablanca displays of mutual interest, proving that commerce and industry develop with the port. Traced also was the story of Philadelphia, America's "cradle of Liberty," as a means of giving encourage-Moroccans in developing their democratic way of life. There were impressive displays of transportation, industry, and communications. Manufacturing concerns presented areas demonstrating advances made in petroleum uses and products; papermaking, pharmaceuticals, sugar packaging, materials handling, automotive (in-cluding compact cars), pottery, construction, cork products, electronic teaching, home appliances, educational television, telephonic devices, solar energy, steel, automatic food vending, plastics, printing and publishing, The National Aeronautics and Space Agency, and the Air Force provided displays show ing achievements by this country in space research.

POZNAN, POLAND-29TH INTERNATIONAL TRADE FAIR, JUNE 12-26

The U.S. theme for this important European trade fair is "research for better in-dustrial products." More than 80 American firms are cooperating in presenting operating displays which should be of interest to the Polish people. Individual exhibits include fiberglas products, a plastic-tube filling machine, a paint blender, an electronically-controlled kitchen, household appliances, a small library, automotive repair shops, compact automobiles and materials-handling equipment. An agricultural area will show modern aids for the farm. Tourism displays stress means by which Poland can increase its tourist trade. This is the fourth consecutive year of participation by the United States in this fair.

DAMASCUS, SYRIA-SEVENTH DAMASCUS INTER-NATIONAL FAIR, AUGUST 15-SEPTEMBER 10

Here to represent the United States there will be a wide variety of demonstrations, from closed circuit television to recombin-ing of milk for use in ice cream; from the expanded GE House of Magic to a complete sewing machine production line. hibits, selected to meet a broad range of interests, include shops for auto repair, woodworking and metalworking, machines for making plastic products and displays of consumer products. Of interest especially to the young there will be an exhibit with manikins dressed as Roy and Dale Rogers with items of cowboy equipment, amid scenes of American's western areas. An agricultural area will have a crop-dusting airplane and farm equipment. "Magic hands," signed for handling radioactive materials, will draw interest. Our new compact cars, too, will be on display.

IZMIR, TURKEY-29TH INTERNATIONAL FAIR, AUGUST 20-SEPTEMBER 20

The ports of Philadelphia presentations that appeared earlier at Casablanca will again be seen at this port city. In response to a request from the American Embassy in Turkey, an area adjacent to the U.S. Pavilion will show products of American companies having branches in Turkey. Firms in this area will set up their displays independently but will keep them in harmony with the overall design of the official U.S. exhibit.

KABUL, AFGHANISTAN—JESHYN INTERNATIONAL FAIR, AUGUST 23-31

The United States here will present a balanced exhibit of operating agricultural and industrial displays, together with the giant screen production, Circarama, to take visitors on a visual trip across our country. Agricultural exhibits are to demonstrate three means of irrigation, and modern tools and machinery used in growing and harvesting crops. Industrial exhibits include small shops geared to the economy of Afghanistan—for auto repair, the recapping and vulcanizing, sewing (production line), metal and plastics making and woodworking. There will also be cultural and educational exhibits. Other exhibiting countries include Soviet Russia and Red China.

VIENNA, AUSTRIA—INTERNATIONAL AUTUMN FAIR, SEPTEMBER 4-11

This is Austria's major commercial event, visited by more than 650,000 people from some 54 countries, including those of the Soviet bloc. For this reason it is considered ideal for the U.S. exhibits this year to display a "new, aggressive look, with emphasis on sales," as well as to offer presentations designed to bring about better understandings of the American way of life. A central exhibit, placed by the Office of International Trade Fairs (OITF) will emphasize reasons for buying U.S.-manufactured goods, and around the sides of the American pavilion individual firms, contributing to a funds pool in proportion to their space, will show their wares, distribute promotional matter, quote prices and take orders. OITF will, as usual provide general management of the exhibit and pay certain other expenses. Chicago Association of Commerce and Industry has taken a large section of the space and there will also be showings of machinery and consumer goods.

SALONIKA, GREECE—25TH INTERNATIONAL FAIR OF THESSALONIKI, SEPTEMBER 4-25

Largest and oldest in the Balkans, this fair provides an excellent showcase for American goods and way of life in an area where Soviet influence is a factor because of geographic proximity. The U.S. exhibit will include demonstrations of consumer appliances and industrial machines, color television, achievements in electronics and a science presentation. Agricultural interest will be directed to a showing of balanced mixed feeds and the part that research plays in farming. An American prestige automobile will provide contrast with a full line of new compact cars.

ZAGREB, YUGOSLAVIA—INTERNATIONAL TRADE FAIR, SEPTEMBER 10-25

Highlighting this fifth U.S. exhibit at Zagreb will be a complete American drugstore, of the type suggesting a "junior department store." In a demonstration of modern kitchen appliances there will be comparison displays of 1920 and 1960 American kitchens, latest automobiles and trucks, pharmaceutical equipment, auto repair shops, printing and reproduction, electronics, a model chemical plant and a mockup television studio to illustrate the use of television tape recorders. Agricultural equipment will also be shown. Our "Pioneer V" space satellite and a demonstration of an "Aeromobile" will attract special interest,

TUNIS, TUNISIA—EIGHTH TUNIS INTERNATIONAL FAIR, OCTOBER 14-30

The tentative listing of operating exhibits here includes the "GE House of Magic," an "air car," typical American shop windows, shoe manufacturing, a petroleum plant dio-

rama and communications mechanisms. Others include a silicone chemistry display, textile manufacturing, metalspinning, food processing, sugar packaging and a mechanical tudoring machine. Models of the "Pioneer V" and "Tiros" satellites will also be shown.

School Construction Assistance Act of 1960

SPEECH

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10128) to authorize Federal financial assistance to the States to be used for constructing school facilities.

Mr. UDALL. Mr. Chairman, I am a member of the subcommittee that drafted this particular legislation, and I should like for a moment to attempt to lead this discussion out of the narrow channel in which it rests. The tenor of our discussion would lead one to believe that the only real problem facing American education is that we are short 140,000 classrooms. I think this is a serious problem, but American education faces much greater problems. All of these major studies of American education in the last 2 or 3 years-I refer to the Rockefeller report—and my col-leagues will notice I use that name tripplingly on my tongue-the Killian report, the reports of Dr. Conant, and the White House Conference on Education have all concluded that if we are going to do the type of job we should be doing we must double our outlays for education in the sixties.

And Secretary Flemming last year stated that it was a reasonable goal for us as a people to double teachers' salaries in the next 10 years.

I want to discuss with you a moment these broad goals, because in focusing our attention on the classroom shortage, we are perhaps misleading ourselves as to the scope of the challenge we face.

One basic conclusion of the Rockefeller report was that in the years ahead education will have a strategic importance in our national performance and that what we do, or do not do, in the field of education may very well determine the posture of strength of our country and its capacity to perform great tasks in the years ahead.

Another of the basic conclusions of these reports is that the American people cannot meet these goals unless, in the words of the Rockefeller report, there is a "thorough, painful, and courageous overhaul of local and State taxing systems." This need for local tax overhaul was demonstrated just a moment ago by my colleague from New York, Mr. Goodell, who preceded me in the well of the House. So the time has come when we must face the total problems of American education.

There are, I know, some who feel we are doing a good job in education. I do not. Ours is the richest country in the world—and, whether we like it or not, we wear the mantle of world leadership. If we are to move toward these reasonable goals, it seems to me we must determine now that we are going to spend more for our teachers and our schools. I will confess that on education, I am a spender. I do not think we are spending enough. The best investment we can make is an investment in the minds of our young people.

The details of this bill are based on sound experience. They are based in part on our experience under the landgrant college program, and in part on the system of State aid to education which has worked so well over the years. I am not only against Federal control; I am in favor of maximum local control. This bill provides, for the first time, maximum local control. If an amendment to be proposed by the gentleman from Montana [Mr. METCALF], is agreed to, we will say to each locality: "You decide what your needs priorities are. If you want to build schools, fine-or if you prefer to raise the salaries of your teachers this also is satisfactory." essential point is that these decisions should be made at the local level. This is the very essence of a sound system. It is based on our experience under State aid systems and puts the decisionmaking authority in the school boards where it belongs.

Every time the Congress passes a bill. like the National Defense Education Act, and we, in effect, say, "Spend it for this purpose and nothing it for this purpose and nothing else," we are not putting faith and confidence in local school boards. Therefore I am one of those who will support the amendment offered by the gentleman from Montana [Mr. METCALF], to broaden the scope of this legislation. Let us trust the judgment of the State and the local people. Let them come forward and decide where the money should be spent. I think this is a very basic issue, and whether we thresh it out or not today, it will be on our desks when we return next January. We must have an educational system worthy of our country-one that will enable us develop to the full our human resources. We have voted a bill of nearly \$4 billion earlier today, a public works bill, to develop our natural resources. Our proposal is a modest one, a proposal that we make a further investment in human resources.

Mr. WAINWRIGHT. I wonder if the gentleman will take another minute that I may ask him a question relative to his amendment?

Mr. UDALL. If the gentleman will yield me time for that purpose.

Mr. WAINWRIGHT. Mr. Chairman. I yield the gentleman 1 minute to ask him if he will explain his variant so that we may be able to consider it before it comes up tomorrow.

The CHAIRMAN. The gentleman from Arizona is recognized for 1 minute. Mr. UDALL. If the amendment to be

offered by the gentleman from Montana [Mr. Metcalf], does not prevail, the

amendment which I intend to propose, if the opportunity presents itself, will put the teachers' salary local option Which is in the Senate bill into the committee bill. In other words, it is a narrow amendment and would merely give the State and local people the right to decide whether to use the money for construction or salaries.

Mr. WAINWRIGHT. I thank the gentleman.

Resolution To Raise Social Security and Lower Retirement Age by Employees of the Chevrolet Plant at Janesville, Wis.

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1950

Mr. FLYNN. Mr. Speaker, men and women throughout the country realize the problems of the aged. They realize that many of the aged live in want and Drivation. They also realize that many old people continue to work because of economic necessity when they should be living in retirement. This, naturally, means that they are taking positions that younger people could be filling. They realize that this creates unemployment among those under 60 years of age, and they realize that if social security could be amended to provide for retirement at age 60 that it would make it possible for all unemployed men and women under 60 to have a job and it would also make the declining years of our older people more pleasant.

This thought has been expressed by the men and women employed by the Chevrolet Division of General Motors in Janesville, Wis. Their representative, Gaylord Sagen, today sent to me the enclosed resolution to raise social security and lower retirement age. I am setting it forth in full as I believe that it represents the thinking and the aim of working men and women in every State

in the Union:

RESOLUTION TO RAISE SOCIAL SECURITY AND LOWER RETIREMENT AGE BY EMPLOYEES OF THE CHEVROLET PLANT AT JANESVILLE, WIS. Whereas there are better than 3 million

people still unemployed in the United States;

Whereas there will be over a million students graduating from our high schools and colleges each year and these students will be looking for permanent jobs, thus creating more unemployment at that time; and

Whereas industry is continually using more and more automated machinery creating a condition of less employees needed to produce the production needed; and

Whereas there are over 60 million people employed throughout the country, and ac-cording to statistics 10 percent of these people are over 60 years of age. If it were possible for all of the people over 60 years of age to retire this would mean there would be over 6 million people who could retire. they did so it would make job opportunities for all the people who are laid off, and the students who will be looking for jobs in the spring; and

Whereas it is very important something be done to immediately relieve the unemployment we now have, and stop the gradual increase of employment by automation: Therefore be it

Resolved, That Local 95, UAW, go on record of calling on the Congress and the Senate and the President of the United States of America to immediately enact legislation lowering the social security age limit to 60 years of age and increasing the amount of social security to \$240 per month for a married couple, plus \$80 for each dependent child, this additional cost to be raised by increasing the percentages paid by the employee and the employer equally.

Respectfully yours,

GAYLORD SAGEN, Recording Secretary, Local 95, UAW.

Record of Accomplishments of Forest Service of Region 9 in 1959

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, May 26, 1960

Mr. WILEY. Mr. President, the preservation of our forest lands is essential if we are going to provide an adequate amount of these resources for the generations of the future.

Over the years, there have, of course, been differing opinions on management and utilization of our forest lands, particularly in our national forests. spite the handicap of differing theories, however, the outstanding leadership in our U.S. Forest Service is enabling our populace to benefit in a great many ways.

Currently, U.S. national forest lands, for example—under the multiple-use theory—are utilized for such purposes as wood, forage, recreation, wildlife, watershed management, and a variety of other

constructive purposes.

Through cooperation with the States and private land owners, also, the Forest Service also is carrying on work in woodland management, technical assistance, cooperative watershed management, tree plantings, utilization and marketing of forest products, and many other such activities.

Today I was privileged to receive from Mr. M. M. Nelson, regional forester, U.S. Forest Service, headquartered in Milwaukee, Wis., a review of the splendid work being carried out by the Forest Service, of the U.S. Department of Agriculture, in region 9-a subdivision of our 10 national forest regions.

Reflecting the constructive way in which realistic efforts are being made, not only to preserve, but also to utilize these valuable resources, I ask unanimous consent to have excerpts from the report printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECord, as follows:

RECREATION, WILDLIFE, FORAGE, WATER

To facilitate the management of these forest resources so closely interrelated, we have

them grouped in one division. the aggregate as lands and officially as recreation, lands, wildlife, water, and range management. In this area the multiple-use concept is most discernible.

Forest outings

The national forests in region 9 accommodate 5.4 million visits, representing 7.1 million man-days of recreation use. This is a continuing upward trend-7 percent higher than 1958. Picnic and camping use jumped 10 percent over last year.

Skiling interest remains high, as demonstrated by the opening of three new private winter sports developments embracing na-

tional forest lands.

The national forest outdoor recreation survey was initiated to collect and inventory the recreation resources of the national for-This information will serve as a basis for the development of forest recreation plans and to formulate programs. The analysis will include overall coordination of recreation uses according to the multiple-use concept of national forest management. field work started July 1, 1959, and the total project is to be completed by December 31,

The third year of Operation Outdoors was completed in 1959. Under this program 177 family units were rehabilitated and 201 new ones constructed. This is less than planned under Operation Outdoors. Limited funds and increased maintenance caused by heavier use forced us to postpone many desirable projects.

Wildflife-A forest crop

About 2.6 million visitors to the national forests enjoyed the many hunting and fishing opportunities on these public lands. Big game hunters bagged an estimated 48,000 white-tailed deer under the more progressive hunting seasons which the various State conservation departments now provide. Sustained yield management of deer and other wildlife species is becoming a reality as the public more fully accepts the potential of these renewable resources.

Cooperative programs with State conservation departments were expanded.

Forest Service timber management activities improved the wildlife habitat on the 178,478 acres which were cut-over in timber sales, treated by timber stand improvements. or planted to forest trees.

In portions of some of the northern forests of the region excessive deer populations have reduced their food supply to a critical low and have eliminated the reproduction of some of the more valuable timber species needed for future timber supplies. habilitate both the game habitat and the commercial forest resource a reduction to a below normal population is indicated.

Grazing

A grazing conference was held in August at Salem to consider the administration of this resource in the national-forest units in Missouri. Present research programs and needs were reviewed.

The Sheyenne LU project in North Dakota had another successful season under lease to the Sheyenne Valley Grazing Association. Feeder calves from this project have gained an excellent reputation. They command top prices at the annual fall auctions at which stock from this sand-hills area is marketed. The Forest Service concentrated on controlling the remaining sand blows fencing them out of the pastures and seeding them to grasses. In addition, the Forest Service and the association seeded 541 acres and controlled brush and leafy spurge on 920 acres.

Soil and watershed work

Soil rehabilitation and stabilization work was accomplished in 12 projects on the Chippewa, Lower Michigan, Missouri, Shawnee, and Wayne-Hoosier National Forests. Representative projects include: stabilizing 80 acres of blow sand in Michigan; stabiliz ing and improving 2,500 feet of stream channel in Ohio; and controlling 6 miles of gullies in Missouri.

Forest soil surveys were started in region nine in 1959. Soils on 89,000 acres were mapped on the Nicolet National Forest. This survey is a pilot study designed to develop and test methods of classifying and mapping soils and interpreting the results for intensive forestry purposes.

More people want land use permits

Pressures for use and occupancy of national-forest land continued to increase during the last year. Individuals, organizations, industries, and public agencies hold 4,194 permits to occupy and use about 250,000 acres of national-forest land; average increase in number of permits and acreage has been nearly 2 percent per year for the past 5 years. Examples of the more than 100 kinds of permits include mining, pasture, rights-of-way, schools, and summer homes.

Land adjustments assist in management

Within the Boundary Waters Canoe Area (Superior National Forest) continued effort to acquire the remaining private ownership resulted in 15 individual tracts being approved for purchase involving 3,080 acres and a value of \$56.516.

Of 32 tracts purchased 20 were in Ohio

and Indiana.

In addition, 33 land exchanges were made. The United States was offered 10,250 acres in exchange for 8,541 acres.

WOOD-ONE OF THE MULTIPLE USES

Timber resource management plans cover 7,565,000 acres in the national forests of this region. Activities consist of (1) harvesting timber in need of cutting by sale of standing trees to private purchasers, (2) reforestation, (3) timber stand improvement, and (4) control measures to prevent damage to timber crops from insects, diseases, and rodents.

The harvest is below 1958

Although the total timber harvest of 527,000 cords of pulpwood and other products and 73 million board feet of sawtimber is double that of 10 years ago it is 7 percent below the 1958 harvests, with a corresponding reduction in income to \$1,804,000. This fall off was almost entirely in pulpwood. Lower pulpwood demand by the mills was primarily responsible.

Expanded markets for increasing pulpwood supplies needed

Almost 20 percent of the pulpwood produced in the region was harvested from the national forests. More growth in quantity and quality would result if the full allowable cut of mature timber and thinning and improvement cuts could be made. The contribution to the local economy would also be increased immediately and in the future.

In an endeavor to interest expansion and new industries that could use available national forest and other timber, information has been compiled and distributed primarily in cooperation with State agencies to make known the existing opportunities for wood-based industries. Efforts are being continued to achieve a breakthrough of the apparent ceiling that has prevented any substantial increase in the harvest of pulpwood during the last 5 years.

Stand improvement measures such as weeding, thinning, and release from worthless trees is a necessary part of raising timber. Planted trees as well as natural regeneration requires such care. Eighty thousand acres were given this treatment during the year. However, good management would dictate a program of triple this size.

Porcupine damage continues a problem

In addition to the restoration of predators to control the porcupine, one of the more destructive rodents of the forest, direct control measures were required to prevent heavy losses of timber-growing investments. estimated that some 100,000 acres of plantations and young high-valued hardwood stands, subject to severe damage if not protected, were protected by these operations.

Timber growing requires more than harvestina

Harvesting operations of mature, evenaged jack pine stands, for example, require artificial measures following cutting, such as planting and seeding to get a new crop Six thousand acres were planted and seeded during the year following such harvest cutting.

In addition to regeneration measures on recently harvested areas, 10,000 acres of barren lands were planted during the year bringing the total area successfully reforested to date to 827,000 acres. Almost 10 percent of the commercial forest land in the national forests of the north central region remain in need of planting if they are to produce satisfactory timber crops for our future needs. At the current rate over 50 years would be required to get all of these lands into production.

Four forest tree nurseries were in operation to produce the 12 million trees that were An additional 9 million trees were produced in these nurseries for States and other cooperators. The activation of a program to adequately provide for reforestation on the national forests would require the full production of the four national forest nurseries. Such full production would reduce per unit costs. However, with the use of a high proportion of 3- and 4-year-old planting stock it would require several years to bring production up to the requirements of such a program.

BLUEPRINTING THE FOREST

Forest engineering brings the engineers' skills from the drafting board to the remote parts of the region's forests. In this service function the forester and engineer team up to provide improvements needed to carry out multiple-use management on the national forests.

Architectural services and plans were provided for seven ranger dwellings and four garages in 1959. The region's road system required considerable engineering effort. Maintenance at increased standards and rehabilitation of specific roads continued as a large project. Access roads accounted for much of the new construction. Specifically the 1959 region accomplishments are:

 Completing 39.3 miles of new road and reconstructing 44.7 miles of old roads in the forest development system.

2. Rebuilding 20.2 miles of the forest highway system to modern standards.

3. Replacing 13 old bridges with 4 modern bridges and 9 with large metal culverts.

New planimetric maps showing timber types were made for 2,300 square miles of land. Maps for recreation folders for Huron, Chippewa, and Nicolet National Forests, and for the Current-Eleven Point River area in Missouri were completed to give information to visitors in these areas.

INFORMATION SERVICES

The increasing demand for information about the work and activities of the region 9 forests is an indication of public concern for the national forests. In 1959 the trend was sharply upward. There were many more visitors to forest recreation areas, Ranger headquarters, supervisor, and regional offices. Requests for information included all the multiple-use activities found on the forests. Written requests for literature, bulletins, maps, and forest conservation materials required over 4,000 letters. The 429 motion picture prints in the regional library were tightly scheduled to serve a

total audience of a half million people exclusive of TV showings.

Every forest officer has an increasing responsibility to supply the needs of the pub-lic for information. During the past year information and education training sessions were held on all but one of the forests to enhance this public service. Recreation map folders for the Huron, Chippewa, and Nicolet National Forests were published. A special area leaflet on the Current and Eleven Point Rivers National Forest recreational area was released.

THE FINANCIAL SITUATION

During fiscal year 1959 the national forests of region nine produced revenue in the amount of \$1,921,319. Additional revenue in the amount of \$68,668 was realized from lands acquired under provisions of the Bankhead-Jones Act of June 22, 1937. These revenues represent earned income resulting from sales of timber permits issued for grazing of livestock, use of land for private purposes, power generation and transmission. and royalties from mining. One-fourth of the income was returned to the States for distribution to the counties to be used for schools and roads. In 1959 the amount so returned for local expenditure was \$613,106.

Other receipts not classed as income totaled \$700,727 and included amounts deposited by timber purchasers for improvement of lands cut over and for protection or elimination of logging slash hazard, plus other cooperative projects in which the national forests benefit.

PERSONNEL

A program for preparation of individual training plans or career development plans for all employees in region 9 was initiated early in the year and is near completion. A unit training leader has been designated for each forest and regional office division to implement the program.

The region's safety record continued to meet high standards and for the 11th time region 9 qualified for the Chief's Annual Safety Award with an accident frequency rate of 4.93 per million man-hours worked. Motor vehicle accidents were reduced from 15 in 1958 to a new low of 6 during 1959. Early in 1959 the region also received an Award of Merit from the National Safety Council for noteworthy safety performance. and a Second-Place Safety Award in the Wood Products Section of the National Safety Council.

Plans are well underway for operation of the region 9 training camp for orientation of all new professional employees appointed during 1959. In addition, an advanced training session will be held for those graduates of the 1958 junior training camp.

The number of professional foresters on the national forests increased by 17 new foresters who entered on duty following graduation from Forestry Schools of the Middle West. Employment in the national forests continued at a high rate with 1,857 employees on the rolls at the peak of the field season on May 31, 1959.

Special recognition was received by nine regional employees for their extraordinary performance on the job. One received the special distinguished service citation from the Secretary of Agriculture. Two received outstanding performance ratings with cash awards to each. Six employees received special cash awards totaling \$1,650 for general superior accomplishments.

The examining program of Field Board 3. Civil Service Examiners for the Department of Agriculture, continued to expand in 1959. There were 3,926 applications received for various kinds of positions in the Department's Middle Western bureaus, an increase of 17 percent from 1958. The board now services 52 separate appointment establish ments who made 309 appointments to the Federal service in 1959 from their registers.

ADMINISTRATIUP TASKS

Operational services coordinate the internal needs of the organization. Budgeting and work planning is centered here.

An organization study was completed for all districts on the Superior National Forest and one district of the Missouri National Analysis of district workloads is necessary to adjust district boundaries in keeping with increased use of the national forests. There were no district or forest boundary changes made during 1959.

The physical plant

Seven ranger district dwellings and four garages were completed during the year. One dwelling was purchased at Doniphan, Mo. These buildings are part of a program to provide adequate housing for our field men at all ranger headquarters where private housing is unavailable or difficult to obtain. The radio system was improved by shifting one Illinois district system from low to high band. Minor improvements in equipment were added on five forests.

COOPERATING WITH THE STATES AND PRIVATE TAND OWNERS

Forest management progressed

In our nine cooperating States the forest management program advanced in many ways. Three States added wood utilization and marketing specialists to their forestry staffs.

Cooperative training activities continued: The Division of State and Private Forestry of the Forest Service, the States, and research centers together conducted 17 field forestry training schools. And personnel from six States participated in an intensive course on wood utilization and marketing at the Forest Products Laboratory in Madison, Wis.

Watershed management forged ahead

Public Law 566 provides for cooperation between the Forest Service and the States in rehabilitating watersheds on State or private lands. Work on this relatively new program advanced:

1 5: 1959	of 1958
1. Planned and reviewed projects 36 2. Programed22	-12 +22
3. Put into operation 19	+58

Cooperated to protect forests from insects and diseases

To protect white pine from blister rust, wild currants and gooseberries were eradicated from 40,743 acres of private and Stateowned land, and from 3,016 acres of Indian land. In addition, 5,000 trees were treated to test an antibiotic for protection from blister

The Forest Service cooperated with the State forester and State entomologist in spraying 7,240 acres to control spruce bud-

States and private landowners planted more land to trees than last yearacres with 112.5 million trees. More can be planted in 1960 when 130 million trees will be available.

The CFI (continuous forest inventory) included consultations with five industrial and three public agencies on the expanded use of punch card data. Three machine processing jobs were completed, involving 2 million acres and 4,500 permanent plots. More than 115,000 individual tree records were completed. pleted or planned for on machine cards. Contracts to solve special problems by use of electronic tabulating machines increased.

Protection from fire was difficult

With the exception of 1952, the States in region 9 had the worst fire conditions in record. Dangerous fire conditions developed in Missouri in March. Wisconsin and Minnesota suffered extensive losses during a short period in the spring.

Training in 1959 emphasized fire behavior to improve the ability of firefighters to forecast dangerous fire conditions. This training helped save lives of firefighters.

Address by Gov. J. Millard Tawes Before the Governors' Conference on the Appalachian Region

> EXTENSION OF REMARKS OR

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday May 26, 1960

Mr. FOLEY. Mr. Speaker, on Friday, May 20, 1960, the Honorable J. Millard Tawes, Governor of Maryland, convened an 11 State Governors' Conference on the Appalachian Region at Annapolis, Md. This historic inaugural meeting was called by Governor Tawes to exchange views among the chief executives of all States wherein lies the great Appalachian mountain range. These views were focused on the economic and social problems of the citizens of the represented States who reside in the mountain area. In defining the mutual problems found in the 11-State chain, Governor Tawes set forth certain basic principles applying to Federal-State relations that are of timely importance. For this reason, I have included the full text of Governor Tawes' address in the Congressional RECORD, as follows:

ADDRESS BY THE HONORABLE J. MILLARD TAWES. GOVERNOR OF MARYLAND

First of all I want to welcome you to Maryland. I know many of you had to take time from busy schedules to be here today. That fact is, I believe, ample testimony to the importance of the matters we are here to discuss.

As I am sure you are aware, we have a great deal of ground to cover in a very short time. For this reason, I shall be brief, as I know we all want to allow as much time as possible for exchange of ideas.

I would like to explain at the outset exactly what led to my request for our discussion of the problems of the Appalachian area on an interstate basis. Quite frankly, my concern began with the problems of my own State.

For some time, our westernmost counties have not fully shared in the economic gains of Maryland. This has been brought about by a combination of circumstances which you are all familiar-the decline of the coal mining industry, fewer jobs in railroading, and a reluctance on the part of new businesses to locate in the mountainous terrain of the Appalachian region.

Since becoming Governor, I have been visited by many conscientious and concerned citizens of our western countles, who discussed their problems with me and asked what I felt could be done to promote the development of their region.

promised them I would look into the situation and do my best to help.

However, the more I examined the problems of our western Maryland counties, the more it became obvious that these problems were part and parcel of an economic and social pattern which is common to most of the Appalachian area. As a matter of fact, many of the citizens of our western counties look much more to the North-toward Pennsylvania-and to the South-toward Virginia and West Virginia—than to the rest of our State. In so doing, they are following the natural contours of the mountains and valleys of the Appalachians.

In this situation, it seems logical to me that maximum benefits could be gained for our western countries only by including them in a program to rebuild and revitalize the economy of the entire Appalachian re-

Moreover, here in Maryland, only a relatively small portion of our State lies within the Appalachian region, and I knew that, in our neighborhing States to the North and South, there existed a vast reservoir of experience regarding the problems of this re-gion, as well as large numbers of trained and dedicated people whose work in the Appalachian area over a longer period of time had given them a fund of knowledge which was greatly superior to our own.

This, therefore, was the beginning of the line of reasoning that led me to invite all of you here today to this meeting.

However, there was an additional consideration, which seemed to me to be of considerable importance. Up to now, almost all of the efforts to help find a solution to the problems of the Appalachian region have come from one or the other of three different sources-the individual States, the Federal Government, or private groups, organizations and foundations. All of these have been doing excellent work, but it seemed to me that they woud be able to function more effectively if the States that comprise the entire Appalachian region could get together and give a visible and forceful demonstration of their united concern. Such a demonstration would underline their determination to work together in order to bring the Appalachian economy into line with the prosperity that exists throughout most of our Nation.

It seems to me that all of the States represented here today, working together, can serve as a vital force in seeing that the potentials of this region are no longer overlooked and in speeding up the timetable of economic development.

To my mind, it is shameful and intolerable that, in 1960, there should be children in the United States who are suffering from malnutrition, and entire families who are living on Government subsistence handouts which are below normal nutritional needs. It is intolerable that we should have American communities where the family incomes are so low that children can't go to school because of lack of clothes and shoes.

The real tragedy of this area, indeed a tragedy for the Nation, is the appalling waste of the area's greatest resource-its people. We, in Maryland, are convinced that we cannot long endure such waste. On the contrary, the time is long overdue that we strive to provide economic opportunity to all our citizens. The inexorable pressures of the 20th century permit no less.

How much better that we join together to make this area a contributor to the national wealth rather than a receipient of inadequate and demoralizing public assistance. How much better that this area be the home. the workshop, and the play yard for a po-tentially highly skilled and talented people who need only the opportunity to produce.

I view the Appalachian region, with its 10 million people and 130,000 square miles, as one of America's last great frontiers. am convinced that the people in this room welcome the challenge and hold within them the keys to solutions.

I look forward to joining with you in a great effort.

I do not feel I need to go into detail about the specific factors which make up the complicated economic and social mosaic of the Appalachian region. I am sure all of you are more familiar with them than I. They will be summarized very briefly for you in a few minutes by consultants to our Maryland Department of Economic Development,

One thought, which I would like to express, is that too often in the past, particularly at the governmental level, we have tried to solve the problems of the Appalachian region in the form of stop-gap, emergency programs. Of course, these programs, especially insofar as they relieve human suffering, are essential.

Therefore, I was disappointed over the President's veto last week of the distressed area legislation, but it seems to me that we can never arrive at a permanent solution to the problems of the region until we stop thinking of the mountains as a "distressed area" and begin to think of them as an underdeveloped region with vast untapped human and natural resources—a region that can find its rightful economic level only through a plan of overall economic development, programed for a period of 5, 10, or even 20 years.

Such a program must concentrate on curing the disease, not treating the symptoms. It must aim towards breaking down the interlocking obstacles of terrain and isolation which underlie and aggravate—and, in some cases, directly create—those chronic and recurrent economic problems with which we are all too familiar.

All of us are aware, I believe, that improving the economy of the Appalachian region would also have a most favorable impact upon the remaining areas of all of our States. We here in Maryland, for example, are very much aware that the Appalachian mountain area forms a significant part of our economic hinterland, and any improvement in conditions in the mountains will be felt promptly in our coastal ports and trading centers. I am sure this is equally true for those States whose eastern portions lie in the mountains and whose western lands project along the great river valleys of the South and Midwest.

One of the encouraging aspects of the Appalachian picture is that the unfavorable economic conditions are not uniform throughout the area. Certain of the urban centers have recently begun to share a bit more in our Nation's overall prosperity, and I would hope that, with encouragement, this trend could be strengthened to the point where these cities could become centers of employment and thus forces for economic development for ever larger areas.

Bad as conditions may be in certain areas of this great region, they are not nearly as bad as some sensational reports would portray them. Whatever course of action is taken, it must be positive—not negative. It must be designed in a way which will point up the facts of our great potentials and not be aggravated by bad advertising of conditions which can and—I am sure—will be corrected in response to the intelligent leadership of government in partnership with private enterprise.

But, as I have said, I cannot begin to touch on all the intricacles of the problem, nor do I wish to preempt the time which we have to discuss our ideas together.

Americans cannot afford to be complacent about economic hardship and distress anywhere in the world, much less in the very heart of our country. Nor can we allow oursclves to be defeated by the difficulties of the problems we face.

I believe that the time is ripe for the launching of some forceful interstate action in regard to the pressing problems of the Appalachian region, and I am most hopeful that this conference will be the seedbed out of which will grow a new awareness of our obligations to the mountain areas of our States.

The Armed Forces: Defenders of Peace

EXTENSION OF REMARKS

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. FORD. Mr. Speaker, in an address at Savannah, Ga., last Saturday Gen. Lyman L. Lemnitzer, Chief of Staff, U.S. Army, discussed "The Armed Forces: Defenders of Peace." General Lemnitzer pointed out that to succeed in deterring war we must have the capability to win war. I was also impressed by the strong case which General Lemnitzer has made for our mutual security program. He says that—

My colleagues of the Joint Chiefs of Staff and I all agree that none of us would want to see a single dollar added to his own specific service budget if that dollar had to be subtracted from the mutual security program.

The full text of the general's speech follows:

THE ARMED FORCES: DEFENDERS OF PEACE

It gives me great pleasure to return to Savannah. This city offers a visitor a memorable combination of warm hospitality and beautiful and historic surroundings. combination is difficult to match and impossible to excel. For a member of the Armed Forces, there is an additional appeal. All of the military services have installations in this general vicinity-I have in mind not only Hunter Air Force Base, of course, but Parris Island and Fort Stewart as well. military personnel who have served at any of these posts have strong and happy associations with Savannah. I have personal knowledge of this feeling from my own experience. During late 1940 and early 1941 I happen to have taken part in the planning for and construction of what was then known as Camp Stewart. As you know, this has now become one of the Army's permanent installations.

In addition to all these reasons, I particularly value my opportunity to be here on this special occasion. I want to take this occasion to express to you my appreciation for the interest shown in the Armed Forces by the people of Savannah. This interest has been amply demonstrated by the impressive way in which you have observed Armed Forces Day. From such interest, the members of the Armed Forces draw renewed inspiration in fulfilling the many requirements of their vital tasks.

In considering a subject for my remarks tonight, it seemed to me that nothing could be more suitable than to talk about the Armed Forces with regard to the most fundamental of their tasks. The subject which I have chosen, therefore, is "The Armed Forces: Defenders of Peace."

Armed forces, of course, are designed for war. Therefore, it might seem at first glance that to speak of them as means of preserving peace is a contradiction in terms. On the contrary, however, our country has no aggressive designs on anyone. For us, the prime reason for having armed forces is to maintain peace—on acceptable terms.

It is unfortunate but true that the world exists today in a state of continuous tension. This tension is given intensity by military potentialities which have been created by advancing technology. Describing the situation, President Eisenhower has said:

"With both sections of this divided world in possession of unbelievably destructive weapons, mankind approaches a state where mutual annihilation becomes a possibility. No other fact of today's world equals this in importance—it colors everything we say, everything we plan and everything we do."

What makes this situation most alarming is the stated objective of international communism. That objective is world domination. It is pursued by every possible means—political, economic, and psychological. Underlying all these is military force which is massive in size, global in scope, modern in armament, and versatile in capability. The influence of this military strength is not restricted to the possibility of active hostilities. The threat which it poses provides the force behind the pressures of the cold war.

We are making every effort to find peaceful solutions to the problems that are the sources of tension in the world. Our effort must—and will—continue. As an underlying requirement, however, we must have the manifest ability to defend ourselves against attack. Such an ability is essential to insure the preservation of those principles of liberty, justice, and human dignity to which we and other free world nations are dedicated.

This ability stems from strength. I want to state emphatically that it is not the purpose of our strength to threaten anyone. However, we must have the types and level of strength which hold out the clear promise of certain retribution for any attack upon us. In so doing, we not only protect ourselves, but we gain time to continue the search for peaceful and acceptable solutions to the sources of world tension.

In other words, the objective of our strength is to deter war. However, to succeed in deterring war, we must have the clear capability to win a war if one is thrust upon us. This objective is expressed in the theme of Armed Forces Day—"Power for Peace."

I want to make it clear that the strength I refer to is not solely military. It includes the economic resources and structure which make us able to produce and support the necessary military forces. It includes the determination to uphold our cause which makes us willing to expend the effort—and make the sacrifices, if need be—for the support of the military forces we require, and to use those forces if we must. Finally, our strength includes the military power—the product of our economy and our determination—which makes us ready to defend ourselves and our principles effectively and promptly against any military threat.

The effectiveness of our security does not depend solely on the existence of strength. There is also a requirement for a sound method for the employment of the strength we maintain. In other words, we must have a valid, well-thought-out strategy.

After World War II, when we were forced to recognize the emergence of the Communist threats to peace, the United States was faced with a choice of two basic strategies.

We could withdraw into ourselves, behind the no longer effective barriers of the Atlantic and Pacific Oceans, into Fortress America. The Fortress America strategy has been aptly described as "taking our first stand in the last ditch." In my opinion, such a strategy would provide a guarantee of defeat, and mean the loss of all the values and principles for which we stand.

In contrast, we could adopt a forward strategy, in which we would draw the line against aggression along the outer barriers of the Free World. It is this strategy which we adopted.

In doing so, we adopted its corollary the concept of collective security. This concept is both necessary to and made posby our forward strategy. Collective security is therefore an absolutely inseparable element of our own nationl security. Through it, we gain enormously in strength and effectiveness.

Let me describe some of the assets we

gain through collective security.

Associated with us for mutual defense are some 45 free nations located throughout the world. These associations are based on shared interests and shared devotion to common principles. They have made pos-sible the creation and maintenance in peacetime of actively functioning organlastions to permit successful combination of all our efforts and operations in war. have in mind such organizations as the North Atlantic Treaty Organization (NATO), Organization of American States (OAS), the Southeast Asia Treaty Organization (SEATO), and the Australia-New Zealand-United States Pact (ANZUS Pact). all of these call for maintenance of military force organizations in being. However, they have made it possible to establish agreed provisions for the creation of such forces when needed. They have brought into being an important degree of mutual understanding and standardization of practices, weapons, equipment, and doc-trine. All this would be invaluable in case of war.

A vital element in the development of a Working collective security system has been our mutual security program. I want to say more about the military aspects of this program later. For the time being, I merely Want to point out that the mutual security program is based on economic as well as military cooperation. Economic strength, as I have already indicated, is an essential element in military effectiveness. Military strength depends upon economic stability At the same time, there is a reciprocal relationship economic stability requires adequate security, which depends to a great degree on military strength. This rela-tionship points up the importance of mili-tary tary strength in resisting the many forms of cold war pressure.

It is impossible to overemphasize the importance to our defense of collective security, or of the mutual security program which ands so greatly to its strength. colleagues of the Joint Chiefs of Staff and I all agree that none of us would want to see a single dollar added to his own specific Service budget if that dollar had to be subtracted from the mutual security program. Collective security, indeed, is the cornerstone of our total security effort. President Eisenhower put it very clearly

When he recently said:

"If nations friendly to us are weakened and imperiled, so are we.

If other friendly nations are strong and free, our own strength and freedom are more

"If other nations prosper, so do we." Now, in order to develop, with our allies, the type of military force which can effectively deter war, we must first identify the forms that war could take.

Most conspicuously, everyone is aware that Soviet aggression could take the character of what has been called "general war." That is, it could entail all-out, global attacks upon the United States and the other free world nations. Such a war could include attack by nuclear or thermonuclear weapons, delivered by long-range bombers and missiles. However, it would not be restricted to such attacks—or finally decided by them. It would also involve naval operations to isolate the United States and our overseas allies from each other. Further, it would involve offensives by combined air, sea, and ground forces to seize control of

land and people throughout the world. deed, these offensives would be the indispensable prerequisite for the aggressor to achieve his objective; their success would be essential to his victory. The Soviets them-selves have made clear their belief that the final decision in war would be determined by the combined operations of land, sea, and air forces. The types of force they have developed-strategic missiles, offensive ground forces, and strong submarine fleets-are additional indication of the form they conceive that general war would take.

Aside from being general in scope, the Communists could also launch war that would be geographically limited. Within the area in which it was fought, however, limited war could be conducted with a wide variety of degrees of intensity. It could vary from a small-scale clash to war on the all-out geographically confined scale of the Korean War. It could be either nuclear or nonnuclear. Even though such a war might not directly threaten our own territory, it would pose a danger which, although indirect, would be gravely menacing. This is so because, over a period of time, Communist absorption of allied nations one by one would weaken the free world as a whole and ieopardize the strength of the free world's collective security. As the President pointed out in the statement I quoted, our national security would be affected accordingly.

I have pointed out that successful deterrence of war requires the ability to win. However, this ability must be credible to the potential aggressor. That is, it must exist in terms which he considers valid. For that reason, we must insure that we have the types of military force which are clearly capable of defeating the forces he maintains, in the type of operations in which

he would employ them.

Among the requirements we must meet, therefore, is to provide the capability to retaliate surely and effectively against a strategic nuclear attack. The purpose of this capability is to insure that a prospective aggressor will see no advantage in aggression-to make the price of such attack too heavy to be offset by what the attacker might conceivably hope to gain.

With this, we must have the capability to protect ourselves against attacks, if deterrence fails, so as to minimize their effects. This capability is essential for us to survive and retaliate against a massive blow de-

livered by surprise.

In addition, we must have the capability not only to retaliate strategically, but also to continue the struggle which would be necessary-after the opening blow upon usto defeat the enemy's forces wherever they have attacked.

Finally, we must be capable of responding promptly, effectively, and appropriately to attacks which are geographically localized. We must be ready to take effective counter action throughout the globe, in operations involving either nuclear or nonnuclear

All of these capabilities require forces in being; armed with modern weapons; manned by trained and dedicated soldiers, sailors, airmen, and marines; properly deployed and available to fight effectively in any type of war, large or small, nuclear or nonnuclear, anywhere it may occur. Beyond this, these capabilities require a foundation of psychological and moral strength based on the conviction and the determination that we will prevail.

In order to meet these requirements, the Armed Forces are fulfilling a number of broad, interrelated tasks. These tasks are mutually supporting and mutually depend-

The first of these which I shall discuss is the provision of secure, strategic retaliatory forces. These forces include the missiles and bombers of the Strategic Air Command, the

fighter-bombers of Tactical Air Force units overseas; and Navy carrier-based aircraft. The Navy's Polaris submarines will soon be added to this array of power.

An esesntial element of the effectiveness of these forces is provided by the defensive measures we take to achieve their security. These measures insure our ability to retaliate effectively even if we are attacked by surprise. In part, this security is achieved by the mobility, dispersion, and diversification of our retaliatory forces. These factors would greatly complicate the task of any planner trying to develop an attack which would be assured of sufficient success to justify being launched. In addition, security is provided by the active defenses we maintain to intercept and destroy an attacking force before it could reach its targets. These defenses consist of the combination of Air Force and Navy early warning systems, Air Force interceptors, and the Army's surfaceto-air missiles. Currently, we are working on development of a weapon-the Nike Zeus-for defense against attack by missiles. All these defensive forces are united into a coordinated, centrally directed organization-the North American Air Defense Command (Norad). Included under the operational control of this organization are not only all U.S. air defense forces, but also the air defense units of Canada as well. The commander of Norad is Gen. Laurence Kuter, of the U.S. Air Force. His deputy is Air Marshal C. R. Slemon, of the Royal Canadian Air Force.

The next major task which the Armed Forces are carrying out is the maintenance of forward deployments. That is, forces of all military services are stationed, alongside forces of our allies, in key strategic locations overseas. In the European area, we have the 6th Fleet in the Mediterranean, the 7th Army in Germany, and Tactical Air Force units for essential air support. In the Pacific area, we have the 7th Fleet in Far East waters; the 8th Army and Tactical Air Force units in Korea; a Marine Corps division in Okinawa, where it is soon to be joined by a reinforced airborne battle group of the Army; and an Army division-the 25th-in Hawaii. These forces provide clear evidence to our allies-and also to our potential enemies-that we are able and determined to act promptly and effectively against any military aggression. As such, they make a vital contribution to the deterrence of war-limited or general-and to the strength of the collective security system. They also contribute to the strength of allied resistance to the Communists' cold war opera-

It would be unsound, of course, to spread our military forces thin so as to try to have some strength everywhere. Indeed, there is no need for us to do so, because we have allies throughout the world. However, Communist aggression could occur in any number of widely separated areas. We must therefore be ready to come to the assistance of our allies in case of attacks upon them in areas where we do not have American forces deployed. Also, we must be able to reinforce the units we maintain overseas if they should be attacked. To meet this requirement, the Armed Forces carry out the next of the broad tasks which I mentioned. This is the provision of strategic reserves. These are centrally located forces of all the military services which can be rapidly dispatched wherever they are needed to conduct any type of operations required. Our strategic reserves include Tactical Air Force units in the United States, Fleet Marine Forces, and the Strategic Army Corps. In addition, there are the Army division in Hawaii and the Marine Corps division on Okinawa-together with the Army battle group which will soon join it there. Although I mentioned these forces in connection with forward deployments, they also are a valuable asset in our total strategic reserve capability.

The need to provide continuing support to our forward deployments and to move our strategic reserves promptly in case of mili-tary emergencies points up the next major task which the Armed Forces are carrying This task is the provision of the capability to maintain a steady flow of men, weapons, equipment, and supplies over the air, sea, and land lines of communication from the United States to the combat zone. This flow must continue despite an enemy's efforts to block it. Therefore, this capability not only requires transportation, but also requires the effective protection of the air, sea, and land routes over which this transportation moves. The Military Air Transport Service, the Military Sea Transport Service, the Army's Transportation Corps, and the joint defenses of transportation lanes and facilities against air and submarine attacks all contribute to the accomplishment of this vital task.

Still another broad task which must be performed is the maintenance of the ability to augment our peacetime active military strength if war breaks out. The requirement to expand would occur even in the case of comparatively small-scale operations. It is not restricted solely to mobilization of military forces, but includes actions to insure production of the equipment and supplies necessary to carry out the operations to win the war.

In part, this task is performed by stockpiling equipment, maintaining plans for conversion of industry to military production, and providing both active and passive protection of industrial, communications, and population centers against attack. In this connection, civil defense activities have a direct influence on our military effectiveness. This is because they can minimize the effects of enemy blows. A clearly effec-tive civil defense, therefore, contributes to the deterrent effectiveness of our total military effort.

For the initial mobilization of military manpower, the Armed Forces look to their respective reserve components-the Army and Air National Guard and the Army, Navy, Air Force, and Marine Corps Reserves. These organizations provide trained, ready individuals and units. Speaking of the Army, about which I naturally have most detailed knowledge, we have reserve component forces built around 37 combat divisionsfrom the National Guard and 10 from the Army Reserve. In every respect, their organization parallels that of Active Army units. Their readiness and training are at the highest peak in our peacetime history. They provide an invaluable asset both for the rapid expansion of active forces in case of war and for any emergency or disaster occurring in the United States.

The final major task of the Armed Forces which I shall discuss is cooperation with our allies. All of the previous tasks which I have mentioned contribute to the achievement of this cooperation. What I have specifically in mind, however, is the activity of the Armed Forces in connection with the military aspects of the mutual security program. Under this program, we are assisting in the development of the military strength of 42 Allied nations. Even a brief tabulation of the forces the nations participating with us in this program are maintaining provides some impressive totals. Their ground forces consist of no less than 5 million men. Their navies comprise 2,200 combat ships. Their air forces have more than 25,000 aircraft, and about half of these are jets.

All of the U.S. Armed Forces are assisting in the development of Allied strength under the mutual security program. The Army alone, through its Military Assistance Ad-visory Groups and Military Missions, is as-sisting in the training of the equivalent of approximately 200 Allied divisions. These, with their counterparts in the other types of military forces, constitute a vast contribution to the sum of free world military They are an important element in the ability to achieve the common goal, which is to deter the Communists from risking military aggression.

To sum up my remarks, I want to stress the major points in what I have said this

evening.

Most basically, the object of all our military effort is to prevent war. To do so, howstrength which is capable of winning war if deterrence fails. Our ability to win must be clearly evident, which means that it must stem from the type of forces which the prospective enemy recognizes will insure the defeat of any military aggression he might consider undertaking. The more clearly we consider undertaking. The more clearly we possess this ability, the less likely we are to be called upon to employ it.

In developing military strength, we have joined with the other free nations of the world in a cooperative effort to insure our common defense through collective security. This collective security system provides the foundation of our own national security system. It represents a vast, widespread, and impressive total of strength. In contributing to this strength, we threaten no nation. The purpose of our effort is to deter war by promising the sure defeat of aggressive attack upon us or our allies.

The forces which make up our military strength are versatile, flexible, and powerful. They require—and include—the strengths and special capabilities of all our Armed Forces, organized under the type of control and coordination to insure their most effective employment in combination. Where appropriate, they are united under centralized direction with the forces of our allies. I can assure you that the maintenance and continuing improvement of this combined capability is the object of the fullest energles of all your Armed Forces.

Sustaining the Armed Forces are the understanding and support of the people of the United States, whom the Armed Forces serve. Such understanding and support provide the indispensable source not only of the material effectiveness of the military services, but also of the moral and psychological strength of their individual members. The interest of the people of Savannah, which you have so clearly displayed in your observance of Armed Forces Day, is an impressive manifestation of the understanding and support to which I refer. These, in turn, are a reflection of something of the most profound importance—the American dedication to the principles on which this Nation was built and for which it stands today. This dedication gives unmistakable proof of the firm determination of the American people to uphold these principles against any threat the future may bring.

The union of this national determination with the military strength represented by the united capabilities of our combined Armed Forces and those of our allies provides the vital source of our power-and. through it, our surest hope for peace.

It's Still Our Money, Mr. President

EXTENSION OF REMARKS

HON. THOMAS F. JOHNSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. JOHNSON of Maryland. Mr. Speaker, under leave to extend my remarks I wish to call to the attention of my colleagues an excellent article which recently appeared in the largest daily newspaper published in the First Congressional District of Maryland.

Mr. Oscar Morris, editor of the Salisbury Times, consistently brings to the public timely editorials of national concern. His excellent article is as follows:

IT'S STILL OUR MONEY, MR. PRESIDENT

Every time President Eisenhower goes out of his way to blast Congress for looking crosseyed at his newest foreign aid proposal, he leaves the impression that Congress is trespassing on his territory.

We resent the impression and are curious about the psychology that causes Mr. Eisenhower to make it. He of all recent Chies Executives has tried to show respect for the prerogatives of the legislative branch.

Every Representative and Senator has the duty to watch over public money. The executive branch can propose how money should be spent, but only the legislative branch can dispose of the money. Thereafter, it still has the duty to keep track of the way the money is spent and to call the executive branch for an accounting if there have been improper practices.

It has been our feeling throughout the foreign aid program that there should have been more accounting—that many of the practices that have flourished under the happy guise of a freehanded "Uncle Sugar" could not have withstood the kind of scrutiny that U.S. taxpayers customarily give to domestic spending.

We have felt this way in spite of the standard theme that the foreign aid program is a bulwark of the ideals of America in a world under pressure to accept authoritarian rule. We believe in the theme. But that does not bar the belief that Congress would be doing less than its duty if it failed to keep the foreign aid program under critical scruting and to hold the executive branch responsible

or its handling of the people's money.

U.S. taxpayers are putting up the money, not their Federal Government. This is help from the American people—a people-to-peofle to the head of the height treated as ple program. Instead of its being treated as a sacred cow that cannot be touched on penalty of committing some mysterious crime, the foreign aid program should be viewed as a continuing investment in American security, made with the full approval and the complete understanding of Congress.

Dirty Business

EXTENSION OF REMARKS

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. GIAIMO. Mr. Speaker, on May 1 last, this Nation observed Law Day as proclaimed by the President. Occurring as it did, on May 1, Law Day dramatized the contrast between the American concept of freedom and fair play under law and the suppression of individual freedoms by the Communist societies.

Traditionally, May 1 is a date on which the Communist world parades its military might, symbol of its philosophy of rule through force, fear, and intimidation. In the United States, May 1 has now become a day for a demonstration of a different sort, in which the people may reaffirm their faith in the rule of law as the best safeguard of human dignity and human rights. Among these rights and International Understanding Fostered by essential to that basic human dignity is the right of a man to his privacy. The law should stand as a shield for the individual against the acts of those who would invade his privacy and set up spies within the walls of his very home. Certainly, Mr. Speaker, the law must not, itself, set up Trojan horses in American homes. Certainly, this House must be vigilant against such an abuse of the American spirit of justice.

Mr. Speaker, I call the attention of the House to an editorial which appeared April 16, 1960, in the New York Times. It outlines a duty for this body to perform. I hope that the next Congress Will take note of it and set about correcting the situation described in the article Which I ask be inserted into the RECORD

at this point:

DIRTY BUSINESS

The conflict between Federal and State law on the dirty business of wiretapping must be resolved, and it ought to be resolved in favor of congressional legislation authorizing strictly controlled use of wiretapping limited to certain types of crimes and only

on court order.

New York State, for example, permits its law-enforcement officers, under statutes adopted as recently as 1958, to wiretap under controlled conditions and to introduce in the courts evidence thus obtained. Yet the U.S. Supreme Court has interpreted the Federal Communications Act of 1934, the basic law on the subject, as prohibiting wiretapping by either Federal or State officials, and prohibiting the use of wiretap evidence in Federal courts—while leaving it open to State courts to use such evidence despite the expressly illegal action (under Federal law) of their officials in obtaining it. In its decision this week in a wiretapping case the U.S. Court of Appeals thus refused to enjoin New York officials from introducing Wiretap evidence at a State trial; and it did so, of course, in full recognition of the fact that wiretapping violated Federal law and that such evidence could not be used in Federal courts.

This situation, under which State law enforcement officers (in the five States that permit wiretapping) can violate Federal law and yet get away with it and even have their evidence admitted in State courts, is anomalous and absurd. It is worse than that, for since no State officers have been Prosecuted by the Federal Government for Wiretapping (nor is it likely that they would be), the Federal Government is thus conniving in the commission of crime and in the breakdown of respect for law at the very

heart of the law-enforcement process. And yet it is not the State officers operating under State laws who are to be condemned, but rather the inaction of Congress in straightening out the wiretap mess.

Every believer in civil liberties and in the right of the individual to privacy and the protection of his person dislikes the idea of wiretapping, electronic eavesdropping and similar method of crime detection. Yet as Alan F. Westin of Columbia University Points out in an article in the April Commentary, it is only unreasonable searches and seizures that were outlawed in the fourth amendment. "It is not outside traditional justice for the conversations of those who communicate with a person reasonably suspected of criminal activity to be subject to a search," he points out; but of course the search, and the the search must be strictly limited; and the limitations must be enforced. The act of 1934 never envisaged the conditions the police and the courts are faced with today in the field of wiretapping; Congress has the duty to clarify it and bring it up to date.

International Crossroads Breakfast-

EXTENSION OF REMARKS OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. SCHWENGEL. Mr. Speaker, on Thursday, May 19, I called attention to some of the many expressions of friendship and understanding which have been generated through the international crossroads breakfast at the Washington YMCA. These expressions have come from around the world in the form of letters to Mr. Paul Brindle, who has been in charge of this effective people-to-people program for better understanding.

Under leave to extend my remarks, I wish to include additional excerpts from letters which I feel speak so eloquently for the effectiveness of this program.

These excerpts follow:

Robert G. Sutton, senior lecturer, School of Architecture and Building, University of New South Wales, Australia, recalls:

"Although it is over 2 years since I made your acquaintance at the International Crossroads, it seems as if it were only yesterday. I shall never forget the thoughtful friends I made and the hospitality extended to me wherever I went in America. Believe me, I am looking forward to 1965, when I again expect to visit you. If you were to ask me of my main impression of my travels, I must say that America and Australia are the two closest nations in their way of life. We are more American in our way of thinking than we are English, and with the increasing investment of capital by many of your U.S. companies, we are like a younger brother to your country."

Cyro A. Moraes, general secretary, YMCA, Rio de Janeiro, Brazil, says:

"Let me congratulate you and your group for 14 years of existence. It is not easy, I am sure, to keep a group like yours going for 14 years and still making the breakfast worthwhile, interesting, instructive, and a blessing to those who attend. All of you are to be sincerely congratulated, and may God bless you all as you celebrate your 14th anniversary * * . There is one thing that perhaps you folks back in Washington do not realize as well as we do, and that is that Washington, D.C., must be not only one of the crossroads of the world, but the crossroads, since the United States is the undisputed leader of the free world."

Dr. E. M. Blaiklock, head and professor of Classic Department, University of Audiand,

New Zealand, writes:

"The 9 years since I spoke to your breakfast gathering have abundantly reinforced my thesis of that day. The world's only hope is the Christian faith. It is the only dynamic counter to communism, the solution to the race problem, the one final hope of peace."

P. G. Gollerkeri, M.D., professor of bacteriology, Kasturba Medical College, Mangalore, India, comments:

"A particular emotional cord in my being gets an occasional thrill whenever you write to me, and a whole train of pleasant and interesting memories is set in motion in my mind. Not the least vivid of these is the unforgetable crossroads breakfast meeting, with the actively humanistic contacts made with the national representatives of so many countries and cultures coming together for

a tete-a-tete palaver in this unique session across the breakfast table. I think it is a grand idea of yours, fostering, as it does, a degree of international amity and good will, socially, culturally and politically, and a mutual exchange of ideas on a variety of topics peculiar to each country.

"In a month or two, my son, a doctor of medicine, is due to go to the United States. I have described to him in glowing details your country and your city, and I am sure he will add himself to the considerable total of your international crossroads member-

ship."

Dr. S. Thomas Edwards, board of directors, YMCA, Bombay, India, says:

After mentioning many of the current troubles throughout the world. Dr. Edwards said: "The world is at a crossroads and at cross purposes. It is in this context that I look at the valuable efforts but with much too small an area of understanding the International Crossroads Sunday Morning Breakfast is making continuously. On the 14th anniversary day, I would wish your institution should grow in strength and spread with branches all over the world as a peace agent through better understanding and mutual trust. May God bless all those who take part in the Sunday morning breakfast and fit them for the noble purpose."

Raimo Raevuori, principal, Adult Evening School, Jarvenpaa, Finland, writes:

"I can assure you that my spiritual tles with the United States, established during my visit over there, are as firm as ever, and I am following developments in your country with keen interest, not only news in Finnish newspapers, but through 'Life' and other periodicals, too."

Prof. C. Rajagolalan, professor of geology, Alagappa College, Karaikudi, India, com-

"The day is still green in my memory. was on the forenoon of June 21, 1958 (Saturday) that, while trying to enter his office room in the somewhat ill-lit corridor of YMCA, Mr. Paul Brindle almost collided against a tall, slim, middle-aged foreigner. Mr. Brindle promptly apologized and invited the alien into his office and explained his mission about the crossroads breakfast the next day."

The professor goes on to explain that he changed his travel plans, at Mr. Brindle's urging, to join the breakfast, which was a profitable experience. He ends with a prayer to give long life to the chairman of the

Crossroads.

Dr. Hans Dietrich Ahrens, Essen-Werden, Germany. (Dr. Ahrens is active in public relations work, and because of his work pertaining to the improving of United States-German relations, he was appointed chair-man of the all-German committee of the U.S. Chamber of Commerce in Germany.)

"When I was honored at the local YMCA at Kassel, near the Soviet zone, border of my divided homeland, last Sunday, my thoughts went back to a wonderful meeting which you directed in Washington in 1948. I am still very grateful for the splendid spirit which prevailed in your group. More strength to the great work of international understanding as performed by yourself and your friends. Spiritual force alone will eventually overwhelm the force of Marxist atheism.'

Toshihiko Suzuki, Osaka, Japan (international student of Westinghouse Electric) states:

"I notice that year by year the number of people attending the International Crossroads Sunday Morning Breakfast is increasing. I am certain that the meeting contributes very much for good understanding among nations,"

Valentin Soine, director general of the prison administration, Ministry of Justice, Helsinki, Finland, recalls:

"Ten years have passed away since I was there-I have had opportunity to make visits to many other countries in Europe in the last 10 years-but the greatest benefit from my trips I have received in the United States. a country which in its many States has so large a variety of solutions to problems of the life. During that time I was there, I won also many good friends which I bear in mind my whole life. I feel real happy to know that you continuously, during so many years, have gathered foreign people around the Sunday breakfast table to find good fellows and to spend a moment with them in front of the face of our common Lord. My kindest regards to all of them who are sitting round the breakfast table.

Mats Blom, vice president, Ostagota-Lantmannens Centralforening, Norrkoping,

Sweden, relates:

"Let me thank Paul and his helpers for the very good idea to keep an open table for us traveling young people. It is easy to feel lost in big cities, but this gathering together makes us feel at home and helps make friends, which is most important. The Crossroads is a grand project, and I hope you will continue the open breakfast for many years to come."

Dr. B. N. Ghosh, biochemist, Calcutta,

India, comments:

"During my stay in the United States and Europe, I had the opportunity to meet various people in my personal capacity, as well as through various organizations, and I must admit that the Crossroads Sunday morning breakfast is one of such unique organization, where people from all over the world can meet-on the way to human destiny, irrrespective of their caste and creed, color, views and belief."

Dr. S. V. Desai, an authority on agricul-

ture, Bombay, India, states:

"I wish I could join you all on the annual session of May 1. As distances are long and expenses are prohibitive, I shall be with you in spirit only. The ideals of Crossroads International are very pleasing, and a visitor to Washington finds himself in the midst of friends on a Sunday morning when all are making themselves merry in their own circles. The pleasure the Crossroads gives to the lone visitor cannot be lightly taken. May your meetings grow larger and larger and attract large groups of visitors to find their bearing in the great country."
Rev. J. K. W. Mathieson, Methodist Peace

Memorial Homes for Children, Victoria, Aus-

tralia, writes:

"The occasion in May 1957, when I had the privilege of being a first-timer at the breakfast was one of the highlights of my tour abroad. It is good to know that the movement continues with such vigor and appreciation. I am sure that all who have had the experience of attending such a breakfast must feel it to be an inspiration to international thinking and cooperation. I hope that at some future time, I may again share in this fellowship."

A. Gunamony, Trivandrum, South India, recalls:

"I must congratuate you on bringing together men from distant parts into your International Crossroads and giving them the thrilling experience of the Sunday morning breakfast.

"I came to the United States in March 1955, on the basis of an international fellowship awarded by the YMCA, and being an absolute stranger to your country and your town, the fellowship I enjoyed in the International Crossroads made a lasting impression. I met men from different countries and it was an enriching experience. You are rendering a great service to visitors to your country by giving them this experience of pleasant fellowship, a discourse by some outstanding person, and a delicious breakfast, all within 1 hour or so."

Dr. G. D. Boaz, professor of psychology, University of Madras, India, comments:

"I really enjoyed that 1 hour 11 years ago spent at one of the sessions of the Inter-national Crossroads breakfast. Let us be able to say this about more hours of our

Mr. Sulaiman, Green House, Kamalapur, Dacca-3, Pakistan, writes (Mr. Sulaiman is editor of a fortnightly magazine, published in Dacca, capital of East Pakistan)

"Thanks to the Crossroads idea, I am sure this will help to develop better understanding between the people of various countries, which is essential to maintain peace in these days of nuclear competition between the big nations!

P. J. Daniel, Mavelikara, Kerala, India.

'I am a constant traveler in my own country and I speak to large audiences sometimes. I lose no opportunity to tell the people about America. The memory of my short stay at the YMCA in Washington, D.C., is pleasant, The International Crossroads Sunday morning breakfast is one of the manifold features of good will and the genuine fellowship a visiting foreigner sees in America."

Shyam Sundar Misra, social and welfare worker of the Servants of India Society, Cut-

tack. India, comments:

While staying at the YMCA, I became a regular member of the International Crossroads Sunday morning breakfast and derived great pleasure and benefit from that cosmopolitan gathering. Indeed, nothing else succeeded so much as did these occasions to implant the 'one world' idea in my mind."

Haanken Chr. Mathiesen, Jr., Tonsberg,

Norway, writes:
